Published Date: December, 2018

Dear Guests...

Welcome to the 9th INTE, ITICAM & IDEC -2018.

International Conference on New Horizons (INTE), International Trends and Issues in Communication & Media Conference (ITICAM) and International Distance Education Conference (IDEC) are international academic conferences for academics, teachers and educators. They promote the development and dissemination of theoretical knowledge, conceptual research, and professional knowledge through conferences activities, the conference proceedings books and TOJET, TOJDEL and TOJNED Journals. Their focus is to create and disseminate knowledge about new developments in these academic fields.

INTE, ITICAM & IDEC conferences are now well-known international academic events and the number of paper submissions and attendees are increasing every year. This year our conferences have received more than 900 applications. The Conference Academic Advisory Board has accepted approximately 600 papers to be presented in Paris, France.

We would like to thank Prof. Dr. Mehmet Ali YALÇIN, Rector of Sakarya University and the President of the Association of Quality in Higher Education Prof. Dr. Muzaffer ELMAS, for their support of organizing these conferences.

We also would like to thank our distinguished guests, keynote speakers for their collaborations and contributions for the success of these conferences.

And finally, we would like to thank to all of our participants who have presented their academic works in INTE, ITICAM and IDEC- 2018, Paris, France.

Without their participation, INTE, ITICAM & IDEC-2018 would, of course, have been impossible.

We would like to sincerely thank all of you for coming, presenting, and joining in the academic activities.

We would also like to thank all of those who have contributed to the reviewing process of INTE, ITICAM & IDEC conference papers, which will be also published in TOJET, TOJNED, TOJDEL and TOJCAM.

Finally, we would like to wish you all a successful conference, pleasant stay in Paris, France.

Thank you

July 18, 2018 - Paris, France

A Case Study On Lecturers' Perception On Peer Observation

Chiaw Ker SOH Australian Matriculation Programme
Sunway College Kuala Lumpur Malaysia
jasons@sunway.edu.my

Abstract

This research paper aimed to explore the perceptions of a group of lecturers in the selected college programme towards the notion of peer observation in teaching, in the context of their course. The study also sought to understand the perceived benefits of the process towards teaching and learning, as well as any disadvantages or limitations of this process within the context of its implementation in the college programme. In this qualitative case study, four participants were identified from the college programme via a non-random purposive sampling, gaining data from interviews and observation documents. Findings indicated that while teachers perceived the peer observation process to be beneficial in terms of constructive and useful feedback, reflective teaching, exposure to a variety of teaching practices as well as greater awareness on own teaching styles and views, there were challenges with the form used in the process, over-generalisation made from infrequent observations due to time constraints and the lack of positive communication, which instilled fear and nervousness towards peer observation. The findings provide an insider's perspective on the strengths and challenges as experienced by the participants who underwent peer observation. This will benefit both practitioners and policy makers in further understanding the various aspects of peer observation as well as the sensitivities that might arise while implementing and conducting peer observation. This will also potentially benefit institutions of learning and teachers who are keen to engage in peer observation.

Introduction

The purpose of this study is to gain a greater understanding on pre-university lecturers' experiences with and perception towards peer observation in teaching, as well as its effectiveness in the context of their educational institution's programme. Based on this, a central question and several sub-questions were constructed, refined and reviewed for viability concerning the objective of the research study (Wilkinson, 2003). These questions were then used to guide the researcher in the process of data collection, such as the construction of interview questions. Based on the purpose identified above, the following research questions were developed to further clarify the focus of the study.

1. What are teachers' perceptions on peer observation as a tool in enhancing their teaching practices?
2. What do teachers perceive as benefits from peer observation?
3. What do teachers perceive as disadvantages and/or limitations of peer observation?
4. From the teachers' perspectives, how can the existing peer observation process be improved?

The Study

Bell (2005) describes peer observation among teachers as a "collaborative, developmental activity" (p.3) where teachers get to share their teaching ideas, understand the effectiveness of their teaching, and reflect on their own practices. Apart from using peer observation as a tool for professional development, peer observation of teaching is also commonly used to manage and monitor teachers' development or performance (Peel, 2005). While there are many benefits to be obtained from peer observation of teaching, studies also indicate that teachers view this process with scepticism and negativity (Lomas & Nicholls, 2005). As such, the study seeks to explore the perceptions of a group of lecturers from a local college, to identify if their views are similar to the general view of teachers on this area. In order to understand the perceptions of the lecturers in terms of their experiences with peer observation in teaching within the context of their programme, the ontology of the research was deemed to be inclined towards the subjectivist, interpretivist and constructivist paradigms, where "reality is constructed, rather than set in stone" (Broom & Willis, 2007, p.25). A qualitative case study approach was adopted to obtain rich descriptions and quality information (Yin, 2014). Interviews with different sources were conducted using interview protocol that was developed to map closely to the research questions. This was to ensure that information collected would yield findings that are more convincing and accurate (Yin, 2014, p.119-120). The selection of participants for this case study, who were lecturers from the pre-university programme selected for this study were done via a non-random purposive sampling. This could "purposefully inform an understanding of the research problem and the central phenomenon in the study" (Creswell, 2013, p.156), which was also supported by Kumar (2005), who pinpointed the usefulness of purposeful sampling in describing something in which little was known, for instance, the context of this particular research. With the strategy, participants were selected based on criterion and maximum variation. Criterion strategy can be described as the selection of participants based on a set minimum criteria revolving the area to be researched upon, while maximum variation strategy was used in choosing participants from diverse backgrounds so as to accumulate a wide range of data, which "increases the likelihood that the findings reflected differences or

different perceptions” in this study (Nair & Jain, 2014, p.20). In terms of the sample size, four participants were identified from the pre-university programme. The relatively small sample size was not considered an issue for a qualitative case study, as “the sample size here is usually a function of the purpose” (Punch, 2004, p.55). To achieve maximum variation, the selection of participants was done across different subject areas or disciplines, as well as the level of experience in teaching. Participants would also have to achieve the minimum criterion of having undergone the peer observation process as done in the selected college programme at least once, in order to be eligible for the research study. Interviews, which are question and answer sessions in a one-on-one or a small group setting, were conducted to collate in-depth information from different individuals for this research study (Driscoll, 2011). Prior to the interviews, a set of questions which was mapped to the research questions was designed for data to be collected in a structured and coherent manner (Kim, 2008). The interview guide approach was adopted, whereby topics and issues covered were outlined in advance, although the researcher had the discretion to decide on the question sequence and structure during the actual interview sessions. The outline allowed the data collection process to be more systematic for each participant, while maintaining a conversational setting during the interviews. Anticipated logical gaps in data can also be minimised by the situational structure of the interviews, thereby increasing the comprehensiveness of collected data (Cohen et. al., 2007). A written consent was obtained from the interviewees after sufficient explanation had been given on the purpose of the research study, including their rights as participants to maintain anonymity, confidentiality and privacy of data collated from them. The interviews were done face-to-face, as its advantages include the ability of unscripted follow up, probing questioning methods as well as the presence of non-verbal communication, which proves to be useful in providing greater insight (Soh & Cheah, 2016). Its reliability was enhanced with the usage of an audio recorder, whereby taped interviews were then transcribed as a “necessity... in accurately recording information” (Creswell, 2013, p.166). Upon consent, the researcher should also receive access to participants’ peer observation documents, which were essentially records of peer observation templates by the participants themselves. This artefact was vital “to establish a knowledge gap... which ties into the chain of evidence in the form of major/minor causes” and effects to the lesson (Nair & Jain, 2015, p.75).

Findings

Table 1: Summarised Qualitative Content Analysis - Interview Transcripts

Themes	Subthemes	
Perception of peer observation	<ul style="list-style-type: none"> · Tool for personal and professional development, not for evaluation · Learning tool for new and senior lecturers · Implementation is heavily dependent on the teaching culture 	
Context of peer observation	<ul style="list-style-type: none"> · Requirement for appraisal · Initial suspicion and resistance due to lack of knowledge · Shift from a one-sided approach 	
Benefits of peer observation	To the observee	To the observer
	<ul style="list-style-type: none"> · Constructive and useful feedback · Greater awareness on own teaching style and technological tools 	<ul style="list-style-type: none"> · Exposure to a variety of teaching practices · Challenges own teaching views
Limitations of peer observation	Challenges	Suggestions
	<ul style="list-style-type: none"> · Generic “one-size-fits-all” form · Overgeneralisation from infrequent observations · Time constraints due to workload and clashes in timetables · Fear and nervousness due to lack of positive verbal and nonverbal communication 	<ul style="list-style-type: none"> · Discipline-specific form, guidance on form-filling · Pre-observation discussion · Follow up peer observations · Assigned peer observation timetable · Positive, encouraging gestures by the observer

Note: The categories do not necessarily represent a single experience, but rather the collective elements of peer observation in the context of the site of study, as perceived by the group of lecturers.

Several themes emerged during the analysis of data via a qualitative content analysis approach, which were then classified and categorised in the following manner (see Table 1). The following analysis is divided into

four key themes: 1) perception on peer observation as a tool to enhance teaching practice, 2) contextual description of peer observation, 3) benefits of peer observation, and 4) limitations of peer observation, accompanied by relevant suggestions for improvement.

In regard to the first research question about teachers' perception of peer observation as a tool to enhance teaching practice, it was evident from the interviews that peer observation is able to serve as a "powerful vehicle for situated learning" (Karagiorgi, 2012, p. 456), within the context of the educational programme. However, it is important to note that this can only be made possible when the appropriate school culture is fostered, as highlighted by one of the participants, in order to ensure the effectiveness of its implementation.

In regard to the second research question about teachers' perception on the way peer observation is done within the context of this study, the participants involved appeared to have similar perceptions that this process was a requirement for them as lecturers, as part of appraisal. This can be seen as a typical case of many higher educational institutions, where formality was sought to establish peer observation in a structured way, in order to cultivate a more standardised experience (Hammersley-Fletcher & Orsmond, 2004). Understandably, there was resistance and suspicion surrounding its implementation in the early stages, which was often the case when observation is constructed as part of appraisal and deemed as managerialist (Peel, 2005). Whilst making peer observation mandatory might contradict its intended meaning as a developmental model (Gosling, 2002), the programme should be explicit in its intention in executing peer observation and how its staff can benefit from this so as to minimise opposition or superficial implementation, where staff might only get involved with peer observation by observing peers at a minimum for the sake of compliance.

In regard to the third research question about teachers' perception on the benefits of peer observation process within the context of this study, both observers and observees felt strongly about the benefits of peer observation. For the observers, the perception of a greater awareness on their own teaching styles from observations, leading to adoptions of new teaching techniques they observed is aligned to Bandura's theory of observational learning (Hergenhahn, 1982). Views on peer observation feedback were inclined on the positive side, based on the experiences of getting constructive feedback from peer observers, also known as critical friends (Shortland, 2010), who were perceived to "provide a unique perspective on their teaching style offering suggestions for improvement and reinforcement of strengths" (Thampy et. al, 2015, p.309). Nonetheless, feedback should also be neutral and accompanied by concrete evidence, in which training should be provided so that the process could be maximised to its full potential (Thampy et. al, 2015).

In regard to the fourth research question about teachers' perception on the limitations of the peer observation process within the context of this study, findings had suggested that all teachers involved in the study did not follow a specified structure and format appropriately, leading to confusion and differences in anecdotal responses. There was variation of responses on the execution for pre- and post-observation sessions in the process, as well as on the usage of the peer observation form. Although all participants mentioned the form as a weakness in this process, all but one failed to indicate a focus on other sources of information available, for example student feedback results, lesson plan or teaching aids. This revealed that when peer observations were done by teachers who did not undergo proper training, or even validated observation procedures, accompanied by the absence of moderation or quality assurance action plans, any outcome or feedback which arose from the observation could not adequately provide a bearing on a teacher's teaching capability as "the correlation between judgements and teacher quality is much lower" (Bousted, 2015). As such, providing sufficient training to those involved in the observation process is vital to ensure the success of its implementation. Time constraints, which was perceived to be problematic, might be related to the nature of peer observation within the educational system in the programme. Shortland (2004) argued that pragmatic issues such as the lack of resources to expedite the process in terms of time allocated for preparation and feedback, or pre- and post-observation sessions, the process might be rendered meaningless. Besides, nervousness and fear concerning the process of peer observation could be prevalent among newer teachers, as senior observers could potentially increase the level of anxiety for the novice teachers, which was caused by a perceived summative quality assurance aspect of peer observation (Thampy et. al., 2015).

Conclusion

It is important to acknowledge that this study was exploratory, as such it contained several limitations. Primarily, the views expressed by the participants in this study cannot be simplistically generalised without considering other variables such as the views of the management, students and other documentary evidence, which were not explored in depth within the context of this study. Furthermore, the present findings could not adequately support the matching between teachers' perception and the actual practice of peer observation in the context of this study.

Nonetheless, it is deemed that these preliminary findings could become the starting point for future research in this area, which calls for a deeper level of analysis. To conclude, peer observation serves as a promising professional development tool in developing high-quality educators, which could then be linked to performance management within the programme and institution as a whole.

Josué ARTILES-RODRÍGUEZ

University of Las Palmas de Gran Canaria. Canary Islands

Abstract

As an educational institution, universities consider university tutorials to be a crucial aspect to promote the individual learning of students as well as transferable competences for life and their professional development, within the European High Education Area (EHEA). To this extent, in terms of the efficiency of tutoring, the different social, economic, political and cultural transformations that have an effect on students, lecturers and the university community in general must be taken into account. The aim of this paper is to analyse the different Tutoring and Guidance Action Plans for Students (hereinafter, TGAPS) from the point of view of the university institution, specifically the University of Las Palmas de Gran Canaria (hereinafter, ULPGC), taking into account the challenges set forth in the management and organisation of the university strategy with regard to this issue. Therefore, a content analysis of the tutoring actions in place in various Schools and Schools of the ULPGC will be carried out, by studying the different TGAPS introduced, and taking the academic, professional and personal dimensions of the tutorial into account. The results demonstrate that there are different practices within the tutoring action, albeit disorganised, weak and with no ties between the three aforementioned dimensions. The conclusions show the need of developing coordination from the different experiences of the high-level educational institution, in addition to introducing common measures from each area of knowledge. Moreover, it is important to organise creative and innovative tutoring actions that take into consideration the context of uncertainty that frames the tutoring action and the guidance procedures from the University.

Keywords: *Areas of knowledge; University; Dimensions; Guidance; Tutorial.*

Introduction

The globalization of the economy, the accelerated progress of Information and Communication Technologies (hereinafter ICTs) and the new ways of working have led to the emergence of inevitable new questions regarding the management and organisation of high-level educational institutions and their action in terms of counselling and tutoring students. This means that university tutoring rises amidst a sea of uncertainty, and appears to be 'adrift' in a context that does not understand timelines in the long term and strips students and lecturers from certainty (Sennett, 2000).

Within the framework of the European High Education Area (hereinafter, EHEA), tutorials acquire a relevant role in the teaching function of lecturers. The aim is to explicitly state and systematise the role that each lecturer performs spontaneously as a guide and facilitator in the learning process of students. Changes in the teaching-learning process, which require European convergence, should be accompanied by a change in the tutoring process. The EHEA intends to improve the quality of assessment and accountability, and requests further emphasis on the outputs (procedures and results), as well as the compatibility, comparability and transfer among the European Union university systems (Martinez, 2009). To this extent, the management of tutoring action from the university as an educational institution contemplates university tutoring as a crucial action to promote the independent learning of students and the development of transferable competences for their life and professional career.

Tutoring is an educational activity that is linked, with more or less intensity, to university since its origins (Gordon & Gordon, 1990). A consolidated tutoring model can prove extremely effective in the creation of integrated or transversal competencies, conceived as pathways to knowledge (Lee, 2009). In other words, they behave as shared attributes that can be generated in any degree or field: the development of certain cognitive, methodological, technological and linguistic abilities; the capability of expressing feelings, of self-reflection, of teamwork, social commitment, decision-making, among others (Lapeña et al, 2011).

Nowadays, university students need to know, more than ever, how to interpret their experiences, take into account different points of view and give meaning to their life. Based on this logic, the challenge of university studies is to become a training platform whereby students graduate with a clearer personal and professional project, together with the knowledge required to confront the creation of their life-long career (Lobaro & Ilvento, 2013).

The training of students based on continuous learning, prioritising self-learning and the creation of new educational modalities whereupon the student is the main actor in the training process, translates in the lecturers becoming, albeit not exclusively, guides, facilitators and creators of learning opportunities (Sánchez et al, 2011). University

tutoring is seen as a function that assists, guides and supports students during their learning customisation procedure and the development of personal and professional competences throughout their career, the dynamic horizon of their life project being a personal and professional project (Lobato & Echeverría, 2013). Subsequently, this paper will analyse the different proposals set forth in the Tutoring and Guidance Action Plan for Students (hereinafter, TGAPS) of a specific university, focusing on three dimensions and different areas of knowledge.

In the context of the EHEA, university tutoring should be managed based on three dimensions: academic or training tutorials, career tutorials and personal tutorials (Álvarez & Álvarez, 2015).

Academic or training tutorials

These tutorials relate to the informative and training tasks carried out by each lecturer, within the framework of their module, in order to monitor the learning process of their students. It could be described as the continuous exchange between the lecturer and the learners to counsel and guide the learning process in a specific area of study (Álvarez & González, 2008).

Therefore, these tutorials will be managed as part of the teaching process in order to develop actions aimed at the academic guidance and counselling of students. To this extent, all lecturers should organise and plan this section of academic tutorials, an essential accessory and counterpoint of teaching (Zabalza, 2003).

This type of academic tutorial can either be in person or online, due to the multiple resources provided by ICTs.

Professional or career tutorials

This dimension refers to a more integral view of the tutoring intervention in the university context, whereby the guidance task of lecturers is not wholly limited to the academic environment and the fulfilment of their module. Instead, it goes beyond this, monitoring the whole educational process and stimulating the student's personal and professional maturity. Hence, the degree tutor also carries out assistance tasks and guides students from the moment they are admitted until the completion of their studies (Álvarez, 2005). Within this context, there are authors who talk about curriculum focused tutorials (Zabalza, 2003; Villar & Alegre, 2004), whereby the tutor not only mediates between the group and the lecturers, but also coordinates with other course lecturers and the degree. The information and training activities that the degree tutor carries out with students will depend on the stage at which their students are.

At the beginning, they focus on aspects which will help them adapt to university life. During the intermediate years, they work on aspects related to the curriculum, whilst the final years focus on more vocational aspects and the transition and introduction to the labour world (Álvarez & González, 2008).

Personal tutorials

Personal tutorials focus on studying and mainly solving personal psychological issues that affect the student's academic performance (Álvarez & González, 2008).

The complex reality burdened with multiple changes, in society and at university, needs to be managed from the logic of a multidimensional tutorial that takes into account the academic, professional and personal environment of the student.

The Study

Aim The aim of this paper is to study the aspects fulfilled within the organisational framework of the vast areas of knowledge regarding the academic, professional and personal dimensions for the development of tutorials for university students.

Method. Analysis of the complex reality of the Tutoring Action Plans of the different Schools of a specific university within the EHEA framework. This perspective leads to a deeper understanding of the reality, surpassing the description (Sandín, 2003). Thus, different tutoring actions can be contrasted to offer a global overview from which aspects initially ignored will emerge (Taylor & Bodgan, 1984). The procedure chosen is called content analysis (Bardin, 1996; Mayring, 2000) as the technique for objectively and systematically understanding a stated aspect in order to focus on and explain this reality.

Sample. A content analysis of the TGAPSs of an average type university with 22,987 students and 1,585 lecturers has been carried out. The 14 TGAPSs established in the 14 schools of the University of Las Palmas de Gran Canaria have been analysed and grouped by area of knowledge, which are divided as follows (See Table 1): Engineering and Architecture (4); Health Sciences (2); Sciences (1); Arts and Humanities (3) and Social and Legal Sciences (4).

Table 1.
Schools by area of knowledge

ENGINEERING AND ARCHITECTURE	<ul style="list-style-type: none"> - School of Architecture - School of Telecommunications and Electronic Engineering - School of Computer Engineering - School of Industrial and Civil Engineering
HEALTH SCIENCES	<ul style="list-style-type: none"> - School of Health Sciences - School of Veterinary
SCIENCES	<ul style="list-style-type: none"> - School of Marine Sciences
ARTS AND HUMANITIES	<ul style="list-style-type: none"> - School of Philology - School of Geography and History - School of Translation and Interpreting
SOCIAL SCIENCES AND LAW	<ul style="list-style-type: none"> - School of Education Sciences - School of Law - School of Economy, Business and Tourism - School of Physical Activity Sciences and Sport

Source: Own creation.

Instrument. On the basis of the theoretical references and current TGAPs, a protocol has been designed to systematise data collection (Bardín, 1996), based on the University School under study. These are classified by area of knowledge and then analysed using the three dimensions of university tutoring and their variables. To this extent, the study takes into account the three dimensions of university tutoring: Teaching or Academic, Professional or Career, and Personal (Álvarez & Álvarez, 2015). The analysis of each dimension has been performed taking into consideration the following variables (See table 2):

Table 2.

Dimensions and variables of university tutoring

DIMENSION	VARIABLES
ACADEMIC OR TRAINING	TRAINING TASK INFORMATIVE TASK TEACHING ROLE
PROFESSIONAL OR CAREER	CAREER GUIDANCE MATURITY
PERSONAL	PSYCHOLOGICAL RELATIONS PERFORMANCE

Source: Own creation.

Procedure and data analysis. Overall, two different parts were identified. The first part identifies the authors and research carried out on the object of the study which problematize the tutoring action within the EHEA framework, the different actions to be taken into account from the point of view of the management and organisation of a higher educational institution. The second part consists in accessing the reality of the different TGAPs of the university under study and performing a content analysis of the mentioned dimensions, based on the classification criteria of the dimensions and their variables: Academic, Professional and Personal (Álvarez & Álvarez, 2015).

Results

Due to the vast amount of data, the results of the TGAPs have been synthesised by area of knowledge, based on the three dimensions studied in the framework of university tutoring.

Area of Sciences

This area of knowledge includes the School of Marine Sciences. The Training Task, with regard to the *Academic Dimension*, addresses the guidance during the admission process and the degrees offered by the School; information and guidance on the study plan; training offer; guidance in the learning process; and guidance

mechanisms towards the final dissertation. Within the Informative Task, information is given on consolidation courses and on the Olympics and the Scientific Summer Camps. Regarding the Teaching Role, the following aspects are worked on: academic integration; student support for their academic project; awaken their interest in Marine Sciences; and constantly update the web page.

The Professional or Career Dimension addresses the counselling given when choosing external internships and support during their introduction to the job market and continuous learning (Career). The Guidance variable focuses on the availability and use of resources for learning, and guidance on professional options. With regard to Maturity, information on mobility is promoted.

Finally, in the *Personal Dimension*, within the Psychological variable, the school has a specific programme on attention to diversity. In terms of Relations, promoting participation in management organisms is defended together with the adaptation to the structure and dynamics of the School.

Area of Health Sciences

Regarding the *Academic Dimension*, the School of Health Sciences takes into consideration study planning, the management of the institution and the application of knowledge within the Training Task. The School of Veterinary has no actions contemplated to this regard. From the point of view of the Informative Task, the School of Veterinary offers information on the university, the organisation of the degree and school, procedures for a loan and the use of the library. Meanwhile, the School of Health Sciences provides information on the teaching project of each module, preferable previous knowledge and learning activities for each module. The Teaching Role variable is addressed by the School of Veterinary by means of the module results report. Likewise, the School of Health Sciences promotes actions such as: promoting the profile of vocational admission; knowledge consolidation courses available; solutions to learning issues; support to attaining studies; and promoting participation in academic and cultural activities.

Within the *Professional Dimension*, in terms of the Career variable, the School of Veterinary offers information on professional outcomes. The School of Health Sciences offers information on postgraduate courses (masters and PhD), specializations, guidance in decision making, choosing their curriculum path, support in study continuation programmes, and support entering the labour market. The other variables are only addressed by the School of Health Sciences, which provides guidance on the structure of the study plan (Guidance), information on mobility and support during the development of their professional project (Maturity).

In the *Personal Dimension*, with regard to the Psychological variable, the School of Health Sciences addresses the promotion of responsible attitudes, commitment during training, self-learning, psycho-pedagogical attention (referral to the university's counselling office) and the identification of students who risk failing. To this extent, the School of Veterinary addresses customised student attention, a support service to assist academic needs, personal counselling, support to students with special educational needs, and the identification of academic failure. In the remaining variables, only with School of Health Sciences addresses the integration and adaptation to university life and promotes team work competences (Relations) and teaching study techniques; responsibility and involvement in studies, together with attention to student who have temporarily put their studies on hold (Performance).

Area of Architecture and Engineering

The *Academic Dimension*, specifically the Training Task variable, focuses on the organisation of courses and seminars that complete the training. Regarding the Teaching Role, the four Schools coincide on the importance of guidance in the structure, competences and contents of the degrees. In addition, two of them, the School of Architecture and the School of Engineering in Telecommunications and Electronics, address actions on technique and teaching methodologies among lecturers.

With regard to the *Professional or Career Dimension*, the four schools' tutoring action focuses on professional guidance, support in creating the professional project and training in job searching.

Within the *Personal Dimension*, the School of Architecture and the School of Engineering in Telecommunication and Electronics address the promotion of students' self-knowledge (Psychological). Additionally, the four schools highlight the importance of university life integration (Relations) and counselling in study and work techniques (Performance).

Area of Arts and Humanities

The School of Geography and History addresses the *Academic Dimension* from actions for supporting planning and guidance in the election of modules (Training Task), the offer of information on study plans (Informative Task) and guidance for academic decision making. Similarly, it includes the coordination of the lecturing team and problem solving (Teaching Role) as actions that must be attended within academic tutoring. Within this dimension, the School of Philology addresses two actions related to two of the three variables described: tutoring mechanisms for the dissertation (Training Task) and student monitoring (Teaching Role).

With regard to the Career variable, the *Professional Dimension* of both faculties provides actions related to counselling for external internships, a global overview of the training process and support for the professional project and entry to the labour market. In the Guidance variable, both faculties defend guidance in personal, social and academic training. They also promote mobility and international exchanges (Maturity).

In the *Personal Dimension*, within its TGAPS framework, the School of Geography and History focuses on self-knowledge, self-esteem, values and attitudes of students (Psychological). The School of Philology does not appear to have any actions regarding the Psychological aspect of its students. Regarding the Relations variable, the School of Geography and History addresses the support in assertive communication, interpersonal relationships and promoting student participation in the School. To this extent, the School of Philology addresses actions on adapting and the importance of cohabitation rules. With regard to the Performance variable, the School of Geography and History addresses counselling in study and work techniques. The TGAPS for the School of Translation and Interpreting are not published, thus, it was not possible to analyse it in the framework of its area of knowledge.

Area of Social Sciences

The *Academic Dimension* of the four faculties takes into account guidance and monitoring of the dissertation (Training Task). The School of Education Sciences includes the academic curriculum design within this variable. Regarding the Informative Task variable, all the faculties in this area address information on the study plans and degrees offered by the centre. Within the Teaching Role variable, monitoring the academic activity of students and their teaching-learning process is addressed as a tutoring action, as well as promoting the admission of new students.

The School of Education Sciences and Physical Activity and Sport include teacher coordination and support to study plans to guarantee the best attainment possible. The School of Education Sciences works on guidance in decision making, review and compliance of teacher projects, sharing resources, experiences and teaching practices: implication in the use of the online platform, academic motivation for students, mediation in problems and the assembly of cultural activities (Teaching Role).

The four schools, with regard to the *Professional or Career Dimension*, promote guidance in the academic curriculum, work insertion and continuous training (Career). Furthermore, the School of Education Sciences addresses continuous training and the acquisition of an overall view of the training process. Regarding the Guidance variable, the four schools include guidance in academic decision making, guidance in the learning process, professional guidance and work insertion. In terms of Maturity, the four schools aim to provide students with a general view of the university and the school, guidance for mobility and guidance during external internships.

Within the *Personal Dimension*, the School of Law, the School of Economy, Business and Tourism, and the School of Physical Activity Sciences and Sport have a Psycho-pedagogical cabinet for the Psychological variable. The School of Education Sciences advocates personal commitment, independent learning, development of responsibility, self-knowledge and self-esteem, values and attitudes. With regard to the Relation variable, the School of Law, the School of Economy, Business and Tourism, and the School of Physical Activity Sciences and Sport address the integration of university students and student participation (Relations). In addition to these aspects, the School of Education Sciences also includes the development of teamwork competences, assertive communication and interpersonal relationships. The Performance variable is only addressed by the School of Education Sciences, which sets forth actions related to study habits and techniques, and ways of learning.

Conclusions

In the area of Health Sciences, there is not a balance between the schools that comprise it. The School of Health Sciences provides a clear presentation of tutoring actions by addressing all the dimensions, whilst the School of Veterinary has a weak TGAPS which barely touches the Professional Dimension of tutoring. It also has a weak Academic Dimension whereby its actions are merely administrative, such as processing student loans and grants or the use of the library. Within the Personal Dimension, it only includes the Psychological variable and highlights the support of special educational needs and academic failure, but it does not provide any preventive measures or general personal counselling.

In the area of Social Sciences, the tutoring actions set forth by the School of Education Sciences stand out, as they address an array of objectives and activities from the three dimensions of university tutoring. They emphasise the attention to aspects relative to the academic curriculum design, the review and supervision of teaching projects, which must follow a set of clear guidelines for teacher planning. This provides coherence to the school's area of knowledge and its application in tutoring actions and quality management.

In the area of Architecture and Engineering, there is harmony among its four schools at this university as they all address tutoring actions in the framework of the three dimensions equally.

With regard to the area of Arts and Humanities, the Personal Dimension stands out due to the concern of the School of Geography and History in aspects related to assertive communication and interpersonal relationships. Curiously, the neighbouring school, Philology, whose main focus is the study of languages and communication, does not

address, in the TGAPS framework, anything related to communication. The area of Sciences stands out for only having one school at this university: the School of Marine Sciences. It's TGAPS clearly balances the three dimensions and emphasises the academic and continuous training of its students.

Therefore, it would appear that tutoring action and the challenges set forth by university tutoring within the EHEA framework are diverse and complex. It is clear that there are diverse tutoring action practices that attain the three dimensions: Academic, Professional and Personal (Álvarez & Álvarez, 2015), but they are scattered, and do not strengthen or assemble from a more complex and engaged strategy. To this regard, it is noticeable that schools that are close to each other do not share mechanisms or tutoring actions that they could establish jointly by area of knowledge and academic complicity.

Thus, the need of coordinating the actions and experiences in which there are common parameters attaining the three dimensions and by area of knowledge is debated, as there could be encounters and guidelines that converge from the different TGAPSs, such as the importance of organising creative and innovative tutoring actions which take into account the context of uncertainty (Sennett, 2000; Bauman, 2007).

A Community Service Practices Course Project Model: My Syrian Students

Kudret AYKIRI
Pamukkale University
kaykiri@pau.edu.tr

Abstract

The aim of the study is to investigate the opinions of preservice teachers in social studies department related to the community service practices course project called "our guest students" whose target group is Syrian students. In accordance with this purpose, the study was designed with case study method, which is one of the qualitative research methods. The sample of the study consisted of 4 preservice teachers studying their third year at Social Studies Education Department in the Faculty of Education of a state university during the academic year 2017-2018. Sampling of the study was performed according to criterion sampling, a type of purposeful sampling. The data of the study was gathered through semi-structured interview, photographs and a message application. The data was analysed with descriptive analysis method. At the end of the study, it was found out that (a) social studies teacher candidates are experiencing lack of knowledge about Syrian students, (b) they have difficulties in finding and implementing activities for them, (c) they should be educated about the Syrians, (d) they have developed positive opinions about the Syrians. Proposals for these results have been drawn up.

Key Words: *Social Project, Community Service Practices, Learning by Servicing, Syrian Students, Preservice teachers in Social Studies Department*

1. Introduction

Awareness towards global problems is much lower than the desired level. In order to raise awareness to these global issues, probably the most effective way is to raise conscious people, and so universities, nongovernmental organizations and political corporations should carry out projects that are realistic and applicable (Aydın, 2016, preface). On the university basis, these projects are conducted through scientific studies, or based on voluntariness, or within the framework of courses. Considering the university courses, we come across community service practices, a course compulsory in all departments of education faculties.

According to Sönmez (2009) education affects the whole society and the most essential factor in this system is teachers. In this sense, community service practices course is of critical importance in order for preservice teachers not to be grown isolated from the society. In the light of this, considering that one of the most basic social problems in Turkey today is the issue of Syrian refugees, conducting activities aimed at Syrian refugees within the frame of community service practices course is regarded as crucial. Preservice teachers would absolutely give priority to Syrian students with this regard.

The reason why the study included preservice teachers in the department of social studies is that many topics and learning outcomes of community service practices course and a lot of notions regarding the issue of refugee, which is one of the problems of today's world, such as citizenship, human rights, immigration, exile, refugee, asylee, multiculturalism, awareness, empathy, respect, tolerance etc. are closely related to social studies program. In addition, when it is considered that the emergence of social studies courses is because immigrant children will become socialised (İnan, 2014), it can be clearly seen that this issue is highly associated with social studies and preservice teachers in this fields. Then, this being the case, what kind of activities will our preservice teachers in the social studies field do, what kind of problems will they experience in these activities, what kind of solutions will they find for these problems and most importantly what will be the contributions of these activities to these preservice teachers?

1.1. The Aim of the Study

The aim of the study is to investigate the opinions of preservice teachers in social studies department related to their social project aimed at Syrian students.

1.2. The Importance of the Study

It is believed that the result of the study is of critical importance as it enlightens issues such as the activities, the problems experienced and the solutions related to these problems for preservice teachers who will carry out a project aimed at our Syrian students in community service practices course. In the literature, no scientific study has been encountered concerning community service practices towards Syrian students. Also, in some studies it was emphasized that trainings related to the adaptation of the students with immigrant status should be provided and projects should be developed to involve these students in education (Çakırer Özservet, 2015)

1.3. Sub-goals

- What are the reasons of the preservice teachers in social studies department to choose the project called "My Syrian Students"?
- What kind of activities did the preservice teachers in social studies do within the frame of the " My Syrian Students " project?

- What kind of problems did the preservice teachers in social studies experience and how did they solve these problems?
- What are the contributions of the " My Syrian Students " project to the preservice teachers in social studies?

2. Method

2.1. Design of the Study

The study was designed with case study method, which is one of the qualitative research methods. According to Merriam (2013), case study is the method in which a limited system is described and analysed in a detailed way. The thing that is to be studied should be a limited system such as only one person, program, group, organization etc. This study focused on a school, a group of 8 preservice teachers voluntarily servicing there and their experiences related to this school. As Creswell stated (2016) in case study method, detailed information is gathered with multiple information sources and the case analysis is conducted. In this study, thanks to experiences of the preservice teachers related to the activities that they conducted with Syrian students, the data was gathered through multiple information sources- semi structured interview, documents and reports- and then analysed.

2.2. Sample of the Study

The sample of the study consisted of preservice teachers studying their third year at Social Studies Education Department in the Faculty of Education of a state university in Republic of Turkey during the academic year 2017-2018. Some activities were performed during 7 weeks by the preservice teachers in a state-funded secondary school in the city center where the university is located. In the study, the opinions of totally 4 preservice teachers were received on these activities. Sampling of the study was performed according to criterion sampling, a type of purposeful sampling. Yıldırım and Şimşek (2013) suggested that purposeful sampling enables in dept analysis of the cases that are considered to have rich information. In the criterion sampling, a type of purposeful sampling, the criterion used was "participating in the project voluntarily and not having experience and knowledge about the educating of Syrian students. The group went to the school regularly every Friday and conducted activities for about 3 hours daily during 10 weeks. Since the size of the sample is just a case considering the focus group of the study, working with a group of 8 was considered to be satisfactory. Moreover, when weekly reports and studies were analysed, it was seen that notions and processes started to repeat and data saturation was observed with one group.

2.3. Roles of Researcher

The researcher in this study don't have the role of participant, he watched the process, conducted the focus group discussion and analysed the related documents and reports. The researcher has been following social project and community service practices courses closely for about 5 years and has certificates of appreciation within the context of community service practices and carry out studies on social projects.

2.4. Data Collection Tools

The data of the study was gathered through document analysis (reports, photographs, magazine article) and semi-structured interview.

Semi-structured interviews were performed in social studies seminar room. The room had a u-shaped table as well as adjustable and comfortable chairs. For the interview, 7 questions that are suitable for a conversational atmosphere and daily language use were prepared. Depth interview was tried to be performed with 8 probes emerged during the interview. In the preparation process of the questions, the literature was reviewed and right after forming first draft of the items, opinion of an expert in the field was referred to. The piloting of the questions was conducted with some preservice teachers formerly accomplishing projects in the community service practices course. The interview was fulfilled by the researchers. It took one hour.

Diaries: The diaries kept by the preservice teachers after each week's activities are reviewed.

2.5. Analysis of Data

The data obtained from interview was analysed with descriptive analysis method. In this method, the data gathered is summarised and interpreted according to the pre-determined themes. The data can be arranged considering the themes on which the research questions center (Yıldırım and Şimşek, 2013). In this study, the data was also designed according to the themes on which interview questions focused. The analysis of the data was conducted in the following process:

- For descriptive analysis, the frame was designed according to interview questions. The themes that were dealt with were the reasons to choose the project, the contribution of the project, problems encountered in the project, recommendations for the project, the project and course relationship and the opinions of other stakeholders.

- Right after determining the thematic frame, the next step was processing the data. The interview was transferred to computer medium without making any changes and 16 pages of data was gathered. The data was shown to the participants and they were informed that they would remain anonymous and the data would be used for scientific reasons. The coding was conducted first and then themes were put into the final form. The main themes were determined with agreement-disagreement method.
- In the following step, the findings were started to be described. Under each theme, direct quotations were presented.
- Finally, the findings were interpreted so as to reveal cause effect relationships.

2.6. Credibility, Transferability and Consistency

In the study, regarding the credibility, expert opinion was referred to, participant confirmation was achieved. While preparing the questions for interview, expert opinions were obtained from field experts and Turkish education experts. After the whole study was finished, it was examined by the experts in the field. After the interviews, the participants were provided with the last version of the study and asked if there were any parts to be corrected or clarified to maintain member checking. Member checking was carried out through a specific meeting for this purpose.

Within the scope of transferability in the study detailed description was performed and purposeful sampling was used. After the data obtained from interview was described comprehensively, direct quotations were often given place to. For purposeful sampling, criterion sampling was used.

In order to maintain consistency in the research, during the coding process of the data gathered from the interviews, consistency in conceptualisation was taken into consideration.

As for the confirmability in the study, the coding and results of the study were examined by the expert in the field.

2.7. Ethical Issues

The participants of the study participated in “My Syrian Students” projects voluntarily. Their consent was taken to conduct interviews. After the study was finished, the results that they had been waiting for excitedly were checked and then confirmed by them again. Symbolic codes were used in the quotations (Turkish teacher:T; Teacher trainees:TT. Data gathered from interviews will be kept in archives for a while.

3. Findings And Discussion

3.1. The prior knowledge and attitudes of teacher trainees about Syrian students’ education in Turkey

All teacher trainees participated in the research study stated that they do not know anything about Syrian students’ education (TT3 “I do not know anything about it”). Teacher trainees have a positive view about Syrian students’ attending in the Turkish National Education System but they have a negative view about the process after (TT1 “When we think that they will live in Turkey from now on, it is a correct decision for them to attend in the Turkish National Education System. However, this process could be hard because the main problem is language”).

3.2. What problems should be resolved about Syrian students?

When we compare the expressions of the school principal and Turkish teacher who teaches Turkish in the preparatory class and the observations of teacher trainees in the process, we have the following problems:

Learning Turkish: Turkish teacher states that Syrian students do not want to learn Turkish because they think that they would return to Syria because they have acquaintances who have already returned to Syria. However, when the diaries of teacher trainees have examined, it can be understood that Syrian students have learnt Turkish (TT2 “There is no problem in their understanding, there is not much trouble in their speaking, too”).

Cultural differences: It is seen that there is not a hand washing habit, there is a difference in eating and drinking culture, and there is a cultural difference in not holding hand. When the diaries of teacher trainees have examined, it is seen that holding hand is not a problem, students have held their hands during plays (TT1 “We saw that there was no problem in holding hand as the teachers said before. When we said them to make a circle, everyone held their hands and made a circle”). They have done activities for other problems.

Family: Parental indifference (not attending in parents’ meetings, not preparing student for school in the mornings depending on sleeping until late hours, T “I am calling the family but they do not come”), early marriages (there are some engaged students in the secondary school, T: I have a thirteen-years-old student, their parents do not send him/her to school because he/she will marry), violence, non-communication among family members, the integrity of the family.

Physiological and economic need: It is underlined that the number of children who do not get enough food is high and this situation affects learning very much. It is also emphasized that there are students working for economic

needs (T “Most of the children are hungry, I want support for this problem. They are hungry until 3 o’clock”). It is stated that there is no problem with the clothing in the diaries (TT2 “In general, their appearances are neat and tidy, but they do not have school bags, they come to school with nylon bag”).

The desire of violence: It has been underlined that violence tendencies are more common depending on the family, but it is emphasized that they do not have peer violence and they see it as a form of communication (T “They communicate by hitting each other. It is normal for them”). It is also said that they swear in Arabic and Turkish. A teacher trainee’s diary also confirms this. (TT4 “I heard they used insulting words for each other”). When we examine the diaries, it appears that there are some opposite statements about negative behaviour which containing violence (TT4 “They are generally fine. They are very respectful”).

Get engaged at an early age, the worse it has been adopted: The point that needs to be emphasized seriously is the engagement of students in their 11-12 year olds (most of them get engaged with the people older than them) and the worst thing is that they have adopted this situation. (TT 2 “Our another student give this respond ‘I am angry when somebody says bad word to my love’, then we have learnt that she is engaged with a man, 24-25 years old and her fiancé works”).

3.3. The Activities Done

Activities done by teacher trainees in their projects called "My Syrian Students" in the context of the Community Service Practices Course are:

Meeting and warming towards each other: It seems that the first week has been completed with meeting games, cake and beverage delivery and role-model interview activities. When the meeting games are examined, it seems that they are creative drama based. Activities have been done at the school garden because they are action-based. Activities have been held at the school grounds because they are motion-based. Before they started the games, they introduced themselves and stated their goals. They then played the games they planned (TT 1: We went to school garden. When we went outside, we told them what our aim was, why we were there, what we were going to do, and then we did our first meeting activity which was called ‘tell your name with an action’). The dodgeball was played in accordance with their wishes to warm towards each other. After the games, in order to eliminate the hand washing problem, female teacher trainees started the hand washing habit with the girls and the male teacher trainees started the hand washing habit with the boys. Then, they went to the class and cakes and beverages were provided (it is seen that physiological needs are also important). Male teacher trainee (TT4) who already knew Arabic performed the role model activity through his own story. This activity has been shown to be effective (TT3 “Our friend, TT4, took their attention with an effective speech. Even after this talk, the students started to ask questions”).

The importance of communication and introducing the Turkish Culture: It draws attraction that robot touring game, one of the warm-up games, have been played for the importance of communication. It is stated that the purpose of the game is to show the importance of communication (TT2 “We have tried to show them how difficult it can be to communicate and negotiate by doing this activity”). As a second activity, it appears that a presentation related to the importance of the language was prepared and some materials in the presentation were explained by dramatization. (TT1 “We tried to explain the importance of this topic with the help of the presentation we prepared on the importance of language. TT4 and TT3 explained some items by dramatization so that they would not be bored while listening to the presentation”). It has been seen that introducing Turkish culture is at the forefront. The role-model interview seems to have been done again as the third activity. Moreover, a role model (a journalist who came to Turkey from Syria) are presented. Until this stage, teacher trainees seem to be willing to design an activity, use activity-based tasks, give importance to draw attention, and use the activities which are relevant to the topic.

The topic is over: It seems that teacher trainees have started with their warm-up games every week. In the third week “wolf father” game was played. Looking at the content of the game, it appears that it is intended to warm up but it is not related to the subject. (TT4 “First, we played 'wolf father' game as both a warming towards each other and a warm-up game”). Teacher trainees have begun to think that the topics related to the importance of Turkish language and cultural education are handled enough, and there is no more activity to be done. They have organized a game-based activity in an academicians counselling to identify new problems. The result of the game which is sticking happy and sad emojis on the wall and expressing their emotions by throwing ball shows that Syrian students have problems which every students can have. This may give us a clue that Syrian students in Turkey have a normal student life. The only extreme problem is getting engaged at an early age.

Picnic and theatre activity: It is seen that teacher trainees gave up the activities related to the importance of communication and culture teaching and turned into the activities aiming at enjoying in the following weeks. (TT2 “Our goal here is to have fun together and most importantly to bring them together the theatre”). It appears that there are also students who cannot get permission from their family, which confirming the family indifference which is included in the problems.

On values and cultures: Teacher candidates have noticed two things. The first one is the activity which Syrian students have always wanted is game. Secondly, out-of-class activities are distracting. For this reason, activities are done in the class. Teacher candidates are seen to have an interview activity both for themselves and for Syrian

students to recognize their culture. While doing this, the point that they are paying attention to is the warning of the course adviser: “not to make them adopt the culture, both they should know that their culture will be preserved but to know the culture here is for their benefit”. We generally see that the culture is usually dealt with through food culture. Because when the teacher pointed out the difference in culture, he/she stated the spice odor density in the class as a problem. Understanding their culture and introducing the Turkish food culture have been aimed. (TT1 “We started with the food culture and they said that they ate the food at the floor table. We mentioned on the food culture in the east and west”). Then, it is seen that some general etiquette rules in society are mentioned: giving seat at a bus, not taking anything from their neighbor’s garden without permission, not smoking. It seems that there is also a conversation about the problem of early engagement, which is seen as an urgent situation determined the previous week. It is seen that in order to draw attention on this situation, TT1 gave some examples in his/her life. It is seen that the role modelling activity is also carried out here.

Respecting cultures through local games: After the activities aiming at entertainment, it is seen that the activities related to the culture have started to be done after the warning of the counsellor. After the meeting game, it is seen that the teacher trainees are learning the local games of the Syrian students and playing together. They stated that they did it to show that they respect their culture. (TT 4 “After the game we played our local games with our students. It has become a good tool to show that we respect our students’ cultures and values and do not exclude them”).

Saying goodbye and evaluation: It is seen that the teacher trainees have left with emotional satisfaction from the project which they started with anxiety (TT2 “Firstly, I was anxious about the project because I did not know how it would be, but in the last week, I was sad”), have observed the positive changes in the target group (TT2 “The most important thing they said: ‘We will continue to the school, won’t leave it, we will be a teacher like you’). In the last week, they finished the project by carrying out an activity on what the students have gained. Of course, there are still problems. This study is a problem of the continuing of girls’ education lives which we confront again and again (TT2: While my male students answered confidently, my female students said I wanted to be a teacher ashamedly. They also added: Of course, if my parents give permission”).

4. Result and Discussion

Teacher trainees who participate in the research have a positive attitude towards the education of the Syrian students, this is a situation that makes happy when it is thought that there are some research studies (Topkaya ve Akdağ, 2016) including social studies teachers who have partly negative attitude. When we deal with the expressions of the teacher trainees, it is seen that they only consider ‘language’ as a possible problem related to Syrian students’ education. The relevant literature also supports their assumptions in this regard: Language problem, in other words, the difference of language and alphabet (ERG, 2016: 46) is the first problem of the Syrian students who enrolled the schools (ÇOÇA, 2015; Gözübüyük Tamer, 2017: 131).

Due to language problems, the level of education of Syrian students is not at the enough level (Sağlam ve Kanbur 2017: 310). They also confirmed that there was a problem in the school where they carried out the project in the result of the interviews with the Turkish teacher. However, they limited themselves to the importance of Turkish language within their competence. Although they did activities on the first week in terms of language, it is seen that they did not include this topic in subsequent activities because they realized that Syrian students could communicate in Turkish in the process.

It is seen that activities with the intention of introducing Turkish culture are frequently tried to be included. It has been seen that cultural promotion events are not held for a few weeks and when they are done, they are confined only to food culture and certain rules of etiquette and they are forced to attend new activities. It is suggested that teacher trainees should educate social science teacher trainees about the activities that will enable the Syrians to acquire the cultural characteristics necessary for living with the Turks.

Activities are generally based on play, dramatization and conversation, and there are no different activities. It is recommended that such projects include alternative activities. Particularly, students’ demand of playing game draws the attention. In the relevant literature (Gökşen, 2015), it is suggested to play games for Syrian students especially for therapy.

The project has contributed both to teacher trainees and Syrian students. This achievement is affective satisfaction. When we look at the purposes of community service practices, it seems that such a gain is requested (Kamer, 2009). However, it seems that the gains are not sufficient. It is recommended that such projects be well structured and that certain learning objectives be set at the beginning of the project.

One of the educational situations that arise in the project is the continuity of the educational life of the girls, especially. It is known that parents are not willing to send girls to the school (Seta & Theirwold, 2017).

It is also emphasized in the relevant literature (Gencer, 2017) that there is an equal enrolment rate for males and females in primary and secondary schools but this ratio changes against the females in secondary education, marriage at an early age and females who cannot get permission from their parents to go to school are obstacles to schooling and steps should be taken in this regard.

A Community Service Practices Course Project Model: Social Cinema

Kudret AYKIRI
Pamukkale University
kaykiri@pau.edu.tr

Abstract

The aim of the study is to investigate the opinions of preservice teachers in social studies department related to the community service practices course project called "social cinema" whose target group is students in village primary and secondary schools. In accordance with this purpose, the study was designed with case study method, which is one of the qualitative research methods. The sample of the study consisted of 8 preservice teachers studying their third year at Social Studies Education Department in the Faculty of Education of a state university during the academic year 2017-2018. Sampling of the study was performed according to criterion sampling, a type of purposeful sampling. The data of the study was gathered through semi-structured interview and photographs. The data was analysed with descriptive analysis method. At the end of the study, it was found out that the reasons for choosing this project, contribution of the project to preservice teachers, the problems they encountered in the project and the solutions they found, suggestions for the persons who will carry out similar projects.

Key words: *Social Project, Community Service Practices, Equality of Opportunity in Education Preservice teachers in Social Studies Department*

1. Introduction

Awareness towards global problems is much lower than the desired level. In order to raise awareness to these global issues, probably the most effective way is to raise conscious people, and so universities, nongovernmental organizations and political corporations should carry out projects that are realistic and applicable (Aydın, 2016, preface). On the university basis, these projects are conducted through scientific studies, or based on voluntariness, or within the framework of courses. The project "Social Cinema" conducted by preservice teachers who are in a department of social studies at a state university, is project that starts with volunteering and integrated into community service practices course. This project, which is based on school-based, well-known activities, is concerned with the relationship between social studies preservice teachers and community service practices course and it is discussed contributions of project.

1.1. The Aim of the Study

The aim of the study is to investigate the opinions of preservice teachers in social studies department related to the community service practices course project called "social cinema" whose target group is students in village primary and secondary schools.

1.2. The Importance of the Study

It is believed that the result of the study is of critical importance as it enlightens issues such as the activities, the problems experienced and the solutions related to these problems for preservice teachers who will carry out a project aimed at students in village primary and secondary schools in community service practices course. It is possible to obtain information on many activities carried out in schools. However, there was no scientific study of these activities.

1.3. Sub-goals

- What are the reasons of the preservice teachers in social studies department to choose the project called "social cinema"?
- What kind of activities did the preservice teachers in social studies do within the frame of the "social cinema" project?
- What kind of problems did the preservice teachers in social studies experience and how did they solve these problems?
- What are the contributions of the "social cinema" project to the preservice teachers in social studies?
- What are the suggestions of the preservice teachers in social studies for those who will carry out similar projects to "social cinema"?
- Is there a relationship between our social cinema project and community service practices course according to the opinions of preservice teachers in social studies?

2. Method

2.1. Design of the Study

The study was designed with case study method, which is one of the qualitative research methods. According to Merriam (2013), case study is the method in which a limited system is described and analysed in a detailed way.

The thing that is to be studied should be a limited system such as only one person, program, group, organization etc. This study focused on a school, a group of 8 preservice teachers voluntarily servicing there and their experiences related to this school. As Creswell stated (2016) in case study method, detailed information is gathered with multiple information sources and the case analysis is conducted. In this study, thanks to experiences of the preservice teachers related to the activities that they conducted with students in primary and secondary, the data was gathered through multiple information sources- semi structured interview, documents and reports- and then analysed.

2.2. Sample of the Study

The sample of the study consisted of preservice teachers studying their third year at Social Studies Education Department in the Faculty of Education of a state university in Republic of Turkey during the academic year 2017-2018. Some activities were performed during 10 weeks by the preservice teachers in a state-funded secondary school in the city center where the university is located. In the study, the opinions of totally 8 preservice teachers were received on these activities. Sampling of the study was performed according to criterion sampling, a type of purposeful sampling. Yıldırım and Şimşek (2013) suggested that purposeful sampling enables in dept analysis of the cases that are considered to have rich information. In the criterion sampling, a type of purposeful sampling, the criterion used was "participating in the project voluntarily and participating within the course". Since the size of the sample is just a case considering the focus group of the study, working with a group of 8 was considered to be satisfactory. Moreover, when weekly reports and studies were analysed, it was seen that notions and processes started to repeat and data saturation was observed with one group.

2.3. Roles of Researcher

The researcher in this study don't have the role of participant, he watched the process, conducted the focus group discussion and analysed the related documents and reports. The researcher has been following social project and community service practices courses closely for about 5 years and has certificates of appreciation within the context of community service practices and carry out studies on social projects.

2.4. Data Collection Tools

The data of the study was gathered through document analysis (photographs) and semi-structured interview. Semi-structured interviews were performed in social studies seminar room. The room had a u-shaped table as well as adjustable and comfortable chairs. For the interview, 7 questions that are suitable for a conversational atmosphere and daily language use were prepared. Depth interview was tried to be performed with 8 probes emerged during the interview. In the preparation process of the questions, the literature was reviewed and right after forming first draft of the items, opinion of an expert in the field was referred to. The piloting of the questions was conducted with some preservice teachers formerly accomplishing projects in the community service practices course. The interview was fulfilled by the researchers. It took four hour. In addition, photos taken during the action phase have been examined

2.5. Analysis of Data

The data obtained from interview was analysed with descriptive analysis method. In this method, the data gathered is summarised and interpreted according to the pre-determined themes. The data can be arranged considering the themes on which the research questions center (Yıldırım and Şimşek, 2013). In this study, the data was also designed according to the themes on which interview questions focused. The analysis of the data was conducted in the following process:

- For descriptive analysis, the frame was designed according to interview questions. The themes that were dealt with were the reasons to choose the project, the contribution of the project, problems encountered in the project, recommendations for the project, the project and course relationship and the opinions of other stakeholders.
- Right after determining the thematic frame, the next step was processing the data. The interview was transferred to computer medium without making any changes and 32 pages of data was gathered. The data was shown to the participants and they were informed that they would remain anonymous and the data would be used for scientific reasons. The coding was conducted first and then themes were put into the final form. The main themes were determined with agreement-disagreement method.
- In the following step, the findings were started to be described. Under each theme, direct quotations were presented.
- Finally, the findings were interpreted so as to reveal cause effect relationships.

2.6. Credibility, Transferability and Consistency

In the study, regarding the credibility, depth oriented data was tried to be collected, expert opinion was referred to, participant confirmation was achieved. In order to collect depth oriented data, probes were included during the interviews. While preparing the questions for interview, expert opinions were obtained from field experts and Turkish education experts. After the whole study was finished, it was examined by the experts in the field. After the interviews, the participants were provided with the last version of the study and asked if there were any parts to be corrected or clarified to maintain member checking. Member checking was carried out through a specific meeting for this purpose. Member checking meeting was photographed with the consent of the participants. This evidence will be kept in archives for a while.

Within the scope of transferability in the study detailed description was performed and purposeful sampling was used. After the data obtained from interview was described comprehensively, direct quotations were often given place to. For purposeful sampling, criterion sampling was used.

In order to maintain consistency in the research, during the coding process of the data gathered from the interviews, consistency in conceptualisation was taken into consideration.

As for the confirmability in the study, the coding and results of the study were examined by the expert in the field.

2.7. Ethical Issues

The participants of the study participated in social cinema projects voluntarily. Their consent was taken to conduct interviews. After the study was finished, the results that they had been waiting for excitedly were checked and then confirmed by them again. Symbolic codes were used in the quotations. Data gathered from interviews will be kept in archives for a while.

3. Findings

3.1. The Name and Content of the Project

The social cinema project has started on voluntary basis in the second class (TT4 “This project is a project entirely on a voluntary basis”) and then integrated into community service practices in the third class. The project name is given by the teacher trainee (TT2) who is the initiator of the project. It is seen that he/she gave this name because he/she has wanted to attribute to the social sciences teaching department and also he/she has thought that the most deprived activity in the project is cinema (TT2 “This name emphasizes on the cinema activity, one of the most important activities, as well as attributes to the social studies teaching department. The reason of the importance of cinema activity is that other activities can be reached everywhere, but there are certain places for cinema”). Although there are some group members who found the name suitable, there are also some members who think that ‘social’ term is suitable but ‘cinema’ term should be changed because the project covers many activities, not only cinema. What are these various activities: (a) wearing theater costumes and clown clothes, make-up and then many children games aiming at warming towards each other (dropping the handkerchief, skipping rope), playing games that are played with ball (volleyball), and dancing with music. (b) Revised Snow White and Seven Dwarfs Show. (c) Aşuk and Maşuk show. (d) hand, face painting and handprint, (e) various catering (fruit juice, cake, candy, chocolate, etc.), (f) constituting a box office, giving tickets, popcorn and beverages and getting them to watch an animation film, (g) organizing traditional competitions with book reward (gunnysack race, tug of war) and finally, having a souvenir photo taken with all students and group members.

3.2. The reasons for carrying out the project

So why did they volunteer for such a project and they continued the project in the second year? It seems that the main reason of the teacher trainees for carrying out this project is to eliminate the inequality of opportunity to some extent (TT2: “the difference between the children live in rural areas and urban areas”) that they have observed and experienced (“We have seen, known and experienced (TT8)”) before.

Although the preparation of the project is a long time period, the stage of action lasts for one day. Here the question of how much equal opportunity can be achieved comes to mind. Teacher trainees are aware that their activity is short and limited (TT3 “Even if it was only a day”). However, it is believed in the affect that will create and it is seen as a secondary goal to enable the target group to achieve cognitive and affective gains with magic touches (TT8 “We want to show a different world, to arouse curiosity, to contribute to their future dreams and visions”).

The purpose of teacher trainees was not a romantic “TT8: romantic” attempt with their own statements. The activities they did were not “a favour, a donation, etc. (TT8)”. It is perceived they were right-based. Although they have emphasized on the gain of “smile” in their purposes, it seems that they have had profound and prospective aims and they have not had an aim like “Everybody laughed, was happy and it was over” (TT8).

Another aim of teacher trainees is to experience teaching experience. It is already seen as an important experience for teacher trainees “to be together with the students, understand their desires, needs, feelings and thoughts” (TT6).

In the teacher trainees expressions, it was also seen their having the value of altruism as a trigger factor (TT7 “We were volunteer to do this, it was not a content of a lesson, we carried out this project because we really wanted to reach these students and make them happy”).

Teacher trainees can always serve as a volunteer for specific purposes. But the answer to the question why the similar service is done next year comes to an important condition. The answer is the feedback from the target group (TT5 “to have a smile on children's face”). It is seen that the feedback reinforces the teaching love that exists in the teacher trainees and that it provides the continuation of the project. It is also seen that the sensitiveness value that can be considered as one of the project gains is important in the continuation of the project (TT2 “when the school where the activities done and the situation of the children at this school are seen, the students at the other schools are thought and they are asked to do something for them”).

3.3. The outcomes of the project

Values and skills contributed by the project are:

Teacher trainees express that they develop empathy when they prepare the activities (TT 3 “when we decided to carry out this project, we decided the activities by putting ourselves in their place”).

Teacher trainees state that while they were planning the activities, their creative thinking skills developed (TT1 “we tried to find creative activities in order to offer better and more enjoyable time. This situation has contributed to our creative thinking skills”).

Since the teacher candidates must make effective presentations when they are looking for sponsors and also the students they will talk to are talking with the dialects belonging to the local people, they must express an effective speech. It is stated that this situation has made contribution to use the Turkish language skill well and correctly.

“Cooperation” is the value that two teacher trainees (TT2 and TT 8), one of them being project manager, regards as the most important contribution (TT2 “The most important contribution of this project is cooperation. Because you want to do something and you have a very nice project idea. However, this alone is not enough. You cannot suffice to everything...”). It also seems to have contributed to the intra-group communication and collaboration skills related to the cooperation (TT1 “We carried out this project with a group. For this reason, our intra-group communication skills and cooperation skills”).

Teacher trainees seem to provide emotional satisfaction (TT7 “First and most importantly, I felt good because I made those children happy”).

During the project preparation phase and the project action phase, it is seen that the teacher trainees encounter many problems and find solutions to these problems (TT1 “Both before and during the project, they had to find immediate, fast and effective solutions to the problems that occurred during the project. When we look at it from this side, it has made positive contributions to our problem-solving skills”).

3.4. Encountered problems and the solutions to these problems

The problems encountered during the project are:

Teacher trainees have indicated that the budget is the most important problem (TT 5 “The biggest problem was the fund problem”). It is seen that they solve the budget problem by holding a kermes in the universities they are affiliated with and separating the settlement of Denizli city center by regions and looking for sponsors in groups (TT3 “we found a solution by separating the fund into groups and making sponsor negotiations”).

Finding the costumes, which is related to the budget but is a more specific issue, draws attention as another problem. It is understood that this problem is solved by asking for the groups in the university, renting from the shops and creative touches to individual costumes (TT5 “it was difficult to find a costume for the activity. We also collaborated with other groups, rented them, and solved them with our own costumes”).

The action phase of the project takes a full day, but the preparation phase involves a long period of time. For this reason, the time problem emerges as another important problem (TT5: “Those who have decided to do the project are beginning to realize that this project is a tiring and a long process). This problem seems to be due to the fact that the project is not structured, namely not well planned (TT 5 “they should dot the i's and cross the t's”). It appears that self-devotion has been made as a solution (TT7 “sometimes we had time to go home late, we could not sleep”).

During the project preparation phase, there was a problem of finding an activity that is linked to the time problem (TT5 “it was a problem that the project would not include what activities were involved in the project at the planning stage”). It can be thought this situation is originated from that these teacher trainees have started the project in the second grade and they have not taken any lessons to design educational activities. For this reason, it is seen that the activities are very well known events (theater and cinema, competitions). They stated that they used voting and consensus techniques when setting events (TT3 “We decided that activities by stating our own opinions, voting these opinions and then we chose the activities best rated”).

School directors and even teachers' apathy to the project was seen as a major problem (TT8 “The second major problem was the lack of interest and communication of school directors. Besides, the teachers were indifferent,

too. They only preferred watching). This problem seems to have been partially solved by individual efforts (TT2 “doing everything by yourself and not expecting everything from the school management are the things wanted”). The impossibility of the school was expressed as another problem (TT1 “we have problems arising from the impossibility of the school”). They seem to have solved these impossibilities by individual efforts (TT1 “we took for the missing things such as projector, sound system, etc. by providing from our university”).

Decision of the school where the project will be carried out is expressed as one of the important problems. It has been tried to find a school that was in need (TT5: “Choosing a school was one of the biggest problems. Because determining which school really needs this project was a big problem”). It has been seen that this problem has been solved by talking to the municipality. As the second problem related to school determination, we confront with the bureaucracy (TT1 “It was one of the important problems to get official permissions and solve the problems”). This problem seems to have been solved by planning as an activity of the project student group and taking the permission through this group (TT3 “We found a solution by showing official things under the club name”).

It was stated that the transportation problem was also experienced and this problem was solved through the municipality (TT5 “We had the transportation problem but the municipality solved it”).

When the suggestions part is taken into consideration, there is a problem that there must be some values for group work. It is emphasized that mutual respect value is important (TT2 “They must respect each other and care about each idea”).

When the suggestions part is taken into consideration, it is seen that project introduction is a problem (TT8: “and most importantly they should promote the project for its future”). They also emphasized the need to promote with social media (TT3 “Social project activity should be promoted on the social media”). At the same time, it was emphasized that “the photos of the events should be combined for the interview with the authorities in the school” (TT3) and the brochures should be prepared.

In sum, it is seen that the teacher trainees faced with many problems and found solutions to them. In this process, the importance of “patience” value was understood from the expressions (TT4 “They must first be patient, they should not give up because of the first problem they have and they should go over the problem”). It was stated that they will receive the reward of being patient with the feedback from the target group (TT6 “The smiles of the students take away all the tiredness”, TT4 “They should put all of them in the background when they think children’s happiness”).

3.5. The Relevance of Community Service Practices Course

Teacher trainees stated that if the social cinema project is taken within the scope of the course, it will be carried out for being “compulsory” and “taking notes”, so it should be based on “volunteerism” (TT5 “To me, making such a good project under a course to take note reduces the value of the project. Such volunteerism and willingness increase this project’s value”).

Teacher trainees who stated that they are related to the community service practices, established this relationship because they saw children as a part of the society (TT1 “Social cinema is a project of community service practices course. Because it appeals to a target audience within the society”). Nevertheless, they make feel from the continuation of this expression that it should be based voluntary.

It is also non-negligible that there is a facilitative function of the course in formal procedures (TT3: “Only for the formal procedures, it should be shown in the scope of the course”).

When talking about volunteering, it is seen that the value of altruism is emphasized (TT5 “It must be done voluntarily without waiting for nothing”).

In sum, the social cinema project has been linked to the fact that it is based on volunteerism, emphasizing the value of altruism, if it is in the scope of the course, it will be considered as compulsory and taking notes, serving only children who are in a part of society.

4. Result And Discussion

The social cinema name is based on the attribution to the identity and the most valuable activity in the project. The project is not just about cinema activity, but about eight separate events.

The real purpose of this project is to provide equality of opportunity, at least partially as a right. The initiating factors of the project are teaching love and altruism value. The factors that enable the project to continue are the feedbacks from the target group and the sensitiveness value it generates.

It is seen that the project has made contribution to the teacher trainees’ developing empathy, creative thinking, speaking Turkish language well and correctly, problem solving, communication and cooperation skills, the values of cooperation and sensitiveness and also it is seen to make students have an emotional pleasure.

When we look at the purposes of community service practices course, it seems that the teacher candidate should gain the benefits such as improving the sensitivity to social problems, defining the society, and tasting the pleasure of serving the community (Kamer, 2009). It is also parallel to the findings of other studies (Çetin ve Sönmez, 2009;

Tanrıseven, Üredi, ve Yanpar Yelken 2010; Yılmaz, 2011) in which the community service practices is useful to teacher trainees

Teacher trainees have emphasized that the project should remain voluntary based by linking to the value of altruism. It is known that there is altruism value (Furco, 1996, s.4) in the nature of volunteerism in their participation in activities in which they focus on the services they are supposed to benefit and the benefits of the service recipients.

In the light of these findings, it is suggested to study the contribution of the project for the teacher trainees in detail and specially, and also it is suggested that those who want to gain these contributions by carrying out this project should examine the experiences of the people in this study well.

Abstract

Committed to the highest standard of quality in the provision of higher education in the professional field of civil engineering technology, a comprehensive Quality Management System (QMS) was developed as the essential framework to effectively oversee the QA&QC processes as well as to meet the stakeholders' expectations at all levels. The fully online integrated system captures real-time data for continual monitoring anytime, anywhere. It comprises of 3 primary sub-systems, namely the Student Assessment System (SAS), OBE System (OBESys) and the Student Information System (SMP), which are harmonized with the greater university-wide anchor system named Total Campus Integrated System (TCIS), incorporating all ancillary arms in the operation of the institution. This paper explains on the operational environment supported by the various centralized offices related to academic and non-academic development of students, such as the Academic Management Office, Information Technology Centre, University and Industry Relation Office, among others. The policies and mechanisms adopted for attracting and retaining outstanding staff on board is also discussed, in conjunction with a constructive and supportive leadership at the helm. In addition, assessment mechanisms for both staff and students are elaborated to show the holistic monitoring and close-the-loop improvement exercises in place for effective QA&QC. Besides, participation of the industry via programme review, industrial engagement at course level, research and consultation projects and others are highlighted to ensure relevance of the engineering technology programme with current market needs and expectations. In a nutshell the QMS executed is shown to not only coordinate but consolidate the various work processes in the machinery of the University, ensuring the seemingly stand-alone offices to have their outputs seamlessly advanced to the overall good performance of the academic programme.

Introduction

Quality assurance and control as well as quality management systems are not modern notions. Ancient Egyptians defined quality as 'a sign of perfection', such as demonstrated in the architectural precision and aesthetics of the royal tombs of pyramids (Elshennawy, 2004). In the academia, quality could be interpreted as relating to academic standards (Cheng, 2011), though Brink further elaborated that quality could be the answer to the question of 'is it good?', while standards address the question of 'is it good enough?' (Brink, 2010). However, quality in education is closely related to 4 main purposes: preparation for sustainable employment, preparation for life in a democratic society, personal development as well as development and maintenance of a broad knowledge base, i.e. lifelong learning (Bergen, 2011). Assessment of stakeholders' satisfaction on the educational processes, organisation and outcomes would serve well for institutions of higher learning to take necessary and timely preventive or corrective measures to upkeep the quality of the programmes offered, though the reliability of the inputs depend very much on the techniques and instruments adopted to acquire data (Ham & Hayduk, 2003).

Continual Quality Improvement

For continual improvement, the educational programme is evaluated regularly to keep in line with current development and to align it with the needs of stakeholders. In this regards, the Faculty, as well as the University have applied a comprehensive PDCA (Planning, Doing, Checking and Acting) cycle to ensure successful execution of all processes related to PEOs, PLOs and CLOs. The PDCA cycle of the overall quality management at different levels. At the University level, the PDCA cycle is fundamentally framed on the basis of the University's long term strategic plan (UTHM Blueprint). The University's blueprint as outlined in the central policy framework is supported by implementation of relevant processes involving the Faculty, its departments, units and individual staff members. The blueprint is revised accordingly whenever deemed necessary in order to ensure the set targets are systematically achieved. The quality assurance at this level is ascertained with annual internal auditing processes, i.e., the internal auditing, which are managed by centre for Academic Development and Training (CAD), and external auditing, i.e. ISO by SIRIM. The auditing ensures that the structure and quality of task implementation complies with set procedures and regulations. In addition, the University has also developed the Internal Complaints and Suggestions Channel System (SACAD), as one of the channels for students and staff to give feedbacks concerning the University at any time.

From Programme Outcomes To Quality Improvement

Figure 1 summarizes the overall inter-relationship between PEOs, PLOs and CLOs, which collectively contribute to the assessment of PLO attainment of the Programme. Represented in a pyramidal arrangement from bottom-up are the tasks / activities carried out and assessed in each course of the Programme, followed by the CLOs for each of the course, which cumulatively build up the respective PLOs or POs at a higher order, and finally culminating in the attainment of PEOs measurable after a certain lapse from graduation. On the left wing of the pyramid are listed the instruments of assessment for each component, namely SAS for gauging the attainment of CLOs at course level, OBESys for measuring the achievement level of PLOs cumulatively from the contributing CLOs throughout a student's study, and finally Tracer Study for evaluating the graduates' attainment of PEOs 3-5 years after completion of the Programme. Assessment data collected with the aid of the instruments are then analysed to identify the strength and weaknesses of the components in formulating short and long term improvement strategy for the Programme as a whole, i.e. close-loop CQI practices. Understandably, the intricately related system requires the change in one component to have an influence on the others to various degrees.

It follows that a discourse on the attainment of PLOs alone cannot illustrate the full picture of the effective further development and improvement of the Programme. The overall structure of the Programme would be affected in one way or another for every change made to any of the component. To address the particular concern of Criterion 2 in terms of adoption of the POs' assessment outcomes for improvement of the Programme, it is apparent from Figure 1 that the attainment level for each PLO for individual students can be retrieved and reviewed via the OBESys. Indeed, performance of the entire cohort of students can also be analysed for comparison purposes simply by the sorting function of the OBESys. These findings are then used for identifying unforeseen shortcomings, untapped potential as well as uncharted waters for betterment of the Programme. Also, these reports serve as useful references for reviewers of the Programme (e.g. External Examiner) to gain valuable insights of the Programme, guiding them to make informed decisions or recommendations in their reviews.

All these help make the process of making relevant and spot-on improvement to the Programme a timely and orderly one. The real-time data management of OBESys allows students' performance to be monitored closely, particularly in terms of the time-dependent, cumulative attainment of PLOs. In other words, review of the PLOs' attainment need not be postponed till the end of the student's study, but can be accessed and analysed at any point of time with a display of the accrued merits for each PLO. The following discourse details out the infrastructure for quality assurance and control of academic programmes in the University, primarily under the umbrella of quality management system, i.e. MS ISO 9001: 2008. In general, UTHM implements Quality Academic Practices under the systematic approach outlined in MS ISO 9001: 2008. Through the implementation of MS ISO, review of the academic curriculum in terms of stakeholders' input is conducted in accordance to RPK-02 Curriculum Review Procedures. The Tracer Study is also conducted to serve as an informative tool to ascertain the employability of graduates, preferred or dominant fields of work, potential career prospect, among others for continuous improvement of the Programme.

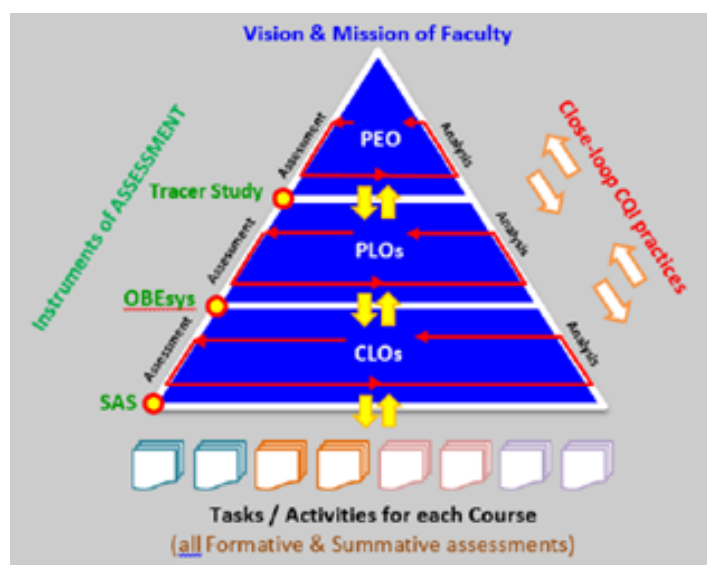

Figure 1. Hierarchical organisation and cross-relationship between the components for CQI at each level.

Continual Quality Improvement (CQI) is necessary and vital to ensure the sustained development and betterment of an academic programme with regular self-checks. It is necessarily implemented at all levels of a quality management system, such as found in the academia in providing value-for-money academic programmes of

assured quality. The improvement strategy and approaches must encompass the entire ecosystem of the institution, especially in the Programme's fundamental architecture, founding philosophy and aspirations. Therefore, the CQI processes cut across the board from the Programme to the Course levels as described below.

At the Programme level, CQI is implemented via various tools including Faculty Academic Committee meetings, OBE performance monitoring, Internal Quality Audit reports, University Strategic Action Plan, stakeholders' review meetings and external examiner reviews. At Course level, CQI is required for cases where students score less than 50% of the total marks. The CQI activities are subjected to the creativity and innovation of respective academic staff with considerations of the suitability. These activities could be in the forms of extra classes with additional exercises and/or teaching materials, individual tutoring sessions, as well as revisions and discussions on completed assignments and tests.

All in all the attainment of PLOs are shown to be supported by the assessment and attainment of CLOs from the downstream end, and supporting the evaluation of PEOs attainment on the upstream end (refer Figure 1). The CQI cycle at Programme and Course levels effectively extracts insightful data and findings as feeder information for review, revision and overall improvement of the Programme as a whole.

Evidence-Based Attainment Of Programme Outcomes

Meeting the PLOs via collective attainment of CLOs in the respective Courses are substantiated by a number of documented evidence. These evidences can be broadly divided into 2 categories: materials by academic staff and students (Figure 2). As shown in Figure 2, the materials prepared by the academic staff for a Course include the question papers and answer schemes prepared for tests and final examinations, with detailed cognitive domain analysis on differentiation of the difficulty levels as per Bloom's taxonomy. It also encompasses structured questions or problems for course assignments and projects (PBL exercises), questions and answers for oral examination of laboratory work, suitably themed Bachelor Degree Project (BDP) titles and scope, and other tasks assigned to students throughout the duration of study. From the students' end, evidence collected include project reports or assignments with accompanying visual aids in various formats (e.g. brochure, poster, video, model, etc.), as well as compiled in threes of the best, moderate and low achievers: answer scripts for tests and final examinations, laboratory reports, assignments, and other written work. Other evidence in this category can also be found in the reports and logbooks for Bachelor Degree Project, Industrial Training, field work, plant and site visits as well as industrial talks or seminars.

Taking into account that a holistic graduate should be equipped with both academic and non-academic skills or competencies, evidence of students' effort contributing to the attainment of PLOs also include records of the various activities organised by and/or participated in the Faculty and Departmental Student Clubs, university-wide student associations, sports clubs, uniform bodies and others. Students are encouraged to take part in national and international levels competitions too, such as language, cultural and sports events, both co-organised by the University or entirely managed by outside entities. These go on to show the academic prowess and extra-curricular aptitude of the students, leading to the attainment of PLOs which are essentially an epitome of the desired product of the Programme, i.e. an all-rounder graduates with a balanced flair to function as a member of profession and society in general.

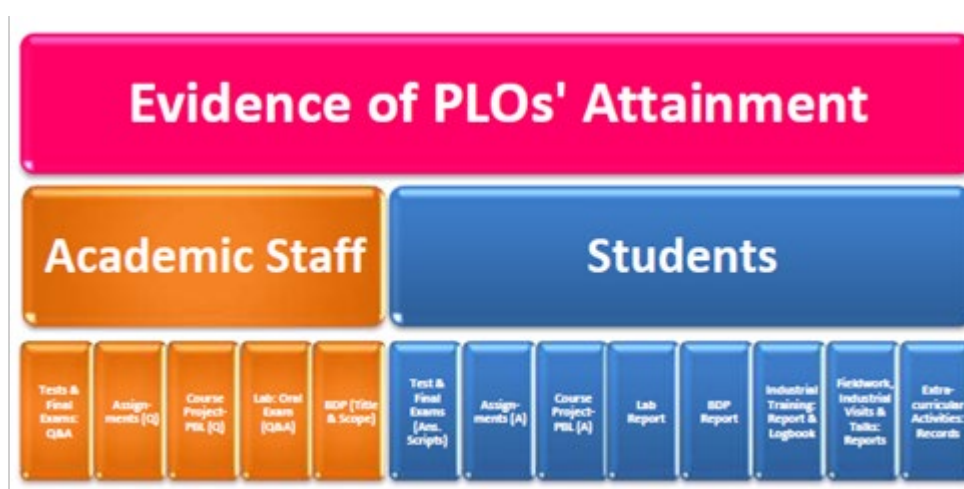

Figure 2. Evidence substantiating the attainment of programme outcomes.

Cqi For Quality Assurance And Control

The commitment of the University to quality assurance is demonstrated by the Quality Policy statement that strives to provide quality academic programmes that meet the stakeholders' satisfaction through excellent organizational management and continual improvement. Top management and staff at all levels are committed to practice and

maintain effective quality management satisfying MS ISO 9001:2008 certification standards.

The University Quality Objectives are implemented to ensure the achievement of the University's vision and mission. During Management Review Meeting, the Faculty Quality Objectives were also consistently reviewed. UTHM has been awarded the ISO 9001:2008 - Management of Academic Programmes. In 2004, 2008 and 2010, UTHM has passed the surveillance Audit excellently and the award was extended to 2016. There are now 68 procedures in total which are continually amended to accommodate new changes. Since practiced in 2001, the ISO 9001:2008 has become the motivation of quality academic programmes management.

For Continual Quality Improvement (CQI), annual ISO audit and academic audit are conducted for all Faculties' academic programmes. Three processes related to academic programme were proposed to be reviewed in the recent internal audit to ensure quality programme development and to address the requirements of OBE and stakeholders, namely academic programme development, academic programme review and implementation of lecture processes.

a. System for Examination Regulation

UTHM has established procedures for preparation of the final examination papers, in accordance with the ISO standard. The Academic Management Office (PPA) is responsible to monitor the workflow of the final examination regulation, beginning with the preparation of examination paper (RPP-12 Procedure for Final Examination Paper Preparation), assessment of the examination paper (RPP-13 Procedure for Final Examination Paper Specifications), preparation of the final examination (RPP-14 Procedure for Final Examination Service), and the submission of the final examination results (RPP-15 Procedure for Final Examination Collecting, Inserting, Checking of Marks). At the Faculty level, the Faculty Academic Office is responsible in monitoring academic staff's adherence to the work processes.

b. System of Assessment for Examinations, Projects and Industrial Training

i. System of Assessment for Examinations

At the Faculty level, the Examination Committee is responsible to manage the preparation, assessment and moderation of the examination papers. The questions for final examinations are Prepared by the academic staff according to level of Bloom's taxonomy that has been set according to the CLOs of the particular course. Table of Specification is used to ensure that the questions are correctly mapped according to the CLOs, during formative and summative assessments so that every CLOs and consecutively, PLOs could be assessed i.e. constructively aligned. In ensuring the quality of final examination questions, the drafts of the final examination paper undergo two levels of moderation processes. At first, the draft is vetted at the departmental level using the Vetting Form of Test and Final Examination, and should fulfil the following requirements:

- Compliance to ISO (RPP-15)
- Proper usage of terms
- Suitability of questions mapped to CLOs and learning taxonomies
- Suitability of examination duration with the course's number of credits
- Suitability of Level of Bloom's taxonomy

ii. System of Assessment for Final Year Projects

The procedures consist of several aspects including submission of Bachelor Degree Project title and proposal by students, appointment of supervisor, students briefing on Bachelor Degree Project, and approval of project titles by Head of Panels, supervision, and the Bachelor Degree Project assessment. Since Semester 1, Session 2016/2017, ePSM system, an online Bachelor Degree Project management system, was developed by Centre of Information Technology (PTM) for facilitating the implementation of Bachelor Degree Project. The submission of Bachelor Degree Project title and proposal by the students is conducted using the ePSM. In addition, the marks from supervisor and examiner panels are recorded in the system, before the coordinator of Bachelor Degree Project transfers the marks to SAS upon marks moderation.

ii. System of Assessment for Industrial Training

The assessment of students' performances for industrial training are divided into two stages, namely, the industry on-site visits by the Faculty supervisor and upon the completion of industrial training, with reference to RPP-11 Procedure of Industrial training (Supervision & Evaluation) and the University's Industrial Training Guideline.

c. System for Teaching and Learning

In order to ensure the quality of the teaching and learning process, each academic staff is provided with the Desk File, containing ISO procedures as a clear guideline and reference with their respective scope of work. Apart from appointing relevant stakeholders, the Faculty is continuously improving the quality of each programme by benchmarking exercises so the standard is appropriate or even better than programmes offered by other renowned

local and international universities. To date three benchmarking exercises were conducted with universities in Australia and also locally at UMP and UNIKL. Findings from the benchmarking exercises proved that the Programme is of appropriate standard and quality, locally and internationally. Good practices from other universities, including environmental engineering technology laboratory practices such as pilot scale system for water, wastewater treatment system as well as air pollution control devices were also introduced in the teaching and learning to enhance student's skills and competencies.

Conclusions

Quality assurance and quality control are essential to regular monitoring of an academic programme, as well as serving to promote continual improvement and upgrading of the supporting system. Inputs from various offices are consolidated to gauge, rectify and enhance the academic processes involved in the smooth running of the Programme. Such an integrated quality management system helps eliminate hiccups due to human errors, delays and unforeseen logistical glitches, while keeping real-time records of every element in the Programme even after the student has left the University.

Acknowledgements

Kudos to the Faculty's AA Team (academic and supporting staff) for the successful ETAC accreditation of programmes late last year.

A Conceptual Framework For 21st Century Distance Learning: Developing Computation And Computational Thinking

Şeref Mirasyedioğlu
Başkent University
serefm@baskent.edu.tr

Abstract

In the 21st century, scientific and technological innovations have become increasingly important as we face the benefits and challenges of both globalization and a knowledge-based economy. To succeed in this new information-based and highly technological society, all students need to develop their capabilities in science, technology, engineering, and computational mathematics (Rui Games Neves, Jorge Cavalho Silra, Victor Duarye Teotra, University Nova, Lisbon, 2016).

Computational thinking is seen as a skill set that every child needs to develop. It is related with a number of other 21st century competencies based on problem solving, critical thinking, productivity, and creativity.

The theory of computation (Anil Maheshwari, Michiel Smid, March 23, 2017) has and still been one of the core areas of applied mathematics. It explores the fundamental capabilities and limitations of models of computation. A model of computation is a mathematical abstraction of a computing system. The most important model of sequential computation studied in computer science is the Turing machine, first proposed by Alan Turing (1936). Mathematical abstractions called models of computation are at the heart of computation and computational thinking.

Computation is a process that is defined in terms of an underlying model of computation and computational thinking is the thought processes involved in formulating problems to which solutions can be represented as computational steps and algorithms.

In EDUsummIT (Chris Dede, Punya Mishra, and Joke Voogt, 2013), it was aimed to advance the discussion about computational thinking by focusing its core competencies, its relation with and distinction from other 21st century competences, and its place in the curriculum.

Advancing Computational Thinking is a specific follow-up of the more general discussion held at EDUsummIT 2011 on the importance and implementation of 21st century competences in terms of teaching and learning in a digitally networked world (Voogt, Erstad, Mishra & Dede, 2011; Voogt, Erstad, Dede & Mishra, in press).

Computational thinking represents a universally applicable attitude and skill set for everyone, not merely for computer scientists, would be eager to learn and use (Jeannette Wing, 2006, p. 33). Overall, Wing argues that this new competency should be added to every child's analytical ability as a vital ingredient of science, technology, engineering, and mathematics (STEM) learning.

Several professional bodies and think tanks in the US, the UK, and the Netherlands have called for more attention to computational thinking in the curriculum.

We aim to advance this discussion by focusing on the core components of computational thinking, its relation with and distinction from other 21st century competences, and its place in the curriculum and implementation of distance learning environments.

A Follow-Up Study Of Investigation Impacting Factors Of The Academic Performance For Children From Transnational Marriage Families In Taiwan

wangkuo@gmail.com

Abstract

This study was a longitudinal follow-up study of children's development of transnational marriage families in Pingtung, Taiwan. A total of 70 children (aged from 12 to 17 years old) out of 115 participated in the survey study, accounting for 61% of the survey population. All students completed the demographic information and Learning Motivation scale and the instructor filled out "The Learning Behavior Checklist for Students of Secondary School" to assess the characteristics of students' learning behavior. After the SEM statistical analysis, the findings of the study showed that: First of all, family environment (.33) influences children's learning motivation more than personal intelligence (.23). Secondly, in terms of reducing children's learning behavior problems, family environment (.33) is more significant than learning motivation (.25). Thirdly, Learning behavior problems (.82) affects children's learning performance more than personal intelligence (.13). Finally, children of the transnational marriage families had the better achievement performance when their problems of learning behavior are fewer (.64).

Keywords : *Academic achievement, learning behavior, learning motivation, transnational marriage families*

Introduction

Since the 1990s, Taiwan has rapidly transformed into a multi-ethnic country due to marital immigration. At the end of 2017, there were 530,512 foreign spouses who are spouses of non-Chinese spouses (MOI, 2017). The number of children of transnational marriage families enrolled in secondary school in 2017 amounts to 75,894, accounting for about 11.04% of the total number of national secondary schools enrolled in the country. The learning status of children from transnational marriage families in schools has become an issue requiring more attention in Taiwan society nowadays.

New immigrant women married into Taiwan, there were maladjustment problems due to language, culture, life, customs and environmental differences. Meanwhile, there were some characteristics for transnational marriage families, such as low social-economic status, marital instability derived from different cultures and causing distress parenting. Children of transnational marriage families had the learning difficulties and obstacles due to their lack of language skills, thereby affecting their school achievement performance and interpersonal interaction management. Furthermore, the characteristics of their families such as lack of family member timely assistance in schoolwork, and insufficient resources, might influence children's learning quality of transnational marriage families.

There were significant differences in academic achievement between students of transnational marriage families of Southeast Asia and students of Taiwanese (Chung, Wang, & Chen, 2006). However, these differences were caused by what kind of factors in the end. This study examines subtleties from the family environment, personal intelligence, learning motivation, learning behavior which factors affected the learning performance and academic performance of children of transnational marriage families. The purpose of this study was to explore the relationship among factors such as family environment (FE), personal intelligence (PI) and learning motivation (LM), learning behavior (LB), learning performance (LP), and academic performance (AP) of children of new transnational marriage families. Several assumptions were examined as follows.

1. There is a close relationship between the learning performance and the academic performance;
2. Children's learning behavior affects the learning performance and the academic performance;
3. Children's learning motivation indirectly affects their learning performance and academic performance through learning behavior;
4. Children's personal intelligence and family environment indirectly influence their learning performance and academic performance through learning motivation and learning behavior.

Methods

1. Participants

In this study, the researchers studied the language and mental development and learning status of 9 elementary schools and 4 to 10 year-old children of transnational marriage families in Neipu Township, Pingtung County in 2004. In the 2011 academic year, these children had already entered the secondary and vocational high schools. This study investigated the learning situation of 70 adolescents. A total of 28 boys and 42 girls completed the latest exam results in terms of class ranking. A total of 12 students ranked top 10 in the class, accounting for 17.1% of the total. There were 17 students ranked the second tier (from 11-20) in the class, accounting for 24.3% of the total. There were 32 students ranked the third tier (from 21-30), accounting for 45.7% of the total. There were eight students in the final ranking class, account for 11.4% of the total. Only one student did not fill out his class ranking.

The mother's nationality was 3 from the Mainland, 33 from Indonesian, 14 from Vietnam, 16 from Philippine, 3 from Thailand, and 1 from Cambodia. Regarding fathers' working condition, there were 15 students' father were unemployed, 43 students' father had a full time job, 7 students' father had part time jobs, 5 students did not answer this question. The average monthly household income was less than 670 US Dollars for 21 students, 671 to 1,000 US Dollars for 33 students, 1,001 to 1,331 US Dollars for 9 students, more than 1,334 US Dollars for 1 student. Six students did not fill out their monthly household.

2. Instrument

This study was a longitudinal study of the development of children of new transnational marriage families. Personal Intelligence and Family Environment Information were collected in 2004. Personal intelligence was examined by comprehensive psychological assessment. Home environment data was assessed using the home environment scale designed by Caldwell and Bradley (1984).

Children of transnational marriage families were invited to fill out their demographic data and learning motivation. The Learning Motivation Scale was designed by Liu et al. (2010). This scale was applicable to the sixth grade to the ninth grade students. The scale was divided into four dimensions in terms of value, expectation, emotion and execution. Student's instructors were invited to fill out the students learning behavior assessment. This scale was designed by Meng & Chen (2010) which was used to assess school learning behavior characteristics for the primary and secondary school students. The contents of this scale included student demographic information, academic performance, learning performance, and learning behavior scale.

Results

The results (see Figure 1) showed that the learning performance and academic performance of the students were closely related to each other; learning behavior also directly affected learning performance and academic performance. Students had the fewer learning behavior problems, their learning performance and academic performance were better. The effect of learning behavior on learning performance (-.82) was far greater than that of academic performance (-.64). Students' learning motivation indirectly affected learning performance and academic performance through learning behavior. Students had the stronger motivation for learning, they had the less the problem of learning behavior. Personal intelligence and family environment mainly affected learning performance and academic performance indirectly through learning motivation and learning behavior. Students' personal intelligences were higher; they had the stronger the motivation for learning. Additionally, students' family environments were better, their motivations for learning were better. The family environment (.33) was stronger than personal intelligence (.23) to arise student motivation for learning. In addition, the family environment could also directly affect learning performance and academic performance through learning behavior; the better the family environment, the fewer problems of learning behavior. The family environment (-.26) was less than learning motivation(-.25) to reduce students' learning behavior problems. Students' personal intelligence could also directly affect their learning performance. However, students' learning behavior (-.82) was far more important than personal intelligence (.13) in affecting their learning performance.

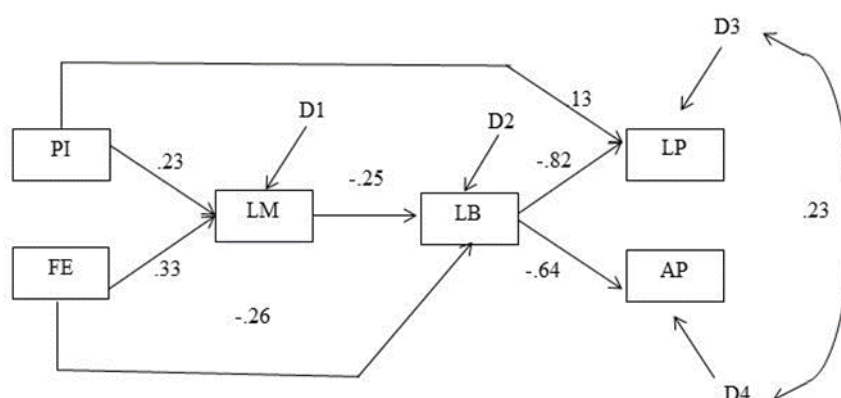

Figure 1 Influence of students' learning and academic performance

Discussions

In conclusion, for students of transnational marriage families who were relatively disadvantaged in Taiwan, their academic performance and learning achievement model had a close relationship with their learning performance and academic performance. Students' learning behavior directly affected their learning performance and academic performance. Students had fewer learning behavior problems, their learning performance and academic performances were better. The influence of learning behavior on learning performance was far greater than that of academic performance. Students' learning motivation, through learning behavior, indirectly affected their learning performance and academic performance; the stronger the motivation for learning, the less the problem of learning behavior. Students' personal intelligence and family environment mainly affected indirectly their learning performance and academic performance through learning motivation and learning behavior. Students had the higher the personal intelligence and the better of the family environment, their learning motivations were stronger. The family environment was stronger than personal intelligence to arise student motivation for learning. In addition, students' family environment could also directly influence their learning performance and academic performance through learning behavior; the better the family environment, the fewer problems with learning behavior; and the family environment was more important than the learning motivation to reduce the problem of learning behavior. Students' personal intelligence could also directly affect learning performance; however, learning behavior was far more important than that of personal intelligence in affecting their learning performance. European and American studies (Siahaan, Lee, & Kalist, 2014; Villiger, Wandeler, & Niggli, 2014) indicated there was a close relationship between the educational performance of immigrant children's children and their parents' involvement. The conditions of transnational marriage immigrants were different for studies of foreign immigrants. The women in Southeast Asia were transnational marriage immigrants to Taiwan which made their lives belonged cultural disadvantage. And their husbands with lower socioeconomic status, therefore, made them

to have a double weak effect. They were also busy with their livelihoods and had no time to care for their children's learning. Although immigrant mothers were extremely concerned about their children's learning, however their involvement for children's learning might indeed be more than sufficient.

Conclusion

The findings of this follow-up survey showed that there was a large variation in the academic performance, learning behavior, and learning motivations. This was consistent with the previous findings of the survey. The results also highlighted that the students from transnational marriage families did belonging to extremely disadvantage for their learning behaviors.

Abstract

This paper presents a new software framework for managing IoT devices in real time. The software enables intelligent management of IoT devices in cyber physical systems using models based on differential equations. Specification of management functions is done by defining the models in real time, while management actions are transferred to IoT devices via REST web services. As such, the developed software has twofold educational purpose. Firstly, it is used for teaching internet of things, providing students with a test bed for implementing different scenarios for managing smart devices. Further, the developed software is adequate for teaching computer simulation, because it provides a tool for developing and testing various models of continuous systems. The evaluation was conducted at the Faculty of organizational sciences, University of Belgrade.

A Model Suggestion For Classifying Responses Given To Open-Ended Items In Open And Distance Learning System

Eren Can Aybek

Hilal Seda Yildiz Aybek
Yasar University
hilal.aybek@yasar.edu.tr

Yasin Ozarslan
Yasar University
yasin.ozarslan@yasar.edu.tr

Abstract

It is becoming increasingly common for online learning activities to be conducted for common courses offered at the tertiary level. Learning Management Systems still use traditional measurement systems in the context of measurement and evaluation, although they offer different opportunities for processes such as sharing, presenting, interacting and structuring learning materials in an open and distance learning process. When the measurement and evaluation practices in the Learning Management System are specifically addressed, it is seen that the most useful item types for these systems are multiple choice, true-false, short response items. These types of item are preferred because it can be easily scored by the learning management system.

When it is desired to use open-ended items in the measurement and evaluation processes, it is very difficult for the items to be automatically scored because at least one rater is needed. In addition, in order to ensure no distrust in the learning assessment phase and to ensure that the scores are reliable, an answer key must also be established in order for the evaluator to score open-ended items and to provide objectivity.

The purpose of this research is to classify the answers given to open ended items in the courses in the distance learning system by logistic regression analysis to determine student success. For this purpose, the answers given by 300 university students to three open ended items were scored with a holistic rubric. In order to classify student responses, a logistic regression model is established and the proposed model is tested and interpreted by the researchers.

A Practical Case Of ‘Ddadeutan (Warm) Education Community’ Based On Positive Behavior Support¹

Soonyoung HWANG

Dept. of Special Education, Pusan National University
South Korea

Sejin CHA

Dept. of Special Education, Pusan National University
South Korea

sejin86@naver.com

Abstract

The purpose of this study is to examine the application of positive behavior support as a way of mediating problem behaviors of students with developmental disabilities and to explore the feasibility of ‘Ddadeutan(warm) educational community’ through them. This study examined the effects of positive behavior support on problem behaviors of students with developmental disabilities and their impact on community formation. A team-based problem behavior intervention was conducted for 16-year-old boys who were determined to need problem behavior support through the individual education council. The team consisted of the principal, two senior teachers, one homeroom teacher, and one professor of special education. In order to intervention the target behavior(spitting, tear), the positive behavior support strategy(sound book, praise) was applied as AB design method. As a result, the problem behaviors decreased, and in the process of applying positive behavior support, it was confirmed that the synergy effect occurs through cooperation of the team members.

Introduction

Based on the understanding of students with different characteristics, special teachers are required to coach their studies to the abilities of each student and to manipulate their problem behavior. In the case of special teachers, the special nature of guiding disabled students who are unable to protect their own human rights is a serious problem with teachers' poor discipline. On the other hand, studies are also showing that many special teachers are being hurt by the behavior of disabled students. Thus, if schools and teachers fail to properly prepare and respond to students' problem behavior, the damage could go to both students and teachers.

In response to these social demands for effective and positive problem behavior interventions, the notion of positive behavior support (PBS) has been introduced in Korea since the early 2000s. Positive behavioral support is a systemic approach to establish the social culture and strong behavioral support required to achieve the academic and social success of all students. This can be effective in creating a ‘Ddadeutan(warm) educational community’ by promoting positive behavioral changes for faculty members and improving the system and procedures for improving student behavior. The primary prevention, which prevents the expression of problem behavior and teaches appropriate behavior, the secondary prevention which applies stronger interventions to students who do not respond to primary prevention, and this positive behavior support, which consists of tertiary prevention for high-risk students, is feasible only if the participation of all school members is assumed.

On the other hand, positive behavioral support refers to identifying the relationship between problem behavior and environmental variation and developing arbitration procedures based on the outcomes. Thus, through functional assessment, it is necessary to identify prior events and subsequent outcomes related to problem behavior and to develop interventions by manipulating environmental variants. The positive behavioral support experiments in school situations have been conducted by a collaborative problem solving team to re-aggregate the student's environment through multiple strategic interventions (Busan Metropolitan Office of Education, 2014; Hwang, Lee & Lee, 2014) that take into account personal circumstances.

The purpose of this study is to explore the feasibility of a ‘Ddadeutan(warm) educational community’ through examples of application of positive behavioral support to mediate problem behavior by students with developmental disabilities. Specific research issues are as follows.

1. How does positive behavior support affect problem behavior(spitting, tear) of students with developmental disabilities?

¹ This work was supported by a National Research Foundation of Korea grant funded by the Korean Government (2017S1A3A2067778).

2 How does the positive behavior support implementation process affect the formation of a Ddadeutan(warm) education community?

Research Method

Research Participant

The objective of the support for positive behavior was a student in special education school, who was selected through the individual education council for each student who decided that individual support was necessary as problem behavior continued without responding to positive behavioral support at the school level. He is a 16 year old boy with developmental disabilities. Problem behavior is usually seen in classrooms or corridors, where people cry, scream and hurt themselves when they are unhappy.

Positive Behavior Support Team for 'Ddadeutan(warm) educational community'

By correcting the student's behavior, we formed a positive behavioral support team to realize a warm educational community. The team was joined by a principal, two head teachers, one professor and one homeroom teacher. The principal was in charge of providing positive behavioral support, and the professor acted as a behavioral support consultant. And my homeroom teacher was in charge of the implementation of the problem behavior arbitration, and two of the department managers became support teams.

In particular, the homeroom teacher checked for changes in observations and behavior to identify a student's problem behavior, while the department's teachers helped assess relevant background information and behavior progress.

Intervention Environment

Positive behavioral support was done in classrooms, corridors where problem behavior was most often occurring, and was observed during class and during recess.

Target Behaviors

To identify the main functions of problem behavior, functional behavioral assessments were conducted on the using ABC descriptive records(direct assessment), QABS(indirect assessment) and MAS(indirect assessment).

Table 1: Functional behavioral assessments

target behavior	operational definition	function of behavior
spitting	The behavior of a student spitting on a teacher's face during lunch hour	primary : acquisition of interest secondary: acquisition of reinforcement materials
tearing	The behavior of tearing open wounds on the face and arms	primary : sensory stimulation secondary: avoidance

Positive behavior support Strategies

We conducted two main strategies, a proactive and a response strategy, with positive behavior support strategies. It is as follows.

Table 2: Positive behavior support strategies

target behavior	proactive strategy	response strategy
spitting	. providing reinforcement material (sound book) when finished eating without behavior . Arrange student away from teachers for lunch	. intended ignoring . When you finish your meal without spitting, you will receive social reinforcement(praise) and reinforcement (sound book)
tearing	. Dispersion of sensory stimuli while supporting teachers provide social reinforcement (praise and attention)	. Using the other DRO, the 10 second fixed interval reinforcement plan provides reinforcement (bread) . Gradually increase the fixed interval time

Data Manipulation

Effects of changes in student behavior were analyzed in the order of primary and arbitration by applying the AB design method and the alternating intervention design method.

RESULTS

The Effect of Positive Behavior Support on Problem Behavior of Students with developmental disability

- The pitting Behavior of the Students with Developmental Disability

We looked at changes in the behavior of the problem during lunch time during the day. The average and scope of the frequency and frequency of problem behavior of the subject student's primary and arbitration periods are shown

in Figures 1 and Table 3.

Figures 1: Graph of changes in the frequency of spitting behavior

Table 3: Changes in the frequency of spitting behavior

situation	target behavior	-	baseline	intervention
lunch	spitting	mean	40.3	13.65
		range	23 - 55	6 - 24

Spitting behavior showed an average of 40.3 problem behaviors during the initial phase. A maximum of 55 problem behaviors occurred during the 20-day period at least 23 times. The intended ignoring strategy of the teacher in charge of the problem behavior, the reinforcement for the peer students who are good at meals, and the provision of the reinforcement after the average occurrence of the problem actions were reduced.

• The Tearing Behavior of the Students with Developmental Disability

We looked at changes in the behavior of the problem in art class and in vocation class. The frequency graph of problem behavior and the average occurrence rate per minute of students are shown in Figures 2 and Table 4.

<Figures 2> Graph of changes in the frequency of tearing behavior

Table 4: Problem behavior rate(%)

situation	target behavior	-	DRO application	without DRO
art class, vocation class	tearing	mean	0.022	0.047
		range	0.01 – 0.64	0.01 – 1.26

When the target behavior was not acted, the target behavior was given 10 seconds of fixed interval and the interval

time was gradually increased. If intervention was not applied, it would reduce the target problem behavior 2.82 per hour on average and 0.047 % per minute per minute on average.

The Effect of Positive Behavior Support Implementation on the 'Dade County (warm) education community'

Positive behavioral support has reduced the problem behavior of students with developmental disabilities. In addition, a cooperative team of the school president, homeroom teacher, department manager teacher, and external expert behavioral consultant were formed in the process of implementing positive behavioral support, resulting in synergy effects. In other words, by bringing in not only faculty members within the school but also university professors who are outside experts in problem behavior, it was possible to provide teachers with professional knowledge and advice on how to mediate problem behavior between the school and the school.

Suggestions

Positive Behavior Support of problem behavior for disabled students should be made on the basis of functional assessment. Problem behavior represented by disabled students is difficult to explain at the same time, and its function is also likely to have complex functions. It is important to conduct direct or indirect observations and gather sufficient information, such as background events. However, in this process, it is impossible for the teacher alone to observe the behavior of students with developmental disabilities and gather information. Therefore, cooperation among faculty members is essential and necessary to develop the necessary qualities.

Until now, the school's behavioral intervention has focused more on the 'problematic' behavior of students. Rather, it is necessary to change its mind so that it can guide desirable behavior rather than "problems" in order to improve the quality of life. In addition, instead of introducing arbitrary interventions, teachers should be encouraged to conduct evidence-based, empirical scientific interventions based on observational data on behavior.

In conclusion, The warm education community should provide opportunities for school members to participate actively and parents to participate. In this regard, it could be established as a system of community practice within a positive behavioral support school.

Abstract

The aim of this study is to examine the teaching practice according to the views of the managers and teachers responsible for the implementation of physical education and sport teaching practice in schools conducting the practice. A semi-structured interview technique, one of the qualitative research methods, was used in the study. The study group consists of 24 educators, including 8 school principals, 7 school practice coordinators and 9 practice teachers that are responsible for implementation in 8 secondary education institutions where teaching practice is carried out in Batman province center during the spring semester of 2017-2018 academic year. A semi-structured interview form developed by researchers was used as a data collection tool in the study. The results of the interviews are then coded under the appropriate themes after analyzing by the content analysis method. According to the results obtained, it is seen that the views of the administrators and educators responsible for implementation were grouped under four themes, including “The Position of Teaching Practice”, “The Gains from Teaching Practice”, “The Scope of Teaching Practice” and “Time for Teaching Practice” found in the curriculum. The vast majority of administrators and educators have stated that teaching practice is necessary, teaching practice contributes to the professional experience of teacher candidates, and if the lack of coordination is solved, it is a successful practice which is essential for candidate teachers to learn by practicing and experiencing in the field. However, they have pointed out that the period of teaching practice in the university curriculum is insufficient for teaching practice and implementation, and one semester of practice is only contributing to the student's orientation process.

Introduction

The learning-teaching process, which is the most dynamic and functional element of the education system, consists of two basic dimensions. One of them is the learning that concerns individuals who are directly involved in the process, and the other is the teaching that involves organizing stimuli in the learning environment that provides external support for the learning formation (Öztürk, 1999). In the process of learning and teaching, the role and the importance of the teachers are obviously great. Individuals should be trained in a way that they can keep pace with changes and developments in the society and the world and contribute to it. This is achieved by a qualified teaching personnel as well as a good education system (Çelikten, 2005). It is necessary that schools have a good education, that is, the quality of teaching in the school should be upgraded so that the students can succeed. This is only possible with qualified teachers (Seferoğlu, 2004); because teachers take various responsibilities in bringing new skills and values to themselves, to the students and to the whole society in the long run. In modern societies, teachers are seen not only as technical staff performing the education and training, but also as the people who will be the role model for the students and society. These social expectations for the teachers make it necessary to define all the qualities of a competent teacher and to implement the teacher training policies prepared in this framework (MEB, 2017).

In Turkey, teaching profession is regarded as a “specialized profession” in the National Education Basic Law No. 1739, and it is stated that preparation for the teaching profession is provided through general culture, special field education and pedagogical formation (Milli Eğitim Temel Kanunu, No. 1973). All the institutions that train teachers through the Decree Law No. 41 that entered into force on July 20th, 1982 were taken from the Ministry of National Education and incorporated into universities. The education period of all higher education institutions that have been training teachers since 1989-1990 academic year was increased to the bachelor's degree, at least. The programs of faculties that educate teachers since the transfer of teacher education to universities have been renewed many times based on national and international developments and these changes are continuing today (MEB, 2017).

Throughout the historical process, reorganization studies were carried out in relation to teacher education graduate programs in 1997, 2006 and 2009; however, the most comprehensive study was carried out within the scope of the National Education Development Project (MEGEP) between 1996 and 1997. In this context, some undergraduate programs in the field of educational sciences that are not corresponding to any employment were closed. After adopting the eight-year compulsory education in 1997-1998 academic year, the school grades were regulated as primary and secondary education, the course schedules of the departments and branches of education/educational sciences were restructured as a result of the collaborative studies of Ministry of National Education (MEB) and Council of Higher Education (YÖK). Furthermore, a number of official documents regarding education sciences and teacher training, such as 10th Development Plan (2014-2018), MEB Strategic Plan (2015-2019), Turkey Higher Education Qualifications Framework, the Teacher Training and Education Sciences Field Competence have been published over time (YÖK, 2018).

The courses in the “New Teacher Training Undergraduate Programs”, which has been recently organized by the Higher Education Council, are composed of three groups: teaching vocational knowledge (VK), field education (FE) and general culture (GC) courses; and the courses of teaching vocational knowledge (VK), field education (FE) and general culture (GC) were included in the programs by 30-35%, 15-20% and 45-50%, respectively. In the Table, in which the intensity of vocational knowledge, general culture and field education courses in the undergraduate programs are represented, VK courses, general culture courses and field education courses were included in the Physical Education Teaching Program by 33%, 18% and 49%, respectively. On the other hand, in the vocational knowledge (VK) courses in the undergraduate program of Physical Education Teacher, it is seen that it is compulsory to take Teaching Practice 1 course in Semester VII, while it is compulsory to take the Teaching Practice 2 course in Semester VIII.

Teaching Practice 1 and 2 courses are defined as making observations about methods and techniques specific to the field; doing micro-teaching practices, in which special teaching methods and techniques specific to the field are used, individually and with groups; site-specific activity and material development; preparation of teaching environments, classroom management, measurement, evaluation and reflection. It is stated that the Teaching Practice 1 and Teaching Practice 2 courses are to be carried out by instructors who had undergraduate education, post-graduate education in the related teaching program, or by instructors who are associate professor of Inter-University Board (IUB), have doctorate in the field of educational sciences and/or associate professor of IUB according to the relevant article and priority order of the Directive on Teaching Practices to be Made by the Practice Students in the Educational Institutions affiliated to the Ministry of National Education, and if the need continues, it will be carried out by other instructors (YÖK, 2018).

Through the Teaching Practice course, candidate teachers have an opportunity to apply the knowledge and skills they have acquired theoretically in a real environment before the service concerning the teaching profession (Kavcar et al, 1999). Thanks to school-based practices, it is ensured that the candidate teachers realize whether they are suitable for this profession, and also acquire professional experience and improve themselves socially (LaMaster, 2001). It is highly important for candidate teachers to practice the information they acquired theoretically in the pre-service period in a planned way in the guidance and supervision of the practice teacher in gaining experience and adopting their profession (Özkan et al., 2005). In this respect, school-based studies with qualified teacher education have an important role in terms of professional development of candidates (Hacıömeroğlu and Şahin, 2011).

When the literature is examined, it is seen that there are qualitative and quantitative studies on the teaching practice of candidate teachers in various categories (Yılmaz and Namlı, 2017; Yamaç and Bakır, 2017; Avcı and İbret, 2016; Yılmaz and Özçakmak, 2015; Baran et al., 2015; Altıntaş and Görgen, 2014; Taşdere, 2014; Aydın and Akgün, 2014; Mete, 2013; Akpınar et al., 2012; Yeşilyurt and Semerci, 2011; Çepni and Aydın, 2015; Baştürk, 2009; Dursun and Kuzu, 2008; Parker, 2008; Sarıçoban, 2008; Özkan et al., 2005). However, it is seen that the studies on the teaching practice of the physical education and sports candidate teachers (Dalkıran and Aslan, 2016; Özbal, 2009, Çiçek and İnce, 2005) are limited.

In this study, it was aimed to examine the views of the managers and teachers responsible for the implementation of teaching practice for physical education and sports in schools carrying out the practice. Within the scope of teaching practice, which is an important course for teacher education, it is important to keep a light on the work to be done in the field in order to better understand the views and suggestions of administrators and teachers who are practitioners of the course.

Method

In this study, qualitative research method is preferred as the method that best reflects the problem characteristics. Qualitative research is a research in which qualitative data collection methods, such as observation, interview and document analysis are used and a realistic and holistic process for revealing perceptions and events in a natural environment is followed (Yıldırım and Şimşek, 2008).

The study group consists of 24 educators, including 8 school principals, 7 school practice coordinators and 9 practice teachers that are responsible for implementation in 8 secondary education institutions where physical education and sports teacher candidates participated in the teaching practice that carried out during the spring semester of 2017-2018 academic year. The demographic characteristics of the educators are given in Table 1.

In the study, a semi-structured interview technique, which is an interview type, was implemented. Semi-structured interviews provide an opportunity for the participants to express and convey the events that they perceive and their views with their own words. At the stage of preparation for interview questions, firstly the field related to the hypothetical framework of the study was reviewed, and then the question of researching was formed by creating the conceptual framework by making use of the opinions of experts in qualitative field. The content analysis technique was used in the analysis of research data. The main goal in content analysis is to reach the concepts and associations that can explain the collected data. Through a content analysis method, the data is defined and the facts that may be hidden in the data are revealed. In the content analysis, the basic process is to bring together similar data within the framework of specific concepts and themes (Yıldırım and Şimşek, 2013: 259).

The data obtained from the interview form were examined one by one and transferred to the text via voice recorder. The data are analyzed by experts in the field of qualitative research and study, and the coding was carried out in Nvivo 10 program. In the study, as a result of the reliability calculation, r was found as $r=0.89$ in terms of the correspondence between the encoders. Therefore, the calculated values show that there is a good level of fit between raters.

Table 1. Demographic Characteristics of Educators Attending the Study

Participants	Gender	Age	Practice Task	Monthly Income	Professional Time	Managerial Time
P1	Male	41	Practice Teacher	3480 TL	14 Yrs	-
P2	Male	43	Practice School Coordinator	4800 TL	18 Yrs	6 Yrs
P3	Male	47	Practice Principal	5000 TL	21 Yrs	16 Yrs
P4	Male	40	Practice Principal	4500 TL	15 Yrs	4 Yrs
P5	Male	42	Practice Teacher	4000 TL	22 Yrs	-
P6	Male	28	Practice Teacher	4000 TL	3 Yrs	-
P7	Female	30	Practice Teacher	3125 TL	3 Yrs	-
P8	Female	40	Practice School Coordinator	4500 TL	15 Yrs	7 Yrs
P9	Male	51	Practice Principal	4500 TL	26 Yrs	4 Yrs
P10	Male	47	Practice Principal	5000 TL	25 Yrs	17 Yrs
P11	Male	29	Practice School Coordinator	4400 TL	4 Yrs	2 Yrs
P12	Male	40	Practice Principal	5000 TL	20 Yrs	10 Yrs
P13	Male	41	Practice Teacher	3500 TL	15 Yrs	-
P14	Male	39	Practice School Coordinator	3500 TL	14 Yrs	-
P15	Male	32	Practice Teacher	3000 TL	5 Yrs	-
P16	Male	39	Practice Principal	4000 TL	14 Yrs	7 Yrs
P17	Male	38	Practice School Coordinator	4400 TL	15 Yrs	7 Yrs

P20	Male	40	Practice Teacher	3000 TL	13 Yrs	-
P21	Male	33	Practice Teacher	4500 TL	9 Yrs	3 Yrs
P22	Male	50	Practice Principal	5000 TL	25 Yrs	20 Yrs
P23	Male	39	Practice School Coordinator	6000 TL	19 Yrs	10 Yrs
P24	Male	38	Practice Teacher	4500 TL	12 Yrs	-

Results

The results of the study are given based on the themes formed by the questions posed to the participants and the codes belonging to these themes are given together with the percentages in the following Tables.

Table 2. The Position of the Teaching Practice in University Curriculum

Teaching Practice Curriculum	Necessary	Categories	Participants (N=24)	f	%
		Positive	P1, P2, P3, P4, P5, P6, P7, P8, P10, P12, P13, P14, P15, P16, P17, P18, P19, P20, P21, P22, P23	21	87.5
		Negative	-	-	-
		Partly	P9, P11, P24	3	12.5

According to Table 2, 87.5% of the educators stated that teaching practice in university curriculum is completely necessary, while 12.5% of them stated that it is partly necessary. Some of the views of the educators are given below:

1. *If the lack of coordination is solved, it is a successful practice (P11).*
2. *Positive, I find it beneficial for students to gain experience (P12).*
3. *It is very useful and essential for teacher candidates to learn by practicing and experiencing in the field (P19).*
4. *I think that the teaching practice in university curriculum is positive and it is motivating the students to prepare for their profession; however, the time is insufficient. One semester of practice is only contributing to the student's orientation process. Little time remains for teaching practice and implementation (P24).*

Table 3. The Gains from "Teaching Practice" in University Curriculum

Teaching Practice	Gains	Codes	Participants	f	%
		Experience Sharing	P1, P4, P7, P14, P16, P17, P18, P21	8	33.3
		Professional experience	P2, P3, P5, P6, P8, P9, P10, P11, P12, P13, P15, P19, P20, P22, P23, P24	16	66.7

According to Table 3, 33.3% of the educators emphasized that the teaching practice in the university curriculum contributed to the gains from experience sharing, while 66.7% from professional experience. Some of their views are given below:

1. *It means to practice in different institutions, to recognize different age groups, to observe and to spend time with them (P7).*
2. *Since each institution has different physical conditions, it helps the student having at least experience, in terms of the difficulties that s/he will encounter after being assigned. (P14).*
3. *It is beneficial for teachers to do an internship in different settings without knowing where and under which conditions they will be teaching (P19).*
4. *That each student is assigned to different institutions and schools means different socioeconomic status, different student levels and naturally different approaches. It naturally reflects on the professional development of the student in the form of a different method and technique (P24).*

Table 4. The Scope of "Teaching Practice" in the University Curriculum

Teaching Practice	Scope	Codes	Participants	f	%
		Theoretical teaching of the course	P3, P10, P22	3	12.5
		Implementation Experience	P1, P5, P6, P11, P17, P19, P24	7	29.1
		Behavior pattern Experience	P2, P7, P9, P13, P16,	5	20.9
		Administrative Experience	P4, P8, P15, P20, P21, P23	6	25.0
		Observation	P12, P14, P18	3	12.5

According to Table 4, with their opinions about the scope of teaching practice in the university curriculum, the educators stated that 12.5% of them conducted theoretical teaching of the course, 29.1% of them helped their students to gain implementation experience, 20.9% of them helped them to gain behavior pattern experience, 25.0% of them helped them to gain managerial experience, while and 12.5% of them had their students carry out the observational activities.

Some of the views of the educators are given below:

1. *I have them do the implementation of the course by giving information about the preparation, the teaching of the course and teacher-student relations (P1).*
2. *I give the theoretical information related to the preparation and teaching of the course and the level of the relations with the students (P10).*

3. *I tell them what they need to do within the scope of teaching and student relationship in situations where they can encounter during their teaching life (P13).*
4. *During the first 4 weeks, the student observes the practice teacher. In the following weeks, students give the course by trying to understand the teaching profession (P14).*
5. *We give students information on administrative issues and give examples of relevant documents about implementations. We review annual and daily plans together (P23).*

Table 5. The Time for “Teaching Practice” in the University Curriculum

Teaching Practice	Time	Categories	Participants	f	%
		Sufficient	P5, P6,P8,P10,P17, P18, P21, P22, P23	9	37.5
		Insufficient	P1, P2, P3,P9, P11, P12, P13, P14, P15, P16,P19, P24	12	50.0
		Partly	P4, P7, P20,	3	12.5

According to Table 5, 37.5% of the educators stated that the period of teaching practice in the university curriculum was sufficient, 50.0% of them stated that it was insufficient, while 12.5% stated that it was partly sufficient. Some of the views of the educators are given below:

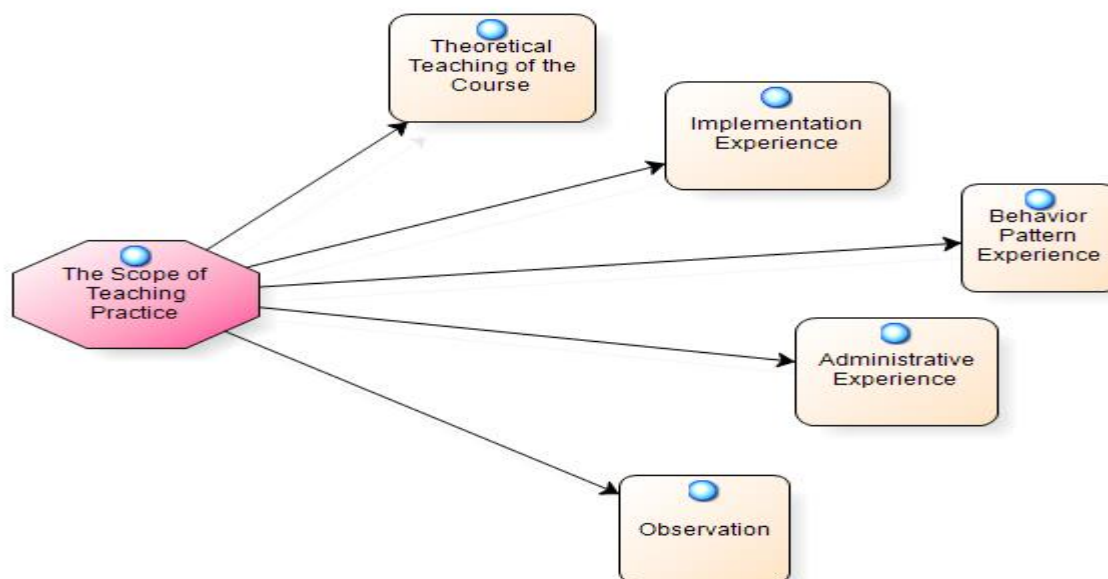

1. *We find it insufficient. It has to be done earlier than senior class (P2).*
2. *They are quite experienced about theoretical knowledge. I think there should be a longer time to get enough experience in practice. Teaching practice is a course given senior year. I think this should be increased to 2 or 3 years (P7).*
3. *The time for practice is sufficient (P17).*

Conclusion And Recommendations

In this study, which is designed according to the qualitative research method, it was aimed to evaluate the opinions of the administrator and the educator personnel responsible for the implementation in the practice schools in Batman province center regarding the teaching practice course that physical education and sports teacher candidates participated in. The results obtained from the study are grouped under four themes, including “The Position of Teaching Practice”, “The Gains from Teaching Practice”, “The Scope of Teaching Practice” and “Time for Teaching Practice” found in the curriculum.

**Model 1.** The Gains from Teaching Practice

The vast majority of administrators and educators have stated that teaching practice is necessary, teaching practice contributes to the professional experience of teacher candidates, and if the lack of coordination is solved, it is a successful practice which is essential for teacher candidates to learn by practicing and experiencing in the field (Model 1). However, they have pointed out that the time for teaching practice in the university curriculum is insufficient for teaching practice and implementation, and one semester of practice is only contributing to the student's orientation process. Administrator and educator personnel have not considered the teaching practice time in the university curriculum as sufficient. In this context, they have stated that teaching practice course should be done before the senior class (P2), and recommended expanding the course to 2 or 3 years (P7).

Model 2. The Scope of Teaching Practice

Moreover, administrators and educators have stated about the scope of teaching practice included in the university curriculum that they have the students conduct theoretical teaching and observational activities, and gain practice, behavior pattern and the managerial experience (Model 2). Administrator and educator personnel stated that they informed the candidate teachers about the preparation, teaching, teacher-student relations and the implementation of the course and have them implement it (P1), that teacher candidates observe the practice teacher for the first 4 weeks, and they teach the course and try to comprehend the teaching profession in the following weeks (P14), and that they inform the candidates about the administrative issues and give examples of relevant documents and examine the annual and daily plans together (P23).

When the literature is examined, it is seen that similar results and suggestions are included in previous studies. In their study, Alaz and Konur (2009) pointed out that squeezing the teaching practice course into one day causes a lack of practice. On the other hand, in their study Dursun and Kuzu (2008) reported that ensuring the coordination between the faculty and the practice school is important for the implementation process. In their study, Şimşek *et al.* (2013) determined that candidate teachers should practice for a longer period of time in the same class, the number of candidate teachers assigned to each tutor should be reduced, an effective cooperation between the faculty and the school personnel should be ensured, and the duration of the teaching practice course should be extended in terms of both weekly teaching time and the number of semesters. In their study, Sılay and Gök (2004) stated that the lack of coordination between the practice schools and the faculty creates problems in candidate teachers' practice.

The "Teaching Practice" provides the opportunity for school teachers to participate in a comprehensive way throughout a semester. Through this course, candidate teachers have the opportunity to participate in all the hours of the physical education course for one day a week throughout a semester (Çiçek and İnce, 2005). When examining the results of this study and other studies in the field, it is seen that teaching practice course has an important place in candidate teachers' pre-professional experience. In this context, this study, which is designed according to the qualitative research method, can be compared with the results of the study conducted by repeating the same sample group with quantitative research method. The study may be carried out on a wider sample group to obtain different opinions and suggestions in order to improve teaching practice.

A Research On Liking Evaluations Of Art Periods Of The Students Who Took Art History Lessons In Terms Of Furniture

Necmi KAHRAMAN

Interior Architecture and Environmental Design Afyon Kocatepe University Turkey
nkahraman@aku.edu.tr

Abstract

Many artistic movements have been able to continue their influence for centuries during the period of their own period and have not decreased their appreciation rates and still continue to be produced and preferred. This study was carried out with aku gsf interior architecture department and aku afyon myo furniture and decoration students who took at least one of art history, furniture art history or furniture styles courses to determine which one of the art movements is more popular nowadays. The questionnaire prepared for this purpose consists of personal information and 18 art periods with their evaluations which are most appreciated in the direction of general opinion. A total of 163 students, 112 female, 51 male, and 32 associate degree, 131 undergraduate student were participated in the survey. As a result, Gothic, Renaissance, Scandinavian, Art Deco, Pop Art and Minimalism are more popular than the others, whereas 14. Louis, 15. Louis, 16. Louis, Rococo, Chippendale, Adam, Hepplewhite, Sheraton and Maximalism movements are less popular.

Keywords: *Furniture Styles, Liking Evaluation, Aesthetics, Education Level.*

Introduction

In parallel with the development of the societies the goods they have used e.g. objects, structures and similar changes and developments in the historical process have come day by day. Many factors play a role in these developments and changes. Societies were most often bored into existing furniture and entered different searches. In other factors, we can list developments in materials and technology, cultural interactions, and so on (Miller, 2011). Advances in furniture and decoration progress parallel to architecture. In addition, people living in different geographies, different cultures, furniture has led to the emergence of different designs. Over time, similarities have increased in design as cultures are under the influence of each other. Over time, similarities have increased in design as cultures are under the influence of each other. Although there are intercultural common pleasures in the globalizing world market, there are some cultural influences in consumer preferences. Some of the styles have been able to last for many years, others have not been long-lasting.

Laumann and House (1970) found that living spaces are related to the social identity of a person (such as status, social thought, etc.), and in this respect, they have identified the style of living space. In this regard, Rechavi (2009) found that the greatest difference among living spaces is in style preferences when studying the value of living space. As a result, in the case of common indoor arrangements it has been seen that each user uses elements in different styles according to his / her own enjoyment (eg, television use, painting on walls and tables, use of decorative items, etc.) Also, the item density and color usage also differed. In another study by Amaturro, Costagliola and Ragone (1987), they found that style preferences are not based on income but rather on a status indicator and social identity.

Rutkin (2005) examines in her study which variations of four interior design elements are preferred by hotel guests, and which elements are most important to overall preference of the lobby space. These design elements are 1) scale; 2) furniture type and arrangement; 3) finish materials; and 4) access to daylighting and views. Two opposing variations of each element were looked at during the data collection. x Three main groups stand to benefit from the findings of this research: 1) the hotel industry; 2) the millions of people that spend time in hotels each year; and 3) the design professions. Using a four-way factorial Analysis of Variance to analyze the responses of thirty participants to visual stimuli representing hotel lobby spaces, she was proven that all four design elements have significant impacts on user preference of hotel lobby spaces.

Çapanoğlu (2014) states in her study, the main emphasis was given on the consumers' liking, beauty, complexity, impressiveness and familiarity perceptions within the context of understanding the styles used in living spaces. In the first step, the images, regarding several styles of living spaces planned to be used in the surveys, were tried to be identified by gathering the views of 11 academicians working in the related area; and 24 significant images were classified as modern, mixed and classic. In the second step, 252 participants from public were conducted to a survey and were asked to evaluate the images according to the notions specified; I would-I would not like to live for liking; a perfect-very bad design for beauty; modest-complicated for complexity; attractive-ordinary for impressiveness; and familiar-not familiar for familiarity. As a result, she observed that there has been a significant common view, and the modern style was preferred compared to the other styles mixed and classic.

In Gökay and Demir's (2006) research, it was analysed if art courses given at different level of education influence related students' aesthetic preferences and aesthetic perceptions. They also searched if the aesthetic education given in art lectures effects students' aesthetic preferences level positively. They found out that, aesthetic preferences of students could be influenced by means of art education, but popular culture was determined the main effective factors on their aesthetic perceptions.

Akalin and his colleagues (2009) explored, five different sets of single-family house facades from private suburban cooperative housing developments in Ankara, Turkey, were analyzed; with each set comprising one example each of minimum, intermediate and maximum complexity. A questionnaire was given to 100 undergraduate students of the Architecture and Engineering Departments of Gazi University, Ankara (41 from architecture and 59 from engineering). These students were asked to rate a total of 15 photographs from five housing sites with the help of five-point semantic differential scales under three headings; namely: Preference: beautiful - ugly, warm - cold, pleasant - unpleasant; Complexity: unimposing - imposing, simple - complex; and Impressiveness: impressive - unimpressive. The results proved the existence of a U-shaped relationship between complexity and preference criteria. That is, facades representing an intermediate level of complexity were favored over less and more complex ones. The facades that seemed the most impressive were the most complex ones, but these, however, were not the most preferred.

Türkmen (2014) states, furniture trends in England during the historical process were reviewed and the current situation was tried to be put forward in light of the conversations, which have been held with the designers of the companies, leading and determining the direction of furniture trends in today's English market. Results were reviewed in the direction of these data and answers, provided by the designers, whose views and comments were included into this study. Today's approaches, which accordingly became more clear, were retaken into consideration. Furthermore, furniture designs of 22 furniture companies from the English furniture market were reviewed in order to support this study. Three different furniture ranges were developed for the English market in direction to the results of these reviews and in the line with the findings attained from the above mentioned conversations.

In general, it is thought that the effects of the furniture styles of the different periods, which are still used today, on the users' liking of the works are not adequately discussed. Therefore, the recognition of the effects of the furniture styles on the users' appreciation of the interior and the elements of the furniture will shed light on the new designs. Therefore, it is considered that in the design of interior and accessories the effect of furniture styles on users' liking evaluation ratings are known it will shed light on new designs. In this study, it is assumed that the gender differences and the education levels of the users' liking evaluations on the of the furniture styles will be different. From this point of view, the research hypothesis created to test of how furniture styles of different periods affects users' liking ratings is given below:

- H1: There will be a marked difference between the liking evaluation of women and men for furniture styles of different periods.*
- H2: Associate degree students will exhibit a more positive approach in their liking evaluation of furniture styles of different periods than undergraduate students.*

Method

Selection of Subjects

At the beginning of this research, 18 art periods were chosen to take place in the questionnaire which will be used in determining the liking preferences of the students in order to reach the determined aim. When these movements are selected, the place and importance of each movement are emphasized in the literature are taken into account. In addition, while the level of liking of the related students is determined; the reactions of the students to the periods they need to examine and the distribution of these reactions on different movements and the most liked and the most disliked currents have been tried to be determined.

Survey Design and Procedure

In the design of the questionnaire developed to test the research hypothesis, previously validated and reliable surveys were used in the surveys conducted by Berlyne (19), İmamoğlu (1975), Ertürk (1983), Özkan (2014), Özkan and Yıldırım (2017) ve Yıldırım et al., (2015) and composed of adjective pairs ordered positively (1= Most Like, 5= Most Dislike) five-digit semantic differential scale was used. The research questionnaire consists of two parts. In the first chapter; general information of the subjects and secondly, evaluations of the likes about the furniture styles of different periods.

Experimental Material

In Afyon Kocatepe University classrooms used as an experimental environment, the photographs of Gothic, Renaissance, Baroque, 14. Louis, 15. Louis, Rococo, 16. Louis, Chippendale, Adam, Hepplewhite, Sheraton, Scandinavian, Art Nouveau, Art Deco, Retro, Pop Art, Minimalism and Maximalism style furnitures are reflected on the screen with DataShow and individual ratings of these styles by students were determined by questionnaire. Photographs of the furniture belonging to different periods used in the experiment are given in Fig.1.

Figure 1. Furnitures of different periods used in the experiment

2.4. Statistical Analysis

In this study, the effects of evaluations of the subjects of 18 different furniture styles were examined. According to this, the subjects' evaluation of furniture styles was considered to be a dependent variable, the gender and education level of the subjects were considered as independent variables. The percentage values, arithmetic mean and standard deviation values of the data obtained from the study were calculated, and the difference between dependent and independent variables was statistically analyzed with t-test to see whether it was statistically significant at $P < 0.05$ level. In order to compare the mean values of the variables obtained in the analyzes, the data are expressed graphically.

Findings

163 students from Afyon Kocatepe University Faculty of Fine Arts Department of Interior Architecture and Environmental Design and Afyon Vocational School Furniture and Decoration Program students participated in this research and the information is given in Table 1. According to this, it is seen that 68.7% of the subjects are female and 31.3% of them are male, 80.4% of them are undergraduate and 19.6% of them are associate students.

Table 1. General Information of Subjects

General Information of Subjects		N	%
Gender	Female	112	68.7
	Male	51	31.3
Education Level	Associate Degree	32	19.6
	Under-graduate	131	80.4

Note: N: Number of subjects, %: Percentage value

The mean and standard deviation values and t-test results for the liking evaluations of the furniture styles of the subjects participating in the survey are given in Table 2.

Table 2. M and SD values and t-test results of the subjects' liking evaluations

Furniture Style	Gender				t- Test Results			Education Levels				t- Test Results		
	Female		Male					Associate Degree		Under-graduate				
	M	SD	M	SD	t	df	Sig.	M	SD	M	SD	t	df	Sig.

Art Nouveau	2,89	1,35	2,88	1,35	0,046	161	0,963*	2,96	1,30	2,87	1,36	0,370	161	0,712*
Art Deco	2,59	1,37	2,58	1,38	0,043	161	0,966*	2,71	1,48	2,56	1,35	0,565	161	0,573*
Retro	2,75	1,54	2,76	1,55	-0,022	161	0,982*	2,84	1,54	2,74	1,55	0,338	161	0,736*
Pop Art	2,50	1,40	2,43	1,41	0,288	161	0,774*	2,50	1,41	2,47	1,41	0,096	161	0,924*
Minimalism	2,40	1,65	2,37	1,66	0,105	161	0,917*	2,46	1,68	2,37	1,64	0,290	161	0,772*
Maksimalism	3,55	1,49	3,62	1,49	-0,293	161	0,770*	2,59	1,49	3,57	1,49	0,072	161	0,943*

Notes: * P < 0.05 was not significant..

M: Average value, SD: Standard deviation, t: t- value, df: Degree of freedom.

a: Variable averages have been listed from 1 to 5. A high value shows negative responses.

Looking at the average values given in Table 2, it is seen that there is no apparent difference between the liking ratings of the furniture styles of different periods according to the sex (female, male) and education levels (associate degree, undergraduate) of the subjects. In the comparison of the binary t - test, no significant difference was found for all the styles between the independent variables at $p < 0.05$ level. According to this, the gender difference and difference in education level between the students with associate degree and undergraduate who had taken the art history lesson have not had a significant impact on the liking evaluation of furniture styles. Based on these results, the previously hypothesized H1 and H2 hypotheses are not supported.

On the other hand, considering the average evaluation of the furniture styles of different periods of the subjects given in Figure 2, it is seen that the Gothic, Renaissance, Scandinavian, Art Deco, Pop Art and Minimalism movements are more appreciated than the others, whereas 14. Louis, 15. Louis, 16. Louis, Rococo, Chippendale, Adam, Hepplewhite, Sheraton and Maximalism movements are less favored.

Note: Variable averages have been listed from 1 to 5. A high value shows negative responses.

Figure 2. Average evaluation of furniture styles

Conclusions And Recommendations

As a result, the most popular style was minimalism, followed by gothic, pop art, scandinavian, art deco, renaissance, retro, art nouvea, baroque, 15th louis, rococo, sheraton, chippendale, 14th louis, hepplewhite, 16th louis, maximalism. As see, the most disliked style is maximalism. It can be said that the two most popular styles over the last few hundred years are 15th Louis and 16th Louis. Although there can not be a study about it in the literature, they may have continued their effects for many years and this judgment can be reached if the productions still continue to be demanded. However, the 15th louis and the 16th louis styles are left behind in the preference of the students. This may be because young people prefer their objects with modern lines.

When the average values given in Table 2 are examined, it is seen that there is not a clear difference between the evaluations about the furniture styles of different periods according to the gender of the subjects (female, male). In the comparison of the binary t - test, no significant difference was found for all the styles between the independent variables at $p < 0.05$ level. Accordingly, gender differences have not had a significant impact on the liking evaluation of furniture styles. On the basis of these results, the previously hypothesized H1 hypothesis is not supported.

If we take a look at the evaluation by gender, 14th and 15th louis, scandinavian and renaissance styles are feminine, 16.louis, Adam, Gothic and Hepplewhite styles are obviously a little different from the preferences of male students so we can interpret they as masculine styles.

Again, looking at the average values given in table 2, it is seen that there is no apparent difference between the liking ratings of the furniture styles of different periods according to the education level (associate degree, undergraduate) of the subjects. In the comparison of the binary t - test, no significant difference was found for all the styles between the independent variables at $p < 0.05$ level. According to this, the difference in education level of associate and undergraduate students who took art history course did not have a significant effect on the liking evaluations of furniture styles. On the basis of these results, the previously hypothesized H2 hypothesis is not supported.

Again, looking at the average values given in table 2, it is seen that there is no apparent difference between the liking ratings of the furniture styles of different periods according to the associate degree (undergraduate) of the subjects.

It is noteworthy that there is not a significant difference between the preferences of the two different student groups, which is a big difference between the placement scores in the university (when they are in the most successful 2% of the undergraduate students, 90% of the undergraduate students are in the slice). As hypotheses, it was thought that great differences would come out.

It is thought that this work will shed light on furniture designers, decorators, interior architects and similar professional groups in the field of design trying to determine new trends.

Acknowledgment

I would like to thank to my precious students who filled in research surveys.

Abstract

Students with intellectual disabilities are increasingly present in primary and secondary schools. In schools coexist different ways of schooling to allow these people to study with students without disabilities. The importance of the instrument was to explore the attitudes of teachers working with students with intellectual disabilities in classrooms. The purpose of this research was to develop an instrument to assess teachers' perceptions and needs related to the presence of students with intellectual disabilities in a regular classroom. A total of 849 teachers from 58 schools with a mean age of 45.54 years participated. Results showed that a three-factor structure (Favourable Attitude towards Inclusion, Negative Feelings towards Inclusion, and Competence Needs) was the best solution, with appropriate reliability and validity. The scale developed in this study enables an initial diagnosis of school functioning by assessing teachers' perceptions and needs.

Keywords: *Intellectual disabilities, scale analysis, exploratory structural equation modelling, educational inclusion, teachers' attitudes.*

Introduction

In schools students with intellectual disabilities are increasingly in ordinary schools, where teachers usually work with a homogeneous group of students. Normally, 6 pupils with intellectual difficulties are educated in regular schools with a classroom for special education (CSE). This way of schooling, which is implemented in certain countries such as Iceland, Norway, Cyprus, Italy, and Spain (Carbonell, 2009), is characterized by the non discrimination between them, and tries to meet the needs of students in the most integrated way. Although they receive separate educational interventions, they also attend classes for certain subjects, in which they are at par with regular pupils, that is, with their classmates. The increase in CSEs is being used as the priority option to reduce segregation of students in special education schools (Avramidis & Kalyva, 2007; Nicolaidou, Sophocleous, & Phtiaka, 2006).

This schooling system has facilitated the access of pupils with intellectual difficulties to regular schools, where they share playtime and out-of-school activities. In addition, it has given them access to certain subjects in ordinary classrooms, with other classmates who do not have difficulties and a faculty without specific training in intellectual difficulties (Angelides & Michailidou, 2007; Carbonell, 2009).

To promote inclusion, it is necessary to explore teachers' perceptions of and beliefs about pupils with intellectual difficulties. Teachers need to see diversity in a positive way and should take initiative to make inclusive activities (Weiner, 2003). It is necessary to know the beliefs of teachers about students with disabilities to assess this trait as one of its many features (Boyle, Topping & Jindal, 2013). Therefore, assessing these variables is vital, however we do not have a scale to evaluate regular classroom teachers who have students with intellectual disabilities. This is important in regular schools that have incorporated in their structure classrooms of special education (CSE). The teachers of these centers should work with students with intellectual disabilities along with other students.

Research on this topic has taken into account certain characteristics of teachers, such as gender, training, characteristics of the difficulties, professional experience, educational stage, and ratio or the contact with pupils with difficulties.

The results for gender have been slightly inconclusive; although some studies show that women have more positive attitudes towards inclusion (Boyle, Topping, & Jindal, 2013; Eichinger, Rizzo, & Sitotnik, 1991; Thomas, 1985), others show that male teachers have more inclusive attitudes (Batsiou, Bebetos, Panteli, & Antoniou, 2008). Others have found that the perceptions and attitudes of teachers are not related to gender (Avramidis & Norwich, 2002; Balboni & Pedrabissi, 2000; Heinman, 2001; Van Reusen, Shoho, & Barker, 2001).

Although a positive attitude towards inclusion exists, teachers are conscious of their insufficient training with regard to educating diverse students (Ferrandis, Grau, & Fortes, 2010). Consequently, if teachers are equipped with the expertise needed to work with diverse students, they will feel more competent, accept the inclusive approach more willingly, and will have a positive attitude towards working in a diverse classroom (Avramidis & Norwich, 2002; Avramidis & Kalyva, 2007; Horne & Timmons, 2009).

The educational stage has also been analysed as a variable that can determine the perception of the teachers towards inclusion. Monsen and Frederickson (2004) point out that studies comparing primary and secondary school teachers attitudes towards and beliefs about inclusion have found that, due to their initial training, primary school teachers generally show a more positive attitude towards inclusion and diversity than do secondary school teachers. Another factor that influences the perception of secondary school teachers is that at this level, there may be vast gaps in curriculum achievement between pupils. In this type of situation, the teacher is perceived as incompetent and specialists are delegated the responsibility of resolving these gaps (Moliner, Sales, Ferrández, Moliner, & Roig, 2012).

In reference to the ratio, studies have contradictory results depending on other factors like the size of the class or teachers' workload (Colmenero, 2009). The difficulties revealed by the teachers are related to pupils with more-severe difficulties and an excessive number of pupils in the classroom, which leaves them little bandwidth to attend to pupils with diverse needs (Jiménez, Díaz, & Carballo, 2005). In addition to the teacher-student ratio, a high percentage of pupils with intellectual difficulties in class generates more insecurity and stress in the teachers, which can be exacerbated if resources and support are insufficient (Talmor, Reiter, & Feigin, 2005). Nevertheless, Monsen and Frederickson (2004), after a review of the literature, stated that the teacher-student ratio of the class, despite influencing teachers' attitudes towards inclusion, is a subjective factor and is largely influenced by the characteristics of the teacher, whether the ratio is excessive, and the school's conditions and policies regarding inclusion.

Studies on previous contact with the pupils with educational needs have differing results. Teachers with experience with people with difficulties express more positive attitudes towards inclusion (Avramidis & Kalyva, 2007; Batsiou et al. 2008; Everington, Stevens & Winters, 1999). The previous contact the teachers may have had helps to generate a positive attitude towards pupils with intellectual difficulties, diversity, and the processes of inclusion (Avramidis & Kalyva, 2007; Avramidis & Norwich, 2002). The schools with more inclusive models, such as those in which these children receive schooling in the regular classroom or those regular schools with their own special education classrooms, facilitate considerable interaction between teachers and pupils with difficulties.

Nevertheless, the mere fact of worked with certain type of pupils with difficulties does not imply that the perception towards them is positive. Teachers' previous experiences influence their perception towards diversity, but teachers who have had negative experiences with pupils included in their classrooms, especially due to these pupils' behaviour, show attitudes less favourable than teachers who have had a more positive experience (Díaz, 2002).

Research has identified factors potentially associated with teachers' perceptions and attitudes, including gender, age, education level, and experience with pupils with difficulties. Although in-depth research has been conducted, it is necessary to develop a scale to better measure teachers' attitudes and perceptions.

Models and dimensions linked to teachers' attitudes

Cochran (1997) validated the Scale of Teacher's Attitudes Toward Inclusion (STATIC), a 20-item measure with four dimensions: advantages and disadvantages, professional issues, philosophical issues, and logistical problems related to the educational inclusion of the pupils with educational needs. Items are focused on equal opportunities for pupils with difficulties according to their needs. Professional issues refer to teachers' previous perceptions regarding education of pupils with difficulties. Philosophical issues consist of items related to the behaviour of the pupils with difficulties and teacher-training needs. Finally, the dimension of logistic problems pertains to the material resources required in the inclusion process, in the face of various need.

The Principals' Attitudes toward Inclusive Education (PATIE) scale developed by Bailey (2004) consists of 24 items across five factors. Questions focus on the inclusion or segregation of pupils with difficulties in regular

classrooms. The factor *teachers' workload* covers the main responsibilities of inclusive education. The *advantages and problems of the inclusion* factor assesses professional judgment regarding the fairness of inclusion. The *challenges of the inclusive education* factor focuses on the challenges that must be faced to move forward in the educational process. The *exclusion of the pupils* factor pertains to the rejection certain pupils encounter as a result of the type of difficulty they have, its severity, and their behaviour. Finally, the *need for teacher training* factor is related to the necessary and perceived preparation of professionals.

Kudláček (2007) developed the scale Attitudes Toward Inclusion of Children with Physical Difficulties in Physical Education – Revised (ATIPDPE-R). The instrument groups items in 3 factors pertaining to positive outcomes for students, negative outcomes for students, and negative outcomes for teachers. The first covers the advantages for the pupils without difficulties and promotion of tolerance. The second focuses on beliefs about deceleration and that inclusion of pupils with difficulties lowers the quality of education. The third factor pertains to teachers' perceptions regarding their professional competencies. Forlin, Earle, Loreman, and Sharma (2011), in a review of the scale Sentiments, Attitudes, and Concerns about Inclusive Education Revised (SACIE-R), identified the following factors: teachers' stance regarding inclusion, their feelings about relations with people with difficulties, students' acceptance of peers with different needs in regular classrooms, and concerns regarding the implementation of inclusive practices. This instrument was developed from a combination of three pre-existing scales, with 60 items in total, which were reduced to form a unique scale of 19 items. Those three scales were the Attitudes Towards Inclusive Education Scale (ATIES; Wilczenski, 1992), a revised version of the Interaction with Disabled Persons (IDP) scale (Forlin et al., 2001; Gething, 1991, 1994), and the Concerns about Inclusive Education Scale (CIES; Sharma & Desai, 2002). The authors conclude that the final SACIE-R consists of 15 items distributed across three factors. Factor 1 (feelings) evaluates negative emotions towards teaching pupils with disabilities, Factor 2 (attitudes) is related to positive perceptions of teaching in inclusion, and Factor 3 (worries) concerns perceptions of professional competence and need for teacher training regarding classrooms with diversity. The authors found that the instrument has adequate internal consistency; under this three-factor structure, Factors 1 and 3 contain items related to negative emotions or worries while Factor 2 contains items reflecting positive attitudes.

Purpose

We think that the development of a scale of attitudes is crucial for several reasons. The research on attitudes exposed scales are not exclusive to evaluate teachers working with students with intellectual disabilities. Cochran (1997) validated the scale of teacher attitudes towards inclusion in a general way. In this line, Bailey (2004) developed a scale to reveal attitudes towards disability but the instrument was addressed to the directors of schools. The study by Kudláček (2007) is a scale of attitudes towards the inclusion of children with physical disabilities in physical education. The characteristics of the difficulties influence the teachers' perception and their beliefs about the appropriate way of schooling.

Teachers perceive sensory or motor disabilities as minor compared to more-complex intellectual difficulties (Avramidis & Norwich, 2002). The reasons for this phenomenon stem from attitudes, teacher training, and even the need to understand the new model of educational inclusion (Praisner, 2003; López, Echeita, & Martin, 2009). This research explores the attitudes of teachers working with students with intellectual disabilities in standard classrooms.

Bearing in mind the inclusive model of schooling, in which pupils with intellectual difficulties are taught along with normal-ability classmates, by teachers with no specialized training in intellectual difficulties, it is essential to investigate the beliefs and teaching methods upon which are based the daily practice of these teachers (Roselló, 2010). Teachers' attitudes and professional beliefs determine the diversity of the faculty as for its function, establishing the way of conceiving its work in the school facing the education of the pupils (Sánchez & Pulido, 2007).

Therefore, the present study aimed to develop an instrument based on three fundamental variables: the inclusive educational system, the measurement of perceptions of the presence of pupils with intellectual difficulties in a regular classroom, and teachers' needs related to practice.

Method

Participants

This study was conducted with a sample of 849 teachers from 58 schools in Spain, with an average age of 45.54 years (SD = 8.55). Of these, 510 were employed at primary schools and 339 were employed at secondary schools. Regarding level of education, 312 had completed a degree and 452 had a certificate of advanced study. The schools

comprised a mix of urban and outlying rural public schools, with students predominantly from middle-class families. All schools have classrooms for special education (CSE).

Procedure

The school administrative authorities were contacted and given an explanation of the study purpose. They were requested for permission to distribute the questionnaires. Through collaboration with these authorities, the researchers were able to administer the instrument in 58 schools. The schools' teacher responsible for special education received, distributed, and returned the questionnaires to the educational authorities, in agreement with the guidelines provided by the investigators.

Measures

To develop the Scale of Attitudes Towards Students with Difficulties in Classrooms of Special Education in Ordinary Schools (SAD-CSOS), a pool of 33 items was created. Response options ranged from 1 (not at all satisfied) to 5 (very satisfied). Items were developed to examine the attitudes of primary and secondary school teachers towards inclusion of pupils with difficulties in schools with special education classrooms.

This instrument is not based on a unique model, but try to integrate elements and constructs of the following scales: the ATIPDPE-R (Kudláček, 2007), PATIE (Bailey, 2004), and SACIE-R (Forlin, Earle, Loreman and Sharma, 2011). The common features of these scales are the dimensions related to positive attitudes towards inclusion, negative feelings towards the pupils with difficulties, limitations of inclusion of pupils with regard to educational stage, teachers' concerns, previous teachers' perceptions, and need for training (Avramidis & Norwich, 2002; Avramidis & Kalyva, 2007; Bailey, 2004; Forlin, Earle, Loreman & Sharma, 2011; Horne & Timmons, 2009; Kudláček, 2007; Monsen & Frederickson, 2004). The scale also incorporated items on needs related to integration of pupils with learning difficulties for specific subjects in regular school classrooms.

Data analyses

To determine the scale's factor structure, we first determined the number of factors. To do this, we employed various criteria. The first was the factors' theoretical meaning. Second, we performed a parallel analysis because relying on the criterion of retaining factors only with eigenvalues above 1, where sampling error is not taken into account, causes initial eigenvalues to tend to be greater than 1, and factors might be accepted erroneously and not because of factor variance. Parallel analysis overcomes this limitation by comparing the eigenvalues with averaged eigenvalues estimated from several correlation matrices of random variables based on the actual number of variables and subjects (Hayton, Allen, & Scarpello, 2004). Third, we examined fit indexes; however, exploratory factor analysis (EFA) tends to produce results that are difficult to replicate with confirmatory factor analysis (CFA) (Schmitt, 2011), so we employed exploratory structural equation modelling (ESEM; Asparouhov & Muthén, 2009). The main advantage of this technique is that it combines EFA and CFA, and does not require the factor loading of the items in the non-corresponding factors to be zero, leading to a more accurate calculation of the fit indexes and correlations between latent variables (Asparouhov & Muthén, 2009; Marsh et al., 2009).

With regard to the rotation method used to perform the parallel analysis, we used geomin rotation, following the recommendations of Asparouhov and Muthén (2009) for situations in which little is known about the factor structure. More specifically, we used oblique geomin rotation because in social sciences, methods involving oblique rotations show relations between factors that are closer to reality (Brown, 2006; Schmitt, 2011). We used the maximum likelihood estimation method. We used oblique geomin rotation in ESEM too, but a different estimation method. Because we used a scale with Likert-type items, the observable variables are ordinal categorical variables (Flora & Curran, 2004). Therefore, to estimate the value of the parameters and fit indexes, it is more accurate to use an estimation method that does not require multivariate normality (Schmitt, 2011). Therefore, we used the weighted least squares means and variance adjusted (WLSMV) method.

Moreover, the fact that teachers are grouped by schools violates the assumption of independence. This can inflate the value of χ^2 and underestimate standard errors (Stapleton, 2006). To overcome this, the parameters were estimated maximizing a weighted logarithmic function and the standard errors, using a *sandwich* type estimator (Muthén & Muthén, 2015). To assess model fit, we used the χ^2 test, χ^2/df ratio, root mean square error of approximation index (RMSEA) and its 90% confidence interval (CI), Tucker-Lewis index (TLI), comparative fit index (CFI), and weighted root mean square residual (WRMR).

After determining the number of factors, to avoid cross-loadings and obtain a clean structure, we discarded items with loadings that were lower than .35 and that differed by than .15 between two factors. Next, we analysed reliability by using McDonald's (1999) omega (ω) estimated from the polychoric matrix correlations, because this index, unlike Cronbach's alpha, does not require the factor loading to be the same for all the items (Yang & Green,

2010) nor the data to be continuous (Elosua & Zumbo, 2008). Similar to Cronbach's alpha, values above .80 indicate reliability. Missing values were estimated using the full information maximum likelihood method (Enders, 2010). All analyses were performed with Mplus 7.3 (Muthén & Muthén, 2015).

Results

Factor Structure

The parallel analysis, where three eigenvalues were above the upper limit of the eigenvalues estimated using the random correlation matrixes (Figure 1), showed that the three-factor structure seemed to be the most suitable. However, an examination of fit indexes from the ESEM (Table 1) indicated that the five-factor solution seemed to be the best. Nevertheless, strict compliance with this criterion usually results in the acceptance of more factors than necessary (Hayashi, Bentler, & Yuan, 2007). A four-factor structure was also identified, but there was unclear distinction between factors. The three-factor structure presented a theoretically sound option. For all the above reasons, we choose this solution. Subsequently, we eliminated items with loadings lower than .35 or those with a difference between two factors that was lower than .15. The final version consisted of three factors and 24 items.

The first factor, *Favourable Attitude towards Inclusion*, consists of 10 items; the second factor, *Negative Feelings towards Inclusion*, comprises 6 items; and the third factor, *Competence Needs*, contains 8 items. This factor structure has adequate fit: $\chi^2(845, 207) = 864.291$ ($p = .00$), RMSEA = .061 [.057, .066] CFI = .92, TLI = .89. Factor loadings range from .391 to .916 (Table 1). Finally, the coefficient (r) of the correlation between *Favourable Attitude towards Inclusion* and *Negative Feelings towards Inclusion* was $-.346$ $[-.470, -.222]$, between *Negative Feelings towards Inclusion* and *Competence Needs* was $.161$ $[.027, .294]$, and between *Favourable Attitude towards Inclusion* and *Competence Needs* was $.347$ $[.168, .525]$.

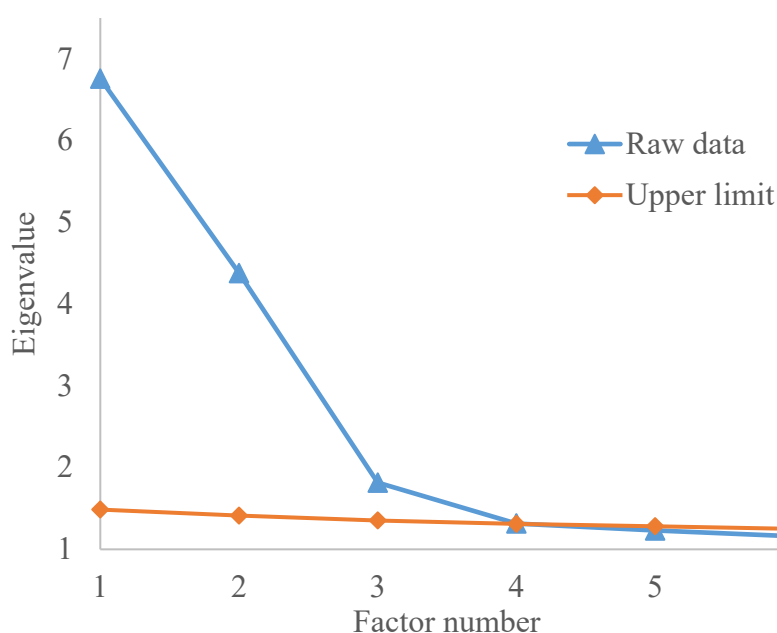

Figure 1. Parallel analysis plot

Table 1

Number of factors and fit indexes as a function of the number of factors in each extraction.

Factors	χ^2	df	RMSEA	90%	CFI	TLI
1	4258.846	464	.098	.096 - .101	.555	.524
2	1620.457	433	.057	.054 - .060	.861	.840
3	1154.767	403	.047	.044 - .050	.912	.891
4	813.752	374	.037	.034 - .041	.948	.932
5	673.203	346	.033	.030 - .037	.962	.945

Reliability

The results showed that the three dimensions had adequate reliability: *Favourable Attitude towards Inclusion* ($\omega = .839$), *Negative Feelings towards Inclusion* ($\omega = .721$), and *Competence Needs* ($\omega = .898$).

I264	.295	.003	.611

Note. Factor 1 = *Favourable Positions towards the Inclusion*. Factor 2 = *Negative Feelings towards the Inclusion*. Factor 3 = *Competence Need*.

Discussion

The aim of this project was to develop an instrument based on three fundamental variables: the inclusive educational system, the measurement of perceptions related to the presence of pupils with intellectual difficulties in regular classroom, and teachers' needs related to teaching practice. For this, we designed a pool of items and analysed the scale's factor structure and reliability. The results showed that the SAD-CSOS with three factors (*Favourable Attitude towards Inclusion*, *Negative Feelings towards Inclusion*, and *Competence Needs*) had adequate validity and reliability, in line with previous research (Bailey, 2004; Forlin, Earle, Loreman & Sharma, 2011; Forlin, Jobling & Carroll 2001; Kudláček, 2007; Sharma & Desai, 2002).

Factor 1 measures teachers' perceptions regarding the importance of inclusion of pupils with intellectual difficulties in regular schools, in accordance with the works of Forlin, Earle, Loreman, and Sharma (2011) and Kudláček (2007). It is shaped by items relative to the development of attitudes favourable to the inclusion of such pupils in the school, teachers' perceptions about other agents in the process of inclusion, and the need to include these pupils in activities in regular classrooms. Factor 2 pertains to opposition towards the inclusive process, covering feelings that limit teachers such as apprehensions, feelings of sorrow or guilt, and the perceived negative effects suffered by the school as a result of including students with intellectual difficulties (Kudláček, 2007). Factor 3 covers formative and methodological aspects that teachers consider to be necessary to be able to give an inclusive response to this type of pupils together with their classmates, in accordance with the contributions of Cochran (1997), Bailey (2004) and Forlin, Earle, Loreman and Sharma, (2011). In particular, this factor measures the needs for the transformation of the special education classroom into a regular classroom and contains items about what must be done for the regular classroom to include pupils with difficulties. This factor indicates various competencies that teachers need in order to work with pupils with intellectual difficulties (Avramidis & Kalyva, 2007; Horne & Timmons, 2009).

The information gathered has been forwarded to schools and the results are being used by school principals and administrators to implement measures to change teachers' negative perceptions about inclusion. Also, such information is helping to increase positive attitudes towards pupils with intellectual difficulties in order to establish a process for change.

This study has several limitations that warrant attention. One is that the predictive validity of the questionnaire was not analysed. In future studies, it would be interesting to examine in depth the relationship between the responses to this questionnaire and actual educational inclusion of pupils with intellectual difficulties in regular schools and/or the actual inclusion culture of the school. In addition, teachers' beliefs are not independent from context; that is, teachers of the same school often have similar or shared thoughts. For this reason, it would be interesting to analyse by means of a multilevel analysis what percentage of the variance of responses of the teachers was due to the school and what percentage belonged to the subjects. We could not perform such an analysis because of the differing number of teachers per school; in some cases, there was only one person per school. Therefore, future studies could recruit a suitable sample for performing such a multilevel analysis.

The present study provides evidence that the SAD-CSOS is a reliable and easy-to-use measure that enables an initial diagnosis of school functioning by assessing the teachers' perceptions. This instrument, from the point of view of educational administration, can reinforce decision making related to teachers' needs regarding educational inclusion of pupils with intellectual difficulties, as the results from this scale can be used to implement formative actions.

Abstract

The main purpose of this study was to develop and examine the consistency of factors that affecting innovation performance in private schools, Thailand. In addition, researchers also examine the direct, indirect, and total effects on innovation performance. A mixed mode design was employed using a combination of quantitative and qualitative methods to collect data. Five academic experts were involved in qualitative data collection while a total of 650 private schools were participated in the quantitative of collecting data in the first and second phase respectively. School is the unit of analysis and school principal is the target sample in this study. Quantitative samples were selected using multi-stage random sampling technique. The in-depth interviews at the first phase to five experts was design to develop factors of innovation performance that have high factor loading based on the findings from first phase. Findings of the second phase revealed that the innovation performance structural model of private schools is consistent to the empirical data as $X^2 = 91.741$, $df = 72$, $p\text{-value} = 0.583$, $X^2/df = 1.274$, $CFI = 0.998$, $TLI = 0.996$, $RMSEA = 0.023$, $SRSR = 0.018$. In addition, findings also showed that learning environment ($\beta = 0.388$), strategic management ($\beta = 0.371$), organizational culture ($\beta = 0.088$), and school leadership ($\beta = 0.428$) are found to have direct effects toward innovation performance. On top of that, school leadership ($\beta = 0.428$), organizational culture ($\beta = 0.288$), and learning environment ($\beta = 0.596$) have indirect effects toward innovation performance. It can be concluded that the effects of factors in descending order will be learning environment ($\beta = 0.596$) and, school leadership ($\beta = 0.384$), organization culture ($\beta = 0.376$), and strategic management ($\beta = 0.371$). Finally, finding showed that school leadership associated to organizational culture ($\beta = 0.813$) together leads to direct and indirectly effects on innovation performance of private schools in Thailand.

Keywords: *Innovation performance; learning environment; organizational culture; private schools; school leadership*

Introduction

The rapid changes are leading to increasing levels of economic competition and socio-political-cultural transformation thus transforming the ways people think, live, learn, and interact. For Thailand to remain competitive in an age of global movement and uncertainty, a knowledge-based society that can generate innovations through creativity and shared knowledge must be developed (Buasuwan, 2018). Private schools as educational organizations have to adapt for changing to survive, grow and create innovation in order to maintain continuous and sustainable development (Chamchoy, 2012).

Prasertcharoensuk and Tang (2017) emphasized that strategic school leaders are able to provide the vision and direction for organizational innovation performance. This is because school leaders need the skills and tools for both strategy formulation and implementation to promote innovations. In addition, Manea (2015) highlighted that management and innovation in education represent key factors in the completion of a qualitative educational act, which serves the socio-cultural, economic, and democratic values and principles. Through the involved processes, school leadership and management represent the fundamental factor and also mandatory for the functioning of organizational innovations.

Research Objectives

Based on the previous literatures above, researchers would like to examine structural relationship model of the school leadership, organizational culture, strategic management, and learning environment toward innovation performance of private schools in Thailand. The following are the specific objectives of this study:

- i. To examine the relationships between the key factors of innovation performance in a structural relationship model.
- ii. To examine the congruence of the structural model with empirical data.
- iii. To examine the direct, indirect, and total effects of factors toward innovation performance.

Method

A mixed mode method was employed by researchers to collect quantitative and qualitative data using multiple ways to explore the research problems thoroughly. This research design is a combination of different modes of collecting data for a single research. Researchers begin to collect quantitative data followed by a collection of qualitative data to achieve the sequential explanatory of the collected data. Researchers intend to use the quantitative data analysis from Structural Equation Modeling (SEM) to assist in explaining and interpreting the findings of a qualitative study (Creswell, 2014).

At the first phase, researchers utilized in-depth interviews to the five academic experts who were selected using purposive sampling technique. They were selected because they are professionals in the area of policy management in Thailand Ministry of Education, professors in higher education institutions, and actively involved in innovative program at national level. Findings from the first phase were designed to identify factors of innovation performance.

At the second phase, a survey quantitative design was employed 520 private secondary high schools from a population of 1,208 private schools in Thailand (data from Department of Private Education, Ministry of Education, Thailand). Sample size was determined based on Meyers, Gamst, and Guarino's (2006) rules of thumb because Meyers et al. proposed that suitable sample sizes depend upon the numbers of items available for factor analysis. Kaplan (2000) proposed that the proper ratio of samples is 10:1 or 10 samples per one observable variable. Since there were 52 observable variables in this study, the required sample size was 520 samples of schools since unit of analysis of this study was school. On this line of reasoning, multi-stage random sampling technique was utilized to select top up to 650 schools after considering about high non-response rate.

After the qualitative data was analyzed using content analysis, factors that affecting innovation performance were identified. This is followed by the second phase whereby quantitative data was analyzed using SEM in order to fit the model with empirical data. SEM is suitable to use because the theoretical constructs of this study are represented by the latent factor. The relationships between the theoretical constructs are represented by regression or path coefficients between the factors. The SEM implies a structure for the covariance between the observed variables. Confirmatory Factor Analysis (CFA) is used to validate the measurement model. Secondly, SEM directs around fitting the structural model by measuring the significance of the relationship between latent variables, which is accomplished through path analysis (Kaplan, 2000). CFA was used as a desirable validation stage preliminary to the main use of SEM to identify the causal relations among latent variables (Schumacker & Lomax, 2004).

Findings

The findings of this study are presented in accordance with the research objectives stated above.

Qualitative findings of factors of innovation performance a structural relationship model

Qualitative findings are derived from the five academic experts' responses. The five academic experts shared with researchers regarding the factors that affecting innovation performance in private schools.

Quantitative findings of factors that affecting innovation performance

Findings from the first phase above there were five latent variables in the structural relationship model namely innovation performance, school leadership, organizational culture, strategic management, and learning environment. Qualitative findings indicated that there are five latent variables and 18 observable variables as shown in Figure 1 below.

Subsequently, findings also showed that each latent variable has its factors as follow. Innovation performance (IP) consisted of incremental innovation (IP1), radical innovation (IP2), and process innovation (IP3). School leadership (SL) was comprised of transformational leadership (SL1), strategic leadership (SL2), innovative leadership (SL3), and technology leadership (SL4). Organizational culture (OC) included adaptability (OC1), learning (OC2), teamwork (OC3), risk taking (OC4), and creativity (OC5). Next is strategic management (SM) encompassed environment analysis (SM1), strategic planning (SM2), strategic implementation (SM3), and evaluation and control (SM4). Finally, learning environment (LE) covered physical environment (LE1) and psychological environment (LE2). CFA was used to validate at the preliminary stage to identify the causal

relationships among the latent variables. Findings related to factor loading values of all the latent variables for innovation performance structural relationship model ranged from 0.711 to 0.981 are statistically significant at 0.01. Factor loading is the importance of standard factors of each observable variable in the relationship model of innovation performance that had been taken into account. The co-variance with innovation performance was from 50.60 to 96.20 percent.

The factor with the highest factor loading was process innovation ($\beta = 0.981$, $R^2 = 0.962$). This second highest factor was innovative leadership ($\beta = 0.925$, $R^2 = 0.856$). This is followed by strategic implementation ($\beta = 0.914$, $R^2 = 0.835$), evaluation and control ($\beta = 0.905$, $R^2 = 0.819$), strategic leadership ($\beta = 0.904$, $R^2 = 0.817$), psychological environment ($\beta = 0.898$, $R^2 = 0.806$), transformational leadership ($\beta = 0.890$, $R^2 = 0.792$), technology leadership ($\beta = 0.887$, $R^2 = 0.787$), teamwork ($\beta = 0.881$, $R^2 = 0.776$), adaptability ($\beta = 0.878$, $R^2 = 0.771$), physical environment ($\beta = 0.867$, $R^2 = 0.752$), risk taking ($\beta = 0.864$, $R^2 = 0.746$), creativity ($\beta = 0.848$, $R^2 = 0.719$), learning ($\beta = 0.839$, $R^2 = 0.704$), environmental analysis ($\beta = 0.831$, $R^2 = 0.691$), and incremental innovation ($\beta = 0.830$, $R^2 = 0.689$) respectively. The factor that had the lowest factor loading was radical innovation ($\beta = 0.711$, $R^2 = 0.506$). As a result all the factors of the structural relationship model are found to be important construct for innovation performance.

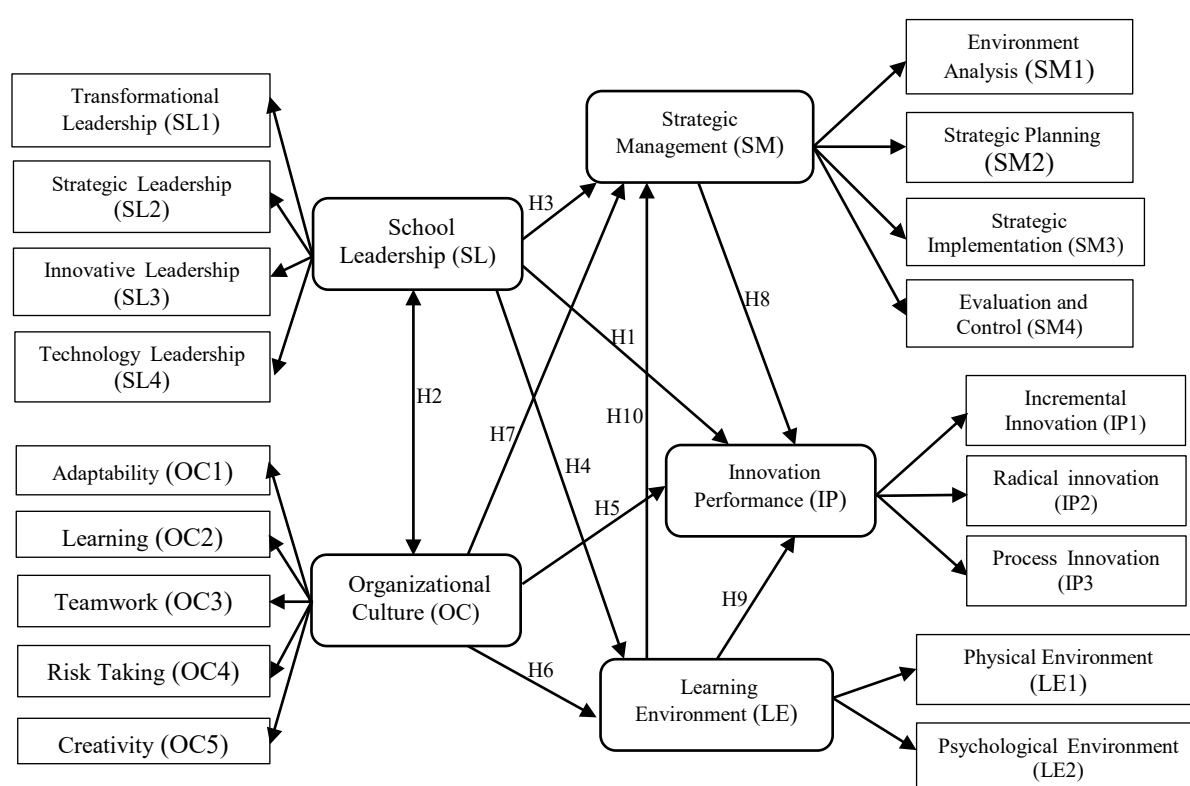

Figure 1. Factors of Hypothesis Structural Relationship Model

Table 1. Factor loading and validity of latent variables and their related observable variables in the structural relationship model

Latent variable	Observable variable	Factor loading (β)	R^2
Innovation performance (IP)	Incremental innovation (IP1)	0.830**	0.689
	Radical innovation (IP2)	0.711**	0.506
	Process innovation (IP3)	0.981**	0.962
School leadership (SL)	Transformational leadership (SL1)	0.890**	0.792
	Strategic leadership (SL2)	0.904**	0.817
	Innovative leadership (SL3)	0.925**	0.856
	Technology leadership (SL4)	0.887**	0.787
Organizational culture (OC)	Adaptability (OC1)	0.878**	0.771
	Learning (OC2)	0.839**	0.704
	Teamwork (OC3)	0.881**	0.776
	Risk taking (OC4)	0.864**	0.746

	Creativity (OC5)	0.848**	0.719
Strategic management (SM)	Environment analysis (SM1)	0.831**	0.691
	Strategic planning (SM2)	0.838**	0.702
	Strategic implementation (SM3)	0.914**	0.835
	Evaluation and control (SM4)	0.905**	0.819
Learning environment (LE)	Physical environment (LE1)	0.867**	0.752
	Psychological environment (LE2)	0.898**	0.806

Quantitative findings of congruence of the structural relationship model with empirical data

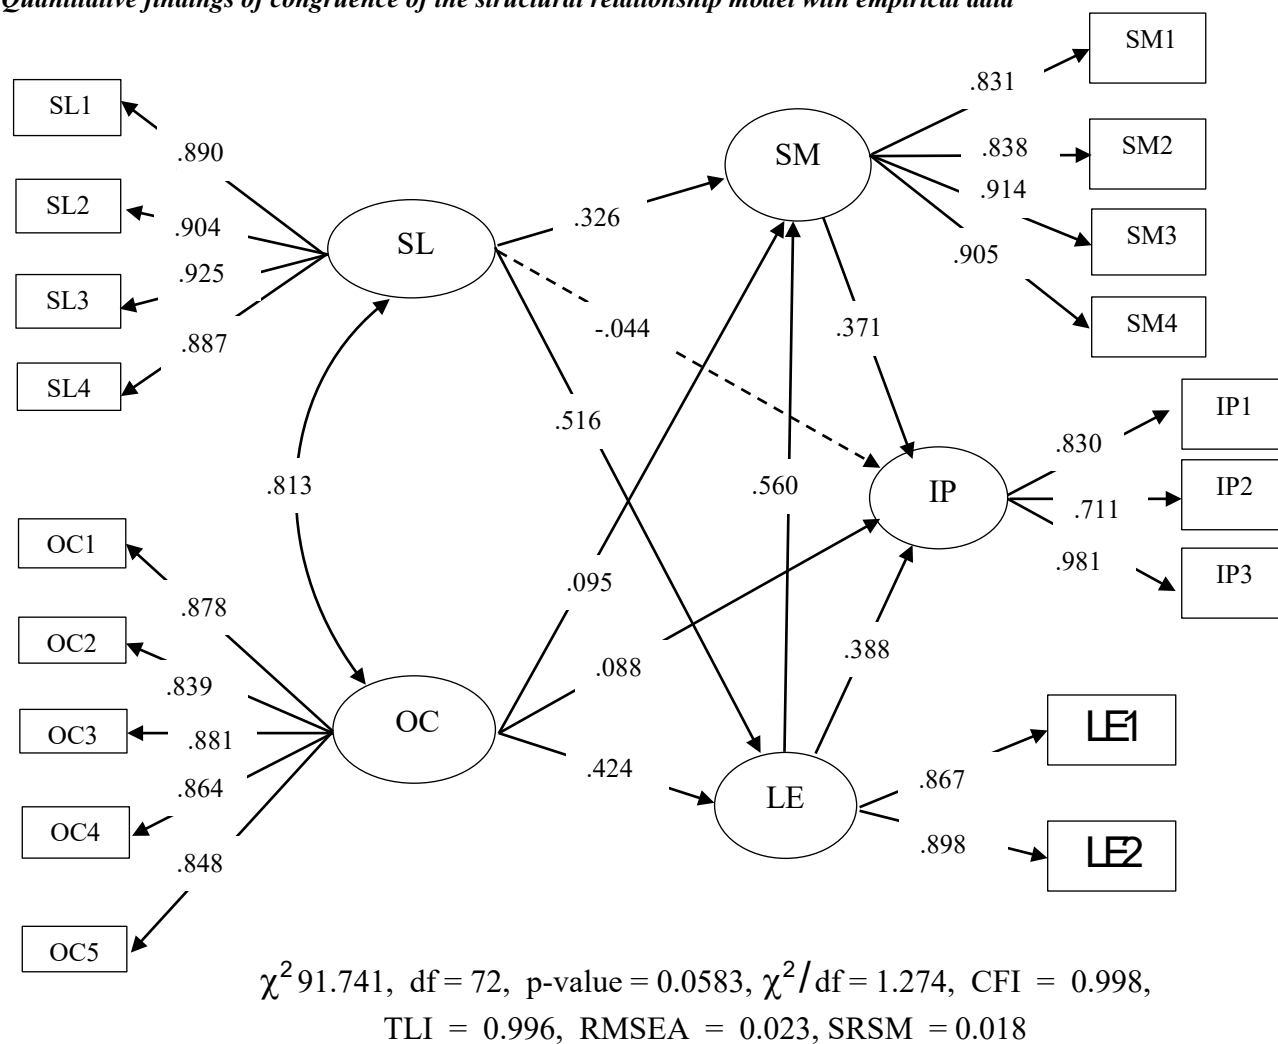

Figure 2. The Effects of the Structural Relationship Model

Findings from the correlations between the factors of innovation performance could be assessed in the standard component score (β) which indicated significantly high and positive correlations at 0.01. Besides, it was found that the structural relationship model has a goodness fit with evident data, with $\chi^2 = 91.741$, $df = 72$, $p = 0.0583$, $\chi^2/df = 1.274$, $CFI = 0.998$, $TLI = 0.996$, $RMSEA = 0.023$, and $SRMR = 0.018$. Finding shows that the structural relationship model of innovation performance of private schools in Thailand were consistent with empirical data. This implies that the consistency of factors that affecting innovation performance resulting in descending order would be school leadership, strategic management, learning environment, and organizational culture. In addition, observable variables of innovation performance was found to be at good level in descending order as such process innovation, incremental innovation, and radical innovation. Figure 2 shows the effects of the latent and observable variables in the structural relationship model of innovation performance.

Findings of the direct, indirect, and total effects of factors toward innovation performance

All the latent variables were found to have significant direct and indirect effects toward innovation performance. In addition, school leadership and organizational culture were found to have direct effects toward learning environment and strategic management while learning environment has direct effect towards strategic

management. Table 2 shows the direct, indirect, and total effects of factors toward innovation performance.

Table 2. Direct, indirect, and total effects of factors toward innovation performance

DISCUSSION AND CONCLUSION

Findings revealed that school leadership, organizational culture, strategic management, and learning environment are important factors that promoting innovation performance of private schools in Thailand. Therefore, learning in the 21st century has to move toward innovative, open, and flexible learning environments (Organization for Economic Cooperation and Development, 2013), concerned with educational innovations that will assist the nation to prepare the knowledgeable, creative, and innovative human capital for the future (Panich, 2012). These educational shifts in terms of innovations have to intertwine with curriculum development, leadership and management development through policy and practice (Abbis, 2015).

In conclusion, the success of private schools in promoting the creative and innovative society of Thailand 4.0 will require socio-cultural-institutional transformation. Researchers would like to suggest to the Ministry of Education to utilize the structural relationship model of innovation performance in the school administration training and staff development programs. Although there have already been some important successes among some private schools in Thailand (Muangthong, 2012), there are still many reforms that will be necessary in Thailand to develop the innovation, lifelong learning, and knowledge-based teachers' community required for it to remain competitive in an age of global movement.

Abstract

In fulfilling its vision of quality higher education and in line of Saudi strategy calling for higher education in engineering and technology, and motivated by increasing demands for young Saudi engineers, Prince Sultan University (PSU) planed to establish a college of Engineering. A technical committee was formed to identify which engineering programs the college should offer. This paper presents the structured approach used in conducting the task and the findings. First the method of identifying the promising programs is presented. This included a review the Saudi Higher Education strategic plans, the Kingdom's education environment, and a survey of engineering programs in Saudi Arabia, the Gulf countries, the Middle East, Asia, Europe and North America. This was followed by a survey of demands for engineers in the Saudi private and public sectors and the supply of engineering graduates. A quantitative approach of evaluating the most promising programs is also presented. This approach is based on identifying criteria of evaluating the candidate programs, evaluating the degree of importance of each criteria, measuring the degree by which each program meets the criteria and finally calculating a weighted score for each candidate program based on the criteria degree of importance and the degree by which the program meets the criteria. Finally the conclusions and recommendations are presented.

Introduction

Prince Sultan University (PSU), established in 1999, is the first private university in Saudi Arabia. The university is widely acknowledged as a leader in higher education in the Kingdom. It offers ten undergraduate degree programs within three colleges. After a decade since its establishment with a focus on enhancing existing programs, PSU embarked on a second decade of development and expansion by establishing new colleges and introducing unique programs. For accomplishing this purpose, PSU formed a committee to investigate the viability of establishing a College of Engineering and to identify most demanded and promising programs.

The vision strategies of Saudi Arabia are conducive to the establishment of a College of Engineering at PSU. The strategies of "Vision 2020" are organized along distinct themes with a focus on economic diversification and development of human resources (Ministry of Economy and Planning, 2010). The development of the human resources theme calls for raising the technical, managerial and innovative capabilities of the working population through various learning processes along the following lines:

1. Raise standards of technical and scientific education.
2. Enhance managerial competence and innovative capabilities through industrial learning.
3. Encourage the expansion of technology-based small and medium enterprises.
4. Develop a national innovation system to support the exchange of technological knowledge between R&D centers and private firms.
5. Upgrade production technology through alliances with international technology leaders, collaboration with domestic technology centers, specially science and technology schools of KSA universities.

Background

KSA General Education Environment

The educational environment in Saudi Arabia is thriving as shown by the following (Ministry of Higher Education, 2010):

- Thirty-eight percent of the Saudi population of over 26 million is under the age of fourteen.
- Of the 300,000 Saudis graduated from high school in 2009, about 250,000 enrolled in higher education.
- The number of students enrolled in higher education grew from 350,000 in 1999 to almost 669,000 in 2009, an increase of 91%.
- Females make over 60% of the student population in Saudi universities. Consequently, universities are catering more programs for females.
- The number of graduates approached 108,000 in 2009, over 61,000 of whom are females.
- The number of universities grew from 7 (exclusively public universities) in 1989 to 32 universities (24 public and 8 private universities) in 2009. Over the same period, the number of colleges at these universities grew from 83 to 487 (40 of which in private universities).

KSA Engineering Education Environment

The engineering education environment is found to be encouraging considering that more and more Saudis are seeking engineering education. So far engineering higher education has been limited mainly to males; however, females are taking the opportunity to enroll in the very limited programs offered to them, mainly Computer Engineering and recently some Architecture related programs, where enrollment in these programs is high (Al-Sultan, 2007; Nahed, 2005).

Following are some facts about the encouraging engineering education (Ministry of Higher Education, 2010; SAGIA, 2007; European Commission, 2003):

- The Ministry of Higher Education is encouraging state universities to revise their departments in lines with the employment market demands. This is an attempt to guide the resources towards medicine, science, engineering and IT fields.
- The number of engineering colleges tripled from 7 in 2002 to 21 in 2007.
- Secondary School Science Graduates who are eligible for admission in engineering colleges grew from 43.9% in 1999 to 51.4% in 2003.
- IFS statistics show that less than 1% of the Saudi population graduate in science and engineering. This percentage is way low when compared an average of 6% for developed countries.
- According to Saudi Arabian General Investment Authority figures of 2007, only 3% of Saudis enroll in Engineering, Manufacturing and Construction fields of study. This is way low considering the 15% enrollment in those fields in developed countries.
- According to UNISCO figures of 2004, only 4.4% of Saudis graduates are Engineers. This is way low considering the average universal average of 12.5%.
- Currently less than 23,000 (4%) of the 628,000 students are enrolled in public universities are in engineering colleges. Almost 22,000 of those enrolled in engineering colleges are males and only about 1,000 are females. The percentages of engineering students to the students' population in public universities are 9.4% and 0.3% for males and females respectively.
- 2004 statistics reveal that over 1,000 Saudis are enrolled in undergraduate engineering programs abroad.

Despite the increasing number of public and private universities and the increasing number of engineering programs in the Kingdom, there is a room for unique programs that are becoming popular worldwide, but are rarely offered in the Kingdom. Also certain engineering programs seem to be attractive to females.

Methods And Analysis

A quantitative approach of evaluating the most promising programs was utilized. This approach was based on identifying criteria of evaluating the candidate programs, evaluating the degree of importance of each criteria, measuring the degree by which each program meets the criteria and finally calculating a weighted score for each candidate program based on degree of importance and the degree by which the program meets the criteria.

1. Extensive Survey of Demands for Engineering Graduates

The majority of Saudi engineers work in the public sector. However, Saudi engineering make less than 10% of those

employed by the private sector which employs over 80% of the engineers working in the Kingdom. Overall, Saudi engineers occupy less than 20% of the over 100,000 engineers employed in the Kingdom.

A demand-supply study was based on the period from 2001 to 2003 revealed that demand exceeded supply by approximately 4,000 positions per year in science and engineering. The same study concluded that growth in the engineering graduates from 1999 to 2003 was limited to 1.3%. These statistics showed an increasing demand for Saudi engineers. Although, the number of Saudi engineers increased since this study, the number of engineering positions has also increased due to the enormous economic development in the Kingdom.

2. Identifying Suitable Specializations/Programs

The formed committee adopted a systematic scientific approach for identifying the most suitable programs to offer at the College of Engineering at PSU. The procedure and results of this approach is presented in the following sub-sections.

2.1. Surveying Existing Programs

The committee conducted an extensive survey of the existing undergraduate engineering programs. The survey reviewed traditional and contemporary programs that might be suitable to offer at PSU. The survey also provided review for the engineering programs being offered in Saudi Arabia and the Middle East for both male and female students.

The survey covered 57 different engineering programs in following four areas:

- 1) Architecture Related Programs
- 2) Technology Related Engineering Programs
- 3) Management Related Engineering Programs
- 4) General (Traditional) Engineering Programs

The survey covered 172 universities worldwide including:

- Saudi Arabia: (29 universities)
- Gulf Countries: (30 universities)
- Middle East: (49 universities)
- Far East: (9 universities):
- United Kingdom: (10 universities)
- Canada: (9 universities)
- United States: (36 universities)

Details of each are presented as follows:

- Saudi Arabia: (29 Universities)
 - Public Universities (15)
 - Private Universities and Colleges (14)
- The Gulf Countries (30 Universities)
 - UAE (13 Universities)
 - Oman (5 Universities)
 - Qatar (2 Universities)
 - Kuwait (4 Universities)
 - Bahrain (6 Universities)
- The Middle East: (49 Universities)
 - Jordan (17 Universities)
 - Lebanon (9 Universities)
 - Syria (10 Universities)
 - Egypt (13 Universities)
- The Far East (9 Universities): Malaysia, Singapore, Hong Kong, Australia
- Europe: UK (10 Universities)
- Canada: 9 Universities
- United States: 36 Universities

Tables 1 and 2 below summarize the frequencies of the surveyed programs by region.

Table 1: Frequency of the surveyed programs by region.

			US	UK	Canada	Asia	Middle East	Gulf	KSA - Male	KSA - Female	All
	No	Program	36	10	9	9	30	49	29	29	172

The survey of the Architecture related programs revealed the following:

- A) Programs worldwide - Most common Architecture related Engineering programs
- Architecture
 - Art and Design
 - Architectural Engineering
 - Product/Industrial Design
 - Graphic/Multimedia Design
- B) KSA - it has limited number of Architecture related programs, and as much less than the international and regional averages. The offered programs in KSA are:
- Architecture Engineering: five programs in public universities for males only.
 - Architecture: ten programs (seven for males and three for females). Architecture female programs are offered in private universities.
 - Urban Planning/Design: four programs in public universities for males only.

- Landscape Architecture: one program for males only.
- Interior Design/Architecture: seven programs (two for males and five for females).
- Graphic Design: three program in private universities (one for males and two for females)

Table 2: Percentage of the surveyed programs by region.

			US	UK	Canada	Asia	Middle East	Gulf	KSA - Male	KSA - Female	All
	No	Program	36	10	9	9	30	49	29	29	172

The survey of the Technology related programs revealed the following:

- Most international and regional universities offer Electrical and Computer Engineering programs.
- Saudi universities offer adequate number of Electrical and Computer Engineering programs. However, Electronics and Communication Engineering are mostly offered as majors in Electrical Engineering Departments.
- Biomedical Engineering is becoming a common program worldwide, yet it is not offered in the Kingdom. This conclusion also applies to Electronics Engineering. However, these two programs are interrelated.
- There is a shortage of offered Mechatronics programs in the Kingdom. However, this program is highly dependent on Mechanical and Electronics Engineering.
- Statistics of surveyed Communication Engineering may be misleading because it is taught at many universities within Computer Engineering majors.
- Despite this, the number of offered Communication Engineering in the Kingdom is limited in consideration with the current and expected future growth in the communication industries.

The survey of the Management related engineering programs revealed the following:

- A) The highest concentration of management related engineering programs are offered in U.S. universities.
- B) Only 23 US universities offer undergraduate Engineering Management program. Most US universities offer such programs at the graduate level.
- C) Most common Management related Engineering Programs include:
 - Industrial Engineering and Management,
 - Management Science and Engineering, and
 - Construction Engineering and Management.
- D) In K.S.A., the most common Management related Engineering Programs include:
 - Industrial Engineering and Management, and
 - Construction Engineering and Management.

The committee suggested offering Engineering Management, Engineering and Technology Management, or Management Science and Engineering. Other programs like Energy Engineering and Management, Natural Resources Engineering and Management, and Water Resources Engineering and Management require more resources and are rarely offered elsewhere.

2.2. Identifying Candidate Programs

Based on the study survey and analysis of the relative frequency of the offered programs in the Saudi Arabia to those of the region and worldwide, the committee identified 15 programs that can be promising for fulfilling the needs of Prince Sultan University. A list of 57 programs was compiled to include all potential engineering programs. The elimination process was carried out by asking each committee member to select a total of 15 programs that he/she considers as viable or promising. To dilute bias towards programs in one's discipline, each committee member was instructed to select five programs in his/her discipline and 10 programs from other disciplines. Table 3 is a list for the 15 selected programs with slight modifications to eliminate repetition and to group programs that were usually offered as majors within other programs.

Table 3: The 15 selected programs

1	Computer Engineering Computer, Embedded Systems Engineering, Data Communication Engineering
2	Electronic Engineering
3	Telecommunications Engineering Communication & Networks
4	Biomedical Engineering
5	Electrical Engineering
6	Environmental Engineering Natural and Built: Urban Planning, Landscaping, City & Regional planning
7	Architectural Engineering Structural, Electro/Mechanical, Data & Communication Systems Construction Engineering & Management
8	Architecture Interior, Graphic, Digital, Product, & Multimedia design
9	Materials Science and Engineering
10	Mechanical Engineering
11	Industrial Engineering Design, Production, Maintenance, Safety & Management
12	Engineering & Technology Management
13	Water Resources & Irrigation Systems
14	Energy Systems Engineering
15	Aeronautic & Aviation Engineering

2.3. Defining Program Criteria

The committee conducted a brainstorming session to come up with a list of criteria by to evaluate the 15 potential programs. The list was then passed to each committee member who was asked to select 10 criteria that he/she considers as relevant. Also they were asked to list the selected criteria in the order of importance.

The following is a list of the top 12 criteria that the committee selected as the most important and most relevant:

- 1) Students' Demand / Attractiveness
- 2) Current & Future Market Demand / Sustainability
- 3) Uniqueness / Competition
- 4) Social / Cultural Acceptability
- 5) Compatibility with PSU Programs, Labs and Courses
- 6) Degree of Complexity
- 7) Resources / Facilities Requirements and Cost
- 8) Faculty Requirements and Availability
- 9) Compliance with National and Regional Strategic Plans
- 10) Application / Technology Oriented
- 11) Accreditation Requirements
- 12) Time Required to Establish the Program

2.4. Assessing Criteria of Importance

The next step was to determine the degree of importance for each of the defined criteria. This was accomplished using the Criteria Evaluation Matrix. Each committee member was asked to rank the degree of importance of each criteria from 0 for not important to 5 for extremely important.

Table 4 shows the results of the committee evaluation of the degree of importance for each criterion. Outcomes were grouped by respondent's gender to control for gender differences in perception. The last three columns show the average degree of importance for males, females, all respondents. The results clearly indicate that:

- (A) Current and future demand is extremely important.
- (B) Program uniqueness, attractiveness, social/cultural acceptability, compliance with national and regional strategies, and resources and cost requirements are very important.
- (C) Other criteria except for the time required to establish the program are important.
- (D) The time required to establish the program is moderately important.

Table 4: Results of evaluation of criteria degree of importance.

		Average		
		Male respondents	Female respondents	All respondents
	Criteria for Programs Selection			
1	Students' Demand / Attractiveness	4.00	4.25	4.10
2	Current & Future Market Demand / Sustainability	4.67	4.25	4.50
3	Uniqueness / Competition	4.17	4.50	4.30
4	Social / Cultural Acceptability	3.33	4.50	3.80
5	Compatibility with other PSU Programs, Labs & Courses	3.33	3.25	3.30
6	Degree of Complexity	2.17	3.25	2.60
7	Resources/Facilities Requirements and Cost	3.33	3.75	3.50
8	Faculty Requirements & Availability	2.67	4.00	3.20
9	Compliance with National & Regional Strategic Plans	3.83	3.25	3.60
10	Application / Technology Oriented	3.50	3.50	3.50

11	Accreditation Requirements	3.17	3.00	3.10
12	Time Required to Establish the Program	2.33	2.25	2.30

It is interesting to find difference between males and females perceptions of degree of importance. Females considered social/cultural acceptance, faculty requirements and availability, and degree of complexity are more important than males. Males, on the other hand, considered compliance with national and regional strategies and current and future market demands more important than females.

2.5. Evaluating Potential Programs

Committee members were asked to evaluate the candidate programs for each of the defined program criteria. The evaluation was carried out using the Programs Evaluation Matrix on a relative scale from 0 to 10:

- 0 if the program does not meet the criteria.
- 10 if the program perfectly meets the criteria.

Table 5 shows the average of all respondents' evaluations of the candidate programs for each criterion.

Table 5: Average score of respondents evaluation of candidate programs.

		Criteria											
		Students' Demand / Attractiveness	Current & Future Market Demand / Sustainability	Uniqueness / Competition	Social / Cultural Acceptability	Compatibility with other PSU programs	Degree of Complexity	Resources/Facilities Requirements and Cost	Faculty Requirements & Availability	Compliance with National Strategic Plans	Application / Technology Oriented	Accreditation Requirements	Time required to establish the new program
1	Computer Engineering	7.8	7.7	5.9	7.1	8.8	7.3	7.0	7.5	7.9	8.6	6.5	7.5
2	Electronic Engineering	7.0	7.3	7.0	5.5	5.9	5.6	5.1	6.6	7.3	8.2	6.2	5.5
3	Telecommunications Engineering	8.4	8.0	7.3	6.2	6.5	6.5	6.3	7.5	8.2	8.9	6.9	6.7
4	Biomedical Engineering	8.4	8.3	8.4	6.2	4.5	5.0	4.5	5.1	8.2	8.5	5.9	5.2
5	Electrical Engineering	6.1	6.8	4.2	2.8	4.6	6.1	5.8	7.4	6.7	8.0	6.7	6.3
6	Environmental Engineering	6.8	7.5	7.3	5.4	5.2	7.1	6.7	6.7	7.7	7.6	7.0	6.9
7	Architectural Engineering	8.3	8.0	6.3	5.5	6.6	7.3	7.1	7.6	7.8	8.0	7.7	7.5
8	Architecture	8.0	7.5	5.9	8.6	8.0	7.6	7.6	7.6	7.7	7.9	7.6	8.1
9	Materials Science and Engineering	6.3	6.7	7.0	5.1	4.3	6.0	5.2	6.2	7.3	7.6	7.2	6.1
10	Mechanical Engineering	5.6	6.5	3.8	2.0	3.0	5.8	5.6	7.7	6.6	6.9	6.9	6.4
11	Industrial Engineering	7.8	7.7	6.9	4.7	6.0	7.3	7.0	6.8	7.6	7.1	7.9	7.2
12	Engineering & Technology Management	7.4	7.4	8.2	6.7	6.9	7.5	7.5	7.0	7.4	7.2	8.1	7.7
13	Water Resources & Irrigation Systems	6.7	7.1	7.6	4.2	4.2	6.1	5.7	5.8	7.7	7.7	7.1	6.1
14	Energy Systems Engineering	7.8	8.0	8.0	4.1	4.7	6.1	5.8	6.5	8.0	8.1	6.8	6.3
15	Aeronautic & Aviation Engineering	7.5	7.3	8.4	2.6	3.1	3.2	3.5	4.0	6.5	7.2	4.2	3.6

The summation of the average scores for each program is meaningless because it assumes that different criteria are of the same importance. Therefore, the average of all respondents' evaluations of the candidate programs for each criterion was recalculated. A weighted score for each program was obtained by multiplying the average score for each criteria by the criteria importance factor (ranging from 0 for not important to 5 for extremely important). The resulting weighted scores and summation thereof of the candidate programs are shown in Table 6 below. The last row in the table shows the maximum possible weighted score for a hypothetical program that perfectly meets all defined criteria (i.e., scores 10 on every criteria).

Table 7: Results of the Programs Evaluation Matrix.

Programs		Criteria												Weighted Program Score
		Students' Demand / Attractiveness	Current & Future Market Demand / Sustainability	Uniqueness / Competition	Social / Cultural Acceptability (Women programme)	Compatibility with other PSU programs	Degree of Complexity	Resources/Facilities Requirements and Cost	Faculty Requirements & Availability	Compliance with National & Regional Strategic Plans	Application / Technology Oriented	Accreditation Requirements	Time required to establish the new program	
1	Computer Engineering	32.1	34.8	25.4	26.9	29.1	18.9	24.5	24.1	28.5	30.2	20.3	17.4	312.2
2	Electronic Engineering	28.7	32.7	30.1	21.1	19.5	14.7	17.8	21.2	26.2	28.6	19.2	12.8	272.5
3	Telecommunications Engineering	34.3	36.0	31.3	23.5	21.6	17.0	22.0	23.9	29.5	31.2	21.4	15.5	307.0
4	Biomedical Engineering	34.3	37.2	36.0	23.5	14.7	13.0	15.9	16.3	29.5	29.6	18.3	11.9	280.2
5	Electrical Engineering	25.1	30.5	18.2	10.6	15.0	15.9	20.2	23.8	24.0	28.0	20.7	14.6	246.5
6	Environmental Engineering	28.0	34.0	31.3	20.4	17.1	18.4	23.5	21.5	27.8	26.7	21.7	15.9	286.3
7	Architectural Engineering	33.9	36.0	27.0	21.1	21.9	18.9	24.8	24.4	28.1	28.0	24.0	17.1	305.3
8	Architecture	32.8	34.0	25.4	32.8	26.4	19.9	26.7	24.4	27.8	27.7	23.7	18.6	320.2
9	Materials Science and Engineering	25.7	30.3	30.1	19.3	14.1	15.6	18.1	19.8	26.2	26.7	22.3	14.0	262.2
10	Mechanical Engineering	23.0	29.3	16.3	7.6	9.9	15.1	19.6	24.6	23.8	24.2	21.4	14.7	229.4
11	Industrial Engineering	32.1	34.8	29.7	18.0	19.8	18.9	24.5	21.8	27.5	24.8	24.5	16.5	292.9
12	Engineering & Technology Management	30.2	33.1	35.2	25.6	22.8	19.4	26.4	22.4	26.5	25.1	25.1	17.8	309.6
13	Water Resources & Irrigation Systems	27.6	31.9	32.8	15.9	13.8	15.8	20.0	18.6	27.8	27.0	22.0	14.0	267.4
14	Energy Systems Engineering	32.1	36.0	34.4	15.5	15.6	15.8	20.4	20.7	28.8	28.3	21.1	14.4	283.1
15	Aeronautic & Aviation Engineering	30.9	32.7	36.0	10.0	10.2	8.3	12.1	12.8	23.6	25.1	13.0	8.4	223.0
	Maximum weighted score	41.0	45.0	43.0	38.0	33.0	26.0	35.0	32.0	36.0	35.0	31.0	23.0	418.0

Accordingly, the most feasible programs are the ones with maximum weighted program score as follows:

1. Architecture
2. Computer Engineering
3. Engineering Management
4. Communication Engineering
5. Architectural Engineering
6. Industrial Engineering

Conclusions

Proposed Colleges and Programs

According to the evaluation of the candidate programs and considering the nature and type of programs that are attractive and socially acceptable for Saudi males and females, the committee suggested establishing the following programs:

- A) Female programs:
 - Architecture
 - Interior Design/Architecture
 - Graphic & Multimedia Design
- B) Male programs:
 - Communication & Networking Engineering
 - Engineering Management

Computer and Industrial Engineering were eliminated because they are offered in almost all public and private universities in the Kingdom.

Recommendations:

When presented to the Board of Directors, it was decided to initially begin with:

- Two programs for men: Communication & Network Engineering and Engineering Management
- Three programs for women: Interior Design, Architecture, and Graphics & Multimedia Design.

These programs were anticipated to meet the Saudi Arabian strategic goals of “Vision 2020” and to fulfill the university aspiration for development.

A Study Of Factors Predicting Teenagers' Privacy Information Disclosure And Privacy Control On A Social Networking Site In China

EDi Wang

Macau University of Science and Technology

dwang@must.edu.mo

Abstract

This study examined the relationship between teenagers' self-disclosure and privacy control on a Chinese social networking site, Wechat Moment. We tested whether user activity frequency, user experience, and gender affect self-disclosure and privacy control differently on SNSs. To explore these hypotheses, we conducted a survey with 608 Chinese teenagers. Results showed that teenagers who have protected their accounts are more likely to reveal personal information than those who have public accounts. Active users are more likely to set restrictive privacy settings and disclose their personal information than inactive users. Users registered earlier are more likely to protect their accounts and disclose their personal information than those who registered later. Females are more likely to set restrictive privacy settings and reveal more personal information than males. Results were discussed with their implications for teenagers' privacy education.

A Study On Life Story Structure Of Married Immigrant Women Through Comparison With Korean Folktale <Blessed Daughter Of Butcher>¹

Kim, Juonghee

The Convergence Institute for Asian Multicultural Studies Inha University South Korea

Lovebird0110@hanmail.net

Abstract

The purpose of this study is to clarify the similarity of narrative structure between Korean folktale <Blessed Daughter of Butcher> and the life history of a married immigrant woman living in Korea. For the study, tried to analyze the life history of married immigrant women through in-depth interviews and identified the in-depth story of <Blessed Daughter of Butcher>. In Korean folktale <Blessed Daughter of Butcher>, Daughter of Butcher experienced the movement of the world of life in a poor and weak house, a rich and powerful house. The folktale thus reveals a process of conflict and overcoming for adaptation to a new world. This study explored the life-history meaning of married immigrant women who migrated to Korean society through the process of conflict and overcoming which appeared in Daughter of Butcher.

Introduction

The development of technology such as traffic has facilitated the exchange of people and information across borders, and transnational migration has been actively carried out (Castles, 2013). Korea has also become a multicultural society under the influence of global trends. International migration in Korean society has been dominated by various social situations in the 1900 's for the people to migrate abroad for safety, livelihood and economic profit. However, since the 1990s, as Korea's social & economic environment has improved, immigrants have moved to Korea. Traditional Korean society was composed of relatively simple race and ethnicity, but the percentage of members began to change, accordingly.

Foreigners who have been staying in Korea for a long time have steadily increased since 2007. According to the census of Korea conducted in 2016, the total population is 51,269,554, among which 1,413,758 are foreigners. In May 2018, the number of long-term foreigners increased to 1,620,703, which is about 200,000 more than in 2016. The number of foreigners staying in Korea for the long term is about 3%, and the ratio is expected to steadily increase in the future.

Korea have entered a multicultural society. However, Korean society has a prejudice against multicultural members and refuses a multicultural society. According to the 2015 National Multiculture Acceptability, 52.1% answered 'the number of foreigners in Korea should be at the current level'. Combined with the opinion that the number should be decreased, this is 82.2%. In other words, Korean society can accommodate immigrants who have migrated so far, but they do not want migrants to grow. The reality of Korean society is rapidly changing into a multicultural society, but it is evident that Koreans are staying in a closed and exclusive past. In recognition of the fact that Korean society has entered a multicultural society, it is necessary to change the perceptions and attitudes to accommodate diverse social members. A change in perception of multicultural members will be the driving force behind the change in attitude.

The purpose of this study is to understand the life of married immigrant women who are married to Korean and living in Korea. For the Korean society to turn out the exclusive attitude toward multicultural members and convert to a receptive attitude, efforts must be made to understand and understand their lives in Korea. Multicultural societies that occur in modern societies appear in many ways, but most of them are caused by migration to a powerful country with less socio-economic difficulties. Korea is also showing the same trend. The Korean society's prejudice against married immigrant women is based on an imbalance of power. In other words, it is at the core of prejudice to define marriage migrant women as socially underprivileged based on the logic of power that those with more economic wealth are relatively superior to those with less wealth. Changing this perception can also fundamentally change attitudes toward them.

The Study

To improve the perception of marriage immigrant women, this paper proposes Korean folktale <Blessed Daughter of Butcher> as an alternative narrative. The aim of this study is to compare the lives of immigrant women living in South Korea, which is the subject of the real world, with <Blessed Daughter of Butcher> in story-in-depth level to improve Korean society's perception of them. This is an attempt to dispel social prejudice by changing the

¹ This work was supported by the Ministry of Education of the Republic of Korea and the National Research Foundation of Korea(NRF-2017S1A5B4055802).

"master plot" of married women.

Levi-Strauss(1958) sought to reveal the structure of human thought that conceals its appearance through the analysis of story structure of Sophocles' King Oedipus. This assumes that the story structure of literary works is closely related to the question of how human beings perceive the world. In other words, it can capture human cognitive structure through analysis of story structure.

Porter Abbott(2013) saw that story exist not only in literary works but also in the bases of social phenomena. Stories are constructed from the discourse that is implemented on the surface.

We also have a master plot that repeats in various forms for values, hopes, fears etc., and tends to associate consciously or unconsciously with multiple master plots when thinking about social phenomena or life. The master plot can give a powerful rhetorical effect as connected to our values or identity, and we trust that structured story. Porter Abbott assumes that context, cause and effect that exists behind the apparent phenomenon are formed in the form of a narrative. This is also consistent with the Literary Therapeutics' story theory, which considers the phenomenon that appears on the outside as text, and that there is an in-depth story behind it.

The story theory of Literary Therapeutic assumes that in-depth story exists not only on the basis of social phenomena but also on the basis of human life(Jeong, 2008). In addition, in-depth story plays a similar role to the schema that has a certain direction in our life, such as specific thinking and behavior. The cognitive system with story attribute is seen as an in-depth narrative(Shin, 2016). Literary Therapeutics pay attention to the story properties of the in-depth story and attempts to reveal the structure, form, and story-orientation of human psychological and mental prototypes through in-depth story inherent in the narrative context. This viewpoint is the core research methodology of this study. In this study, sees the life of a married immigrant woman and the Korea society's attitude toward them as a phenomenon, and sees that there is an in-depth story that forms a context of narrative. And analyze it through application of narrative theory.

The theory of in-depth story structure utilizes the concept of 'motifieme' proposed by Dundes, structure such as composition and aspect of the relationship follows the theory of literary Therapeutics(Dundes, 1963; Jeong, 2008). Motifeme is a concept proposed by Dundes in North American Indian folktale analysis to demonstrate the existence of a deep structure underlying the text. This paper analyzes the literary texts using narrative theory for deduct the in-depth structure and analyzes lives using the structure. In other words, examines the relationship between in-depth story of <Blessed Daughter of Butcher>, the literary text and the life of a married immigrant woman, and shed light on the literary value of <Blessed Daughter of Butcher> as an alternative story of multicultural society, the phenomenon. It also aims to find new meaning in the life of married immigrant women. It is intended to bring about a paradigm shift in the idea that the lives of married immigrant women who live in Korean society and those who live in relationships with them are the blessed being and will share the blessing with society as savior.

For this purpose, this article focuses on the common and typical life journey of 35 Chinese migrant women. Immigrants who married internationally in Korea were counted as 156,766 in May 2018. Among them, women account for 83.5% (May 2015. Monthly statistics). The vast majority of marriage migrations are women. The feminization of migration is a common tendency to appear worldwide (Castles, 2013). In addition, many of the married immigrant women living in Korea are Chinese (37%, 2015 National Survey of Multicultural Families).

This paper was designed as a part of the research to search for a comprehensive and effective alternative by exploring the living world of multicultural members in order to realize social integration in Korean society. For this purpose, Chinese migrant women, the majority of immigrants in Korea, as the starting point of research. A total of 65 interviewees were conducted according to the purpose and type of migration. Among them, 35 migrant are Chinese married women (Kim Youngsoo etc., 2018). In this paper, 35 married immigrant women interviewed about their lives have extracted the common and typical life journey of married immigrant women. To expand the discussion on marriage immigrant women in general, tried to secure the typicality and universality that could encompass various cases rather than paying attention to individual and specific cases.

Finding 1.

In-depth narrative structure of <Blessed Daughter of Butcher> focused on the daughter

The <Blessed Daughter of Butcher> is a collection of 34 editions of *The Comprehensive Collection of Korean Folklore*, based on a nationwide survey of the 1980s. It is a considerable number when compared to about collection of 15 editions, widely known folktales such as <Kongji and Patzzi>. But 30 years later, changed in social conditions and environmental conditions, <Blessed Daughter of Butcher> became an unfamiliar piece. Nevertheless, the story of the oral folktale <Blessed Daughter of Butcher>, which has been handed down by story tradition, has many implications for us today. This study focuses on the process of overcoming the difficulties centered on a woman who has no power and poor of <Blessed Daughter of Butcher> and what kind of being she is born again. This has a narrative homogeneity in the difficulties faced by married immigrant women in Korean society and the process of overcoming them. This could help break down the social underpricing of them.

Table 1. The Story of <Blessed Daughter of Butcher>

(1)	There was an old minister with a socially high class and economic power.
(2)	The minister accidentally heard the gods' conversation about his son. The gods said that if a son grows up, he will live poor enough to be unable to eat a bite. On the other hand, a daughter born in a poor butcher's house said she had a good fortune to be rich.
(3)	The minister makes his son marry butcher's daughter to help his son live well.
(4)	The son disregarded the woman and kicked her out when the minister died.
(5)	The woman, who was kicked out, wandered away and remarried a poor man. And she found the gold at her new husband's place of work and became rich.
(6)	The rich woman questioned the minister's son, but he became a beggar.
(7)	With her economic power, a woman took the minister's son and lived well together.

*The Academy of Korean Studies(1980-1992), *The Comprehensive Collection of Korean Folklore* 1-2.

Number (1) reveals the social status of the minister with power and wealth. The minister is a person who has secured a social power that no one can anticipate a downfall until he has met a divine and knows the future. In number (2), the minister finds that the social power he has secured is a finite resource, and that is difficult to last a generation. On the contrary, it's revealed through the prophecy of the daughters that the low and poor social rank at the present time, but the condition is not fixed forever. Minister was overheard by the gods, but he realized that the overthrow of social conditions will be taking place and prepared for the future as a man who had gained new wisdom.

In number (3), the son of minister and the daughter of butcher are married. This implies that the two persons has lived in different socio-cultural backgrounds are obliged to continue their relationship by marriage. Here, the will of the two is not known, and especially the woman is experiencing rapid changes in the world.

In number (4), The husband refuses his wife who has been transferred to his world. A man has a materialistic mindset that replaces surface conditions such as social status and economic power with the value of being. That is, a man cannot accept his wife as a member of the world in which he lived without considering his wife as being equal to himself.

number (5), It shows independence and success of the kicked-out wife. What is expressed as being rich through remarriage should be read as an epic symbol. There are two abilities in a woman's way of starting a new life with empty hands. First, the willingness to stand up even though the opponent rejected her. Second, the ability to achieve economic independence. In particular, the ability to achieve economic independence is not the same as a natural talent. In number (6), her will acquire values and meanings that are accepted in the new world. On the other hand, it shows that minister's short-sighted thinking and exclusive attitude were wrong. In this way, the imbalance of relations that appeared at the beginning is overthrown. The state of life changes according to what kind of attitude you live. She looks for her ex-husband on the (7). She does not think superficially and materialistically, unlike the minister's Son. Rather, she tries to recover the broken relationship. This is her final task. The acceptance means that the relationship between the individuals have been restored and the harmony with the world has been achieved. She shows a way of reconciliation and coexistence with her will, ability and choice.

In this story, the minister plays the role of gaining enlightenment and designing future society. And that future society is led by butcher's daughter. The story structure that reinterprets butcher's daughter as subject can be summarized as follows.

Table 2. Reinterprets <Blessed Daughter of Butcher> Structure

(1)	Single Person	A person with deficiency
(2)	Union	By the helper, the beings of different deficiencies join
(3)	Relationship Crisis	Relationship breakdown due to husband's exclusive attitude
(4)	Response	The success of subjective efforts to be born as a person with a different power than before
(5)	Result	Acceptance of failed subjects

In the story which the relationship between men and women, (1) single person, (2) union, (3) relationship crisis (4) response (5) result can be said to be an in-depth story structure that appears universally (Kim, 2018). The characteristic of <Blessed Daughter of Butcher> is that the daughter of butcher, who is not recognized as a counterpart to the husband, is in a crisis due to her, but rather as an occasion to show her ability. When butcher's daughter becomes a true member of the upper world than the world to which she originally belonged, it is not when she led an outsider like a father-in-law, but when she was kicked out of her and came back up with her own abilities. The husband exercises the power inherited from father. And in relation to butcher's daughter, he takes the advantage of strength as a resident. However, butcher's daughter, with her own ability, climbs up to the same level as husband the resident. And unlike her husband, she becomes an independent and inclusive subject. It can be said that this is the story structure that appears in the life of married immigrant women living in Korean society.

Finding 2.

In-depth story structure Chinese marriage immigrant women in Korea social

Chinese marriage migrant women in Korea married in three ways: (1) An introduction from an acquaintance, (2) By marriage agency, (3) A love marriage. Although China is a powerful country, there is an assessment that the national status is not proportional to the individuals' quality of life due to the deepening gap between rich and poor. More than half of the interviewees perceived immigration to Korea through marriage as an opportunity to improve their quality of life. The life story of the 35 interviewees is summarized as follows.

Table 3. The summarized story of marriage migrant women		
(1)	Single Person	While doing social activities in China, use a marriage agency to marry a Korean.
(2)	Union	Get married to a Korean and move to Korea.
(3)	Relationship Crisis 1	Giving birth to and raising the child, experiencing discord with husband, because of personality and/or cultural difference.
(4)	Response 1	To achieve economic independence from husband, began economic activity when child entered adolescence.
(5)	Relationship Crisis 2	No recognition of social life experiences in China. Though doing physically challenging work, securing economic power leads to independent life.
(6)	Response 2	Get out of physical labor and use Chinese skills to seek better jobs.
(7)	Result	If the husband is economically incompetent, spend more money on education for child and living than their husbands. Organize a small group of women with the same status as themselves, volunteer activities for local community.

In an in-depth story structure that is universally found in the life of a married immigrant woman, the relationship crisis and response are repeated. The reason is that actual life is a continuation, while the <Blessed Daughter of Butcher> is a completed text. However, the attributes revealed in the relationship crisis and correspondence can be analyzed as the core values of the independence and inclusiveness shown by butcher's daughter in <Blessed Daughter of Butcher>. There are common in-depth story structure at the base of different phenomena such as actual life and literary text, and the similarities between the attributes of relations, crises, and responses are emerging.

Marriage migrant women are given three tasks in Korean society. First, get respect as a wife in marital relations. Second, independent as an economic subject. Third, recognized as an equal member in Korean society. These three tasks are consistent with the story journey of a married immigrant woman as a migrant, as a stranger, daughter of butcher who takes root in a newly emigrated world.

The first task is included in the reason to choose marriage with Korean. Married immigrant women saw Korea as a better environment for improving their personal lives. Of course, this is not an objective information obtained by comparing the actual economic strengths of China and Korea, and it is one of stereotypes about China, which has operated a long-term closed market economy. However, it is important for Chinese marriage immigrant women currently living in Korea that even if it is a stereotype, devaluation of China's economic power is a major criterion for judging their value. As a result, the world in which economically poor people belong is considered poor and humble compared to the world in which wealthy people belong. And these two worlds are difficult to be united together by being divided. The difficulties that married immigrant women face after marrying Korean are based

on this logic of power. After the 'Union', the first crisis is caused by this. Korean husbands perceive marital relations as a power relationship with their own dominance according to economic power. And other influences such as patriarchal perception combine to show a more exclusive attitude. Sometimes, it is manifested in an explicit request that "You are came from a poor country, so must hear my words". Or as a different perception of the cause of the conflict. While the wife recognizes that the cause of the conflict is the personality difference, the husband interprets it as the prejudice against the Chinese person. Thus, married immigrant women are given the task that as equal partners in marital relationship respected by her husband.

(4) shown the married migrant women's respond. They actively attempt economic activity and try to become independent economic entities. This is also the process of balancing relationship with husband, as a subject with equal strength and ability. Asymmetric power relations within the home can be overcome through activities outside the home. This can be paradoxical, but it does not rely on the husband by going out and becomes a subject that creates economic value with his own abilities. Here is a clue to the issue of being respected by her husband.

However, outside the home, they experience asymmetric power relationships due to the exclusion of Korean society, like their husband. So married immigrant women only can find jobs such as physically challenging or simple labor, which Koreans avoid. However, as in (6), they resolve the difficulty gradually with firm will. They do not give up or be frustrated, and constantly try and execute what they can do right away. Gradually increasing the economic power, change the job that can demonstrate their real ability and expanding the scope of social activities. It can be understood that they are looking for a way to live as a 'multicultural person' in Korean society. This is proved by statistics.

According to a survey conducted by the Ministry of Gender Equality and Family in 2015 on economic activities, 63.9% of the married immigrant were employed, 3.6% higher than the overall employment rate in Korea. The ratio of female employees is 59.5%, which is lower than that of male workers(83.4%). However, the increase rate of female immigrants is 6.5%, higher than that of men's(3.1%). It is clear that the economic activity of married migrant women is increasing. Although the reasons for this can be interpreted in a variety of ways, men's economic activity after migration to Korea is directly linked to their livelihood, while women's economic activity is the will to regenerate as an economic subject.

(7) show that married immigrant women not only overcome the crisis of their own, but also embrace their husbands and Korean society in an exclusive manner, dealing with them as foreigners. They become the subjects that create economic value in Korean society and gain a power to overcome the marital crisis and ignorance from Korean society. It is done by oneself rather than by someone's help. Moreover, they are going to help the difficulties of their husbands and Korean society. This also means that they have moved to a position where they can be helped from where they need help. They are willing to share what they have achieved with their own strengths. Through the exercise of such acceptability, they are regenerating as equal members of society, balancing power in the relationship between husband and Korean society.

This shows the similarity the problems faced by and method of reaction between the daughter of butcher and married migrant women. '(1) Single Person, (2) Union, (3) Relationship Crisis, (4) Response, (5) Result' as a big framework, the experience of life continues, and the crisis and response are repeated.

Among them, the three tasks faced by married immigrant women are similar to those of butcher's daughter. In (1), the situation of man and woman with different socioeconomic backgrounds appears, before union. Nonetheless, they (2) union, of power that results from the union of economic power causes the problem that she is not respected as a spouse to her husband. The imbalance of power caused by differences in economic power causes problems for her husband not being respected as a spouse. This is the root cause of the crisis in (3). Shown in (4) response, reborn as an economic subject and overcome the problem. After overcoming, as they embrace the opponent, shown in (5) result, solve the tasks. In this way, the crisis of the relationship in the life of a married immigrant woman can be seen to be contained in a complex manner in the crisis of the relationship of <Blessed Daughter of Butcher>. The way of responding also overlaps.

Conclusions

It is the conclusion of this study that the life journey of Chinese marriage immigrant women living in Korea and the journey of life of daughter in <Blessed Daughter of Butcher> are similar in story structure and meaning. However, while the daughter is redefined as a 'blessed being' in the end of the story, Korean society is still failing to change the perception toward married migrant women. Although the Korean society defines marriage migrant women with the same paradigm as the husband's perceptions and attitudes in <Blessed Daughter of Butcher>, there is a lack of reflection on the limits of such attitudes. <Blessed Butcher's Daughter> shows what kind of ending will come when husband hasn't change. The attitude of deprecating and rejecting an opponent as an economic value leads to a downfall. But, like the daughter, married immigrant women show their will and ability to overcome their own deficiencies. At the same time, they try to reconcile and embrace without hating their opponent. It is necessary to change the perception of Korean society about this 'blessed being'.

The study of narrative prototypes contained in the actual life can be meaningful in that it intends to deepen the understanding of reality existence and it is an attempt to fundamentally change certain perception.

A Study On The Establishment Of Life-Worlds Through Economic Adaptation And Acculturation Of Marriage Immigrant Women From South Korea

Youngechul JO

Dr. The Convergence Institute for Asian Multicultural Studies
Inha University, South Korea
tem2000@hanmail.net

Abstract

This study explores the establishment of life-worlds through economic adaptation and acculturation experience of marriage immigrant women residing in South Korea. The study examines the marriage immigrant women's narratives related to their encounter with a husband, job experience, constraints disturbing economic adaptation and acculturation, and the effects of economic adaptation on the level of their acculturation in South Korea. For this, semi-structured interviews consisting of questions related to these issues were conducted on 15 Korean-Chinese women living in the metropolitan area. The findings represent that economic adaptation provides a culturally integrated environment where marriage immigrant women can smoothly begin the establishment of life-worlds in South Korea based on equal mutual relationships. In addition, economic adaptation and acculturation has social implications for marriage immigrant women to boost a sense of self-esteem. The study concludes with implications of the results for making better acculturation as well as economic adaptation experience for the establishment of life-worlds in Korea.

Keywords: *Life-worlds, Economic adaptation, Acculturation, Chinese immigrant women, Chinese marriage immigrant Women*

Introduction

The globalization trend of forming a glocal multicultural society is proceeding in the same way in Korean society, which is a social phenomenon that is happening due to transnational migration across countries. These transnational migrations are having a great impact on the regions and countries in which they are stationed, as well as the countries they have moved to and the world. Choi, Byung-Doo(2012) argues that various forms of transnational migration help the local economy by securing cheap labor. And transnational migration has a positive aspect because international marriage is mainly responsible for the reproduction of family members. There are, of course, various problems such as the improvement of treatment for foreign workers, educational alternatives for children of multicultural families, and the problem of unregistered foreigners.

The problem of migrants before the 1990s can be analyzed as a problem of social integration within the country be domiciled, apart from the sending country. But the problems of the migrants in the situation of transnational migration are socio-spatial. It has complexity because it creates change. Choi, Byoung-Doo(2012) defines transnational migration as a process of 'Glocalization' due to the development of traffic and communication technology and thus spatial and temporal compression, and thus it is understood as the formation of 'multicultural space' which has importance in spatial aspect. In a multicultural space formed through transnational migration, migrants commonly adapt to create a better life or create a new culture. Alba & Nee(2009) explains the intercultural adaptation in multicultural space as a process of breaking down the intercultural barriers by narrowing the gap and narrowing the gap. And the area of adaptation varies from culture, society and economy. Gordon(1964) talked about adaptation in cultural adaptation and structural adaptation. Structural adaptation refers to economic adaptation. Cultural adaptation and structural adaptation are correlated.

Transnational migration in Korean society is being caused by immigrants of various nationalities. According to the 2017 census data provided by the National Statistical Office, as of September 2017, out of the total 317,118 Korean nationals who are multicultural, there are 174,168 people who have Chinese nationality. Which is more than three times larger than the 66,231 Vietnamese nationals with a lot of nationality. In addition, according to the Statistics on Immigrants' Employment Status and Employment Survey in 2017, 43.6% of immigrants were immigrants, followed by marriage immigrants(10.2%), and the proportion of migrant workers and marriage immigrants was over the majority. According to the statistics of foreigners staying in Korea by the Ministry of Justice in 2016, Chinese immigrants accounted for the largest percentage of Chinese immigrants(56,930) and women(45,301).

As such, the formation of a multicultural society in Korean society is dominated by Chinese immigrants, among which marriage immigrant women are the largest. However, marriage immigrant women have been experiencing difficulties in the settlement of the living world due to social structural problems such as human rights violation marriage, discrimination and prejudice of Korean society, status of residence and welfare(Kim, Tae-won, 2012; Choi, Byung-Doo, 2012).

The purpose of this study is to analyze the process of economic adaptation and acculturation of Chinese marriage immigrant women. The purpose of this study is to clarify the meaning and importance of economic adaptation and acculturation in the formation of multicultural living world of Chinese marriage immigrant women who occupy the highest share among various marriage immigrant women.

Theoretical Background

2.1 Chinese marriage immigrant women

In recent years, with the increasing trend of international marriage, the interest of marriage immigrant women is increasing. International marriage shows the phenomenon of 'feminization of international marriage' in that most of marriage between Korean man and foreign women takes place. In 2005, the 'marriage expense support project for farmers and fishermen', which was implemented by some local governments, was the beginning of the increase of marriage immigrant women. In 2007, the Ministry of Gender Equality and Family Affairs International Marriage Support Project Report showed that about 2.9 billion international marriage support budgets were formed in 2007, and about 25% of the local governments conducted the project nationwide. As a result, marriage immigrant women increased explosively, however the Korean government has not prepared a social structural support policy for the increase of married migrant women. As a result, there have been cases of international marriage injuries close to human rights abuses(Lee, 2018).

In particular, Chinese marriage immigrant women who migrated to Korea since the Korea-China diplomatic tie-up in 1992 accounted for the largest number of marriage immigrant women. In spite of the large number of Chinese marriage migrants, Chinese marriage migrants experience confusion about their cultural values in their parents' and family relations as they try to learn and adapt to the cultures of their own and other cultures of Korea (Oh, Young-Hoon, 2014). In addition, conflicts arising from differences in lifestyles such as new culture and food, husband assault and abuse caused by the patriarchal and traditional Korean society, and discrimination and prejudice, which are underestimated as members of society, make it difficult for migrant women to adapt to Korean culture. In terms of culture, Chinese marriage immigrant women also recognize Korean culture positively, especially the filial duty, but negative perceptions of Koreans are causing conflicts. Furthermore, marriage immigrant women have few opportunities to learn about Korean culture, and there are few programs that can directly or indirectly experience their culture.

2.2 Economic adaptation and the acculturation

2.2.1 Economic adaptation

Gordon(1964) argues that immigrants are structurally adapted to mainstream society through social adaptation and economic adjustment. Most migrants seek to improve their quality of life and decide to move without special capital. Chinese marriage immigrant women often migrate to Korea for economic stability and a better life. However, immigrants tend to underestimate their economic status and acquire a lower economic status than their actual capabilities(Basilio, Bauer, & Kramer, 2017; Borjas, 2006; Chiswick, 1978; Chiswick, Lee, & Miller, 2006). Economic adaptation of marriage immigrant women is closely related to Korean social adjustment(Seol, Dong-Hoon, 2005). Seol, Dong-hoon(2005) said their employment status and household income level are indicators of economic adaptation. Therefore, economic adaptation of marriage immigrant women is an essential element in their stable formation of a living world in Korea.

2.2.2 The acculturation

Marriage immigrant women should adapt to Korean culture, society, and economy (Lee, 2018). Alba & Nee (2009) defines the acculturation is a process of change that narrows the gap between cultural boundaries through continuous contact of people with diverse cultural backgrounds. In other words, the acculturation of marriage immigrant women is a process of narrowing the gap between their own culture and Korean culture. Redfield, Linton, & Herskovits(1936) have suggested that the acculturation plays a major role in bringing about changes in the cultural practices, institutions, and structures of society. Through intercultural contacts, people experience the process of cultural adaptation, in which they experience emotional, behavioral, and cognitive change (Sam & Berry, 2010; Ward et al., 2001). Berry(2005) classified the acculturation types into types of integration, assimilation, separation, and state change.

Therefore, in order to reduce the aculturation stress of marriage immigrant women and make them well settled in Korean society for the transition to the just multicultural society in Korea, an alternative to the assimilationist social integration policy is needed.

Research Method

3.1 Collecting research participants and data

For this study, I conducted in - depth interviews with four research participants of marriage immigrant women. The characteristics of the study participants are as follows.

<Table 1> Characteristics of participants

Research participants	Age	Nationality	Academic background	Job	Residence period(year)
Research participants 1	39	Korean	University Graduate	Office worker	10
Research participants 2	47	Korean	University Graduate	Non-employed	14
Research participants 3	40	Korean	University Graduate	professionals	16
Research participants 4	40	Korean	University Graduate	professionals	10

The research participants are Chinese marriage immigrant women who have acquired Korean nationality, and their academic backgrounds are all university graduates. And their job is different. Most of them came to Korea in the late 20s and early 30s and had a unique cultural identity in China. They lived in Korea for over 10 years. They had various marriage experiences, experience of acculturation stress, experience of economic status change. Therefore, it is considered that the composition of these research participants will be easy to analyze how the experiences of acculturation and economic adaptation of Chinese marriage immigrants women influence the formation of the living world and the relationship between them.

In-depth interviews with participants were conducted between October 2017 and February 2018. And interviews took more than 60 minutes for each individual. The questions were about their marriage experience, acculturation experience, and economic adaptation experience. Before the interview, the purpose of the study and the rights of the participants were discussed with them. I also recorded the results after obtaining consent for the recording. I asked the participants to review the recordings for transcription and modification. All the parts that required revision were revised.

3.2 Method for research

This study was conducted by narrative inquiry method to explore the experiences of acculturation and economic adaptation of Chinese marriage immigrant women. Narrative inquiry is one of the most appropriate method to explore the life, experience, and implications of the individual.

This research is based on the six procedures of Creswell(2013) proposed narrative inquiry: ① Examining narrative inquiry as a research method, ② Selecting participant(s), ③ Considering data collection methods, ④ Collecting contextual information, ⑤ Analyzing data And ⑥ Involving participants(Creswell, 2013: 73-75).

Results

This study examined the process of marriage immigrant women's migration to Korea, marriage motivation and life, the experience of acculturation and economic adaptation after migration, and the process of change of the living world based on in - depth interviews with Chinese marriage immigrant women. The effects of acculturation and economic adaptation on the formation of marriage immigrant women 's living world and the relationship between acculturation and economic adaptation were analyzed.

4.1 International Marriage and Migration to Korea: Pursuing a Better Life

All of the participants selected international marriage at the age of their late 20s and moved to Korea. Compared to modern Korean society women, they decided to marry at a relatively young age and move to another country. The biggest reason for their marriage was economic reasons and pursuit of a better life. But all of them were based on the premise of love. Everyone said that the biggest cause was improvement in economic condition and quality of life, but they would not have been married if there was no love.

In the case of research participant 1, when they decided to marry, their parents actively encouraged them. But when her daughter was about to leave, her parents stopped her daughter's marriage to another country for reasons such as discrimination and prejudice against married immigrant women.

“Korea is still a new country. I can live a lot better than I live and make a lot of money. I did not have much work to do (in China) even though I graduated university. At that time, I wanted to meet a man like the protagonist of the Full House drama that was airing in Korea.” (Research participant 3)

“I know Full House. I thought a Korean man had many such men. I do not think that now ... but I was sure that if I came to Korea, I would be able to live better. I wanted to make a lot of money and help my parents(Research participant 4)

The fictional story of the drama has been a positive migration factor for Korea to married immigrant women. But finding a professional job rather than being a heroine in the drama was the biggest factor in choosing to marry Korean men and move to Korea.

4.2 Changes in the world of life due to economic status: Rising self-esteem

All married immigrant women were women with pride as elites. However, in a situation where it is difficult to live as a professional in China, they chose to marry Korean men and move to Korea. However, they had many

difficulties from the beginning.

“I thought it would be all right if I came to Korea. But it was not. At first, I only had to live with the cost of living for my husband. Despite graduating from college, I could not get a job.”(Research participant 1)

“As soon as I came to Korea, I was going to work. But I could not get a job because of lack of Korean ability.”(Research participant 2)

The marriage migrant women resumed their jobs after they moved to Korea. However, the reality of Korea did not respond to them. They had to face discrimination and prejudice against China, beginning with language barriers. All of them were able to have a job three to five years after moving to Korea. Since then, marriage immigrant women have improved their Korean language skills and got a job. And self-esteem has improved since they got a job.

“I was really happy when I received my first paycheck. Although the salary was small, it seemed to be recognized.”(Research participant 4)

“When I got a job, I thought I was treated as a human being. At last I could live dignifiedly.”(Research participant 2)

Marriage immigrant women have started to feel proud as a member of society since they got a job. Again, they were able to get out of the house with courage again for their self-deprecated self. The job was to prove their ability to live a dignified social life. Since then, they have been able to live a family life in the same position as their husbands.

4.3 Change of Living World by Cultural Adaptation: Rise of Self-Efficacy

Marriage immigrant women have suffered cultural conflicts because of unfamiliar Korean culture and prejudice.

“What's so different. When I first came to Korea, I could not eat Korean food.”(Research participant 1)

“I could hardly adapt to Korean food. It was really hard. I was especially hard to eat the sashimi.”(Research participant 4)

In the early 2000s, Korea's perception of multiculturalism was extremely low. In addition, discrimination and prejudice against women who migrated from China at that time was serious. Koreans had a prejudice that Chinese immigrant women were ignorant and poor. Marriage immigrant women have suffered cultural conflicts because of this discrimination and prejudice. Even one research participant thought to divorce. Despite these discrimination and prejudice, they tried to adapt to Korean culture, and now, ten years later, they are dignified Koreans. Most of the married immigrant women in this study chose to assimilate into Korean culture by abandoning their cultural identity as Chinese. This is due to the perception of the stereotypical multiculturalism of Korean society that is still prevalent. Chinese marriage immigrant women are abandoning their Chinese cultural identity and living with a new Korean cultural identity.

4.4 The relationship between economic adaptation and acculturation: Separately and together

Marriage immigrant women were able to get an opportunity to communicate with Korean society through the act of employment. Marriage migrant women understand Korean language, culture, society, economy, and political structure through their work life, and experience cultural adaptation in particular.

“I have come to understand Korean people very well from my work. I learned a lot about Korean culture through talking with a lot of Koreans at work and eating rice.”(Research participant 3)

In addition, marriage immigrant women were hard to find jobs due to strangeness and difficulties in Korean culture such as language barriers, family life culture, and workplace culture. And, even after seeking a job, they had difficulty in working because of differences with Korean culture.

“I was more unfamiliar with Korea because of my lack of Korean language skills.”(Research participant 2)

“I fell out of the interview because I could not speak Korean. It was more difficult to adapt to Korean culture than to learn work at workplace.”(Research participant 3)

In this way, economic adaptation and acculturation for marriage immigrant women were also different phases, and they had a deep correlation and system. For marriage immigrant women, social participation in economic activities has been a positive reinforcing factor for cultural adaptation. In other words, for marriage immigrant women, economic adaptation affects the acculturation, and conversely the acculturation affects economic adaptation.

Conclusions

The purpose of this study is to analyze the process and relationship between the economic adaptation and acculturation of marriage immigrant women. internationally married immigrant women. The results were classified into two parts. First, what are the community activities of married immigrant Korean women. Second, What is the meaning of global citizenship in their community activities.

As a result, based on the narrative of Chinese marriage immigrant women, first, they showed different acculturation patterns according to the degree of integration with Korea's mainstream socioeconomic structure. Second, the level of acculturation was influencing their stable formation of the living world. Third, the role of family(husband, etc.), community, and government in economic adaptation and acculturation of their socioeconomic structure was important. Fourth, Korean people 's low perception, discrimination and prejudice made it difficult for married immigrant women to adjust to their economic adaptation and acculturation.

Therefore, economic adaptation and acculturation of marriage immigrant women should be treated together for social integration policy. This is because economic adaptation and acculturation of marriage immigrant women are necessary and sufficient conditions.

Abstract

The purpose of this study is to investigate the meaning of cooperative learning experience by exploring the class experience of students who participated in the class of „Culture and Education“ in „I“ University, Korea. Data were collected based on the participatory observation journal of the researchers and the weekly participation journal of 10 research participants. The collected data were coded and analyzed based on matrix analysis. As a result, pre-service teachers had worries and fears about unfamiliar learning method when they started cooperative learning. However, they were aware of the importance of cooperative learning, as they experienced educational effects of cooperative learning through the interactions with members. In particular, the experience of cooperative learning by pre-service teachers in social studies had a positive effect on the recognition of the value and necessity of cooperative learning, and also on the consideration of how to unfold the learner-centered activities in social studies class. This study suggests that the pre-service teacher training programs should be designed in such a way as to create the right values and attitudes as teachers.

Introduction

Teacher is a main agent who can guarantee the quality and effects of education. In this respect, the strengthening of teacher's competence is emphasized, and it is suggested that changes are necessary throughout the whole process of training pre-service teachers who are responsible for future education (Son, 2004). Teacher education is based on constructivist theory (Shon, 2005). Teacher should be reborn as a knowledge re-constructor who is capable of constantly producing new constructive knowledge based on past experiences (Han, 2000). A variety of learning experiences of the pre-service teachers become the basis for forming the educational value and the perception and attitude of the teacher. The values and attitudes formed in the process of training pre-service teachers lead to the education field, in which they will teach (Kim, H.P., Kim Y.Y., Kim, H.S., 2008). In fact, it has been reported in many studies that knowledge, thinking ability, and learning ability formed through pre-service teacher's experience have positively affected perception, attitude, and teaching activities as teachers (Son, 2004; Song, 2004; Um, 2010; 2010; Yoo, 2000; Lee, J.H., 2002). This study began with the recognition of the importance of future citizen training, the necessity of innovation in pre-service teacher education, and the importance of educational experience. This study set two research questions as follows: What are the pre-service teachers' participating experiences in cooperative learning class? What are the teaching method implications found by the pre-service teachers? Thus, this study analyzed the experiences and teaching implications of the pre-service teachers who took a required course „Culture and Education“ in the department of social studies education, College of Education, „I“ University, Korea. And it finally made some suggestions.

Cooperative Learning

The purpose of the social studies education department is to make students acquire the knowledge and functions necessary for living as a member of society and to be equipped with the qualities and attitudes of democratic citizens. The 2015 revised social studies curriculum in Korea emphasizes communication and cooperative skills as the qualities of a new democratic citizen and focuses on fostering democratic citizens who can interact positively with others (Republic of Korea Ministry of Education, 2015). The qualities of democratic citizens that are emphasized in social studies can be raised through cooperative learning. Cooperative learning enables learners to acquire social functions such as listening, discussing, interacting, respecting and caring, based on the active participation of learners (Jeong M.S., Choi, H.H., & Jeon, Y.E., 2017). Therefore, cooperative learning can be an effective teaching and learning method that can promote learners' cognition, function, and development of the affective domain. Cooperative learning has the following characteristics in Table 1 (Jeong, M.S., 2008).

Table 1: Characteristics of Cooperative Learning

	Area	Characteristics	Contents	
1	Organization	Team formation	Heterogeneous group	Promoting interactions among members through heterogeneity and diversity
2	Members	Interaction	Positive interdependence	Positive interaction based on consideration and cooperation among members
		Relation	Face-to-face interaction	Emphasizing close physical and psychological interactions among members
		Responsibility	Individual accountability	Striving to achieve good results based on social responsibility among members as a learning community
		Opportunity	Equal opportunity of success	Giving opportunities in order to contribute to achieving common goals, regardless of the difference of individual abilities.
3	Class management	Goal	Specific learning goals	Learning activities led by learners with clear goal recognition
		Time	Enough learning time	Members are fully prepared before class, and work on cooperative activities during class
		Method	Team unity	Promoting a learning motivation by introducing team competition to emphasize team unity
		Assignment	Segmentation of assignment	All learners participate in cooperative learning by assigning tasks individually to each member
		Learning	Concurrent interaction	Simultaneous learning process for each team
4	Evaluation	Reflection	Reflection	Reflection time on activities after cooperative learning
		Reward	Group compensation	Positive interaction occurs to achieve group goals

Although all characteristics presented in Table 1 are not common to all models of cooperative learning, most of them are usually found in various cooperative learning types. Cooperative learning emphasizes positive interactions through the relationship formation of team members. Class goal is to emphasize everyone's responsibility for achieving the common goal, not individual goal. And it also has the effect of giving a sense of communal consciousness and attitude by giving responsibility for the result to the group. The more reflective those characteristics of cooperative learning are in the class, the more effective the cooperative learning is (Jeong, M.S., 2008).

Research Method

The purpose of this study is to explore the cooperative learning experiences of the pre-service teachers who participated in the "Culture and Education" class, which was a required course during the 2018 spring semester for freshmen in the department of social studies education, College of Education, „I“ University, Korea. Furthermore, this study is to explore the implication of teaching method found by pre-service teachers. As a major course for freshmen, this class is aimed at cultivating the basic knowledge and attitude on culture. A form of „open class“ was taken to achieve the purpose of the class. In the open class, professor is the facilitator, and students are the main agents. The instructional model adopted for open class is cooperative learning. Through cooperative learning, problem-solving ability, communication ability, creativity, and cooperation can be cultivated while performing the tasks with the team members.

In order to analyze the cooperative learning experiences of pre-service teachers, case study method adopted. 10 students of „Culture and Education“ class were selected as research participants. Basic data were collected from their reflection journal and researchers' participatory observation journals. Research participants (6 male, 4 female) were selected based on sincerity of their reflection journal. The participants were interviewed in-depth. The collected data were analyzed by applying the matrix method, one of qualitative data analysis methods. First, researchers read the reflection journals and marked meaningful passages. Second, the data was categorized for the second review. Third, final analysis was completed through the third review, followed by the extraction of the subcategories from the categories.

Research Result

1. Analysis of cooperative learning experiences of students

2. For the experience of cooperative learning class by pre-service teachers, this study used the characteristics of cooperative learning presented in Table 1. As a result of the analysis, five categories were extracted from the four areas of cooperative learning, and the analysis results were summarized in Table 2.

Table 2: Analysis of Cooperative Learning Experiences of Students

	Area	Category	Theme	Content
1	Organization	Preparation	Perception	Anxiety and fear about cooperative learning
2	Members	Relationship	Care and respect	Learning how to live together
			Interaction	Positive interactions through communication, respect and cooperation
3	Class management	Method	Preparation	Thorough preparation for the success of cooperative learning
			Interaction	Establishment of cooperation system through continuous exchange of opinions
			Mutual teaching	Intellectual and positive growth through mutual teaching
		Assignment	Division of role	Raising the awareness of responsibility through division of role
4	Evaluation	Reflection	Reflection	Value of cooperation, cooperative attitude
			Educational effect	Cultivating democratic citizenship

A. Cooperative Learning Organization: Anxiety and Fear in the Beginning

Research participants were worried and afraid when they heard about this class as team-based cooperative learning in the orientation of this class.

“I was very embarrassed at first. To freshmen who have just graduated from high schools, the words like open class, flip learning, cooperative learning was very unfamiliar. At the beginning of the semester, it was awkward for me to work with other members and I thought it would be better to do it alone.” [1]

Participants were familiar with lecture-based teaching and learning by rote. A new teaching style like cooperative learning was felt as worry and rejection rather than expectation. However, through the experience of participating in cooperative learning, they felt the value and educational effect of cooperative learning by themselves, and various changes were observed within their groups.

B. Formation of relationships with members

1) Care and respect

Cooperative learning is effectively operated, when it is based on positive interaction and formation of relationships among the members. Care and respect form the basis for positive relationships between members. Participants recognized that the attitude of care and respect was more important than the others through the weekly cooperative learning, and then their recognition led to practice.

“We took care of others” time schedule. We were able to help each other to share the amount of each other, even though it was not a part of oneself. I looked at how they helped each other’s shortcomings through text messenger at night. I feel that cooperative learning has been performed well based on care for others.” [4]

Participants recognized their own cooperative learning team as „us“. Awareness of becoming a community is expressed both in the form of fulfilling individual responsibility and at the same time in the altruistic tendency of caring for others.

2) Interaction

Cooperative learning emphasizes positive interdependence among members (Johnson & Johnson, 2002). Positive interdependence is realized based on smooth communication and respect for members.

“When making important decisions, we tried to listen to members” thought one by one and reflect them positively. We were able to create more solid teamwork through the process of respecting and gathering each other's opinions.” [3]

As in the case above, mutual respect is expressed as a positive interaction, leading to a virtuous cycle of positive relationship formation, and it also serves as a factor promoting human relations.

C. Class Management

1) Method

(1) Class preparation

Cooperative learning is a learner-initiated learning, so it takes a lot of preparation time (Jeong, M.S., 2008). In the „Culture and Education“ class, flip-learning was conducted as an essential task, so that learners could form prior knowledge before the class. In fact, research participants mentioned that there has been a positive change in self-confidence and active discussion by thorough preparation for class.

“At first, when professor asked me to write about culture without flip-learning, I had nothing to write. But after the flip-learning, I was confident so that I become an active learning agent who can discuss on an assignment.” [2]

(2) Communication

Cooperative learning requires a permissive atmosphere in which members can freely exchange ideas and opinions. Cooperative learning management method in the reflection journals of the participants was discussion. Discussions were held consistently through face-to-face meeting and social network service.

“The way we did it was communication mainly through media. We have often met and gathered opinions and exchanged opinions. But Kakao Talk discussion was more frequent. For example, for the preliminary field research, I read the materials I found in Kakao Talk before we gathered. Through that way, I was able to conduct more efficiently and meticulously when I had offline meetings.” [8]

The communication in cooperative learning consisted of exchanging knowledge and opinions related to the subject of the class. The experience of such external communication has led to inner communication that shares the values and attitudes among the members. Inner communication worked as an inspiration to improve and develop the awareness and attitude toward cooperative learning.

(3) Mutual teaching

In cooperative learning, there is an ongoing collaboration to achieve the common goals of the team and the final goals of the class. A representative example of such cooperation is mutual teaching.

“My research site was the Daldong Museum, and I informed my team about the way of cultural change and how the traces of culture have been developed. I already knew about the historical background of the site by using the preliminary learning (flip learning), but I was able to newly find out additional contents that other members explain.” [3]

Challenges given to individuals for cooperative learning are strong responsibility. Therefore, each member is made an expert about the theme. Through mutual teaching, it is possible to maximize interaction and cooperation among colleagues, and to obtain the effect of intellectual development in which learners’ knowledge is expanded.

“I felt that culture could be expressed in such a way by listening to our team presentation as well as other teams’ presentations. And I tried not to do the point that was criticized in other group.” [2]

In addition, as each team presented about the team project at the end of the semester, this class provided opportunities for reflection on progress and result of cooperative learning. This was an opportunity to learn indirectly about the conditions and abilities necessary for better cooperative learning. Mutual teaching in cooperative learning has characteristics that include both cognitive and affective domains.

(4) Challenge: Division of Role

Cooperative learning assigns individual tasks for active participation of all students. As a result of analyzing the reflection journals of the class, the research participants considered fair division of role as important.

“What we did for active team project was the distribution of roles. For the interview project, team leader alone did not work all things. Someone made interview questionnaires. Someone contacted with interviewee, and other worked as interviewer. Thanks to all of them who were involved in one activity, everyone knew what it was and what role we should play.” [9]

One of the important features that distinguishes cooperative learning from traditional small group learning is individual responsibility (Kwon et al., 2004). Uncooperative attitudes are problematic because there is no standard for individual accountability in traditional small group learning. However, in cooperative learning, individual responsibilities and cooperation are required, because everyone is divided into tasks and responsibilities that match their abilities.

D. Evaluation

1) Reflection in the individual dimension

Participants initially felt worried and fearful about cooperative learning. However, the experience of cooperative learning has changed their existing perceptions and attitudes.

“We were accustomed to individual life style. But we showed attitude to care for each other through cooperative learning. And the care gathered and made harmony. Until now, I thought that studying on my own was highly efficient. However, I was able to experience the effect of studying together rather than studying alone by working with the team members.” [6]

Participants realized the value of cooperation through cooperative learning, and they learned the cooperative attitude. This cooperative attitude has led to the achievement of values and goals of community unity and harmony.

“I realized that when everyone did their best together for team project, good quality results could be produced. (Omitted in the middle) Through the team project, I learned how to live together rather than being an individual.” [5]

2) Educational Effect of Cooperative Learning

Cooperative learning positively affects learner’s knowledge expansion (Lee, B.R. & Jeong, M.S., 2011). In traditional lecture-based class, learning by rote and the expansion of knowledge through injected knowledge return to the learner alone. However, even if a same learning goal is provided to a whole class, tasks and goals are different according to team and individual in cooperative learning. The learning of members contributes to the knowledge extension of the whole team and the members.

“I was able to experience acquiring knowledge through self-directed learning while writing together a group report, and I was able to experience acquiring knowledge through collective intelligence by frequently discussing with the members. [7]

As the characteristics of cooperative learning based on positive interdependence are similar to the principles of democratic citizenship education, it is possible to cultivate the qualities of democratic citizens through cooperative learning (Jeong M.S., Choi, H.H., & Jeon, Y.E., 2017). In this study, cooperative learning has the educational effect of cultivating democratic citizenship.

“I realized the importance of democracy in group activities. If I cannot fulfill the value of democracy as a team leader, I will not be trusted by members. However, when democracy was properly implemented, I realized that we can feel the satisfaction that we are actively participate and we are playing an important role.” [9]

Recognition of the value of democracy will play a positive role in cultivating the right democratic citizenship attitude. Cooperative learning experiences have been shown to affect democratic values as well as democratic citizenship. First, active participation was encouraged through cooperative learning.

“In the meantime, there were many passive aspects of doing things that other people directed at school, but they changed into active attitudes in cooperative learning. To me as a facilitator, the process of leading the team and gathering opinions has been a great help to have confidence and active attitude.” [4]

Second, the attitude of respect for diversity has been raised. Participants recognized the importance and value of diversity of community members. Cooperative learning has expanded the scope and content of learning as well as the viewpoint of social diversity. The expansion of perspective on this diversity will be an important foundation for the formation of a multicultural attitude to think about and acknowledge diversity at the national and global level.

“I once again felt the value of respecting diversity as „I must respect the diverse local culture of our country“,

if I have something I have gained with my team members. This is because I felt that the culture of our country is melting into the local culture.” [4]

Third, the attitudes of living with other people such as respect for others, resolution of conflicts, acceptance and recognition, cooperation, and responsibility were raised through collaborative learning.

“I learned how to listen to other people’s opinions while doing cooperative learning, and I learned that many people have different thoughts when I try to cooperate with each other. I also learn how to understand and accept their perspectives. Finally, in order to have the virtue of cooperation, I was able to learn the important value of pursuing individual responsibility.” [10]

Therefore, cooperative learning plays a role of maintaining and developing community through various educational effects in addition to the change of individual level of research participants.

3. Teaching Implications found by Pre-service Teachers

Participants in this study are pre-service teachers who will teach their students as social studies teachers in secondary education after graduating from college. Experience has continuity associated with past, present, and future experiences. In other words, past experience is the basis for forming the present and the future (Clandinin & Connelly, 2000). The cooperative learning experience of the pre-service teachers is not a simple learning experience but a valuable asset that can be widely considered as a teaching plan for future teachers and the learner’s performance of instruction and learning effect. The results of this study were as follows. First, the participants recognized the importance and value of cooperative learning. Cooperative learning has become a new way of thinking about teaching and learning.

“The learning ability of each individual is of course different. It is very important, however, to overcome individual differences and help each other, so that everyone can step together to the finish line without someone first reaching the finish line or without competition. I learned that learning is not only academic but also working with others is learning.” [1]

How will these experiences be taught based on topics they have experienced in the class was spreading to serious consideration about the concrete method of teaching.

“In terms of development and preservation, I will apply the results of our field research on the Baedari village and the Daldong museum to social studies education. The department of social studies education says that students should educate the global citizens who can clarify their own arguments and grounds and fulfill the role of democratic citizens. So, I will apply the method of discussion in this class based on the results of this survey. (Omitted in the middle) Discussions will not only be on teaching and sharing ideas with students, but also on sustainable development. Through these learning activities, I think that I can expect the students’ critical mind on the development and preservation, the power to think about solutions for them, and the training of democratic citizens through discussions.” [3]

First of all, participants emphasized the importance of experience.

“Now, the social studies subjects taught at elementary and junior high schools are nominally inquiry subjects, but most of them are being taught as teaching by rote. If I become a teacher, the subject will be not a form of memorization, but a form with which students experience with their body and think creatively like this „Culture and Education” class. I would like to make students have social studies subjects that students really want to explore.” [8]

Participants recognized the value of cooperative learning and the importance of direct experience through cooperative learning. This has been the basis for generating new ideas about what and how to teach students. As a result, cooperative learning experience of the research participants had the effect and meaning in two aspects of learning as a learner as well as learning as a future teacher. In other words, the curriculum and contents of the pre-service teacher training program directly or indirectly affected the educational values and attitudes to be taught as teachers.

Conclusion

This study started from the recognition of the problems in training pre-service teacher, who are responsible for educating future citizens, and from the necessity of the innovation. In order to carry out the research, this study analyzed the cooperative learning experiences of the students who took the „Culture and Education” class as a required course of teaching major for the freshmen of the social studies education department, College of Education, „I” University.

The results of the study showed that participants had worries and fears about unfamiliar learning methods when they started cooperative learning. However, through the interactions with the members, they became

aware of the importance of cooperative learning for both learners and teachers while experiencing the educational effects of cooperative learning. In particular, the cooperative learning experiences of pre-service teachers in social studies are effective in recognizing the value and necessity of cooperative learning. And furthermore those experiences have been related to their own serious consideration on how to unfold learner-centered activities in the social studies class. The learning effect of pre-service teachers can influence the perception and attitude of future teaching activities and moreover the quality of education. The results of this study can provide the following implications: First, research participants reaffirmed their value as a democratic citizen through cooperative learning. Therefore, the curriculum of the teacher training institute for the pre-service teachers should be designed in order to raise the right educational perspective and attitude as the teacher. Second, the teacher training program should be structured so that teachers can directly experience various teaching techniques that can be applied to the teaching field. The method of classroom management, which is experienced directly during the teacher training period, can be developed into a new teaching form that is best suited to oneself through experience and reconstruction. Third, pre-service teacher's educational programs need to be linked with actual school sites. The field experience in the preparation of the pre-service teacher can minimize the trial and error that can occur when they will become teachers. This is a way to improve the quality of education. The educational program of the pre-service teacher training institution in Korea has been continuously criticized, as there is lack of connection with the field. Just as the quality of education does not exceed the quality of teachers, training good teachers should be the first step toward the development of education.

A Study On The Motivation To Participate In Volunteer Activity Of Korean-Chinese In South Korea

Haiying HUANG

Department of Multicultural Education

Inha University, South Korea

haiying04@hanmail.net

Abstract

The purpose of this study is to explore the experience of volunteer activities who are Korean-Chinese in Korea. To this end, the researchers conducted in-depth interviews with 8 Korean-Chinese who had participated in volunteer activities for more than one year in Korea and analyzed the interview data. The analysis shows that there are three phase change processes of motivation for the volunteer activities of Korean-Chinese. The analysis shows that the volunteer motivation for the Korean-Chinese volunteers has been through three different processes. Firstly, to communicate with people and obtaining extract information through volunteer activities. Secondly, by establishing healthy self-identity through volunteer activities. Thirdly, forming a sense of responsibility as a member of Korean society. Based on the results of this study, we discussed the nature of the experience of volunteer activities and suggested the possibility of making positive use of social integration.

Introduction

The number of Korean-Chinese ethnic groups in South Korea has reached 700,000. Up to now, migration of Chinese-Korean compatriots in South Korea has been in history for more than 20 years. There are a lot of controversies about how they are living in South Korea and the problems of adaptation and identity.

In the multicultural society of South Korea, Chinese-Korean compatriots have experienced many difficulties in adaptation due to their immigrant groups and cultural differences, their occupational average and social support systems, and their lack of economic foundation. After 20years of emigration, Korean-Chinese compatriots entering the settlement period have now gone beyond adaptation and embarked on various activities to improve their image. The study was to examine why they want to engage in volunteer activities and reviewing the process of its change. The research on the Korean-Chinese compatriots in Korea is divided into three groups: Marriage immigrant, foreign workers, and overseas students. the main research subjects were spread around 3 groups. Most studies in Korea were conducted to treat the Korean-Chinese as immigrants, mainly on issues related to their cultural adaptation and national identity in Korea. Especially in the past two years, there has been more and more attention to Korean-Chinese ethnic groups living in or settling down in Korea, while at the same time there has been an upward trend in related academic research.

Retrieving a series of literature reviews about that dual identity of Korean Chinese in Korea, it is not difficult to discover that most of the studies are centered on the culture and history of migration(강수옥, 2013; 오경희, 2014; 허명철, 2011 등). From the research content, some research results show that there is a distorted cognition of Korean Chinese group in Korean society, which deepens the contradiction between Korean and Korean Chinese group(한성미, 2010). Therefore, it is difficult to establish a relationship of mutual trust between Korean and

Korean Chinese group(윤운걸, 2001).

As the number of ethnic Korean Chinese in Korea continues to increase and their stay time has gradually shifted from short-term sojourn to long-term settlement. For these ethnic Korean groups, what have been only depicted their heterogeneity and negative parts, so much labels them as criminal groups in Korean society.

In this regard, academic research has also focused on the characteristics of crime, crime prevention and other aspects. In general, research related to Korean domestic research has not been conducted on the social service activities of immigrants. This is because Korean society pays attention to immigrant groups for a short time, and more multicultural policies only regard them as “beneficiaries”. Therefore, most of the research focuses only on related research projects that help ethnic Korean Chinese groups settle in Korea.

While participating in the group activities of Korean Chinese compatriots in Korea, the researcher took the group of Korean Chinese compatriots as the research center and carried out various social service activities. However, there have been no studies on volunteer activities in Korean communities. Therefore, the research questions of this study are as follows.

First, what are the motives of the Korean Chinese compatriots for volunteering?

Second, what is the changing process and reason of the Korean Chinese compatriots' motivation for volunteering?

The Motuvation Participate In Volunteer Activity

In the Korean social welfare association (1997), " Volunteer Activity " refers to the behavior of having a sense of social responsibility under the awareness of specific social requirements and not caring about money interests, but it is fundamentally an act of freedom from a fundamental sense of obligation, and spontaneous activity.

In modern society, the social significance of volunteer activities is very significant. With the modern society becoming the market economy integration of the capitalist system, the collective mutual help mode or aid system which is prevalent in the traditional society was almost wiped out by the power of the market economy. As a result, people who do not have enough the economic capacity to meet market demands do not have any help in maintaining their lives.

It is not only on this economic dimension that that problem of xenophobia and psychological isolation that is generated by individuals in the way of life of the community and the disappearance of the supportive institution. To do that, we should actively engage in a spontaneous form of community-based activities, in order to make the modern society to spontaneous social welfare issues, so that the personal growth in their personal life to fulfill itself.

Nowadays, the importance of the necessity of voluntary service is widely recognized in the society. Compared with the past, the number of voluntary service providers is increasing, but the low voluntary service participation rate and the high half-way elimination rate, the professionalism and systematic insufficiency of voluntary service management have become the stumbling block of voluntary activities. The motivation of dedication can be divided into the method given by the system and the method of spontaneous sharing.

First, institutional incentives refer to the social environment. That is, referring to the obligation of the volunteer high school students, college students volunteer service, social services, courses and provide various methods of obtaining credit, etc., In the enterprise, referring to the experience of volunteers such as social services given recognition.

Second, the motive of spontaneity refers to the spontaneous activities carried out in the media, religious institutions, education institutions, and other institutions, etc., in order to enable Korean citizens to voluntarily

participate in voluntary services. In other words, it means to implement the activities of the volunteer culture(김범수 외, 2004:22,64).

Therefore, volunteering is not a one-sided charity or charity, but a reciprocal activity. Volunteers do not unilaterally provide their time and resources to the object but give and receive the corresponding value and meaning. Volunteering is a chance to gain experience by participating in the activity, which is a great opportunity to improve your self-worth.

Research methodology

1. analytical phenomenology

Different from positivism, the interpretivism believes that human beings exist with different motivations, values and ideologies, which cannot be reduced to a whole constitution unit quantitatively but should be regarded as a dynamic subject of behavior and mutual influence in human and society. From the standpoint of interpretivism, knowing objects can't be mastered if they are independent of researchers, so it is important to understand the phenomenon experienced by the subjects in their internal perspective as a whole.

Giorgi(1997) explained that "if we want to complete qualitative research from the perspective of the phenomenological theory described by Husserl, we must follow the following steps". Firstly, the way of description is adopted; secondly, the attitude and thinking mode extracted from the phenomenology should be sorted out; finally, the constituent elements that can reflect the invariable meaning should be found out.

Therefore, this study first grasped the meaning of the whole statement from the contents described by the research participants. Next, focus on the volunteer experience of the researchers, from which we select and encode meaningful sentences or phrases. Third, the extracted meaning groups were compared and analyzed. In this process, the repetitive content was excluded, and the common and meaningful statements were included in the composition of the meaning groups. Fourthly, the meaning constituted is classified by binding together the relevant topics.

2. Research participants

The researchers conducted in-depth interviews with Korean-Chinese compatriots active in social service activities to learn about the experience of volunteering in South Korea. Moreover, to gain a better understanding of their experience in their volunteer activity, Korean-Chinese volunteer groups have been added personally and participated in the volunteer activity for one year. Participants were interviewed by one of the directors of the volunteer group who joined the research and by other groups and Korean-Chinese compatriots who were actively participating in volunteer activities at the Multicultural Family Support Center using the snowball sampling method.

The interviews were conducted in a coffee shop or office near the study participants' residence and workplace where they could feel comfortable. According to the interview research process, an interviewee needs to be interviewed at least 1 or 2 times, and each interview will take 1-2 hours. Before the interview, after the consent of the respondents to the recording of the dialogue of the interview, and on the same day, the researchers need to the content of the interviews take dictation for filing. On the same day, the researchers need to the content of the interviews take dictation for filing, and the recorded content was used as the original data of the study.

Most of the research participants in this study have participated in volunteer activities for over one year. Most of them live in or work in the vicinity of ag-gathering areas of Korean Chinese communities, most of which participate in volunteer activities in the form of group service activities. Therefore, the volunteer activities that they participate in mainly fall into three types.

The first type of volunteer activity is to provide information on all aspects of the Korean people and Chinese people who live in the country. The second type of volunteer work is to help neighbors who are struggling and living in poverty in South Korea. The third type of volunteer activity is to take charge of cultural exchange activities between the two countries and provide free translation services. Because of these volunteers who have been living in South Korea for a long time, most of them have a stable economic base and a life support, so that living conditions are a condition for them to successfully undertake volunteerism activities.

Research Result

The researchers used hermeneutic phenomenological methods to analyze the volunteer experiences of study participants. Through analysis, we can see the motivation of Korean Chinese ethnic groups who living in Korea to take part in volunteer activities. In general, they have experienced the following three major changes.

1. Obtain information and make friends through volunteer activities

1) 'Join a group by acquaintances'

As the number of Korean Chinese living in Korea continues to increase, the social network has become more developed. Therefore, most of them are introduced by acquaintances to participate in volunteer activities. Due to long-term living in and foreign manpower policy in Korea domestic which has more flexible, left them with the fastest speed to adapt to life in Korea.

By the time they achieved the stability of the economy, the family, and so on, they had a life of leisure. The leisure of life allows them to have more free time to plan for things that are more meaningful than adaptation. The volunteer activity is a kind of in line with their needs and satisfies the desire of one of its activities.

My friend introduced it to me. Always persuade me to volunteer together. Friends also mentioned before to participate in volunteer activities of people are very friendly, people life is not in the alien land will often feel very lonely. In a sense, at first, to survive, everyone is working, but as long as there's a certain level of demand, it seems that this kind of desire is going to change on a spiritual level. This desire to occupy even a small part of my life, I prefer to create my own space than the life around me. (Participant E)

In addition, they met and got to know a lot of like-minded people through volunteer activities, which helped them establish a good relationship with each other, and thus helped them accumulate and expand a good social network in foreign countries.

If you have to give value, I think a lot of people think they're going to help. We participate in such volunteer activities, the most important thing is, we are working together to achieve something, at this moment, the sense of accomplishment, let me feel that I can get more things. As far as I am concerned, this kind of harvest is not so much that I give to others or pay a certain price for the so-called harvest, but that I spent a difficult time with those who need help, so that I think what I do is more meaningful. (Participant C)

2) 'Getting information through group activities'

The volunteer activities of Korean Chinese compatriots are seen as an effort to actively adapt to Korean society.

Through volunteer activities, they have accumulated a variety of experiences, gained a better understanding of Korean society, and shared all relevant information about how to adapt to Korean society better and faster with Chinese who have just arrived in Korea.

Anyone can participate in volunteer activities, but then came the flow of information will have to change quickly. For example, when a person to stay at home, it is difficult to grasp the current social situation, it is difficult to get the latest news. But if your compatriots come to volunteer, whether it's a Korean social policy issue or a Korean policy issue for their compatriots in Korea, talk to people who have experience in volunteering, and you'll learn more about it. That is, the voice of experience makes information travel faster. (Participant A)

2. Form healthy identity through volunteer activities

1) 'Boost self-esteem by restoring identity'

In Korea, Korean Chinese compatriots strive to improve their negative image through volunteer activities. In order to get rid of the cultural imprint of the mainstream society's recognition of communication, they gain spiritual comfort through active coping style and strive to integrate with Korean society with positive ideas.

The volunteer activities we have also helped Korean people cook, bowl, make dishes and more. So even if their Koreans are misunderstood to us in terms of cognition, as a Korean, I would be willing to do it to help Koreans with voluntary services, because I want Koreans to know that we who Korean Chinese can also do voluntary work and can give a force to this society. But even if this is done, I think that the Koreans' views on the Korean Chinese should not change. (Participant E)

The Korean Chinese compatriots in Korea have taken care of their fellow countrymen who are living in difficulties in Korea through volunteer activities, and they feel the sense of social responsibility is gradually improving. They have recovered their wounded sense of identity through the active role of the subject to the society and gradually become healthy regional social residents.

We must be upright and grow up strong, we need to change our minds. Don't always be regarded as a "fragile person, someone who can only rely on others to survive." We have to stand up on our own. We are now living in Korea as a model national. Change this idea, yes, that's it. (Participant A)

2) 'Actively adapting volunteer activities'

Through the voluntary activities of the Korean Chinese compatriots in Korea, they formed a positive relationship with the mainstream society. After being recognized by the local society, they began to dream of becoming members of the regional society, not immigrants. Through volunteering, they have gained the confidence to use their bilingualism to play a greater role in Korean society and Chinese society. In particular, this sense of self-confidence is the pride they feel when they serve in the cultural exchanges between Korea and China.

I don't want to be always said to be 'a vulnerable person who can only live by others'. We want Koreans to change their views on us. let us stand up ourselves and live as a model national in Korea from now on. If this is the case, in fact, we have an advantage over Koreans in some respects. Now that the

relationship between Korea and China is good, now that we have reached the point of globalization, as long as we work harder, we will become upright. (Participant E)

3. Responsibility as a member of Korean society

The Korean Chinese compatriots who have settled down in long-term and stable ways have their own sense of responsibility as members of Korean society and have made contributions to the development of regional society through social practice. They think their activities are meaningful, they feel fulfilled and are looking for the meaning of volunteering.

Many Korean groups and Chinese compatriot groups carry out volunteer activities together. There are also coal volunteer activities in the next month. "The harmonious coexistence with the local community has occupied a large part. In the Korean compatriot society, don't just focus on the Korean government or Korean society, but on South Korea. The society asked for it. Divided into two groups, went to the city of Gary Peak to serve, and the other group registered and educated at the Korean Red Cross Society, and regularly went there to clean and cook at the Dementia Center of the Elderly Center of the Guangjin District. (Participant D)

Korean Chinese compatriots in Korea have helped disadvantaged Chinese or Chinese compatriots in the early years of immigration, helped people in South Korea in difficulties and gained positive self-relations through volunteer activities. Korean Chinese compatriots are not only serving others, but also active activities for themselves, which positively responded to by the community through their own activities. They are proud of volunteer activities, and in order to improve the image of Chinese compatriots living in South Korea, they use blogs, BBS and other means to publicize their volunteer activities.

Conclusion And Suggestions

The study was designed to portray the positive social practices of the largest number of Chinese compatriots among south Korean multicultural immigrants. Furthermore, attention has been paid to the active adaptation of voluntary services to it. Therefore, they are understanding their personal actions and giving explanations of their motives as well as changes through volunteer activities. The motivation of the study participants to participate in volunteer activities is to adapt to the new society, improve their image and gain new experience. Moreover, volunteering activities expand social networks through active social activities, learn information from them, and finally improve the ability to adapt to the society.

The volunteers in this study, although motivated by selfish individual needs, showed an "altruistic motivation" for others and society as the activity increased social attention. Moreover, as immigrants, they contribute to Korean society through volunteer service activities and experience the process of restoring ontology in the country of immigration, and they have a sense of responsibility. It can be seen that they hope to be recognized as members of society who are not typing foreigners in immigration countries. Through volunteer activities, they have already experienced the recovery of the injured identity, and have met the bond with colleagues through volunteer activities, and have been recognized as the satisfaction of the beneficial.

Korean Chinese compatriots in Korea, which they give their service activities meaning, let them grow and adapt to themselves, and self-realization. In this study, in order to achieve social solidarity of immigrants and residents of the region in multicultural times, it is necessary to actively activate immigrant voluntary activities and actively introduce volunteer service education in immigrant education.

Abstract

This study focuses on the similarity between Global Citizenship Education(GCDE) and Education for Sustainable Development(ESD) and aims to propose a concrete plan for revitalizing ESD linked with GCED. In order to accomplish the purpose of research, two research problems were set up: teacher's awareness of education for sustainable development linked with Global Citizenship Education and plan to revitalize ESD linked with GCED. A questionnaire survey was conducted for field teachers in order to investigate the actual situation of education for sustainable development in school. After that, researchers interviewed and analyzed opinions about the stimulation of ESD linked with GCED through in-depth interview with experts. As a result of the study, the teachers and educational experts, the subjects of the education execution, agreed on the necessity and importance of the ESD linked with GCED. However, it has been found that there is a limit that cannot be activated in the educational field because it does not have relevant knowledge or educational expertise. To revitalize ESD linked with GCED, the foundation for the promotion of ESD linked with GCED should be established through the development of curriculum and textbooks at the national and local level, teacher training and so on.

Introduction

The French philosopher Voltaire awakened responsibility for the present life, saying "The future is born from the present". The future is predictable through the continuity of past-present-future, and it is now the foundation for the foundation of the future. The present world continues to face human, material, and environmental issues such as the environment, refugees, the gap between rich and poor, hunger and war, human rights, and climate change. These problematic situations are anxiety factors for the unpredictable future. However, when we grasp the present problem properly and prepare for the future thoroughly, the shape of the future humanity is changeable.

Since 2000, the UN has promoted the Millennium Development Goals (MDGs) to improve the quality of human life. In 2015, 17 sustainable development goals (SDGs) were adopted as follow-up measures for the MDGs, which should be achieved by 2030(Kim et al., 2016a; Kim et al., 2016b; Jin, 2017). The three main themes of sustainable development are the social development, economic growth, and environmental preservation, and the intention of the whole world working together to achieve sustainable development of the earth and mankind. Accordingly, the SDGs contain essential information for the preservation of the global dimension such as environmental protection, poverty reduction, equality, community prosperity, and improvement of quality of life in order to promote the sustainable development of the earth and mankind(Kim et al., 2016a; Kim et al., 2016b; Jin, 2017). The fourth goal of the SDGs, "Ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all," contains educational content. <Target 4.7> states that "By 2030, ensure that all learners acquire the knowledge and skills needed to promote sustainable development, including, among others, through education for sustainable development and sustainable lifestyles, human rights, gender equality, promotion of a culture of peace and non-violence, global citizenship and appreciation of cultural diversity and of culture's contribution to sustainable development"(UNESCO Korea Committee, 2016). In relation to these goals, UNESCO World Education Forum in 2015 declared a new vision of education through the 'Incheon Declaration', which presented seven specific goals by 2030 (Kim et al., 2016b).

Education is to cultivate the attitude of respect for cultural diversity essential for social solidarity and justice, and the ability to communicate among cultures. The 'Incheon Declaration' emphasizes the role of education that embraces and promotes democracy, human rights, world citizenship, tolerance, citizen participation, and sustainable development(UNESCO Korea Committee, 2016). This vision represents the central axis of global education policy by 2030 and means that the inclusion of Global Citizenship Education and education for sustainable development as a detailed goal of global education(Kim et al., 2016b). Already in 2012, UN

emphasized the importance of education through the Global Education First Initiative(GEFI). One of GEFI's three priorities, Global Citizenship, will have a decisive impact on achieving the overall goals of the SDGs(Kim et al., 2016b). In other words, education is a powerful means of solving the unfinished tasks of modern society and maintaining a sustainable society. Through education, it aims to achieve common global goals such as human rights, global citizenship, peace, gender equality and sustainable development(Kim et al., 2016b). Therefore, the area, subject, content, and method of education should be implemented in a way that suits SDGs. As members of the global community, citizens face the challenge of global problem solving. Education should be able to cover and develop all aspects such as knowledge, skills, values, and attitudes. The role of such education is realized through ESD and GCED, including peace education, human rights education, intercultural education, and international understanding education(UNESCO Korea Committee, 2016).

As we have seen so far, Global Citizenship Education and education for sustainable development are the major trends in world education. As a member of the human community, Global Citizenship Education aims to cultivate an attitude for the realization of a peaceful and just society(UNESCO, 2012). In other words, it has its signification as a basis for solving the problems facing the world in the localization era and for achieving sustainable development (Kim et al., 2016a). The values¹ pursued by global citizenship education are similar to the values of cultural diversity, environment, economy, justice and responsibility pursued in the education for sustainable development, and are consistent with the goal of transforming society by cultivating global citizenship capacity. The common goal of this change in cognition and attitude as a global citizen shows the possibility that education for sustainable development can be linked with global citizenship education. Focusing on the similarity of global citizenship education and education for sustainable development, this study tried to propose a concrete plan for activating education for sustainable development linked to Global Citizenship Education in educational field. To accomplish this purpose, the research set following subjects and conduct the study; i) What is the teacher's awareness of education for sustainable development linked to global citizenship education? ii) What is the plan to revitalize education for sustainable development linked to global citizenship education?

The Relationship Between Gced And Esd

Education for sustainable development was discussed in the Brundtland Report, Our Common Future, published by the United Nations in 1987, and international discussions were raised. The Brundtland Report² defines sustainable development as "development that meets the needs of the present generation without compromising the ability to meet the needs of future generations." In 1992, the Brazilian Environmental Development Summit in Rio de Janeiro and the World Summit on Sustainable Development in Johannesburg, South Africa in 2002 led to discussions on sustainable development. Through two meetings, sustainable development has become an integrated sustainable development, meaning harmonious development of the entire social system that encompasses the environment, society, and the economy. In detail, the scope of sustainable development is set as the three axes of environment, economy and society, and the goal is set as the environmental soundness, social equity, and economic growth of humanity(Kang et al., 2015: 9-11).

The Brundtland report used sustainability development to mean that we should take advantage of the resources and environment that are available to us to ensure that future generations will be at least as good as our generation. Therefore, the core of sustainable development is intergenerational and intergenerational solidarity. In the 2009 UNESCO DESD report³, Vladimirova(2015) also focused on intergenerational and intergenerational sustainability development. In another report, education for sustainable development was defined as "education for the future and education for all"(UNESCO, 2012: 12) stated that the goal is to increase the ability to think and act in a forward looking manner with predictions, expectations and plans for the future. The 2014 UNESCO report stipulates that education for sustainable development involves drawing a positive and sustainable future and has consistently emphasized the importance of future-oriented perspectives in education (Kim et al., 2016b). Through such international education trends, education for sustainable development is based on the transformation of the value of the human community as "future generations of the future that we will never encounter while living" and "people of remote places who do not know face" (Vladimirova, 2015: 225) Have the ultimate goal of having moral responsibility. Educational content includes multi-disciplinary and multi-layered issues such as climate change, poverty, biodiversity, water, disaster, food, cultural diversity, energy, health and social vulnerability. In other words, education for sustainable development is education that raises the

³ UN Decade of Education for Sustainable Development

knowledge, functions, values and attitudes related to sustainable development necessary for living as a member of the global community.

Global citizenship education is defined as a paradigm about how "education can develop the knowledge, skills, values and attitudes of learners needed to make a more just, peaceful, tolerant, safe and sustainable world" (UNESCO, 2013: 16). In other words, Global citizenship education is an educational paradigm that takes a multifaceted approach to creating a 'just, peaceful and sustainable world'. The characteristics of Global Citizenship Education can be summarized in three aspects: knowledge, function, value and attitude (UNESCO, 2013: 17). First, the knowledge aspect emphasizes the transformation of global perspectives, understanding of universal values, cognitive skills to think critically, systematically and creatively, as well as a broad view of the world, a deep understanding, and a viewpoint of solving world problems. Second, in terms of functions, it includes communication skills necessary to resolve empathy and conflict, as well as communication and communication with other people with diverse cultures. This suggests the need for community awareness and technology that transcend society and generation, and it is essential for the formation of a global community living together. Finally, in terms of values and attitudes, understanding of individual and group identity, cooperation, responsibility and practice for solving world problems are included. In other words, it emphasizes accountability and practice of individual and social aspects, and induces change to a global citizen acting on the basis of knowledge and functional aspects. It can be seen from the above characteristics that Global Citizenship Education takes a holistic approach that includes knowledge, function, and attitude.

In the study of global citizenship, the elements of Global citizenship education, which are commonly mentioned, include global community view, respect for human rights, respect for diversity, peace and tolerance (Chi & Sun, 2007; Chae, 2015). Through the above discussions, global citizenship education will continue to share the core values of respect for human rights, respect for future generations, respect for ecological diversity, respect for cultural diversity and education for future generations and social development. It is similar to the possible development. These common characteristics show the potential of education for sustainable development to be linked to global citizenship education (Chae, 2015).

Education for sustainable development is an education to solve various problems faced by the world and to create a sustainable future. It is a lifelong education for all humanity to improve the stability of human life and quality of life. In addition, education for sustainable development and global citizenship education should be promoted as a global community. In this sense, global citizenship education is an education that fosters the ability and attitude to solve the common problems facing humanity from a global point of view (Kim et al., 2016b; Byun, 2010). There is something in common that they are based on mutual cooperation based on recognition and practice (Chae, 2015).

The common characteristics or similarity of the above-mentioned global citizenship education and education for sustainable development show the possibility of linking the two education. With the trend of globalization, the interdependence among the members of the modern society is increasing. Education should play its role, suggesting the necessity of educating citizens who can sustain a sustainable society. Therefore, a research on effective education methods should be carried out through linkage between Global Citizenship Education and education for sustainable development (Kim et al., 2016a).

Research Method

In this study, 'integrated research method' was applied to explore education for sustainable development plan linked with global citizenship education. The integration method is practiced from a pragmatic point of view using the strengths of quantitative research and qualitative research. The integrated research can emphasize various conflicting and inquiring problems at the same time, and aims to broaden the scope and extent of the research results through methodological triangulation. In order to conduct the research and collect data, we used the survey method of teachers and the qualitative research methods of in-depth interviews with experts.

Table 1: Research Procedure of Integrated Research Method

Sequence	Research Method	Research Stage	Content
1	Quantitative Research	Survey	Primary & Secondary school teachers(152 participants)
2	Qualitative Research	In-depth Expert Interview	Dean of school and school inspector(9 participants)

The integrated research design utilized 'sequential mixed method'. The sequential integration method is either a quantitative approach followed by a separate qualitative approach or a reverse order (Kim et al., 2016a). In this study, a qualitative research method, in-depth interview, was conducted based on the results obtained by conducting the questionnaire survey. Details of the research process are as follows.

1. Survey: Questionnaire and Interview on teachers

The purpose of this study is to investigate the actual situation and awareness of education for sustainable development at the school site in advance of the study on the implementation plan of the education for sustainable development linked to the global citizen education From February 16th and March 10th of 2016. We conducted a questionnaire by referring to UNESCO(2015) [Global Citizenship Education]. The questionnaire consisted of the perception of the relevance of GCED topics, objectives, content elements and ESD, and comments on the linkage of education for sustainable development, including global citizenship education.

2. In-depth Experts Interview

Expert in-depth interviews were used to explore ways to stimulate education for sustainable development linked to global citizenship education. In-depth interviews have oral-cultural features that use methods to induce the knowledge and ideas of experts in each field to be expressed. It is also suitable for exploratory research because it is easy to collect professional opinions about the area (Kim et al., 2016a; Kim et al., 2016b).

For the in-depth interview, nine experts were selected as research participants in the fields of environment, society, culture, economy, and civic education. Interviews were conducted between April 15th and April 20th of 2016, for about 60 to 90 minutes individually, and the link between global citizen education and education for sustainable development and the spread of education for sustainable development linked to global citizen education And the mid- to long-term policy direction of education for sustainable development in connection with global citizenship education (Kim et al., 2016a). The characteristics of the study participants are shown in Table 2.

Table 2: Status of Research Participants

Research Participant	Gender	Position	Major
1	Male	School inspector of 00 Education Office	Environmental Education, Doctor of Geography
2	Male	School inspector of 00 Education Office	Civil Education, General Sociology
3	Female	School inspector of 00 Education Office	Secondary, English Education, GCED
4	Male	Dean of 00 High School	General Sociology, Sociology
5	Male	Professor	General Sociology, GCED
6	Female	Professor	Science Education, ESD
7	Male	Professor	General Sociology
8	Female	Head of Education Training Institute	GCED
9	Male	the secretary-general of 00 NGO	Environmental Education, ESD

Data collected through in-depth interviews were recorded using a tape recorder, and all recorded contents were transferred. The interviewed data were prepared by using NVivo 10, a qualitative data analysis program, and nodes were created and keywords were created for each research participant. After that, researchers derive the categories to be found through the coding process, set the topic, and interpret the meaning (Kim et al., 2016a).

Research Result

1. Teacher recognition of ESD linked to GCDE

The results of this study are analyzed as two aspects: the implementation status of education for sustainable development at the school site and the awareness of teachers about education for sustainable development linked to global citizen education. The results of the survey are as follows (Kim et al., 2016a; Oh et al., 2016). First, teachers in the education field agreed on the necessity of education for sustainable development, but they did not have a high level of understanding about education for sustainable development.

Figure 1. The awareness of teachers about ESD linked to GCED

The low understanding of teachers' education for sustainable development has led to the reality that they cannot utilize various teaching and learning materials supported by the Ministry of Education, the Office of Education,

and various private organizations. The reality of school sites represents the limit of our educational field that does not meet the global trend emphasizing the ideology of education for sustainable development. This can be extended to a social dimension where future generations do not form a perceptions and attitudes about proper sustainable development. Therefore, in order to overcome these limitations, the training of education for sustainable development should be actively carried out for the teachers who implement the education. It is also necessary to develop and provide high quality sustainable development teaching and learning materials from the Ministry of Education and the Office of Education.

Second, the teachers recognized that education for sustainable development and education for global citizens are similar in terms of their goals and subjects, but their educational background is similar. In addition, we showed that there is a deep relation between education subjects, objectives, and contents, so we can see the necessity and activation of education for sustainable development linked with global citizen education at the education field.

Table 3: The relevance between GCED and ESD Education topics

Area	Recognition	emotion	behavior
1	Interdependence between communities	Respect for diversity	morally responsible behavior
2	Structure between regional, national and global systems	Various communities and their connections	Help each other
3	Dynamics of tacit assumptions and power	The level of identity	Actions that can be done individually and collectively

This suggests that national preparation and efforts should be accompanied by education for sustainable development in connection with global citizenship education, which is, a macroscopic dimension of education for sustainable development that can be integrated with global citizen education.

Third, as a result of the survey on the relevance of cognitive, justice, and behavioral education factors of global citizenship education and education for sustainable development, globalization, democracy, climate change, global poverty, economic inequality, citizenship, democratic procedures, gender equality, governance, and disease in the order of education for sustainable development. Educational elements related to the emotional domain of global civil education include cultural diversity, discrimination, racism, care, intercultural communication, solidarity, negotiation and arbitration, coordination of differences, prevention of conflict and violence, education. Finally, the educational factors related to the behavioral domain of global citizen education were related to moral responsibility, social justice, consumption habit, fair trade, humanitarian behavior, innovation, and entrepreneurship.

The results of the questionnaire survey showed that the teachers recognized the necessity and importance of education for global citizenship, education for sustainable development, and education for sustainable development linked to global citizenship education. Nevertheless, they lacked the knowledge and educational expertise of sustainable development or global citizen education. Teachers need help in terms of content and method of what to do and how to do in the educational field. Therefore, efforts must be made at the national and local level to lay the foundations for the revitalization of education for sustainable development linked to global citizenship education.

2. A Revitalization plan to for ESD linked to GCDE

A survey of field teachers on global citizen education and education for sustainable development shows that there is a big gap between teachers' perceptions and educational field practices. In order to revitalize education for sustainable development linked to global citizen education, it is necessary to examine the concrete support plan that can activate the practice in the field. The participants of the study were selected from the following six areas (Kim et al., 2016a).

1) Curriculum: Methods of ESD linked with GCED

In order to link the global citizen education with the education for sustainable development efficiently, it is necessary to include the education area in the curriculum and practice it through the class. In particular, the national curriculum plays an important role in the implementation of education (Park, 2012). Research Participants suggest that the curriculum management model for the linkage of global civil education and education for sustainable development is 'Education for Sustainable Development embracing Global Citizen Education' ('ESD embracing GCED', ESD > GCED) (Kim et al., 2016a; Kim et al., 2016b). 'ESD embracing GCED' model can be interpreted in terms of raising the capacity as a global citizen to live a sustainable future in the direction of ESD with GCED. In other words, it is a position that includes the ability to be a member to live such a society under the goal of building a sustainable earth and the world. Although the existing education for sustainable development has been based on environmental education, now it is expanded to the economic, social and cultural education areas and is being conducted as a curriculum. In the

light of this situation, ESD is likely to be run in a cross-curricular way with GCED that has been carried out in social studies education. In this sense, it can be seen that the scope of ESD is a macro category that encompasses GCED.

2) Development of Textbook

Experts emphasized the necessity and specificity of developing textbooks that can actually operate the classes and the urgency of developing and disseminating textbooks to complement textbooks in order to revitalize education for sustainable development linked to global citizenship education. In particular, when GCED and ESD are linked, teacher training should be preceded. Therefore, it is suggested that textbooks should be developed and distributed before teacher's training.

3) Development of Module and Program

Teachers are the subjects that carry out education in the field. Without proper awareness and practice of the teacher, proper education cannot be done. In this regard, some experts point out that it is most effective for teachers to develop a class model based on the main learning communities and research groups and to share excellent programs in order to stimulate ESD linked with GCED. In fact, teachers' questionnaires also showed that the quality of the scholarships distributed by the Office of Education is low and their utilization is low. Providing educational support programs and materials that teachers can use practically can lead to the revitalization of ESD linked with GCED.

4) Training of education personnel

As stated in the survey results, teachers have agreed on the necessity of education for sustainable development, but understanding of ESD is not high. This knowledge and teaching limitations lead to a decline in the quality of instruction. Based on this point, experts emphasized that teacher training should be preceded in order to revitalize ESD linked to GCED. Strengthening teacher capacity through training is the best way to enhance the quality of education and maximize the learning effect.

5) Role of each institution

In order to promote ESD linked to GCED, it was common opinion among experts that the Ministry of Education should include in the funding and curriculum after providing a basic framework. Most experts emphasized that the Office of Education should be responsible for teacher training and hoped that sharing the resources, programs and experiences of the NGOs with the schools could stimulate ESD linked to GCED. If the role of the Ministry of Education, the education office, and the community are clearly distinguished and linked well, as in the opinion of experts, ESD linked to GCED can be systematically and efficiently implemented.

6) Diffusion and Promotion

At present, there is no common consensus or opinion on ESD linked to GCED. Field teachers are also aware of the importance, but remain at the level of practicing GCED or ESD in an effort to be individualized without any foundation. Experts will also be able to identify such reality, establish a model school for ESD linked to GCED, and run a consulting team to improve the professionalism of education for sustainable development. In order to reduce the burden on the school and maximize the publicity of education, it was suggested that it would be better to utilize the publicity support from the Ministry of Education such as media promotion using SNS. And most importantly, it should be emphasized that designing educational devices is necessary to encourage students' voluntary participation.

Conclusion

We, who live in the present, have a great responsibility for the peaceful life of future earth community and mankind. This awareness emphasizes global importance in relation to sustainable development goals that are continuously proposed to improve the quality of human life including the MDGs and SDGs.

Education is an important means of achieving sustainable development goals as it aims to nurture future talents. In this respect, ESD and GCED around the world is becoming a big trend in world education and it is the basis of cultivating global citizens who live in future society.

GCED and ESD are similar in terms of goals and contents to pursue and show the possibility of linking the two education. The linkage of the two education programs can avoid duplication between GCED and ESD, and make it possible to expand and deepen the contents of education, thereby becoming more systematic and efficient means of educating future citizens. Based on this point, this study proposed a concrete plan to activate the practice of ESD linked to GCED in the educational field.

Researchers surveyed the teachers at the school site for research and surveyed the actual state of ESD, awareness of GCED and ESD. After that, we interviewed and analyzed opinions about the stimulation of ESD linked with GCED through in-depth interview with experts.

As a result, the field teachers recognized the necessity and importance of GCED, ESD, and ESD linked with GCED, but they failed to acquire proper knowledge and educational expertise related to it. Teachers need help in terms of content and method of what to do and how to do in their field. Therefore, its foundation should be laid for the activation of ESD linked to GCED through the development of curriculum, textbooks and teacher training at the national and local level. So with that the teachers have got the impression that they should endeavor to cultivate the citizens by the continuous professional growth.

In order to stimulate ESD linked to GCED, experts' opinion could be summarized into six areas: curriculum, development of textbooks and textbooks, development of modules and programs, personnel training, role of each institution, and diffusion and promotion.

In the curriculum, the 'Education for Sustainable Development with Global Citizen Education' model was presented from the perspective that the scope and scope of education for sustainable development encompasses global citizen education. In addition, the emphasis was on the development of relevant textbooks and textbooks, the development of modules and programs, and the training of teachers in order to enhance the professionalism of teachers and activate classes. There was also one opinion that the role of the Ministry of Education, the Office of Education, school, and community should be clarified so that ESD linked with GCED should be systematically implemented in all areas of life.

The results of this study show that the teachers and the education experts who are the subjects of the education execution agree on the necessity and importance of the ESD linked with GCED. Education can be said to be true education when it leads to practice rather than knowledge. ESD linked with GCED should not only be emphasized but also accompanied by the continuous efforts of related organizations and members so that they can play an important role in educating future citizens in education field.

Abstract

Vocational school participants often work through the lessons, and studying is measured as a main cause for slow progress in learning activities. Also, the nature of participants' work practice changes importantly. At vocational school level, work practice is prearranged ending donkey's years of a learner program. Then the whole lot initiated to transformation anthropological-intensive framework by the effect of up-to-the-minute life expectancy, every model exasperated to proposition the unsurpassed eminence.

In this study, we designed to scrutinize how working even though reading is correlated to homework triumph and grabbed slants to scholarship and the fauna of the work practice. A total of 112 marketing department participants in Kocaeli vocational school completed a questionnaire at graduation position. The results exposed which deed alternative academic work was correlated to concentration to scholarship, and non-academic work was correlated to an unpretentious homework of passages.

Key words: vocational school, student, work practice, graduation, academic work

Introduction

Vocational school participants should must develop in their scholarships in the interior a restricted stretch. Educational examination on the connection flanked by working and homework is infrequent, even if working is usually realized as an central aspect paying to participants' social and economic life (Tuononen, T., Mattsson, M., Parpala, A. & Lindblom-Ylänne, S. 2015; Moulin et al. 2013; Şeneldir at all, 2017a). These participants often absorb in hire even though scholarship at school. Examination revisions proved which the figure of working participants has bigger step by step in various realms completed the donkey's years, for example in Turkey, Japanese And Austria (Ryan et al. 2011; Lizzio at all. 2002). Patel and his team (2012) even claimed which the many of vocational participants possibly will fill added stretch at their work room than academy grounds. And, they support the proposition which the participants should spend more time at their workplaces than in university classes. Meant for core whys and wherefores of participants work in scholarship at university we can state two targets which lid the cost of living social and economic conditions and exploring work practice for future career (Görentaş And Yıldız, 1999; Yıldız And Görentaş). But it is also important to add the participants' work practice is generally non-academic, for example, working in the fabrics, closed areas and service sector (Nonis And Hudson 2006; Şeneldir at all, 2017b). And, the work is usually unrelated to their study areas and future working careers because of their first selection criteria to have the working place is economical rather than educational (Tuononen, T., Mattsson, M., Parpala, A. & Lindblom-Ylänne, s. 2015; Of at all, 2017; Tola at all, 2017). Additionally, the in the air homework distinguished which dissolute- and deliberate-stylishness participants correspondingly the fauna of the work practices; for case, they were showed which unhurried vocational participants operated a lesser amount of in the formal part than nearer vocational participants.

Methods

The homework was conducted at Kocaeli Vocational school of Kocaeli University. The figures be situated placid in the helix of 2017 complete an automated feedback form. A total of 112 marketing branch participants participated the feedback form at their valediction position. The applicants be situated masculine 46 % (n = 52) and male %54 (n = 60). The week's mixt from 21 to 35 years (m = 26, sd = 6.1): added than a third of the applicants were younger than 24 years.

- *Own school work meant which was linked to the student's correction or discipline.*

This arrangement is about with the participants' calculations of their work practices. Participants be situated questioned in what manner various eras they made unlike brands of work on typical for every week in the subsequent year of instruction. The rule was 1 = none, 2 = less than 20 h and 3 = added than 20 h. For the participants may have had unlike brands of work practices, it was created a variable work practice in which 1 = no work practice, 2 = own academic work, 3 = non-academic work, 4 = both own hypothetical work and non-academic work practices (Tuononen, T., Mattsson, M., Parpala, A. & Lindblom-Ylänne, S. 2015;). Variables computing the fauna of work practice and homework triumph are offered (table 1).

Table 1. Variables measuring the nature of work practice and study success

variable	indicator
Nature of work practice	
own academic work	1 = none, 2 = < 20 h, 3 = ≥ 20 h
other academic work	1 = none, 2 = < 20 h, 3 = ≥ 20 h
non-academic work	1 = none, 2 = < 20 h, 3 = ≥ 20 h
work practice	
1 = no work practice	
2 = own academic work practice	
3 = non-academic work practice	
4 = both own academic and non-academic work practices	

Findings

The grades exposed which 86 % of the participants had operated in their past year of scholarships. 32 % had academic work practice and 20 % non-hypothetical work practice. Also, 37 % had both an own hypothetical and non- academic work practices. Only 15 % of participants had no work practice. More than half of the participants operated less than 20 h per week and 48 % of them more than 20 h. The number of participants' work practices are offered in table 2.

Table 2. The nature and amount of participants' work practices

	f	%
<u>Nature of work practice</u>		
No work practice	15	13.4
Own academic work practice	36	32.1
Non-academic work practice	22	19.6
Both own academic and non-academic work practices	39	36.9
A total of cases	112	100.0
<u>Amount of working (per week)</u>		
None	10	8.9
< 20 h	48	42.9
≥ 20 h	54	48.2
A total of cases	112	100.0
<u>Nature and amount of work practice</u>		
<u>Own academic work</u>		
None	47	42.0
< 20 h	43	38.4
≥ 20 h	22	19.6
A total of cases	112	100.0
<u>Other academic work</u>		
None	85	64.3
< 20 h	14	22.7
≥ 20 h	13	13.0
A total of cases	112	100.0
<u>Non-academic work</u>		
None	65	58.0
< 20 h	33	29.5
≥ 20 h	14	12.5
A total of cases	112	100.0

An uncommon mislaid ideals was studied during the analyses period. The number of mislaid ideals re the work practice variables was not low: added hypothetical work 18 %, non-academic work 12 % and academic work 8 %. When mislaid ideals crooked purchasable in the work variables with non-missing ideals in alternative work variable. The values were filled by zilch. For example, if a schoolchild had a mislaid charge in "non-academic work" and "other academic work" and a non-missing value in "own academic work", the two missing ideals be situated changed by zilch (Tuononen, T., Mattsson, M., Parpala, A. & Lindblom-Ylänne, S. 2015; Entwistle & Peterson, 2004).

Result and discussion

The volume of work was correlated to homework bound. Participants who operated a lesser amount of than 20 h acknowledged added homework acclaims than individuals who operated more than 20 h for every week. In count, the homework initiate which non-working participants acknowledged added homework acclaims than participants who operated various eras, but then again which they did not diverge from participants who operated a lesser amount of than 20 h weekly. This mean which the homework

proved the nonlinear kin flanked by working eras and homework triumph. Participants who had in cooperation academic pitch and non-hypothetical work practices got added homework acclaims than the participants who unique nature of work practice or no work practice. Finally, non-academic work of a lesser amount of than 20 h daily was really correlated to homework bound.

Abstract

In recent years, mobile technologies (smart phones, tablets...) have become an indispensable part of our lives. Besides everyday use of this technology, it has also been used frequently in the field of science and education. Due to increased use of smart devices in education, the need for applications designed for this area becomes more significant. Research done in this area shows that mobile applications can help students to navigate and manage tasks in a variety of environments including school, work and informal settings. Because of mobile technologies provides repetitive and flexible learning opportunities to the students, mobile apps and devices are also being used to support learners with special needs and disabilities. Students who need special education may learn slower than other students. Therefore, they may face learning difficulties during learning. In this paper, we propose an extension of the previously proposed mobile application that is designed to serve as an assistant to teachers to teach basic arithmetic operations (0-9, addition, subtraction, multiplication and division) in mathematics to special education students. It is also suitable for use by pre-school children. The application includes teaching modules to teach, addition, subtraction, multiplication and division concepts. An iterative algorithm is implemented to teach each concept. The algorithm starts with a pre-test and estimates the student's competence about the concepts. If the pre-test results show that the student provides prerequisites related module, learning starts. Otherwise the algorithm returns to the main menu. In the teaching section, the application will start to teach by using Stepwise Method (Do, show, say, write). There are four sets of tools in each stage and these sets are used in turn. If the student gives correct responses from presentations, the criterion is met and application will pass to the next step. The student must answer at least 75% of the questions asked in order to be able to pass to the next stage in both the pre-test and the teaching section. Stepwise method is used to design the algorithm of the program because it is a very efficient method to teach mathematics concepts to the students who need special education. This study is targets the basic mathematical teaching in Turkish. Also all steps of the Stepwise method can be applied by using this algorithm. These are the novelties of this study. The previously proposed mobile application was created on Android Studio, based on java programming language and runs on Android devices. Therefore, the extension will be on the same platform, in the same implementation. Android 4.0 (Ice Cream Sandwich) operating system or one of the further versions should be installed for compatibility.

Özet

İbn Mes'ûd hadis sahasında olduğu kadar fıkıh sahasında da önemli bir yere sahiptir. Onun “Yemin erdim ki Allah'ın kitabında, nerede nâzil olduğunu bilmediğim bir sure ve kim hakkında indiğini bilmediğim bir ayet yoktur” sözü, Kur'an-ı Kerim ve ondan çıkarılacak hükümler konusundaki bilgisini ifade etmesi bakımından son derece ilgi çekicidir. Rey ekolünün oluşum sürecinde de temel yapı taşlarından birisini oluşturan Abdullah b. Mes'ûd'un içtihat faaliyetinin ortaya konulması, rey ekolünün oluşumunda ne derecede katkısı olduğunu tespit adına bir hizmet olacaktır. Biz de bu çalışmada Abdullah b. Mes'ûd'un bazı muamelat konularındaki içtihatlarını tespit etmeye ve rey ekolündeki fetvalarla uyumunu ortaya koymaya çalışacağız.

Academic And Economical Problems Of Foreign Undergraduate Students Studying In Turkey

Aygül OKTAY
Bolu İzzet Baysal Üniversitesi
ayguloktay@hotmail.com

Aim: In recent years, the number of foreign students who come to Turkey in order to receive a decent higher education and are seen as international cultural ambassadors has been increasing. International students have become a significant component of world education market. Therefore, it is important to increase the share gained from mobility of students at international level. Providing an adequate education for foreign students depends on solving the problems that are encountered by foreign students and increasing the quality of higher education. This study aims to examine the academic and economical problems of foreign students who are studying at a state university in Western Black Sea, Turkey.

Study Group: The study group consists of 71 foreign students who are currently studying in different faculties at a state university in Turkey. In this state university, there are 284 foreign students in 2017-2018 academic year and these 71 students are selected randomly as a sample from this group. The students that constitute the sample come to Turkey from the African continent (14), European Balkans (5), Eastern Asia Bangladesh (8), Central Asia Caucasus (25) and Middle East (19). 30% of foreign students are female and 70% are male. 65% are in the 21-23 age group. All of them are single. 66% of them graduated from classical regular high school, 17% of them from private high school/college, 9% of them from vocational high school and 4% of them from Turkish high school. From largest proportion to the smallest respectively 35% of them are currently studying at Faculty of Administrative Sciences and Economics, 17% of them at Faculty of Arts and Sciences, 17% of them at Turkish Teaching Application and Research Center, 14% of them at Faculty of Engineering and Architecture, 7% of them at Faculty of Medicine, 4% of them at Faculty of Education and 1% of them at Faculty of Theology.

Method: In this research, screening model is used. In order to collect data, the questionnaire that was also used by Ercan (2012) in his master's thesis which includes 16 demographic and personal characteristics multiple choice questions to determine students' current states, problem screening list that consists of 74 problem items regarding 1) Problems related learning Turkish language, 2) Problems related the courses they have taken and their departments, 3) Problems related relationships and interactions with instructors, 4) Problems related opportunities in the university, 5) Problems related financial situations to understand students' academic education and an open ended question that aims to detect students' expectations is applied face to face. When the data is analysed, descriptive statistics frequency and percentage are used.

Findings: 51% of the students that constitute the study group have been in Turkey for 3 years and over, 20% of them for 2 years, 18% of them for less than 1 year and 11% of them for 1 year. 52% of them were informed via internet, 39% of them via their alumni friends, 25% of them via radio and television to come to Turkey. The reasons why they choose that state university are according to 82% of them to get a decent education, 44% of them cultural proximity, 42% of them to go to a developed country. 24% of the students' fathers are civil servants/officers, 17% of them are artisans/small business owners and 14% of them are unemployed or working in temporary jobs. 77% of the students' mothers are housewives. Majority of the students come from poor families. All of them are receiving scholarship. 66% of the students' monthly expenditures are 651 TL or more.

The most significant problem field for the foreign students is determined, between 73% and 51% of them, as learning Turkish language. The biggest problem within 9 problems that they encounter is for 73% of them not to be able to use Turkish properly and adequately. They encounter 26 problems which change between 68% and 41% regarding the courses that they have taken and their departments. The first three of these problems in terms of largest proportions are with 68% not being able to take notes properly related to courses, with 65% crowded classrooms and failing to present oral reports and with 63% being obliged to work hard but still failing. Foreign students encounter 9 different problems which are changing between 48% and 25% in the field of communication and interaction with instructors. The first three of them are with 48% not being able to communicate with instructors, with 46% instructors being prejudiced to them and with 44% instructors not being caring and not behaving warmly towards them. There are 16 problems that are changing between 51% and 30% which are related to insufficiency of opportunities in the university. The first three of them are such that 51% of them find orientation services insufficient, 49% of them find sport opportunities insufficient and 46% of them find psychological guidance and counselling services insufficient. There are 14 problems which are changing between 54% and 25%

regarding their financial situations. 54% of them find daily life more expensive in Turkey comparing with their homelands. %54 of them face working restrictions for foreign people, 51% of them find scholarship/credit amount inadequate, 49% of them are not able to afford education expenses and 49% of them cannot receive economical support from their family.

Results and Recommendations: Foreign students encounter 74 significant problems changing between 73% and 25% from problem list regarding 1) Learning Turkish language, 2) The courses that they have taken and their departments, 3) Relationships and interactions with instructors, 4) Opportunities in the university and 5) Financial situations. In order to solve these problems, policies and strategies of the university should be determined regarding the problem fields. Orientation for foreign students should be prepared meticulously, activities should be diversified and maintained carefully, psychological guidance and counselling services should become sufficient, Turkish Teaching Application and Research Center's education technology should become adequate in terms of equipment, resource and hardware, number of qualified instructors that are employed in the university should be increased, the problem of crowded classrooms should be handled, university should increase the quality of human resources especially instructors, social activity places should become sufficient and lastly it can be recommended that the university should meet international standards and become universal.

Adaptation Of The Actantial Schema Story Analysis Model To Middle School Turkish Language Courses

Abstract

The development of humans, who come into the world equipped with intellectual and affective aspects, is realized in a systemic way which encompasses both thought and art education. Within this context, written, oral or visual texts are important tools. All texts do have a meaning and a message. In order to access this message an analysis on the text is required. There exist different theories and methods that are used in the analysis of different types of texts. The semiotic analysis theory, which is one of them, provides tools for text analysis with respect to the narrative and discourse dimension. The aim of this study is to determine whether a reading lecture activity based on the theory of semiotic analysis (actantial schema story analysis model), has an effect on students' reading and understanding skills. The study is designed as an experimental one based on pre-test-post-tests conducted with a dependent group. With respect to the employed methodology of the experiment, each student was asked to develop two texts for story analysis, the first one prior to the experiment based on the traditional approach, and the second one following the experiment based on the semiotic method. Then the differences between the achievement grades of each text for all students were analyzed. The study population consists of 18 7th grade students in a school of the Ministry of Education. As a result of the study it is concluded that the text analysis methodology that depends on the semiotic theory of is effective on the reading and analysis skills of students.

Key words: *Semiotic analysis theory, actantial schema story analysis model, reading and analysis skills*

Introduction

In the context of questioning existence, the effort to make sense of life underlies all human actions. Although this is a spontaneous and improvisational action, it can turn into a conscious behavior that will facilitate a human being's adaptation to life, if it is done with an awareness. The goal of education, as a matter of fact, is to educate individuals who are productive and at the same time well-adjusted and happy who will sustain life easily, in the most general sense. At this point, the ability to understand and express oneself correctly has a great importance. Advanced educational systems are committed to improving individuals' sensitivities through approaches and methods that support cognitive and affective development. When meaningful learning does not take place in our educational system, people are directed towards rote-learning based education. Educational approaches adopted in recent years in Turkey highlight understanding through intuition, learning by doing and experience, and constructing knowledge — at least theoretically (Epçazan, 2013). The fact that each student has different learning characteristics makes it mandatory to diversify the methods and techniques to be used and necessitates to take into account individual differences among students. When activities are prepared with this in mind, the learning level of each student can be improved. Multi-faceted and multidimensional activities will be able to encourage students to think creatively and critically as well as to participate in lessons. Thus, the functionality and quality of instruction will be enhanced.

The goal of Turkish language education is to bring students to the targeted level in terms of the development of basic language skills (reading, listening, speaking, and writing). The ability of individuals to reach the desired level in terms of the comprehension and expression skills and to express themselves well is linked to the extent of development of these skills. The four basic skill areas correspond precisely to the communication skills, and therefore, will affect students' social as well as academic achievement if they are improved. So, their whole lives will be influenced positively.

Aiming to improve communication skills, Turkish language education is for helping students gain skills rather than offering them knowledge (Şahbaz, 2013). Not only social success but also academic achievement is improved — which improve overall success in life — if the ways to process information, to put it into practice, and to transfer it into life are highlighted in these courses. In this case, in line with **contemporary methods and techniques**, it becomes important to have new and different activities prepared for environments with multiple stimuli and interactions.

In this process, teachers can make courses more efficient through **literary products and activities** that can attract students' attention (Göçer, 2010, Kuzu 2016). The versatility of the methods and techniques that teachers use in the instructional process, the resources they choose and the activities they prepare in line with the goal of the course improve the efficiency of the courses. As the comprehension and expression skills are improved by means

of new and different practices developed based on results of scientific research and with different perspectives, it will also be possible to increase interest in the course.

As an integrated teaching field, language teaching prioritizes activities focused on multiple skill areas in order to enable students to understand the role that language plays in all aspects and dimensions of communication. Within the scope of language teaching, written, oral, and visual texts are essential tools. For one, texts carry certain meanings and messages, which to discover requires textual analysis. Among the different theories and methods applied in analyzing different types of texts, semiotic analysis theory offers several tools for analysis in the dimension of narrative discourse (Kıran & Kıran, 2011). It can also be said that course activities arranged according to this method will ensure to reach the depths of the literary works and also to offer students a new methodological perspective.

Numerous examples were encountered in terms of semiotic text analysis during the literature review that was carried out during the preparation stage of the study. However, no studies could be found on organizing course activities based on this method and researching the effectiveness of the activities. Therefore, it is thought that this study will contribute to the literature.

In this study, the semiotic analysis method that offers a number of tools to uncover the meaning of texts was chosen as the subject of this study. Our positive observations in a study that we had done previously based on analyses of cartoons and text creation using the semiotic approach had suggested us that this method could also be tested in terms of reading comprehension.

The Study

Conceptual Frame

Reading

A number of researchers think that the process of cognitive awareness is effective on the process of understanding. Readers with cognitive and metacognitive skills identify their objectives and strategies prior to reading and activate their preliminary knowledge. Readers who do not have enough of these skills start reading directly. This is because they cannot determine a strategy at certain stages (Kanmaz, 2012). Readers who start reading directly are unable to know what they are reading and for what reason they are reading it, and they get lost in the text.

Joyce's "ideal reader" reads the entire text first in general terms, and then finds the references outside the text. Being an ideal reader requires the person to master all aspect of the text. Iser's "implicit reader" is the reader who is aware of these hidden expressions — that is, the meanings — that are not expressed in the text. Implicit readers can reach the deeper structure of the text in terms of meaning. Fish's "informed reader" collects information about the references before reading a piece of text, takes advantage of the experiences of different readers before reading a piece of text, and gains a versatile perspective. Riffaterre's "archi (plural) reader" considers that the text takes shape by originating from an essence, and evaluates the text with its references to reach that existing essence. What makes this reader different is his or her comparing the text with other texts while trying to reach the first state of the text. The comparison of a piece of text with other texts in the process of sense-making of the text has raised the concept of "intertextuality." Each text created has a referential relationship with texts preceding it, and the meaning of the text can be accessed by interacting with the preceding texts (as cited in: Özbay and Bahar, 2012). This reader handles the sense-making of the text more extensively than the others. Establishing a relationship with other texts in reaching the meaning of the text creates a foundation for the meaning of the text and strengthens it. Semioticians predicate semiotics upon the relationship between the signifier and the signified when determining a sign (Güner, 2012). Since semiotics is essentially based on signs, the relationship between the signifier and the signified is very important in determining signs. Therefore, it is necessary to set out the definitions of the signifier and the signified first. Güneş (2013) defined the signified as "the meaning or thought that a speaker has in mind and wants to convey when using a specific word or phrase." Rifat (2013:97) defined the signifier as "the part of the sign that can be sensed or perceived directly; it is a lingual image in terms of the verbal part of a natural language."

Semiotics mainly deals with meaning and tries to reach a deeper meaning rather than a superficial meaning. And, signs are keywords that are used to reach such a meaning. Rifat (2013:97) defined the sign as "the name given to the unit arising from the merger of the signifier (content) and signified (narrative) planes and from the mutual assumption of each other in language theories." The deep meaning is reached through the sense-making of the signs, and text analyses are carried out in this way.

Derived from the Ancient Greek *sēmeion*, meaning most broadly "sign" or "mark," semiotics is the science of the structure and functioning of any kind of arrangement of signs and symbols used for communication (Cevizci, 2002; Culler, 2002; Erdoğan & Alemdar, 1990). It is a tool for analyzing and interpreting all signs and symbols used in communication, including those in languages, words, images, traffic signs, sounds, flowers, music, banners, advertising, architecture, fashion, literature, painting, and cartoons, to name some common examples (Parsa & Parsa, 2004; Rifat, 1996). In short, semiotics encompasses all meaningful structures that shape social and individual discourses.

The sign is a twofold entity that consists of a signifier and a signified. Whereas the signifier embodies the physical dimensions—the shape, sound, and even objecthood—of a sign, the signified is the concept that this sign represents (Barthes, 1993; Parsa & Parsa, 2004). In a sense, the signified is the mental image of a concept, whereas the signifier is the word or phrase used to express that concept (Barthes, 1993). Saussure (1976) has conceived semiotics as a general science broader than linguistics that involves analyzing and teaching the characteristics of signs, their roles in society, and the rules that they obey. According to Kiran (1998), semiotics does not approach meaning as an abstract concept, with vague boundaries, but is interested in aspects of meaning determined, restricted, and altogether formed by natural language in different ways. The product of these formations—signs—consist of words, phrases, punctuation, and entire texts. For a practical example, Kiran (1998) has described how France's education system has incorporated semiotics and used it in teaching French: "A group of text analysis teachers and book writers who have been following the lectures and works of A. J. Greimas since 1966, are able to incorporate the semiotics into the French education system as a teaching and analysis method, almost without using the metalanguage of the theory, by minimizing the formulas and putting great emphasis on visualization." By using all of the above as a springboard, this study aimed to gauge the effectiveness of incorporating semiotics into language-teaching contexts.

When text analyses are carried out in Turkish language courses, the actions of heroes and reasons for their actions do not take too much emphasis. Therefore, reaching the deep meaning and establish a foundation for the meaning remain incomplete. Greimas's Actantial Model has revealed the actions of heroes along with their reasons and discussed the status and direction of communication between them.

"The individual players of the discourse level are identified by their actions in the narrative syntax step of the productive process and are signified with the term actants" (Kuzu, 2004:39). In the theory of Greimas, actants — that is, the ones performing the action — are more important than the objects. And, this Actantial Model, created by Greimas, reveals the relations between actants.

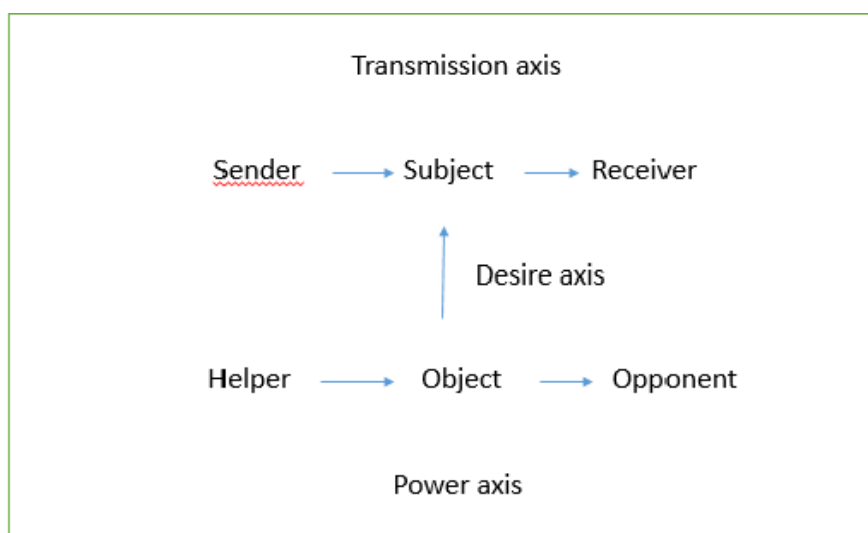

Figure 1: Greimas's Actantial Model (Kiran, 2011, p. 27)

After simplifying the actions of people into six actants, Greimas also matches them in terms of their functions (Kiran and Kiran, 2003:216):

1. The axis of desire: subject and object opposition.
2. The axis of transmission: sender and receiver opposition.
3. The axis of power: helper and opponent opposition.

The schema can be used for all characters of a story. In this case, when we change the subject, all other elements will change.

The axis of transmission between the sender and the receiver is accomplished through the object. The sender activates the subject. An action takes place after that activation, and the receiver benefits from this action.

There is an axis of desire that ensures the relationship between the subject and the object. The relationship that the subject establishes with the object, which the subject wants to reach and desires, is located on this axis. The subject is after the object that it wants to reach.

There is an axis of power between the helper and the opponent. This axis of power is also ensured via the subject. This is how they set up the helper and opponent balances of power that focus on the subject. While the helper strengthens the subject, the opponent tries to destroy this power (Kiran and Kiran, 2011).

Aim of The Study

The aim of this research study is to identify whether doing text analyses based on the semiotic method for use during the reading activities of Turkish language courses is effective on the ability of students to understand a piece of text. Formulated according to the aim of the study, the primary research question asks whether a reading activity based on Greimas' actantial schema story analysis model is more effective than an activity with the same content based on more a traditional method.

The sub-research questions are thus:

- 1) Are there any significant differences between the scores taken by the students from the pre-test (the evaluation questions of the story called "A Poplar and People") and the scores taken by the students from the post-test (the evaluation questions of the story called "The Last Birds")?
- 2) Are there any significant differences between the scores taken by the students from the pre-test (the evaluation questions of the story called "A Poplar and People") and the scores taken by the students from the post-test (the evaluation questions of the story called "The Last Birds") according to gender?
- 3) Is there a significant relationship between the students' academic achievement scores and the difference between the scores taken by the students from the pre-test (the evaluation questions of the story called A Poplar and People) and the scores taken by the students from the post-test (the evaluation questions of the story called The Last Birds)?

Method

The study followed a single group pre- and post-test design (Cohen, Manion, & Morrison, 2005) to investigate whether any meaningful difference emerges in measurements of a randomly selected experiment group, before and after the application of the independent variable. If post-test scores are greater than pre-test scores, then the application of the independent variable will have been proven successful (Büyüköztürk, 2015; Karasar, 2011).

A symbolic view of the model is given in Table 1. G represents the research group, O1 the pre-measurement obtained from the group, X the experimental operation, and O2 the final measurement obtained from the group (Büyüköztürk, 2015).

Table 1:

Symbolic View of the Model

Group	Pre-test	Operation	Post-test
G	O ₁	X	O ₂

To perform the study in a practical, cost-effective way, participants were recruited from a secondary school under the purview of the Turkish Ministry of Education located in Ankara. Since the school maintains only one 7th-grade class, sampling was impossible, and as a result, the entire population (N = 18, 8 females and 10 boys) was recruited. The difference between each student's achievement scores — measuring the level of understanding of the story which was analyzed using the traditional method before the experiment and using the semiotic method after the experiment — was examined. Measurements were taken by three subject matter experts over the pre-test and post-test scores of the same group.

In order to come up with the first finding of the study about the overall success in understanding the text, a paired samples t-test was carried out. It was examined whether there was a significant difference between the scores the students obtained from the pre-test and those from the post-test. A two-way repeated measures ANOVA was carried out to determine the relationship with gender, which was the second finding, and it was explored whether there was a significant difference between the scores the students received from the pre-test and those from the post-test according to gender. For the third finding on the relationship with the academic achievement scores, a Pearson product-moment correlation coefficient analysis was carried out.

The stories used during the implementation process of the study were chosen from among the stories in the textbook of the Ministry of National Education (MNE) that were close to each other in terms of subject. In this process, first, the evaluation questions (10 understanding-comprehension questions) of the story titled "A Poplar and People," prepared by the researcher by taking expert opinions were administered as a pre-test. Then, the story analysis begun. The analysis was carried out through a story map, which is commonly used in the traditional method.

In the second step of the implementation, a set of course content related to the semiotic analysis method and Greimas's Actantial Model was implemented. While this instruction was carried out, the students' learning levels were taken into account, and Greimas's Actantial Model was simplified in a way that the students could understand. Next, the evaluation questions of the story titled "The Last Birds" (10 understanding-comprehension questions) were administered.

In order to come up with the first finding of the study about the overall success, a paired samples t-test was carried out, and it was checked whether there was a significant difference between the scores the students obtained from

the pre-test and those from the post-test. A two-way repeated measures ANOVA was carried out to determine the relationship with gender, which was the second finding, and it was explored whether there was a significant difference between the scores the students received from the pre-test and those from the post-test according to gender. For the third finding on the relationship with the academic achievement scores, a Pearson product-moment correlation coefficient analysis was carried out.

Findings

When the stories were examined in line with Greimas's Schema, a table like the following has emerged.

The analysis of the story titled "A Poplar and People" according to Greimas's Actantial Model:

Subject: The poplar tree; Sender: The sense of existence; Object: The desire to live; Receiver: The poplar tree and the old man; Helper: The old person, the villagers, the flowers, the birds (hoopoe); Opponent: The fabricator, the resident engineers, the architects.

Subject: The old person; Sender: The love of the earth; Object: Under the poplar tree at the seaside; Receiver: The old person; Helper: None; Opponent: Death.

Subject: The fabricator; Sender: Pecuniary advantages; Object: The forest area at the seaside; Receiver: The fabricator; Helper: The resident engineers, the architects; Opponent: None

Subject: The hoopoe; Sender: The sense of vengeance; Object: The prevention of the opening of the factory; Receiver: The hoopoe and the other creatures; Helper: The other birds; Opponent: None.

Subject: The author; Sender: The environmental sensitivity; Object: The desire to protect the nature; Receiver: The author and the nature; Helper: The villagers, the birds; Opponent: The fabricator, the resident engineers, the architects.

The analysis of the story titled "The Last Birds" according to Greimas's Actantial Model:

Subject: The birds; Sender: The migration period; Object: Reaching the living space; Receiver: Constantine, the children, the adults; Helper: The fall season; Opponent: Master Constantine, the children, the adults, the captured screeching birds, the birdlimes.

Subject: The adults; Sender: The autumn; Object: The birds; Receiver: The adults; Constantine, the children; Helper: The children, the birdlimes, the sticks, the captured screeching birds, Master Constantine; Opponent: None

The second part of the story:

Subject: The poor children; Sender: Engineer Mr. Ahmet; Object: Pecuniary advantages; Receiver: The poor children; Engineer Mr. Ahmet, the Netherlander; Helper: Engineer Mr. Ahmet, the Municipal Directive, the Netherlander; Opponent: The police officers

Subject: Engineer Mr. Ahmet; Sender: The Netherlander; Object: Pecuniary advantages; Receiver: Engineer Mr. Ahmet, the Netherlander; Helper: The Netherlander, the children, the Municipal Directive; Opponent: The police officers.

Subject: The Netherlander leather merchant; Sender: The landscape gardening; Object: The grass; Receiver: The Netherlander leather merchant; Helper: Engineer Mr. Ahmet, the children; Opponent: None.

Subject: The author; Sender: The environmental sensitivity; Object: The desire to protect the nature; Receiver: The author and the nature; Helper: None; Opponent: Master Constantine, the adults, the children, the Netherlander, Engineer Mr. Ahmet, the poor children, the Municipal Directive.

Statistical findings on research questions are as follows:

Table 1. Related Samples t test results for the Comparison of Post-test and Pre-test

Variable	N	\bar{X}	S	SD	t	p
Pre-test	17	76.71	21.49	16	5.16	0.001
Post-test	17	88.51	14.91			

In order to determine whether there was a significant difference between the scores the students obtained from the pre-test (the evaluation questions of the story titled "A Poplar and People") and those from the post-test (the evaluation questions of the story titled "The Last Birds"), a paired samples t-test was carried out. According to the results of the paired samples t-test, it was seen that there was a significant difference between the pre-test scores and the post-test scores ($t=5.16$, $p<.05$).

Table 2. Comparison of Pre- and Post-Test Anova Analysis Results by Gender

Variable	N	\bar{X}	S	Sd	F (Wilk'Lambda)	p
Girl	7	6.14	9.62	14	2.59	0.110
Boy	10	15.77	11.79			

A two-way repeated measures ANOVA was carried out to determine whether there was a significant difference between the scores the students received from the pre-test and those from the post-test according to gender, which was the second research question of the study. According to the results of the ANOVA, it was seen that there was no significant difference between the pre-test scores and the post-test scores according to gender ($F(14,.05)=2.59$, $p>.05$).

Table 3. Analysis of Pearson Moment Correlation Coefficient

Variable	R	P
Difference Score-Year end success score	-0.517	0.017

The Pearson product-moment correlation coefficient was calculated to determine whether there was a significant correlation between the students' pre-test and post-test scores and their academic achievement scores. According to the results of the test, the difference between the students' pre-test and post-test scores and the academic achievement scores were found to have a significant, moderate and negative correlation ($r=-0.517$, $p<.05$).

Conclusions

The aim of the Turkish language education program is to develop the basic language skills of students. It is important to use different methods and techniques to develop these basic language skills.

The story analysis using the traditional method and the story analysis using the semiotic method were compared through evaluation questions that were prepared separately in this study, which was based on the semiotic analysis method administered to 7th-grade middle school students.

It was seen that there was a significant difference between the students' post-test scores and their pre-test scores. The fact that the mean post-test score was greater indicated the effectiveness of the semiotic method. This result can be explained by a positive reflection of the ability of the students to think versatily and have different perspectives on their interpretation skills through the semiotic analysis method.

The semiotic method can be said to be more effective in terms of increasing the scores received from the test by the students whose academic achievement was low. In terms of the fact that the students with low academic achievement scored better in the post-test, it can be said that different methods of analysis had a positive impact on the students' learning.

No significant difference could be found according to gender, so there is no comment on that.

When the implementation test results were evaluated, it was found that the students used the power of interpretation in the post-test implementation. Based on this, it was seen that the method that was implemented was more effective in terms of reading comprehension and interpretation.

With the help of the semiotic analysis method, the students were able to think versatily. Thus, it was seen that the students responded better to deeper structural questions about the understanding of the text, in other words they were able to reach the deeper meaning structure of the text. The study was observed to be useful in this respect.

In this study, a linguistic method was addressed in terms of reading comprehension — that is, text analysis — that constitutes an important part of Turkish language education. Through two selected stories, the semiotic narrative analysis method and Greimas's Actantial Model were carried over to the Turkish language course reading activities. Turkish language courses target the development of language and communication skills. When teaching reading, writing, speaking, listening education and grammar teaching, methods and techniques should be chosen to improve versatility, and cognitive and affective skills. It is also important that materials to be chosen and activities to be prepared are compatible with these methods and techniques. Students should be supervised to be able to consider texts in a questioning and critical manner. In accordance with these general principles, the following may be recommended specifically based on this study:

In Turkish courses, different methods should be used in reading activities, which take into account data from linguistics and scientific studies, and the activities to be prepared should be prepared in this direction.

In order to be able to teach how to read meaningfully and profoundly, the semiotic analysis method should be offered in reading activities.

The Actantial Model should be taught to students as a story analysis method, which can be followed by writing education conducted over the self-analyses and sense-making activities carried out by students.

Based on the experience gained from the implementation process, when using this method, the analysis of a piece of text should be started with verbal expressions by directly including students, and the theoretical part should be given the latest.

When analyzing a story using the semiotic method, students should be given opportunities to reach the essence of the story by using the discovery method based on the student-centered, learning-by-doing and learning-by-experience approaches. To that end, speaking training should also be utilized.

Admission Procedure At University Of Economics – Probability Aspects

Jindrich KLUFA

Prague University of Economics Czech Republic
klufa@vse.cz

Abstract

Entrance exams at Prague University of Economics are analysed in present paper. The admission procedure at the university consists of English and mathematical tests. Two different tests in mathematics are used at Prague University of Economics in present time. We shall compare these tests (the distributions of the number of points in test in mathematics) from probability point of view. Entrance tests in mathematics at the university are multiple choice question tests (the test 1 has fifteen questions, the test 2 has twelve questions, each question in test 1 and each question in the test 2 has five answers). The questions in test 1 and test 2 in mathematics are independent. Therefore probability model of binomial distribution was used for comparison of the distributions of the number of points in test in mathematics. The results of the paper can be used to improve the admission process at Prague University of Economics.

Keywords: *Entrance examination, math tests, probability distribution.*

Introduction

The math tests used in entrance examination at Prague University of Economics are multiple choice question tests. These tests are prepared by the Department of Mathematics of the Faculty of Informatics and Statistics. Statistical analysis of the math tests we can find in Klůfa (2016). The multiple choice question tests are suitable for entrance examinations at the university. These tests are objective, results can be evaluated easily for large number of students. On the other hand, a student can obtain certain number of points in the test purely by guessing the right answers. This problem is addressed e.g. in Zhao (2005), Premadasa (1993), Zhao (2006) - this article studies the probability of obtaining a certain score by pure guesswork and introduces a conversion scheme which converts raw test scores into standard percentage marks (the probabilistic analysis shows that the optimum number of choices of answers is four). In Kaspříková and Klůfa (2012) it was shown that risk of success of students with lower performance levels in entrance examination at Prague University of Economics is negligible. The admission process is analysed e.g. in following education research. Relation between results of the entrance exam test and university study results at Charles University (Faculty of Mathematics and Physics) is studied in Zvára and Anděl (2001). The same problem at Czech University of Life Sciences is studied in Poláčková and Svatošová (2013). The comparison of the ways of acceptance students at Prague University of Economics from statistical point of view is in Klůfa (2015b). Analysis of the entrance exams at Czech University of Life Sciences we can find in Kučera, Svatošová and Pelikán (2015) – relation between results of the entrance exam test and university study results. Analysis of the entrance tests at Comenius University in Bratislava we can find in Kohanová (2012). Similar problems are solved in Kubanová and Linda (2012), Hrubý (2016), Bartoška, Brožová, Šubrt and Rydval (2013). Dependence of the results of entrance examinations on test variants is analysed in Klůfa (2015a). In this paper we shall study the entrance examination in mathematics from probability point of view.

The Study

Two different tests in mathematics at Prague University of Economics are applied in admission process in present time:

Test 1. The test has 10 questions for 5 points and 5 questions for 10 points (100 points total). Questions are independent. Each question has 5 answers (one answer is correct), wrong answer is not penalized.

Test 2. The test has 8 questions for 6 points and 4 questions for 13 points (100 points total). Questions are independent. Each question has 5 answers (one answer is correct), wrong answer is not penalized.

The Test 1 is applied in admission process at the Faculty of Informatics and Statistics, at the Faculty of Business Administration and at the Faculty of Finance and Accounting. The Test 2 is applied in admission process at the Faculty of International Relations. We shall compare these tests (the distributions of the number of points in test in mathematics) from probability point of view.

The tests in mathematics correspond to the following general model: Let us consider n independent random trials having two possible outcomes, say “success” (right answer) and “failure” (wrong answer) with probabilities p and $(1-p)$ respectively. The probability of correctly answered question p (under assumption that each of m answers in particular question has the same probability and just one answer is correct) is $p=1/m$.

Let us denote X as number of successes (right answers) that occur in n independent random trials. X is discrete random variable distributed according to the binomial law with parameters n and p . Probability that number of successes is k ($k=0, 1, 2, \dots, n$) is (see e.g. Rao (1973))

(1)

$$P(X = k) = \binom{n}{k} p^k (1 - p)^{n-k}$$

The expected value and the standard deviation of random variable X distributed according the binomial law with parameters n and p is

$$E(X) = np, \quad \sigma(X) = \sqrt{D(X)} = \sqrt{np(1-p)} \quad (2)$$

where $D(X)$ is dispersion of random variable X . The mode of random variable X is the most probable value \hat{x} of random variable X . The distribution function F of random variable X is a real function of one real variable defined for x in interval $(-\infty, \infty)$ by formula

$$F(x) = P(X \leq x)$$

i.e. $F(x)$ is a probability that number of correct answers is less or equal to x . In our case, the distribution function F of random variable X distributed according to the binomial law with parameters n and p is

$$F(x) = 0, x < 0, \quad F(x) = \sum_{k=0}^{[x]} \binom{n}{k} p^k (1-p)^{n-k}, x \geq 0 \quad (3)$$

where $[x]$ is integer part of x .

Findings

Distribution of the number of points in the test 1 in mathematics

Now we shall study the distribution of the number of points in the test 1 (the test has 10 questions for 5 points and 5 questions for 10 points) in mathematics. Discrete random variable

Y_1 = number of points in the test 1 in mathematics

can take values

$$0, 5, 10, 15, 20, 25, \dots, 95, 100$$

For determination of distribution random variable Y_1 we must find the probability $P(Y_1 = k)$ for $k=0, 5, 10, 15, 20, 25, \dots, 95, 100$. For example we shall find probability that number of points in test 1 in mathematics is 25. Let us denote

X_1 = number of right answers in the first 10 issues

X_2 = number of right answers in following 5 issues

It holds

$$\begin{aligned} P(Y_1=25) &= P[(X_1=1 \cap X_2=2) \cup (X_1=3 \cap X_2=1) \cup (X_1=5 \cap X_2=0)] = \\ &= P[(X_1=1 \cap X_2=2)] + P[(X_1=3 \cap X_2=1)] + P[(X_1=5 \cap X_2=0)] \end{aligned}$$

Random variables X_1, X_2 are independent, therefore we have

$$P(Y_1=25) = P(X_1=1) P(X_2=2) + P(X_1=3) P(X_2=1) + P(X_1=5) P(X_2=0)$$

Random variable X_1 has binomial distribution with parameters $n=10$ and $p=0,2$. Random variable X_2 has binomial distribution with parameters $n=5$ and $p=0,2$. According to (1) we obtain

$$\begin{aligned} P(Y_1 = 25) &= \binom{10}{1} 0,2^1 0,8^9 \binom{5}{2} 0,2^2 0,8^3 + \binom{10}{3} 0,2^3 0,8^7 \binom{5}{1} 0,2^1 0,8^4 + \binom{10}{5} 0,2^5 0,8^5 \binom{5}{0} 0,8^5 \\ &= 0,146098 \end{aligned}$$

Analogously, we can calculate the probability $P(Y_1=k)$ for other $k=0, 5, 10, 15, \dots, 95, 100$ (see Table 1 and Figure 1). For this calculation we used software Mathematica (Statistics 'DiscreteDistributions') – see Wolfram (1991).

Table 1: Distribution of number of points in the test 1 in mathematics

Points in test	Probability	Points in test	Probability
0	0.035184	55	0.002890
5	0.087961	60	0.000957
10	0.142937	65	0.000275
15	0.175922	70	0.000067
20	0.174547	75	0.000014
25	0.146098	80	0.000002
30	0.105227	85	3×10^{-7}
35	0.066057	90	2×10^{-8}
40	0.036467	95	1×10^{-9}

45	0.017761	100	3×10^{-11}
50	0.007634	Sum	1

Figure 1: Distribution of number of points in the test 1 in mathematics (polygon)

Now we shall find the distribution function F_I of random variable Y_I (number of points in the test 1 in mathematics). For example we shall find the probability that number of points in test 1 in mathematics is less or equal 30, i.e. the function value $F_I(30)$. We have

$$F_I(30) = P(Y_I \leq 30) = P[(Y_I=0) \cup (Y_I=5) \cup (Y_I=10) \cup (Y_I=15) \cup (Y_I=20) \cup (Y_I=25) \cup (Y_I=30)]$$

Random events $(Y_I=0)$, $(Y_I=5)$, $(Y_I=10)$, $(Y_I=15)$, $(Y_I=20)$, $(Y_I=25)$, $(Y_I=30)$ are disjoint (i.e. these random events cannot occur simultaneously), therefore

$$P(Y_I \leq 30) = P(Y_I=0) + P(Y_I=5) + P(Y_I=10) + P(Y_I=15) + P(Y_I=20) + P(Y_I=25) + P(Y_I=30)$$

Finally from Table 1 we obtain

$$F_I(30) = P(Y_I \leq 30) = 0.867876,$$

i.e. under assumption of random choice of answers approximately 86.8% of students get the test score less or equal 30. Similarly we can find other values of distribution function F_I – see Table 2.

Table 2: Distribution function of number of points in test 1 in mathematics

Interval of values y	$F_I(y)$	Interval of values y	$F_I(y)$
$(-\infty, 0)$	0	$[50, 55)$	0.995795
$[0, 5)$	0.035184	$[55, 60)$	0.998685
$[5, 10)$	0.123145	$[60, 65)$	0.999642
$[10, 15)$	0.266082	$[65, 70)$	0.999917
$[15, 20)$	0.442004	$[70, 75)$	0.999984
$[20, 25)$	0.616551	$[75, 80)$	0.999998
$[25, 30)$	0.762649	$[80, 85)$	1.000000
$[30, 35)$	0.867876	$[85, 90)$	1.000000
$[35, 40)$	0.933933	$[90, 95)$	1.000000
$[40, 45)$	0.970400	$[95, 100)$	1.000000
$[45, 50)$	0.988161	$[100, \infty)$	1

Figure 2: Distribution function of number of points in the test 1 in mathematics

Finally we shall find a basic descriptive statistics of the distribution of the number of points in the test 1 in mathematics. According to (2) we obtain the expected number of points in test 1 in mathematics $E(Y_1)$. Since $Y_1 = 5X_1 + 10X_2$ we have

$$E(Y_1) = E(5X_1 + 10X_2) = 5E(X_1) + 10E(X_2)$$

According to (2) we obtain ($E(X_1) = 10 \cdot 0.2 = 2$, $E(X_2) = 5 \cdot 0.2 = 1$)

$$E(Y_1) = 5 \cdot 2 + 10 \cdot 1 = 20.$$

Expected number of points in test 1 in mathematics is 20. The mode is the most probable number of points in test 1 in mathematics. From Table 1 is

$$\hat{y}_1 = 15.$$

Random variables X_1, X_2 are independent, therefore dispersion of number of points in test 1 in mathematics $D(Y_1)$ is (see e.g. Rao (1973))

$$D(Y_1) = D(5X_1 + 10X_2) = 5^2 D(X_1) + 10^2 D(X_2)$$

Since (see formula (2)),

$$D(X_1) = 10 \cdot 0.2 \cdot 0.8 = 1.6, \quad D(X_2) = 5 \cdot 0.2 \cdot 0.8 = 0.8,$$

dispersion of number of points in test 1 in mathematics is

$$D(Y_1) = 25 \cdot 1.6 + 100 \cdot 0.8 = 120$$

and the standard deviation of number of points in test 1 in mathematics is

$$\sigma_1 = 10.954.$$

Distribution of the number of points in the test 2 in mathematics

Now we shall study the distribution of the number of points in the test 2 (the test has 8 questions for 6 points and 4 questions for 13 points) in mathematics. Discrete random variable

Y_2 = number of points in the test 2 in mathematics

can take values (see Table 2)

0, 6, 12, 13, 18, 19, 24, 25, 26, 30, 31, 32, 36, 37, 38, 39, 42, 43, 44, 45, ..., 88, 94, 100

For determination of distribution random variable Y_2 we must find the probability $P(Y_2 = k)$ for $k=0, 6, 12, 13, 18, 19, \dots, 94, 100$. For example we shall find probability that number of points in test 2 in mathematics is 25. Let us denote

T_1 = number of right answers in the first 8 issues

T_2 = number of right answers in following 4 issues

Random variables T_1, T_2 are independent, therefore

$$P(Y_2=25) = P[(T_1=2) \cap (T_2=1)] = P(T_1=2) P(T_2=1)$$

Random variable T_1 has binomial distribution with parameters $n=8$ and $p=0.2$. Random variable T_2 has binomial distribution with parameters $n=4$ and $p=0.2$. According to (1) we obtain

$$P(Y_2 = 25) = \binom{8}{2} 0.2^2 0.8^6 \binom{4}{1} 0.2^1 0.8^3 = 0.120259.$$

Analogously, we can calculate the probability $P(Y_2 = k)$ for other $k=0, 6, 12, 13, 18, \dots, 94, 100$ (see Table 2 and Figure 2). For this calculation we used software Mathematica (Statistics 'DiscreteDistributions') – see Wolfram (1991).

Table 3: Distribution of number of points in the test 2 in mathematics

Points in test	Probability	Points in test	Probability

50	0.007046	Sum	1

Figure 3: Distribution of number of points in the test 2 in mathematics (polygon)

Now we shall find the distribution function F_2 of random variable Y_2 (number of points in the test 2 in mathematics). For example we shall find the probability that number of points in test 2 in mathematics is less or equal 30, i.e. the function value $F_2(30)$. We have

$$F_2(30) = P(Y_2 \leq 30) =$$

$$= P[(Y_2=0) \cup (Y_2=6) \cup (Y_2=12) \cup (Y_2=13) \cup (Y_2=18) \cup (Y_2=19) \cup (Y_2=24) \cup (Y_2=25) \cup (Y_2=26) \cup (Y_2=30)]$$

Random events $(Y_2=0)$, $(Y_2=6)$, $(Y_2=12)$, $(Y_2=13)$, $(Y_2=18)$, $(Y_2=19)$, $(Y_2=24)$, $(Y_2=25)$, $(Y_2=26)$, $(Y_2=30)$ are disjoint (i.e. these random events cannot occur simultaneously), therefore $F_2(30)$ is

$P(Y_2=0)+P(Y_2=6)+P(Y_2=12)+P(Y_2=13)+P(Y_2=18)+P(Y_2=19)+P(Y_2=24)+P(Y_2=25)+P(Y_2=26)+P(Y_2=30)$
Finally from Table 3 we obtain

$$F_2(30)=P(Y_2 \leq 30) = 0.761282,$$

i.e. under assumption of random choice of answers approximately 76.1% of students get the test score less or equal 30. Similarly we can find other values of distribution function F_2 – see Table 4.

Table 4: Distribution function of number of points in the test 2 in mathematics

Interval of values y	$F_2(y)$	Interval of values y	$F_2(y)$
$(-\infty, 0)$	0	$[50, 51)$	0.984052
$[0, 6)$	0.068719	$[51, 52)$	0.991568

$[26, 30)$	0.757524	$[63, 64)$	0.998925
$[30, 31)$	0.761282	$[64, 68)$	0.999395
$[31, 32)$	0.821412	$[68, 69)$	0.999408
$[32, 36)$	0.872952	$[69, 70)$	0.999643
$[36, 37)$	0.873422	$[70, 74)$	0.999878
$[37, 38)$	0.892212	$[74, 75)$	0.999878
$[38, 39)$	0.937309	$[75, 76)$	0.999907
$[39, 42)$	0.941604	$[76, 81)$	0.999980
$[42, 43)$	0.941638	$[81, 82)$	0.999982
$[43, 44)$	0.945369	$[82, 87)$	0.999997
$[44, 45)$	0.967945	$[87, 88)$	0.999997
$[45, 48)$	0.976535	$[88, 94)$	0.999999
$[48, 49)$	0.976536	$[94, 100)$	1.000000
$[49, 50)$	0.977006	$[100, \infty)$	1

Finally we shall find a basic descriptive statistics of the distribution of the number of points in the test 2 in mathematics. According to (2) we obtain the expected number of points in test 2 in mathematics $E(Y_2)$. Since $Y_2 = 6 T_1 + 13 T_2$ we have

$$E(Y_2) = E(6 T_1 + 13 T_2) = 6 E(T_1) + 13 E(T_2)$$

According to (2) we obtain $(E(T_1) = 8 \cdot 0.2 = 1.6, E(T_2) = 4 \cdot 0.2 = 0.8)$

$$E(Y_2) = 6 \cdot 1.6 + 13 \cdot 0.8 = 20.$$

Random variables T_1 and T_2 are independent, therefore dispersion of number of points in test 2 in mathematics $D(Y_2)$ is (see e.g. Feller (1970))

$$D(Y_2) = D(6 T_1 + 13 T_2) = 6^2 D(T_1) + 13^2 D(T_2)$$

Since (see formula (2)),

$$D(T_1) = 8 \cdot 0.2 \cdot 0.8 = 1.28, \quad D(T_2) = 4 \cdot 0.2 \cdot 0.8 = 0.64,$$

dispersion of number of points in test 2 in mathematics is

$$D(Y_2) = 36 \cdot 1.28 + 169 \cdot 0.64 = 154.24$$

and the standard deviation of number of points in test 2 in mathematics is

$$\sigma_2 = 12.419.$$

Comparison of the Test 1 and the Test 2 in mathematics is in Table 5. For example, test score more than 30 points in Test 1 has 16.3% of students, since (see Tab. 2)

$$P(Y_1 > 30) = 1 - F_1(30) = 1 - 0.867876 = 0.132124$$

Table 5: Comparison of the tests in mathematics (random choice of answers)

Entrance examination in mathematics	Test 1	Test 2
Expected number of points in test	20	20
Standard deviation	10.954	12.419
Test score more than 10 points	73.4% of students	79.4% of students
Test score more than 20 points	38.3% of students	40.7% of students
Test score more than 30 points	13.2% of students	23.9% of students
Test score more than 40 points	2.96% of students	5.84% of students
Test score more than 50 points	0.42% of students	1.59% of students

Conclusion

The number of examples in the test in mathematics was reduced from 15 to 12 to shorten the test run time. The Distribution 1 (the distribution of number of points in the Test 1 in mathematics) and the Distribution 2 (the distribution of number of points in the Test 2 in mathematics) have the same expected value (see Table 5). Standard deviation of the Distribution 2 is greater than standard deviation of the Distribution 1. Due to greater variability of the Distribution 2 e.g. the probability that number of points in Test 2 in mathematics exceeds 40 is approximately two times greater (see Table 5) than the probability that number of points in Test 1 in mathematics exceeds 40 (both probabilities are near to 0).

From the results of this paper it seems that the Test 1 in mathematics is better than the Test 2 in mathematics from probability point of view. However the differences between these tests are not significant. A shorter math test can also be used for admission process at Prague University of Economics.

Acknowledgment

The paper was processed with contribution of long term support of scientific work on Faculty of Informatics and Statistics, University of Economics, Prague (IP 400040).

Abstract

Nowadays, there are valuable modern buildings in Thailand which are gradually reduced by economic and social change, especially in the period of fifteen years ago. These buildings are not only an indicator of architecture growth but they are also being as lifelong learning resources for people. Thus database on the buildings should be developed to be learning resources for architecture conservation as well as lifelong learning encouragement for people. The investigation of adoption on lifelong learning and database development process for conserving eco-architecture modern buildings would be necessary due to database is a collection of information that is organized so that it can be easily accessed, managed and updated. The ease of information access could support the process of lifelong learning which fulfill learners' needs. Thus the adoption on lifelong learning concept and the database development process were studied under the model of database development (Watt, 2018) which consists of six steps; (1) establishing requirements (2) analysis (3) design (4) implementation (5) testing and (6) maintenance as well as the information of the buildings from DoCoMoMo Thailand. The document content analysis was used to integrate between characteristics of lifelong learning and the database development steps that included the buildings information to be the model or prototype of database development process which encourages lifelong learners as well as conserve the eco-architecture modern buildings in Thailand.

Introduction

Modern architecture began in the early 20th century, about 1920-1960. It was based on a simple concept of design with Functionalism in creativity, led by the French architect, Le Corbusier, Ludwig Mies van der Rohe and Walter Gropius, 2 Germans. Their concept was that it should express the beauty of the building itself without decoration and beauty as a universal model. This concept has been recognized around the world since World War

II. Nowadays, many countries around the world aim to preserve the buildings of modern architecture that assimilates the culture of the 20th century, such as modern architecture in the European countries, the United States, and Mexico to develop a sustainable learning resource the International Non-Profit Conservation Organization, established in 1988, is known as DoCoMoMo International (Documentation and Conservation of Buildings, Sites, and Neighborhoods of the Modern Movement). In addition, to preserving architectural buildings, it also preserves building documents, architectural models, architectural sites, and community neighborhoods with community, society and national values. This organization works with more than 70 countries around the world. Thailand is one of the member countries, joining in 2014 under the name of DoCoMoMo Thailand.

(source: www.docomomo.com, www.docomomothailand.org)

The Study

Most Modern architecture buildings in Thailand which were built in 1935-1985 respond to public use and represent the advancement of the architecture, structural engineering and technology of materials, such as concrete, steel, and glass, various roofing materials and so on. Even though architects and engineers who created this work have passed away, but the building works which are the foundation of the modern architecture in the present day, remain in good condition. There are many people interested in it, including students, public people, architects and engineers, construction workers both Thai and foreign, as the statistic was shown in the web page of the Association of Siamese Architects. Travel rates to visit Thai architecture fairs, the world heritage, and other tourist attractions which generate income for all countries, generate revenue for Thailand, in 2015 2.23 trillion baht. There are 29.88 million tourists in Thailand and abroad, growing by 20.44 %. (source: Thansettakij, August 11, 2016) There should be research to explore the development of more than 100 architecture sites to be the focus of tourism in the region of Thailand in the concept of Adaptive and reuse or the development of the building to suit the current use, such as the renovation of warehouse buildings to be a souvenir market, just like

modern buildings in Yokohama, Japan. It will be a sustainable landmark, which leads to the building reservation using its revenue to maintain the buildings and also continue to be a valuable heritage of national importance.

Objectives of the research: Development of a 100-building modern architecture information database, to promote a life-long learning source in Thailand:

1. To survey the valuable buildings based on the criteria of modern architecture and to make a name list of 100 modern buildings by studying their remarkable features and the importance of their history, society, economy, education and others which are valuable to the buildings in Thailand;

2. To create 100-building modern architecture information database in Thailand, in the form of digital information and photos to promote a life-long learning source in Thailand;
3. To create the information to promote the benefit of outcomes in the world of borderless media. This research will be in line with the modern international building preservation concept, with the International DoCoMoMo organization enhancing the stability and publicity of the international values of Thai architecture to be more well-known. The 100 buildings are located in the major provinces of the four regions, such as Bangkok and its vicinity, Chiangmai, Nakhon Ratchasim, Lopburi, Chonburi, and Songkhla, etc.

Findings

Example: The database submission guidelines are based on the DoCoMoMo international form. The Student Union Building named "SALA PHRAK IEW", constructed in 1966 is considered to be the symbolic building of Chulalongkorn University. It has served as clubhouse for students, in aiming to promote unity and harmony between students and faculty member since then. The building, achieving the international style, demonstrates the technological advancement of reinforced concrete with wide flexible space. Columns span 25 meters with 9 meters extended, 17.50 meters height. The remarkable entrance with glass windows and sunshade induce ventilation and delighting. The building was renovated in the year 1981 and 2014 with the guidelines for adaptive reuse. (Ratanamart, S. 2018.)

Table 1: The database submission guidelines are based on the DoCoMoMo international form.

Table 1: The database submission guidelines are based on the DocuMovie International form.

		History of building	Constructed in B.E.2508(A.D.1965) and completed in B.E. 2509(A.D.1966), the building has been opened for utilization on 26 th March, B.E.2510(A.D.1967) which coincide with the first 50 th anniversary celebration of the establishment of Chulalongkorn University. The building serve as venue for various student clubs, or student Union.	
		Summary of important changes after completion	In the year B.E.2524, the problem with foundation consolidation has brought about a major restoration, where the basement floor that was initially used for car parking has become the area for bookstore. Student cooperative and postal office. Later a new 4-storey building has been constructed to overlap the same foundation, which then served as the faculty clubs and senate, and the roof has been changed to concrete tile. Antique Orange color.	
Name	Building character	Building character	For the building characteristics, the front exhibits a 3-storey building. The second storey features a large hall, and the third storey a mezzanine. The central area is open, and allows a view of the lower floor. The utility space is 5,776.99 sq.m. The structure features reinforced concrete, with longest column span of 25 meters, and the building floor extends on the left and right side, measuring at 9.00 meters from the column center to the long end on each side. The height from the second storey floor to the ridge measures up to 17.50 meters.

Introduction: Chulalongkorn University is the first university in Thailand, and has been founded by "The Royal Pages School", where King Chulalongkorn or Phra Chunla Chom Klao Chao Yu Hua (King Rama V) has graciously approved the establishment of the university in the year 1899, and the "Phra Kiew" has been installed as the school symbol as placed in the Grand Palace. Phra Kiew, the Thai equivalent of the coronet, is a headgear traditionally worn by young princes and princesses. King Chulalongkorn adopted it as his personal emblem, as it coincided with the literal translation of his name. From then on, Thailand or "Siam" has experienced the development to sustain advancement and prosperity as observed in the Western countries of the modern era. And from realizing that education is an important factor for development, in 1916 King Ram VI has graciously established the Royal Pages School as the university by the name of "Chulalongkorn University" to serve as the royal memorial for king Chulalongkorn, his father. Chulalongkorn University is situated in Patumwan district, downtown of Bangkok, with The area of approximately 445.73 acres comprising of educational area of 51.55%, academic area for rental of 16% and commercial area of 32.45%. Chulalongkorn University has been developed to achieve continual advancement, with sustained quality for teaching and learning, research and environmental management for the university. This includes 19 Faculties: the Department of Science and Technology, Health Science, Sociology and Humanities, and includes the international and English programs. According to this, the university has been recognized as the oldest and most renowned university in Thailand.

Modern Movement: Thai architecture has been influenced by architectural trends of the Western world since

1868. During the reign of King Rama VI (1910-1925), there has been extensive construction of public buildings and various technicians and craftsmen from abroad with expertise in different fields have been hired to provide service for government sectors. Therefore, modern Thai architecture has been shaped in the way that integrates Thai architecture with utilization of public buildings and construction technology. Modern buildings were designed harmoniously with the integration of Thai roof forms comprising of reinforced concrete structure. Shading panels were first implemented and designed to suit Thailand's tropical climate. These features extensively served their purpose for Modern Thai architecture until present-day.

The identity: Sala Phra Kiew: The term "Sala" in English denotes the Thai style building for multi-purpose application, and is open and spacious. Therefore Sala Phra Kiew in the concept of modern Thai architecture features an integration of modern Western architecture that utilize the technological advancement of reinforced concrete, the application of wide span structures, in conjunction with the wide and open shape of Sala, comprising of high gable roof and all-around glass sidings that can be opened to allow ventilation, and also overhangs to guard against sunlight. Sala Phra Kiew also has a basement which is slightly lower than road level, and is utilized as the university bookshop. The building shape resembles the coronet which is the symbol of the university, as seen from the building plan, roofing and three-dimensional shape. Sala Phra Kiew building has been constructed during the modern movement period of Thailand (1935-1973) and designed by M.C. Vodhyakara Varavan and Professor Lert Urasyanandana, architects, and Dr. Rachot Kanjanavanit, structural engineer. The building was completed in 1966. It is located at the center of the university, to serve as multi-purpose building, as recreational area for hosting student and faculty activities from all departments. The building has been utilized continually in various occasions such as the celebration ceremony for Buddha crystal statue in 1966, where citizens and members of Chulalongkorn University jointly attend this worshipping ceremony. The building with 5,116.99 square meters, the first floor has been elevated to 2.00 meters above the road level; this features a wide and spacious hall allowing for natural lighting through the glass sidings that extend from the floor to the ceiling. The hall has hosted activities for all student clubs, and some area also used to hold faculty meetings. The interior of the hall measures 43.00 meters in width, which comprises of five column spans of 25.00 meters x 10.00 meters. This features a stairway up to the Mezzanine floor that serves as the meeting place for all faculty members of the university, and also allow for viewing the activities held on the first floor. The ceiling is made of wood, and clearly displays the concrete rafter roof structure. The high pitch gable roof with the small gable dormers are lined on both sides of the ridge as the traditional Thai roof style, covered with concrete tiles. The wide open area is a flexible space that can be adjusted in dimension to suit the utilization purpose of each student club from various faculties that has varying curriculum. The curved concrete stairway near the entrance, leads to the Mezzanine floor which creates the sense of movement of space from the lower floor to the upper floor. In the year 1972. The Mezzanine floor had been utilized to welcome Queen Elizabeth II and Duke of Edinburgh from the United Kingdom, as honorable guests of HM King Rama IX on the royal visit to Thailand. The Mezzanine floor had been used as space for serving royal welcoming meal following the royal ceremony.

Adaptive&Reuse: After the building has been in continual service for 15 years, in 1981 with an increase of the number of students and the changed functions, the building was called for renovation to suit the utilization and also strengthen the structure. In 2014-2015, another renovation was made to increase utility space, by adding the new 4 storeys building behind, therefore obtaining the total building area of 11,941.99 sq.m. Both renovations are carried out in accordance with the guidelines for adaptive reuse, with the objectives to sustainably conserve the identity of such valuable building, and to endure to love and unity of all university members until today. (Ratanamart, S. 2018.)

Conslusions

This research will be in line with the modern international building preservation concept, with the International DoCoMoMo organization enhancing the stability and publicity of the international values of Thai architecture to be well-known. The 100 buildings are located in the major provinces of the four regions, such as Bangkok and its vicinity, Chiangmai, Nakhon Ratchasim, Lopburi, Chonburi, and Songkhla, etc. (Source:www.docomomo.com, www.docomomothailand.org)

1. Thailand has 100 modern buildings information for life-long learning
2. More modern architecture learning resources of the country will be known around the world by disseminating 100 buildings, information, which is sustainable for tourism in Thailand, in the media without borders. It also helps to enhance the tourism of the country, which will increase the revenue of tourism according to the nation strategy.
3. Being a conservation learning resource of modern architecture in the history of Thai architecture, which can be transferred to future generations
4. Enhance the conservation of modern Thai buildings in line with the international architecture conservation organization "DoCoMoMo International"

Abstract

We tested first year BSc students of Informatics at the beginning of their tertiary studies, after finishing their studies in high schools and passing the school leaving exams of Informatics. Three pseudo-codes, a flow-chart with visual objects, and a logical problem were presented. The pseudo-codes and the logical problem were borrowed from the Hungarian programming contest prepared for students of 5-8 grades. The flow-chart was created by our team based on one of the pseudo-codes.

We were interested in how the participants were able to read and summarize what the presented algorithms do. All except the logical problems were answered with natural language sentences, while each logical problem was answered with a whole number based on the output of the presented algorithm in the range of [0, 3]. Considering the nature of the answers, the logical problem was different from the others. Beyond the students' results, we were also interested in how the final scores are influenced by the time students spend on computers and mobile devices functioning as computers.

In general, we found that the time students spend on computers affects their results. The heavy and the moderate users scored similarly in the test, while the occasional users scored significantly lower. In the case of mobile devices, the heavy users scored the lowest, while the moderate and occasional users performed better, with similar results. These findings prove that mobile devices do not have positive effects on decoding; furthermore, heavy mobile usage has a negative effect on these activities. Considering computers, the pattern is somewhat different. We have found that in general, there is no difference between the results of the heavy and the moderate computer users. On the contrary, the results of the occasional users were significantly lower than the results of the other two groups.

Introduction

Our major concern in the present study is to understand how computer and mobile-device use influences students' performance in understanding programming problems. We were seeking proof as to whether the students we tested – who by their year of birth are classified as digital natives – possess the abilities assigned to them, namely that they are different from their predecessors, i.e. their minds are so profoundly changed by these devices that they do not need formal education, and the mere use of digital devices will bring the skills which are required for effective and efficient computer problem-solving (Prensky, 2001). Beyond that we aimed to measure whether “They [digital natives] prefer their graphics before their text rather than the opposite.” (Prensky, 2001), and how the graphical representation of a programming problem would influence students' results.

However, we must face the fact that the attrition rate is extremely high in tertiary informatics courses and study programs (OECD, 2016; HIS, 2012; Gombos & Csernoch, 2015), while there is great demand for professionals in the digital era. With the present paper our aim is to use quantitative tools to reveal several components of the above-mentioned paradox and the evaluation system in progress.

Hypotheses

Based on our experiences we formulated the following three hypotheses. These hypotheses consider firstly, the students' results in their school leaving exams, on the basis of which they are accepted into tertiary studies, secondly, the time spent on digital devices, and thirdly, how graphical representation would help the students' understanding of programming problems and their decoding skills.

[H1] 'Computer cooking' does not develop algorithmic skills.

[H2] Heavy use of digital tools does not develop algorithmic skills.

[H3] Graphical representation helps digital natives' understanding of algorithms.

The structure of our paper is the following. The three major sections are entitled The Study, Findings, and Conclusions. The sample and majors of the students participating in the project are outlined in the Sample section of The Study. This is followed by a short summary of the school leaving exam in Hungary, focusing on informatics and mathematics, the two subjects closely related to tertiary studies in informatics/computer sciences, and the students' results in these two subjects. The third section of The Study provides details of the tasks and their requirements, and finally the methods which we applied are described. In the Findings section we present the results of the students' in the test in connection with their results in the school leaving exams. The last section reveals our findings on the students' time spent on digital devices and their results in the tasks originally prepared for students of grades 5-8.

The Study

The Sample

Three groups of Hungarian students at the Faculty of Informatics of the University of Debrecen were tested in the academic year 2016-2017 as part of the TAaAS project (Biró & Csernoch, 2015a, 2015b; Csernoch et al., 2015; Csernoch & Biró, 2017). The project was launched in 2011 to test first-year students of informatics at the beginning of their studies. The aims of the project are to reveal the students' computational thinking skills in general, focusing on the level of their algorithmic and knowledge transfer skills in and between different subjects of informatics, and their problem-solving abilities using different digital tools and environments.

In the present paper the students of the three majors of the faculty were tested (**Table 1**):

- Computer Science (CS) (N=120),
- Computer Science Engineering (CSE) (N=103), and
- Business Informatics (BI) (N=97).

Knowledge Bought Into Tertiary Studies In Informatics

In Hungary, students are accepted to tertiary studies based on their high school and school leaving exam results, or based on purely on their school leaving exam results, with further opportunities to collect additional – mostly non-subject-related – points (SLE, 2018; SLE in Informatics, 2018). In this rather complicated system mathematics is compulsory; however, informatics, the subject relevant in our case, is not. The system offers school leaving exams at two levels: intermediate and advanced. In informatics at both levels the exam is built around office applications, but the proportions and the requirements of the subjects are different. The intermediate level tasks are purely 'computer cooking' application problems, while at advanced level the application tasks require some creativity, and this level also includes a programming task.

Even though informatics is not compulsory, most of our students take these exams, and their numbers and average results are shown in **Table 1**. In general, we can conclude that, based on their school leaving exam results, students start their tertiary studies in informatics with high expectations.

When comparing the results for informatics and mathematics we found significant differences between the two subjects ($p=0.000$). Furthermore, the correlation coefficients reveal that in the CS and BI groups there is a weak correlation between the two subjects ($r=0.33$ and $r=0.19$, respectively), while there is no correlation in the CSE group ($r=0.07$).

In the comparison of the three groups, no significant difference was found between them considering their results in the school leaving exams at intermediate level in informatics ($p=0.150$), while in mathematics there is a borderline difference ($p=0.049$) with a 95% confidence interval. The number of students who took the advanced level exams is much more varied, and in some cases, due to the low number of students, we cannot perform a reliable statistical analysis. However, based on the results of the TAaAS project (Csernoch et al., 2015), the tendency is that the Computer Sciences students' scores are the highest.

Table 1: The number of CS, CSE, and BI students taking the school leaving exams and their results in informatics and mathematics at intermediate and advanced levels.

	N	Informatics				Mathematics			
		Intermediate		Advanced		Intermediate		Advanced	
		N	Mean	N	Mean	N	Mean	N	Mean
CS	120	88	81.81	40	70.35	110	74.38	6	68.66
CSE	103	76	79.72	25	66.68	86	69.26	15	59.13
BI	97	92	78.81	6	67.83	92	72.50	4	64.50

Tasks

We have to emphasize that the tasks presented in **Figure 1** and **Figure 2** are borrowed from a Hungarian programming contest for students of 5–8th grades (NT, 2009), while Task 3 is the a graphical representation of Task 2a (**Figure 3**). The detailed results of Tasks 1 and 2 were published in 2015 (Csernoch et al., 2015), where the focus was on the recognition of the level of the students' algorithmic skills based on the SOLO categories of understanding (Lister et al., 2006). The present paper focuses on the digital tools involved in the problem-solving strategies of the digital natives and the effectiveness of the graphical representation of conditional counting, a well-known problem in teaching programming.

We further must call attention to the structure of the Hungarian Base Curriculum (NAT, 2012) and frame curricula (Frame Curricula, 2013, 2018), which state that teaching informatics in elementary and high schools is compulsory from grades 6 to 10, one class a week. In these courses, programming and computer problem-solving are declared to be a high priority.

<pre> V:=X="A" or Y="A" W:=X="B" or Y="B" If V and W then Point:=0 else If V then Point:=1 else If W then Point:=2 else Point:=3 </pre>	X	Y	Point

	0	0	

Figure 1: Task 1 with the pseudo-code and input data (X and Y) columns, and the Point column to be filled in with the answers, borrowed from the Hungarian programming contest (NT, 2009).

At this point we must call attention to a minor modification to the original task presented in the programming contest (NT, 2009) and used in the TAaAS project prior to this year (Csernoch et al., 2015). The original order of the answers was 3, 2, 1, and 0. We found and published in 2015 (Csernoch et al., 2015) that those students who selected the 0 answer based on the 0 input values formed a unique cluster. We were interested to see whether these students answered 0 simply because the input values were 0. To test this hypothesis, we changed the order of the output values, as is presented in **Figure 1**: 0, 1, 2, and 3. We found that what influences the students' answers is not the order of the output values, but their limited knowledge, details of which were included in the paper mentioned above. With this reverse order of the output values we were able to detect the same clusters of students with the same specifications.

N=50, measured values: 500, 500, 500, 500, 500, 600, 600, 650, 700, 750, 820, 880, 930, 1010, 1050, 980, 930, 830, 780, 720, 720, 710, 700, 750, 770, 790, 820, 880, 880, 820, 760, 740, 600, 500, 560, 670, 780, 820, 920, 880, 860, 820, 770, 770, 760, 750, 740, 740, 730, 720.

```

Task 2a  DB:=0
          Loop from i=1 to N
            If X(i)>800 then DB:=DB+1
          End loop

```

```

Task 2b  DB:=0
          Loop from i=2 to N-1
            If X(i)<X(i-1) and X(i)<X(i+1) then DB:=DB+1

```

```

End loop
M:=0

Figure 3 is the graphical representation of Task 2a. Our research group created this representation to see whether these objects help digital native students understand the algorithm, or not.

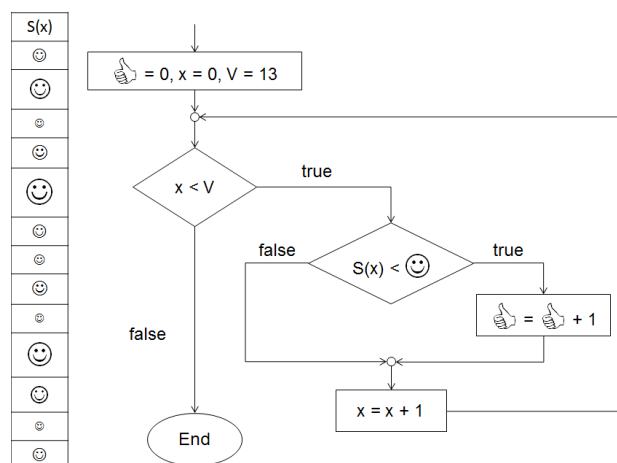

Figure 3: Task 3, a graphical representation of Task 2a: conditional counting.

Methods

The high number of unsolved problems required a comparison of the results with various approaches. We carried out a comparison of students' results in the school leaving exams and the test, checking correlations and significance between the results in these two measuring systems. The number of students whose results are uncountable, either as a result of ignoring the task (I) or scoring 0 (0) are presented in **Table 2**.

Table 2: The number of students who ignored the tasks (I) or scored 0.

	Task 1		Task 2a		Task 2b		Task 2c		Task 3	
	I	0	I	0	I	0	I	0	I	0
CS	20	4	18	7	40	5	41	24	39	16
CSE	27	2	26	3	42	1	48	5	53	10
BI	27	1	61	18	71	11	70	3	69	8

Beyond these comparisons we ranked the students' results according to the time they spent on computers and mobile-devices (functioning as computers). In this sense three categories of computer-time and mobile-time were defined: spending more than 5 hours, more than 2 hours, and less a day on these devices. The categories were named in accordance with the device and the interval: c5, c2, c1 for computer times, and m5, m2, and m1 for mobile times.

The group who achieved the highest score was ranked 1 and the one with the lowest score ranked 3. These ranks were summed for each group and mapped for visual representation. If the computer or the mobile group achieved the highest scores in all the tasks its ranking score is 5. In any other cases this ranking score is higher than 5, and the lowest results in all the tasks would add up to 15 in the five tasks. The results are presented in **Figure 4** and **Figure 5**.

Findings

School Leaving Exams Vs. Decoding Tasks

The results of the three groups in the five tasks are presented in **Table 3**. The comparison of **Table 1** and **Table 3** reveals that the students achieved significantly lower results in the elementary school tasks than in both the intermediate and advanced school leaving exams in informatics (SLE, 2018; SLE in Informatics, 2018).

Table 3: The students' results in the five tasks of the test.

	N	Mean	Task 1	Task 2a	Task 2b	Task 2c	Task 3
CS	120	45.52	59.54	67.50	43.89	23.33	33.33
CSE	103	40.13	49.84	56.63	43.69	26.21	24.27
BI	97	23.30	49.14	27.15	18.21	11.34	10.65

The data presented in **Table 1** and **Table 3** clearly reveals that the students' results in the school leaving exams are significantly higher than in the elementary decoding tasks ($p=0.000$). This finding indicates that the school leaving exams do not require algorithmic and programming skills and knowledge on the part of the students. As was mentioned in the Study section, school leaving exams mostly contain 'computer cooking' tasks, which, based on our testing, do not develop the students' computational thinking skills (Wing, 2006).

In the comparison of the three groups, in spite of the fact that no significant difference was found in their intermediate school leaving exam results, a significant difference was found between the BIM and the other two groups ($p=0.000$). This finding further proves that the school leaving exams cannot distinguish among students based on their computational thinking skills. One of the consequences of the failure of the school leaving exams to measure the students' computational thinking skills is that students are accepted to tertiary courses in informatics/computer sciences based on these scores and they build a false image of their knowledge and expectations, as was revealed and published in 2017 (Csernoch & Biró, 2017).

Table 4: The correlation coefficients between the tasks of the test and the intermediate school leaving exam.

	Total	Task 1	Task 2a	Task 2b	Task 2c	Task 3
CS	0.29	0.11	0.34	0.16	0.30	0.15
CSE	0.28	0.04	0.29	0.26	0.22	0.16
BI	0.29	0.27	0.27	0.21	0.15	0.23

In the following, despite the differences in the results of the school leaving exam and the TAaAS test, we were interested to see whether there is any correlation between the students' performance in the two tests. In all the three groups the two tests are the closest to each other in Task 2a (**Table 4**), but still with a moderate correlation. Beyond this, each of the groups has their special characteristics. In the BI group, who scored lowest in all the TAaAS tasks (**Table 3**), we found some correlation between the TAaAS test and the intermediate exam in the logical and the graphical tasks, while the pseudo-codes presented in the traditional text form have no connection to the 'computer cooking' tasks (**Table 4**). Contrary to this, in the CS and CSE groups the weakest correlations were revealed in the logical and the graphical tasks.

Table 5: The correlation coefficients between the tasks of the test and the advanced school leaving exam.

	Total	Task 1	Task 2a	Task 2b	Task 2c	Task 3
CS	0.61	0.14	0.08	0.58	0.60	0.53
CSE	0.29	0.15	-0.05	0.24	0.31	0.30
BI	0.76	0.30	0.71	0.85	0.81	0.18

In the comparison of the TAaAS tasks and the advanced school leaving exams, the pattern reveals further connections. In this case, the weakest correlation was found in the CSE group, while the correlation coefficients are similar in the CS and BI groups. This result of the CSE students reveals that there is no correlation between their algorithmic skills and the selection of the level of school leaving exams. These students primarily solve the application tasks, which can be assumed by their low results in the advanced school leaving exams (**Table 1**). However, we must be careful with the results of the BI students, due to their low number in the advanced level exams (**Table 1**). It seems that only a few students select this type of exam, but those who do seem to have a similar level in computational thinking as the CS students.

Similar to the intermediate exams, in the CS and CSE groups there is a weak, while in the BI group a moderate correlation between the two tests in the logical task (**Table 4** and **Table 5**, Task 1). In Task 2a, the easiest sub-task in Task 2, an extremely weak correlation was found in the CS and CSE groups, while there was a strong correlation in the BI group. In Tasks 2b and 2c strong correlations were found in both the CS and BI groups. Based on this finding, we can conclude that the programming task has a strong effect on the students' algorithmic skills. The graphical representation (Task 3) in the CS group requires advanced level skills, while in the other two groups such a connection cannot be detected.

The Use Of Digital Devices

The comparison of the students' results in the decoding task and their time spent on digital devices – computers and mobile devices – are presented in **Figure 4** and **Figure 5**, respectively. These findings are based on the ranking

method detailed in the Study/Methods section.

Figure 4: The time spent on computers and the students' results in the decoding tasks.

Considering the use of computers, in the case of the CS and BI students, the moderate users scored the highest in the test. In almost all the tasks they achieved the highest results. In these two groups the heavy computer users had the second highest scores, while the occasional users' results were the lowest. The CSE students' results are different from the other two groups. The moderate users' results were the lowest, followed by the occasional users, and finally by the heavy users. These differences between the three groups are in accordance with their results in the advanced level school leaving exams.

Figure 5: The time spent on mobile devices and the students' results in the decoding tasks.

In the case of mobile use the pattern is different. In the CS and CSE groups the heavy mobile users' scores are the lowest, while the moderate and occasional users achieved higher results. In the BI group the pattern does not follow that of the other two groups; however, we must keep in mind that their results were significantly lower than the other two groups and the number of students ignoring the tasks is extremely high (**Table 2**), so we must be careful in drawing conclusions in this case.

Conclusions

Our testing method revealed that the school leaving exams at intermediate level do not provide reliable information about the students' level of computational thinking, and especially about their algorithmic skills. Beyond this,

these exams do not help students to form a reliable self-evaluation of their knowledge in informatics, which leads to a false attitude to informatics/computer sciences, and to a high attrition rate in tertiary studies.

On the other hand, it was found that the advanced level exam can have a positive effect on the above-mentioned skills, although taking this higher-level exam is no guarantee of the higher level of the skills required in tertiary studies in informatics. We also must draw attention to the level of the tasks presented in the TAAAS test, since they are borrowed from the Hungarian programming contest for grades 5-8. In general, we can conclude that students start their tertiary studies in informatics at an extremely low level of algorithmic skills.

The graphical representation of conditional summing revealed that students must take at least the advanced level exams to understand this form of algorithm. The assumption that they are born with such skills is rejected. These skills are not the privilege of digital natives. These skills must be developed through study. We have come to similar conclusions when testing students' spreadsheet problem-solving skills and their maths problem-solving skills in problems presented in pseudo-codes (Bíró & Csernoch, 2018). These findings are in complete accordance with the statements of Kirschner and his colleagues (Kirschner et al., 2006; Kirschner & De Bruyckere, 2017).

Considering the use of digital devices, we have found that the time students spend on computers affects their results. Heavy and moderate users scored similarly in the test, while occasional users scored significantly lower. On the contrary, the occasional users' results were significantly lower than the results of the other two groups. In the case of mobile devices, heavy users scored the lowest, while moderate and occasional users performed better, with similar results. These findings prove that mobile devices do not have positive effects on decoding; furthermore, heavy mobile usage has a negative effect on these activities.

Abstract

The lexicon allows the expression of particular cosmovisions, which is why there are a wide range of lexical relationships, involving different linguistic particularities (Coseriu, 1991; Teixeira, 2005). We find, however, in teaching context, that these variations are often replaced by dichotomous and decontextualized proposals of lexical organization, presented, for instance, in textbooks and other supporting materials (Baptista et al., 2017).

Thus, our paper is structured in two parts. First, we will try to account for the diversity of lexical relations (Choupina, Costa & Baptista, 2013), considering phonological, morphological, syntactic, semantic, pragmatic-discursive, cognitive and historical criteria (Lehmann & Martin-Berthet, 2008). Secondly, we present an experimental study that aims at verifying if primary school pupils intuitively organize their mental lexicon in a dichotomous way. This study has as its starting point three illustrated stories with words that may establish relations of opposition among themselves. This study was carried out in four second grade Portuguese classes, when formal teaching of lexical relationships begins. Although this content approach starts with antonyms and synonyms (according to Portuguese primary school curriculum), we can see that the students presented different responses, possibly reflecting a cognitive organization of the mental lexicon that escapes the dichotomy of certain oppositions taught in a decontextualized way. We find lexical items grouped according to the same morphological basis, the same seme, the same class of words or specific experiential criteria.

We then believe that, if children intuitive knowledge on words is not confined to oppositional structures and rigid perspectives, it is important to promote lexical relationships heterogeneity awareness through contextualized and scientifically sustained didactic paths, considering lexicon uses as a full exercise of pro-active citizenship.

Introduction

Words may establish a wide range of relationships, concerning their form and/or their meaning (Cruse, 2001). One's mental lexicon, which is a part of our cognitive system that possesses an inventory of all the words we know, stores words in different ways and group them differently, depending on linguistic and non-linguistic criteria (Lehmann & Martin-Berthet, 2008). Each one of us holds a particular cosmovision (Whorf, 1956) and the way we organize our mental lexicon reflects this specificity. That is the reason why we should care about the way lexical

relationships are taught at school, because we need to manage different world views in the classroom, even when we feel they may not be compatible. As a matter of fact, our mental lexical organization influences the way we build knowledge and communicate.

This is the starting point to the research we decided to carry out: if lexicon allows for the expression of particular cosmovisions, that means that mental lexicon may be organised in different ways. Within *Língua e Cidadania: das relações lexicais ao conhecimento do mundo* [Language and citizenship: from lexical relationships to world knowledge] project, which is financed by Calouste Gulbenkian Foundation, we aim at verifying how children tend to structure their mental lexicon and how this should be taken into account in teaching contexts.

The research aims within the project mainly concern the following points:

1. To analyse the linguistic and pedagogical dimensions of lexical relationships – semantic relations (opposition, hierarchy, inclusion and similarity) and morphological and etymological relations (word family) – by considering the interaction between lexicon, culture and citizenship.
2. To realize how mental lexicon interferes with world(s) cognitive processing and with people interactions.
3. To reduce dichotomous thinking and stamped social representations.
4. To promote the awareness of how early manipulation of meronyms and hyponyms has cognitive benefits.

In this article, we turn our attention to relations of opposition, because they are the first to be taught at primary school, according to the Portuguese curriculum, in a way that leaves no place to consider one's particular world views, by reducing this kind of relationships to a dichotomous correspondence between words (Baptista, Choupina, Costa, Querido & Oliveira, 2017).

Firstly, we aim at analyzing relations of opposition following semantic, formal, pragmatic, discursive and cognitive criteria, bearing in mind that *opposition* plays a nuclear role in languages organization and functioning. Then, we will present the first results of an experimental study we undertook in order to verify if primary school pupils intuitively organize their mental lexicon in a dichotomous way, because this seems to be crucial when we are planning language teaching in early years.

1. Lexical Relations – General Assumptions

Language is arbitrary, which means that there isn't a direct link between linguistic structures and the world entities and situations. However, as Coseriu points out, "it is often confused, in the studies of lexicology, the *significatum* (linguistic content) with the *designatum* (extralinguistic reality)" (Coseriu, 1991: 19), leading to some misunderstandings in several fields (cf. confusion between gender and sex, number and quantity, tense and time). As far as sense relations are concerned, this happens when one tries to define (and teach) antonymy and other relations of opposition, as discussed, for example, in our previous work mentioned above (Baptista *et al.*, 2017). In several textbooks and other supporting teaching materials, antonymy is merely presented as a relation of opposition between two words. This has two main consequences: gradability, as an important property of antonyms, is disregarded; and pairs like *thick/thin*, *father/son*, *inside/outside* and *come/go* are treated alike. In the next section, we will take a closer look at these topics as part of a linguistic characterization of antonymy. For now, we try and explain why this confusion prevails, by bringing up two crucial notions: oppositeness and dichotomization.

Oppositeness is as an essential notion within Structural Linguistics (Saussure, 1916/2006), because any linguistic unit (phonemes, morphemes, words...) has a value in a way that it opposes itself to several other linguistic units, sharing with them something in common but being different from them at the same time. It is thus a central lexical notion (Lyons, 1977; Gutierrez Ordoñez, 1996), because it allows us to distinguish linguistic signs, but also to figure out what they share and how they may be stored in a same paradigm.

From a structural perspective, it is important to remember that the value of meanings results from the oppositions in which they participate (Gutierrez Ordoñez, 1996). Thus, *fresh* may oppose to *hot* (weather) or to *dry* (bread), and, in turn, *dry* may oppose to *wet* (weather), to *greasy* (hair) or to *stewed* (wine). Oppositeness is relevant when we consider antonyms, but also in other lexical relations. *Nose* and *eyes* (meronyms) are parts of a *human face* (holonym), even though they have different forms and roles. *Apple tree* and *pear tree* (hyponyms) are both *fruit trees* (hiperonym) but giving origin to different fruits. We can therefore assume that opposition is so relevant in everyday language uses that it is present in speakers' mind all the time (Lyons, 1977), which makes it easier to recovery it quite often, as we may see in teaching contexts.

Oppositeness leads us to distinguish between one element and several others that differ from the first one in some aspects. Most of the times, we tend to contrast a unit to another one, in such a way that "binary opposition is one of the most important principles governing the structure of languages (Lyons, 1977, p. 271). This is one of the many principles within generative theory, which helps us to understand why this tendency spreads all over the teaching field, even when it is not supposed to, as we may see in gradable contexts.

We may by now emphasize two main problems concerning lexical relations teaching, one being to confine it to a dichotomous antonymy and the other being this reductionist attitude to lexical relations in general, by disregarding its complexity.

Lexical relations occur in the paradigmatic level, by considering words that can replace other ones in a given

syntactic position, and in the syntagmatic level, involving the way words are combined in more complex structures. They occur at the level of the signifier (homonymy, homophony, homography and paronymy) and at the level of signified (which will be discussed below).

There are relations not only between linguistic signs, but also between larger units (expressions, locutions and syntagmas). Therefore, lexicological studies mobilize information from all the linguistic fields of research, concerning phonology, morphology, syntax, semantics and pragmatics (Choupina et al., 2013), so that they can account for words' everyday uses and relations.

As far as sense relations are concerned, we may find different typologies that are a consequence of the diversity we illustrated in the previous paragraph. According to Cruse (2001), sense relations must have an intrinsic interest, meaning that they occur "with significant frequency throughout the vocabulary, and must be capable of supporting significant generalizations" (Cruse, 2001, p. 247).

We may find two different groups of words relations (Cruse, 2001). In the first one (identity and inclusion), there are a class-inclusion relation (hyponymy), a part-whole relation (meronymy) and a similarity relation (synonymy, following three subtypes). In the second one (opposition and exclusion), are placed co-meronyms, co-hyponyms and opposites. Cruse's typology makes it clear that lexical relations strongly rely on perspective: *cat* and *dog* are both members of a given class (*animals*) and therefore exclude one another (a *cat* is not a *dog* and vice-versa); *fingers* and *nails* are part of a human *hand* and therefore are exclusive (a *finger* is not a *nail* and vice-versa). These words are part of a lexical field, gathering words distributed along a *continuum* of lexical content (Coseriu, 1991). Organizing these types a little bit differently, Lehmann and Martin-Berthet (2008) speaks about hierarchy and inclusion; similarity and opposition.

Gutierrez Ordoñez (1996) brings homonymy and polysemy to words relations, while Cruse (2001) puts them under the scope of ambiguity. The Spanish author also analyses synonymy in its different types. For another type of sense relations, Gutierrez Ordoñez (1996) identifies those resulting from differences in content (hiperonymy, hyponymy and co-hyponymy; semantic oppositions and antonymic oppositions), suggesting that antonymy, as we will see later on, is a specific type of opposition.

It is not our goal to go through all these types of lexical relations, but just to give an idea of the complexity underneath every attempting of classification. We are now turning our attention to relations of opposition.

2. Relations Of Opposition

As we have already noticed, oppositeness is both a nuclear and complex notion within lexical semantics. It may apply not only to antonymy, but to every other type of lexical relations, such as synonymy, meronymy and hyponymy. When we want to contrast two or more words (or one or several semantic traits), opposition is closely related to antonymy.

Lyons (1977) distinguish opposition from antonymy, seen as two ways of contrasting. Authors as Coseriu (1991), Gutierrez-Ordoñez (1996) or Cruse (2001) use opposition as a more general term and antonymy as one of its subtypes, but it is also possible to assume antonymy in a large sense as an equivalent term to opposition (Vilela, 1994, Gagné, 2015), even if it keeps its narrow sense which we will be presenting later on (that of gradable opposition). This broader meaning of antonymy suits words like male/female, dead/alive, husband/wife, that "are also considered as antonym pairs, for these words are also opposite in meaning. Therefore, the other two categories, complementarity and converseness, are included in the field of antonymy only in a very broad sense". (Gao & Zheng, 2014, p. 235)

Thus, it is important to build a characterization of opposition, by summing up its several types, following some morphological, syntactic and semantic criteria. Usually, these relations oppose two or more items belonging to the same word class (with some exceptions).

2.1. Opposite types

Bearing in mind that in some contexts (not only at school) different kinds of opposites are treated alike, we built a proposal that is inspired by some seminal works (Lyons, 1977; Coseriu, 1991), but follows also summaries by Ostrá (1987), Vilela (1994), Gutierrez-Ordoñez (1996), Cruse (2001) and Gagné (2015), among others. A general procedure is to divide opposites in binary and non-binary, an option that is supported by the traditional logic.

Binary contrasts are contradictory, because the affirmation of one term implies the negation of the other one and vice-versa: if someone is dead, it means that it is not alive and if someone is alive, it means that it is not dead. On the other hand, non-binary contrasts are contrary, since the affirmation of one item implies the negation of the other one, but not vice-versa: if someone is tall, he is not small; but if he is not small, that does not mean he is tall. This logical distinction is connected to a linguistic criterium (Gutierrez-Ordoñez, 1996), because binary opposites are ungradable, while non-binary ones are gradable, with a *twisted* perspective pragmatically sustained (see 2.2. for details).

Within the binary section, we may find five main types: complementary, privative, equipollent, converse (or symmetric) and directional. The first three groups involve complementarity in a particular way, while the other two are more related to a certain perspective of the situation.

Complementary opposites (*dead/alive; open/close*) are ungradable and the affirmation of one of the items always implies the negation of the other, as far as the term is applicable within a certain universe of discourse. Complementarity does exist with certain terms (*public/private*) in particular contexts, but not in others (*public, semi-public, semiprivate*). *Private* opposites are complementary in a certain way but differ from them because they imply the presence (and the absence) of a specific feature, as in *usual/unusual* or *animate/non-animate*. Most of the times, we are talking about adjectives morphologically related and thus the opposition is morphologically marked (through a-, un-, in-, non-), although some exceptions may be found (*above/below* – adverbs not related). This is a true sign of grammaticalization operating in order to create a linguistic contrast (Lyons, 1977). *Equipollent* opposites, when binary, always imply the presence of a particular trace, acting differently in both items of the pair, such as in *male/female*.

The two last groups deal with a certain perspective. *Converse* opposites concern the same relation under two different perspectives, as in *father/son, husband/wife, sell/buy*. We may find 2-, 3- or even 4-place relations: X is Y's father = Y is X's son (2-place predication); X sold something to Y = Y bought something from X (3-place predication). *Directional* opposites concern movement (*enter/leave*) and again perspective (in this case, the point of perspective) is crucial, because we are talking about the same action seen from different points: when migrants are considered, for instance, we say that they *enter* our country (immigrants), while someone in the country they abandon may say they are *leaving* this country (emigrants).

As the tendency to dichotomize prevails in languages, binary types are more diversified than non-binary ones. Non-binary opposites mainly involve true antonyms, but also two other (somewhat controversial) categories: ordering and ranking; and cycles. Members of these two groups are often equipollent, because each one of them has the same statute. In *ordering and ranking*, we find examples such as colours (*blue, red, green*), a case where language makes discrete something that in reality falls into a *continuum*; and ordinals like *first, second...* *Cycles* concern days of the week or seasons.

We finally take a look at (true) *antonyms*. Although they are contraries, not all the contraries are usually seen as antonyms (*tree/dog*). This group is formed by adjectives that can be modified (*taller, less interesting, biggest*) and are most of the times morphologically unrelated (*tall/short, big/small*), which means that there is several terms allowed in the same sequence (*huge, tall, short, tiny...*), a linguistic feature that should be taught in the classroom from the very beginning, in order not to make some confusions with complementary opposites.

Cruse (2001) considers three subtypes of antonyms regarding their commitment with what is being asserted: polar antonyms are both impartial (*heavy/light*); overlapping antonyms include one member that is marked (*clean/dirty*); and equipollent antonyms are both committed, such as *happy/sad*. Degree questions may help us to clarify these distinctions (see more details in Cruse, 2001, p. 253-254).

As Cruse's classification already suggests, antonyms are often seen as binary opposites in everyday uses, because polarity is lexically marked. In other terms, "gradable opposites manifest the property of polarity more strikingly than do other opposites" (Lyons, 1977, p. 279). Although private opposites are truly binary and mark it morphologically, antonyms seem to follow a process of lexicalization that strengthens the opposition between the two morphologically unrelated terms. The *good/bad* pair suggests a more intense polarization than *usual/unusual* or *good/not good*, which helps us understand why dichotomization appears so often in teaching practices concerning antonymy. According to Lyons, this is probably due to a conversational implicature: if it is not good, then it is bad.

We can assume that "the definition of antonymy must be lexical as well as semantic. Antonyms need to have "oppositeness of meaning", but they also need to have a strong, well-established lexical relationship with one another" (Gao & Zheng, 2014, p. 235). They are only one of the opposite relations types, as summarized in table 1:

Table 1 – Types of linguistic opposition

Binary	Non-binary
complementary	true antonyms
private	ordering and ranking
equipollent	cycles
converse	
directional	

2.2. A few (more) words on opposites

The proposal to classify opposites we have just presented is not closed, but it may shed some light on a complex subject. Until now, we have called some morphological, syntactic and semantic criteria, but it is useful to also mobilize pragmatics and cognition to understand opposite relations a little bit more. Antonymy may be analyzed in a pragmatic perspective, seen from speakers' point of view, because we are dealing with a relation that "doesn't rely on logical and complex mechanisms, but rather on cognitive and therefore *basic* ones" (Teixeira, 2005, p. 23). We will clarify this idea with three examples.

In Latin, the idea of *old/not old* follows equipollent oppositions inside each pair of the following sequence: *senex, vetulus, vetus* vs *iuvēnis, novellus, novus*, being related to people, animals or non-animates. This distinction is not present the same way in modern English, but there is still a difference between *young* and *new*.

Several authors emphasize a close relationship between antonymy and synonymy, since antonymy also implies “a dimension of resemblance” (Ostrá, 1987, p. 11), which means that there is a link between antonymy and synonymy. For instance, in French, *redouter, craindre, avoir peur* are synonyms whose specific value depends on semantic and pragmatic differences, oppositions.

So, we cannot see antonymy “as a maximal degree of meaning difference, but rather as one of the manifestations of dichotomization tendency” (Ostrá, 1987, p. 11), in which it differs from other cases of semantic incompatibility due to this semantic similarity. Antonyms are therefore “terms whose semantic traces are identical with a single exception of one which is not only incompatible but opposite” (Gagné, 2015, p. 3).

A third example underlying the importance of pragmatics and cognition in this field is given by the way conversational implicatures may change antonyms typical features (Lyons, 1977). Ungradable opposites may become gradable, as when we say about someone or something that it is *really alive*. Gradable opposites may become ungradable (as seen before in *tall/short*) when we want to emphasize the polarity. And grading ungradable opposites is a linguistic way to refuse to see them as contradictory, as we know by the debate about how many categories are there besides *male* and *female*. These procedures are not exclusive for antonyms, being available for some subtypes of adjectives: relational adjectives, such as *British*, may be graded when we say that this is *a very British attitude*, by turning a relational adjective into a qualificative one.

After having considered the complexity behind sense relations, specifically behind opposite relations, we will now turn to the experimental study we undertook in four second grade Portuguese classes.

3. Experimental Study

Our starting point to this study was the fact that in the first two grades of schooling in Portugal only synonymy and antonymy are taught (Buescu, Morais, Rocha & Magalhães, 2015), which leads to hinder the diversity of lexical relations. Besides, the teaching of antonymy often conveys a dichotomous perspective, thus limiting grammatical structures study, as verified, for example, in manuals and other pedagogical materials (Baptista et al., 2017). We know, as we have already noticed, that dichotomization is a general tendency in language, but not all the cases of opposite relations fit in the field of polarity, which is something relevant when we are preparing pupils to be future citizens aware of world's complexity. This dichotomous vision may narrow the perspective that students build on the world.

So, our research questions were:

- 1 – Do children tend to structure their mental lexicon in a dichotomous way?
- 2 – Do children tend to organize their mental lexicon only with opposite items?

Although we knew that oppositeness and dichotomization are central notions in language, we wanted to find out how they really determined the way children in early stages of formal teaching build lexical relations in their mind, because it is an important issue when it comes to prepare scholar curricula and language classes. In this article, we will be presenting first results of this research.

3.1. Methodology

This study was carried out in four second grade Portuguese classes, when formal teaching of lexical relations begins. It started with the presentation of three illustrated stories with words that can establish relations of opposition among themselves, although these oppositions are not exclusive and that sometimes the syntactic and/or pragmatic context transforms oppositional relations into similarity relations within the narrative (see 2.2. for further details on how this change of perspective may occur).

In fact, these relationships allow groupings of words with criteria other than opposition, such as word class (nouns, verbs, adjectives and adverbs), worldviews, sociocultural references or different perspectives. In the first group, words were related to *age*; in the second one to *beauty*; in the third one to *movement* and *spatial localisation*. We could implicitly mobilize different types of opposites to see how children manage them.

The stories were read aloud by the teacher and visualized on a data show. Pupils had to organize the words (of each story) according to different graphic strategies (two bags in a first exercise, ten hangers with two ends each in the second, and a staircase with several steps, in the third). The bags and the hangars were used in each of the three stories, while the staircase was only used in the first and the second ones, because it was the only stories where we had gradable words.

3.2. First results

When analysing data, we decided to focus on two main issues: what kind of strategies children followed to place the words in each image and how did children group words in each exercise. The strategies may give us some information about the importance of dichotomization in children's mind. The grouping procedures may reveal if oppositeness is really the relation that influences the most their linguistic thought.

As far as strategies are concerned, we realize that children followed different graphic strategies (Figure 1). Some placed the words within the hangars' limits (1) while others used the hangars' ends (2) to write down the items. Not all the children found it necessary to choose only two words per hangar, as we may see in (3).

Figure 1 – Graphic strategies children followed to organize the words

These examples suggest that children follow different strategies to organize the words because they organize their mental lexicon differently. Only in (2) we may observe a tendency to dichotomization, but we need a deeper analysis of all the children's productions in order to draw a clearer tendency, if there is one.

Another argument in favor of this diversity is found when children filled in the bags (Figure 2). Some of them just wrote down some words on one of the bags (2), while others filled both of them (1). Sometimes, they felt it would be important to justify their options (3), by telling us why some words fit in one bag and other words in another one.

Figure 2 – Strategies children followed to fill in the bags

When it comes to evaluate how children grouped the words, we realized that there were different criteria behind each option, which is coherent with what we know about lexical relations and the role of morphology, syntax, semantics, pragmatics and cognition in characterizing them.

We find lexical items grouped according to different linguistic criteria. Some children grouped words which present the same morphological basis and the same *advanced age* (*velho* [old], *velhote* [old man], *velhissimo* [very old]). Other pupils put together words sharing the same suffix, as in *novissimo* [very young] and *velhissimo*. Children of the second grade also showed they are probably aware of word classes, as they grouped together verbs like *entrar*, *sair*, *ir* [enter, leave, go] and adverbs like *aqui*, *cá* [here]. Some of them were also capable of grading lexical items (Figure 3), even if they had to deal with antonyms which are not easy to grade, because they sometimes involve a slight difference in meaning.

Figure 3 – Grading adjectives within the semantic field of *beauty*

This operation of grading adjectives presented a difficulty, as they were not intended to follow one single possibility of organization. Thus, we found some distributions motivated by semantic-pragmatic and experiential criteria with diverse connotative senses. For instance, the items *maior* [*major*] and *adulto* [*adult*] appear either in a group containing words associated with lower age or in a group linked to more advanced ages. When written on the staircase (exercise 3 in each group of words), these items consistently occupy sometimes the intermediate places of transition between the *new* and the *old*.

4. Discussion And Some Conclusions

Although lexical relationship pedagogical approach starts with antonyms and synonyms (according to Portuguese primary school curriculum), two-grade pupils presented varied responses, regarding different strategies of representing the information or different linguistic criteria to put words together. These differences possibly reflect a cognitive organization of the mental lexicon that escapes the dichotomy of certain oppositions taught in a decontextualized way.

We may now try to answer our research questions. Not only we found evidences that children don't always follow the way of polarity (question 1), as they use differently the hangars and the bags to write down the words, but also did we realize that opposition isn't always the best option for them to group the words (question 2), since they have followed different linguistic criteria when performing this task. We really need to deepen this research in order to find other tendencies in children's performances, but, for now, we may assume that children's intuitive knowledge on words is not confined to oppositional structures and rigid perspectives.

Therefore, it doesn't seem to make sense for teaching to lead them that way. Instead, it is important to promote lexical relationships heterogeneity awareness through contextualized and scientifically sustained didactic paths, considering lexicon uses as a full exercise of pro-active citizenship. As Ullmann stated, "words are surrounded by a net of relations that connect them to other words" (Ullmann, 1964: 476).

Lexical relations are complex and change throughout the times. As we can tell by some children's answers, "the chief driving force in processes of regular semantic change is pragmatic: the context-dependency of abstract structural meaning allows for change in the situation of use, most particularly the speaker's role in strategizing this dynamic use" (Traugott & Dasher, 2005: 24).

So, the lexical relationships complexity is not compatible with a lexical-semantic perspective confined to study synonyms and antonyms by themselves and out of their use context, as we see in many pedagogical practices. These notions should be put together with hierarchy and inclusion relations, as well as with those of semantic field or lexical field and should be framed by a more dynamic notion of lexical relations.

An Assessment On The Scientific Studies Conducted In North Cyprus About Child Abuse

Bengü Berkmen^a Ülkü Pişkin Abidoğlu^b

Faculty of Education, Cyprus International University ^a

Faculty of Economics, Administrative and Social Sciences, Cyprus Science University^b

Abstract

Child abuse and negligence have increasingly become important in terms of social aspect. The prevalence rate in the developed or developing countries is now a big concern. The insufficient level of knowledge among the professionals related with children, difficulties in uncovering the situation and denying increase the significance of issue. In terms of TRNC, while the number of studies is not many, the problem is as much worrisome as in other countries. The aim of this study, which was conducted to provide an insight on the matter, is to analyse the existing academic studies about this topic. The study covers eight studies, which were published between the years of 1996-2017, in accordance with certain criteria. At the end of the study, there are a number of recommendations that would take into consideration in further steps about child abuse.

Keywords: *Child abuse, Neglect, Document Analysis, North Cyprus*

Introduction

Child abuse and negligence are the complete acts and neglects hindering or restricting all kinds of development and health of child by the mother, father of child or care taker (Budak, 2000; Oral et.al, 2001; Yaşar and Akduman, 2007). According to Howe, the abuse and negligence of children cover all kinds of physical, emotional, sexual and negligence bearing behaviours, which harm children in various ways or making them sick (Howe, 2005).

In consideration of the types of child abuse, some sources categorise child abuse under three main topics (physical, sexual and emotional), some under four (physical, sexual, emotional and negligence) (Tıraşçı and Gören, 2007), and some under five (physical, sexual, emotional, negligence and exploitation). In terms of their definitions, physical abuse is briefly “non-accidental injury of child”. The non-accidental injuries mainly occur when parents want to punish the child or parents lose their control. It is typically observed as “beating” (Kara et.al, 2004). Parents tend to show violence bearing behaviours for making their naughty or disobedient children obey. In many societies parents culturally approach to such behaviours in order to discipline their children or completely show tolerance. Such tolerance legitimises violence respectively (Güneş, 2012).

Sexual abuse is comprised of any sexual activity performed regardless the consent of child. Without considering the age of child and his/her perception of situation, sexual abuse covers all sexual activities between an adult and child performed with threat or force (Hippins and Swan, 2010). Sexual abuse is a universal situation that might occur in all ages, socio-economic level, ethic structure and culture and at every region. Although it is difficult to estimate the number of individuals exposed to sexual abuse, studies indicate that one in every four girls and one in every ten boys suffer from sexual abuse (Lanning, Ballard and Robinson, 1999).

Emotional abuse occurs when the caretaker cause psychological damage in child through repetitive scolding and violence. The occurrence of emotional abuse is based on two main reasons; negligence in terms of interest, love and care, and being exposed to negative behaviours of caretakers (Polat, 2007a).

Although the results of studies conducted in Turkey indicate that the rate of emotional abuse is lower than other types of abuse, a majority of general population is exposed to emotional abuse in the way of negligence. Negligence means that the individuals who are responsible from child do not meet the needs of child. Such vital needs are nutrition, health, shelter and supervision. The most important distinction between abuse and negligence is that abuse is active and negligence is passive (Kara et.al, 2004).

According to the data on negligence and abuse in other countries; every 10.6 children in 100 children suffer from child abuse and negligence with regard to USA 2007 data (ACYF, 2009). This rate is lower in England as 2.7 children in 1000 children (Department of Education and Skills, 2006). The situation is more prevalent in Turkey. Particularly 34.6% of girls and 32.5% of boys at the pre-school level are abused (Bilir, Arı, Dönmez and Güneysu, 1986).

The aim of this study is to analyse the existing studies on this matter conducted in North Cyprus.

2. Method

This section covers the model, research area, data collection and data analysis.

2.1. Research Model

The research model of this study is determined as document analysis under qualitative research method. Document analysis is used to analyse written materials such as written sources, article, books, journal etc. and visual materials such as images, movies etc. (Sönmez, 2014). This method was utilised to systematically review and analyse the existing academic studies in the North Cyprus about child abuse.

2.2 Research Area

This study was conducted to analyse the existing studies on child abuse conducted in the North Cyprus between the years of 1996-2017. Therefore, some criteria were identified to reach the studies that would be taken under the scope of this research. Such studies were the refereed journal articles, theses and reports between the years of 1996-2017. Upon the screening of studies, there were 9 studies that fulfil the related criteria.

2.3 Data Collection

In the literature review phase of articles, Ebsco-Host, Jstor, ULAKBİM National Databases and Google electronic databases were scanned via the database of Cyprus International University. The key words of Child Abuse and Negligence in the Turkish Republic of Northern Cyprus, Child Rights, Physical Abuse, Emotional Abuse and Negligence were used in the literature review. The preliminary screening were completed upon reviewing the abstracts of studies, and the studies other than the ones fitting the determined criteria were excluded from the scope of this research. A total number of 9 studies about child abuse were found in North Cyprus consequently. The first study conducted in North Cyprus was from 1996. As it was not possible to reach the relevant study, the information on this study were generated from the articles of other authors that were published afterwards (Çakıcı et.al, 2003).

2.4 Data Analysis

The researches found with regard to the research area were enumerated and then the researchers determined categories on child abuse. These are; (a) research model and research method that include information on methodology, (b) characteristics that include the socio-demographical information of participants, and (c) child abuse and its sub-dimensions as the aim of research. The data related with categories were shown in the tables prepared for each category. The detailed interpretation of information about categories was performed under the discussion section and such interpretation was supported with the other researches in the literature.

Additionally, the researchers also performed independent literature review. All data generated as a result of such literature were merged and the researches that would be included under the scope of this study were decided accordingly. Common categories were established after the researchers reviewed each one of them in detail. The data were analysed through the agreed categories and the tables about the detailed interpreted data and criteria were prepared. The generated results were calculated with the formula of No. of Agreement/ No. of Agreement + No. of Disagreement x 100 to reach the reliability rate, which was calculated as 88.9%.

3. Findings

The findings generated from the studies reviewed within the framework of literature review, were chronologically listed and systematically presented in the tables.

3.1 Methodology

The methodology was analysed in terms of the authors, aim of research, research model, research subject and sub-dimensions, and was presented in Table 1.

Table 1. *Information on Research Method and Authors*

No	Authors	Research Model	Research Method
1	Çakıcı and Çakıcı, 1996	Quantitative	Descriptive Research
2	Çakıcı, Çakıcı, Tatlısu, Bekiroğulları and Aksoy, 2003	Quantitative	Descriptive Research
3	SOS Çocukköyü Derneği and KADEM, 2009	Quantitative	Descriptive Research
4	Ekdal, 2011	Quantitative	Descriptive Research
5	Göynüklü, 2012	Qualitative	Document Analysis
6	Akacan, 2012	Qualitative	Descriptive Analysis
7	Beyazıt, 2015	Quantitative	Descriptive Research
8	Berkmen and Okray, 2015	Quantitative	Descriptive Research
9	Tatlıcalı and Berkmen, 2017	Quantitative	Descriptive Research

In consideration with the models of reviewed researches under Table 1, 7 out of 9 researches were conducted with quantitative method, 1 qualitative research and 1 document analysis. The covered 7 quantitative researches were performed with research descriptive method (Çakıcı and Çakıcı, 1996; Çakıcı et.al, 2003; SOS Çocukköyü and KADEM, 2009; Ekdal, 2011; Beyazıt, 2015; Berkmen and Okray, 2015; Tatlıcalı and Berkmen, 2017). The study of Akacan (2012) was conducted with descriptive analysis technique of qualitative method and Göynüklü (2012) performed a study through the analysis of applicable legal regulations for child rights and child abuse.

3.2 Characteristics of Participants

The characteristics of participants are given in Table 2 upon the review of ages and genders of research participants, population, sampling size and regions where the research was conducted.

Table 2. *Characteristics of Participants*

No	Authors	Gender of Participant	Group	Age	Population	Sample/study group	Region
1	Çakıcı and Çakıcı, 1996	-	Child	-	All 2 nd grade high school students in T.R.N.C	-	T.R.N.C
2	Çakıcı, Çakıcı, Tatlısu, Bekiroğulları and Aksoy, 2003	1157 girls, 908 boys	Child	15-16 years	All 2513 2 nd grade high school students in T.R.N.C	2215	T.R.N.C
3	SOS Çocukköyü Derneği and KADEM, 2009	-	Adult	18 years and above	T.R.N.C	686	T.R.N.C.
4	Ekdal, 2011	157 girls, 189 boys	Child	8 years	1020 4 th grade primary school students	380	Nicosia
6	Akacan, 2012	-	Adult	18 years and above	-	10	Morphou
7	Beyazıt, 2015	22 girls	Child	12 years and below	Sexual abuse cases in January 2013 and May 2014	22	T.R.N.C
8	Berkmen and Okray, 2015	141 girl, 159 boy	Child	8-12 years	Primary and secondary schools of Nicosia central	300	Nicosia
9	Tatlıcalı and Berkmen, 2017	175 girl, 37 boy	Adult	18 years and older	Students of pre-school teaching department of university	360	Nicosia

Pursuant to Table 2, the participant group in 5 of the researches is comprised of children (Çakıcı and Çakıcı, 1996; Çakıcı et.al, 2003; Ekdal, 2011; Beyazıt, 2015; Berkmen and Okray, 2015), while adults in 3 (SOS Çocukköyü and KADEM, 2009; Akacan, 2012; Tatlıcalı and Berkmen, 2017). According to the Declaration of the Rights of the Child, every individual, who is below the age of 18, is considered as a child (UNICEF, 2004). The study of Göynüklü (2012) was not shown in Table 2, as it is a study of document analysis performed on the legal regulations about child rights in North Cyprus. The age distribution in the existing studies conducted in North Cyprus is as 8-12, 15-17 and 18 years and above, and there is not any study with regard to the younger age groups. In terms of the regional distribution of studies, 4 of them cover whole island (Çakıcı and Çakıcı, 1996; Çakıcı et.al, 2003; SOS Çocukköyü and KADEM, 2009; Beyazıt, 2015), 3 covers Nicosia (Ekdal, 2011; Berkmen and Okray, 2015, Tatlıcalı and Berkmen, 2017), 1 study was conducted in Morphou (Akacan, 2012).

3.3 Subject Matters

The subject matters as the type/types of abuse were covered under the relevant researches are given in Table 3.

No	Authors	Subject	Sub-dimensions
1	Çakıcı and Çakıcı, 1996	Child abuse	-
2	Çakıcı, Çakıcı, Tatlısu, Bekiroğulları and Aksoy, 2003	Child abuse	Physical and emotional abuse, and negligence
3	SOS Çocukköyü Derneği and KADEM, 2009	Child rights	All sub-dimensions
4	Ekdal, 2011	Child abuse	Physical abuse
5	Göynüklü, 2012	Child rights	-
6	Akacan, 2012	Child abuse	All sub-dimensions
7	Beyazıt, 2015	Child abuse	Sexual abuse
8	Berkmen and Okray, 2015	Child abuse	Physical and emotional abuse, and negligence
9	Tatlıcalı and Berkmen, 2017	Child abuse	Emotional abuse and emotional negligence

In consideration with the data under Table 3, 7 of the studies are about child abuse (Çakıcı and Çakıcı, 1996; Çakıcı et.al, 2003; Ekdal, 2011; Akacan, 2012; Beyazıt, 2015; Berkmen and Okray, 2015) and 2 of them about child rights (SOS Çocukköyü and KADEM, 2009; Göynüklü, 2012). In terms of sub-dimensions covered under the studies about child abuse, 1 study was only about physical abuse (Ekdal, 2011) and 1 only about sexual abuse (Beyazıt, 2015). Two of the studies discuss the remaining 3 sub-dimensions of child abuse except sexual abuse (Çakıcı et.al, 2003; Berkmen and Okray, 2015). Tatlıcalı and Berkmen (2017) conducted a study on emotional abuse and emotional negligence. All other studies are about child abuse (Çakıcı and Çakıcı, 1996; Çakıcı et.al, 2003; SOS Çocukköyü and KADEM, 2009; Akacan, 2012; Göynüklü, 2012).

4. Discussion

While the number of studies conducted in North Cyprus on child abuse is not many, but the first study about this topic was performed in 1996 covering all high schools under the General Secondary Education and Vocational Education Departments of the Ministry of National Education in order to analyse the influence of physical abuse on substance use. It is a study that was performed from the epidemiological aspect in terms of child abuse on a number of 2215-second grade high school students. Pursuant to the research results, the child abuse in TRNC was at crucial levels. The research indicated that there is a strong relation between physical abuse, psychological abuse and negligence, and substance use. Additionally, the research showed that the rate of abuse increases with the higher age, and male students are abused more than the female students and suffered from violence more. According to the research, the rate of failing and getting low marks are significantly higher among physically abused students. With reference to results, one in every two students indicated that they were slapped at least once from his/her parents, and 5.5% frequently punished with slap (Çakıcı et.al, 2003).

The second study performed by Çakıcı et.al (2003) noted that the child abuse and negligence is a crucial problem in North Cyprus. According to the data of this study from 2003, the rate of abused young people increases with the age of age. Similarly, the rate of obedience for psychological and physical abuse also significantly increases with age. While there is no significant difference between the possibilities to suffer from emotional, physical abuse and negligence in students and gender, the male students suffer from violence more than female students. The aggressive and naughty behaviours of boys are tolerated due to their gender, yet the same behaviours of girls are not accepted and might end up with abuse (Erol, 2007). The study indicated that there is no significant difference between the place of birth and abuse rate among students (Çakıcı et.al, 2003).

Pursuant to same study, the education levels of mothers does not show any difference in terms of child abuse while the education levels of father has an impact on the child abuse rates. The fathers of severely abused children have low level of education. There is a significant difference between the divorced parents, students who lost their mother or father or students living with both parents. Students living with both parents are subject to “violent physical abuse” at the minimum level. The study showed that the academic success rates of students suffered from abuse and negligence and their number of absence is lower, and a similar outcome was also generated through a study conducted by same people (Çakıcı et.al, 2003). In consideration with literature, the physically abused child shows symptoms such as over-controlled behaviours or aggressive reactions, unwillingness for physical contact and scared of people, retardation of speech and development, difficulties in no-skill works and at school, cognitive ability disorder and academic failure (Zoroğlu et.al, 2001; Taner and Gökler, 2004).

In 2009, SOS Children’s Village and KADEM conducted a screening policy with a population of all dwellings with children throughout T.R.N.C. The sample of study was selected with stratified random sampling method and

a group of 686 people was established. The results of study indicated the worrying level of child abuse in North Cyprus. Pursuant to this study, approximately 17% of children in North Cyprus cannot find regular opportunity to eat, 17.2% assaulted verbally on the streets and 8.2% suffered from physical abuse (SOS Çocukköyü Derneği, 2009). The research conducted by the Association of International Children's Centre and The Future of Our Future Foundation (2012) on the domestic abuse on children reflected that in general 73.4% of children experience domestic violence at least once in their lives and 67.9% in terms of emotional violence at least for once.

A study was conducted on 380 students from the 4th grade of 6 primary schools located in Nicosia for the second semester of 2009-2010 academic year. According to this study, male students are abused more than female students and low socio-economic level was also considered as a component in increasing physical abuse. Additionally, the findings showed that there is a significant relation between the number of children in a family and being abused by father (Ekdal, 2011). A study in Turkey indicated that 87.4% of mothers physically abuse and 93% emotionally abuse their children, and there is a relation with high number of children in the family (Pelendecioğlu and Bulut, 2009)

A descriptive study of Beyazıt (2015, p. 451) covered 20 sexual abuse cases in 2013-2014 under the scope of study. According to this study, 96.7% of cases are 12 years old and above and the perpetrators are all male. Sexual abuse varies with genders; females are affected by abuse with 3-10 times more and 80-95% of perpetrators are between the ages of 20-40, known by the victim, married with children (Yakut and Korkmaz, 2013)

The study of Berkmen and Okray (2015) is a study conducted to adapt Child Abuse Scale developed by Malik and Shah (2007) into Turkish language. The validity and reliability of scale were tested as a result of adaptation study performed on 300 children between the age group 8-12 from a primary and secondary school in Nicosia. The scale with 34 items measures the sub-dimensions as physical abuse, emotional abuse and negligence. The comparison of scale scores and some socio-demographical features reflected a significant difference between the age of children and their perception of abuse. Therefore, the abuse perception level increases with age. Another study mentioned that the child abuse decreases, as child gets older (Yalçın, Koçak and Duman, 2014). It points out that child might differentiate the behaviour as he/she gets older.

The study by Tatlıcalı and Berkmen (2017) reviewed the knowledge and awareness levels of pre-school teacher candidates about the emotional negligence and abuse. The study revealed that the emotional negligence/abuse awareness levels of male teacher candidates are lower than females, and their emotional negligence/abuse ignorance tendencies vary based on their education levels. Consequently, the tendency of avoiding abuse/negligence among the teacher candidates becomes higher as their education levels become higher. The isolation and tendency to threaten again vary with the education level and education levels of mothers. Pursuant to the study of Sözdüyar (1989) on the primary school teachers, emotional abuse comes as first in terms of behaviours acknowledged as child abuse by the teachers. As a parallel outcome, the studies indicate that the characteristics of children differ with higher socio-economic level; the environmental factors change accordingly and the situation of negligence diminishes. However, in addition to all this, emotional negligence/abuse has gained importance (Polat, 2007b).

Another study conducted in 2012 analysed the existing situation and laws about the Child Rights in North Cyprus. This study concluded that there are significant shortcomings regarding the laws on child rights and emphasized that despite of approval important convention on the child rights, the required legal arrangements have not been adopted yet. Some of the laws still have articles that cause severe child right violations through very old and out-dated provisions (Göynüklü, 2012). Considering the required actions, the most vital action would be the legal reforms. Additionally, actions to be taken can be listed as transposing the rights under the Convention on the Rights of the Children to the national laws, showing efforts to change the cultural and social values in the way of diminishing the violence against children and working to eliminate the economic inequalities (Acehan et.al, 2013).

5. Conclusion And Recommendations

The data generated through the studies on abuse conducted in North Cyprus until now were shared accordingly. The shortcomings were become clear in the light of such data. Particularly, the studies indicated that there is not determination towards the children between the years of 0-6 under the early education program as well as there is no study regarding the abuse of special need children. Studies regarding such fields should be conducted and the situation determination should be ensured in place. Moreover, the parents as the basic core building block for shaping the future of child, pre-school teachers including the early age program, who are directly in communication with child, classroom teachers, branch teachers, special education teachers and whole structure together with the administrators should be informed through in-service trainings; the children should be informed through informative meetings in accordance with their age levels, a support should be provided with visual components regarding how they will create self-protection dimension; the out-dated laws should be revised; the school-parent cooperation should be re-arranged about the subject matter within the institutional structure; the preventive training programs should be developed; the in-school guidance units should be established; the Ministry of National Education and Ministry of Health should conduct activities in cooperation with the related departments of

universities; and the events such as seminars, conferences etc. for raising awareness of community should be organised and the civil society organisation working in relation with the topic should take part more actively.

Hwaeryeon HAN

Inha University, The Republic of Korea
whitehyuky@hanmail.net

Abstract

The Convention on the Protection and Promotion of the Diversity of Cultural Expression was adopted in 2005, was ratified by Korea in 2010. After the Convention, Korea enacted the Act on Protection of Cultural Diversity (referred to as the "Cultural Diversity Act") on May 28th, 2014, in order to implement the Convention. The latter forms the legal basis for cultural diversity policy in Korea. This paper is to examine the changes in policy in relation to the Convention on Cultural Diversity and the Korean Act on Cultural Diversity and evaluate.

Introduction

With an influx of migrants from late 1980s, Korea has become a multicultural society. In relation to the development of policy toward social integration, Korea faces two issues. First, how immigrants will adapt to a new culture in Korea, and second, how Koreans will accept immigrants from various cultures. The Government has promulgated multicultural laws and policies for preventing problems and conflicts in a multicultural society and for social integration (Sang Woo Chong, 2016: 376). Korea adopted the Convention on the Protection and Promotion of the Diversity of Cultural Expression in 2005 and enacted the Act on the Protection and Promotion of Cultural Diversity (Act No. 12691) in 2014. The latter forms the legal basis for cultural diversity policy in Korea.

However, Korean society is not familiar with the concept of cultural diversity since it has historically seen itself as a country made up of a single (Korean) ethnicity. Despite societal norms that place a premium on respecting the elderly and the introduction of equal adult suffrage in 1948, prejudice against minorities such as women, children, the elderly, and foreigners is deeply rooted in society. Regional discrimination is also a serious problem. Now, with Korean unification an issue of growing importance, it is time to re-recognize the concept of cultural diversity. The purpose of this study is to examine the changes in policy in relation to the Convention on Cultural Diversity and the Korean Act on Cultural Diversity and evaluate.

Discussion Of Cultural Diversity

Culture includes everyone's life (Williams, 1869). Culture also reduces structural discrimination and socio-economic distinctions based on ethnicity, class, gender, religion, [and] disability (Arnesen, et al., 2008: 6-7). The "Our Creative Diversity" Report presents a new approach to the development of cultural and cultural policies, focusing on the creative possibilities of culture, other than protecting the culture (Obulgen, 2008: 114). Culture has also become the basis for social integration and sustainability. The intense discussion on cultural diversity began with responses to globalization and free trade. New alternatives have been sought after the position of different cultures in the United States, Western Europe and developing countries has changed and identified (Graber, 2006: 554).

The UNESCO General Assembly adopted, with the approval of 148 countries, The Convention on the Protection and Promotion of the Diversity of Cultural Expression after The Universal Declaration on Cultural Diversity (UNESCO, 2009: 50). The Convention affirms that "cultural diversity is a defining characteristic of humanity, Conscious that cultural diversity forms a common heritage of humanity, being aware that cultural diversity creates a rich and varied world, which increases the range of choices and nurtures human capacities and values". Cultural diversity is necessary for communities, peoples and nations.

Enactment Of Law In Korea For The Implementation Of The Convention

There were cultural diversity policies in Korea before the Convention. However, they were not referred to as "cultural diversity" policies. Policies were developed and enforced relating to traditional culture protection and globalization in 1970s. Policies of rights protection and prejudice prevention for the minority groups (disabled, women, and the elderly) also become mainstream. In the 1980s, policies for the protection of Korean public culture industry from free trade also appeared, and policies for migrants have emerged since the 1990s. Since the early 2000s, the number of immigrants has surged, from a small percentage in 1988, to 4.21% of the total population (or some 2.18 million foreign

residents) in January 2018 (Ministry of Justice). Immigration policies related to this increase in so-called “foreign residents” have been formulated as “multicultural policies”.

However, confusion has arisen as to the meaning of ‘multicultural policy’ and ‘cultural diversity policy’ as cultural diversity becomes more of an issue in Korea. After the Convention, Korea enacted the Act on Protection of Cultural Diversity (referred to as the “Cultural Diversity Act”) on May 28th, 2014, in order to implement the Convention. The Act contains 14 provisions, including the definitions of the Convention, provisions defining the duty of country and people, basic plans, committees, annual reporting, education, and professional training. As of 2018, 12 out of 17 municipalities have enacted an Ordinance on Cultural Diversity. As a result, cultural diversity policies have been implemented widely.

Cultural Diversity Policy In Korea

Cultural diversity policies from other countries are presented in The UNESCO Periodic Report. However, because the policy is implemented according to the situation of the country, policy is different in each country (Kim, 2017a: 48). To show that the Convention is being implemented in Korea, the cultural diversity policy classification should be adapted to the Korean situation. The classification of cultural diversity policy in Korea is below.

First, it is traditional culture policy. Traditional culture, which is also mentioned in the Convention, is the beginning of cultural diversity in Korea. Despite the difficulties experienced by Korea going through periods of colonization and war, a new government was introduced and the traditional culture policy was the first cultural policy. The Convention refers to the importance of traditional culture. Traditional cultural policies can be classified as protection, promotion, education, dissemination and succession, and museums.

Second, it is modern cultural diversity and arts. Efforts to improve the arts and creative requirement for cultural diversity are continuously expanding. Policy in this area recognizes not only the value of art in culture, but also in the promotion of diversity of cultural expression including artistic creation, enjoyment, participation, experience, and cyclical activities of consumption. It also emphasizes the importance of cultural diversity to ‘quality of life’, and also to fundamental ‘human rights’ (Ryoo, 2016: 41). Cultural identity should be preserved along with cultural characteristics in conjunction with cultural rights, protection of language and customs of minor ethnicities. Policies are categorized as artist and network formation.

Third, it is Cultural industry policy. The foundation of the Korean cultural industry has begun with the Basic Act on the Promotion of the Cultural Industry on February 8th, 1999. The Korean cultural industry has been developed and the cultural industry law has been revised and implemented. In the early days, the cultural industry was a major strategic industry in the country, and it has been changed in a rapidly changing environment, such as with the advancement of digital technology. Now, the cultural industry in Korea is changing according to the times.

Fourth, it is Immigrant policy. Based on the numbers of migrant workers (583,316 in June 2018, Korean Government Statistics) and marriage immigrants (155,255 in June 2018, Korean Government Statistics) since the 1980s, Korea has become a multicultural society. The Law on Employment of Foreign Workers (2003) and The Multicultural Family Support Act (2008) were enacted for immigrants to integrate into Korean society. However, in the early stage of migrant policy, policies for foreign workers were implemented based on economic interests. The migrant policy has gradually become more assimilative, and migrants have experienced discrimination and exclusion. Immigrant policy can be classified as foreigners/immigrants, defectors from North Korea, and compatriots.

Fifth, it is cultural welfare policy. Cultural welfare policy has narrowed the cultural gap and has provided many benefits to minorities. Until now, cultural welfare policy has been implemented for all citizens so that they could enjoy culture. Cultural welfare policy now focuses on minorities such as the underprivileged and low-income families in Korea. Cultural diversity, which emphasizes individual differences rather than ethnic or racial differences, is an important part of cultural welfare policy. Cultural welfare policies are focused on women, the elderly, poverty, children/adolescents, and people with disabilities.

Sixth, it is the importance of multicultural education or cultural diversity education. Cultural diversity education is aimed at understanding and respecting various cultures. Cultural diversity education changes perception and when their perception changes, people change. Respecting differences should begin with the indigenous people in the country. Therefore, cultural diversity education can be called civic education. Cultural diversity should be able to emerge in education through teacher education and curriculum including school education.

Lastly, it is international cooperation policy for UNESCO Cultural Diversity. Policy will create and support events, education and broadcasting programs to promote Korean culture. Korea will strengthen its global competitiveness by exchanging culture such as arts, music and history with various cities around the world and dispatch youth and youth leaders. Through international cooperation policies, it is possible to acknowledge and respect differences.

Evaluation Of Cultural Diversity Policy Of Korea

Korea's cultural diversity policy is based on Cultural Diversity expressed in the Convention. Cultural diversity policy is concentrated in the Ministry of Culture, Sports and Tourism. Cultural diversity policies such as the enactment of cultural diversity regulations are being implemented in central ministries and municipalities. The cultural diversity policy of Korea has the following characteristics.

First, after the arrival of multicultural society due to the increase of migrants, it became interested in the policy of cultural diversity rather than protection of traditional culture. Second, the concept of multicultural policy and cultural diversity policy have been confused as the immigrant policy has been defined as a multicultural policy. It means that cultural diversity policy is limited to the field of culture in immigration policy. Third, the meaning of education for cultural diversity is diminishing because multicultural education is narrowly understood as policies for marriage immigrants. Fourth, because immigration policy is implemented by various ministries, the functions of managing immigrant policies or multicultural policies are weak, and the concept of cultural diversity policy has become narrow. Fifth, due to lack of understanding about the concept of cultural diversity at the local government level, duplicate policy has appeared.

The interest of introduction and the production and enjoyment of minority cultures such as Asian cultures is continues to increase. However, due to the tendency to overlap with immigration policies, preserving Korean traditional culture or introducing Korean culture to immigrants may be mistaken for assimilation in a single national culture or multicultural society model. On the contrary, there is a certain concern about the increase of immigrants and refugees. This phenomenon stems from the lack of consensus formation that cultural diversity contributes to the development and sustainability of Korean and world culture.

Cocclusion

In Korea, there were policies of protection of traditional culture and Korean cultural contents before the Convention. However, it was not based on sustainable development or the Convention. Even after Korea adopted the Convention, cultural diversity policy is confused with multicultural policy and it is concentrated in the immigrant. The diversity of cultural expressions, including traditional cultural expressions, is an important factor that allows individuals and peoples to express and to share with others their ideas and value. So the policy should be implemented based on the Convention and includes cultural diversity. The limitation of cultural diversity policy in Korea is that cultural diversity policies are narrowly understood because of confusion between the concepts of cultural diversity policy and multicultural policy. The improvement is that the policy should clarify the concept of cultural diversity and have control tower to reduce confusion between cultural diversity policy and multicultural policy.

An Evaluation On Foreign Word Use: “Eti Wanted” And “Casper” Tv Advertising

Arzu KARAKURT KARABULUT

Öğr. Gör., Okan Üniversitesi MYO Pazarlama ve Reklamcılık Bölümü,
arzu.karakurt@okan.edu.tr

Abstract

When the relationship between language and advertisement is studied, it is clear that it shares a bond of being social and the biggest reason it is integrated is because they are each living entities. In order for both language and the concept of advertisements to remain vibrant, they have to be dynamic. The information age, human needs, and the advances in technology are signs that the period of change that is taking place in language and advertisements will continue. Naturally, as a result of this change, the relationship between language and advertisements will become stronger because language is the most effective means of communication and because in order to have an impact on society, advertisements have to use this important tool carefully. When it comes to being close to societies, it can find these opportunities through channels like television, the internet, social media etc. Advertisements, which influences societies; and as a result, cultures; has brought important issues along with it in its attempt to adapt to this change: Using Foreign Words.

The existence of foreign words that are used as a result of the desire to be like the West and which attempt to form an impossible integrated language through a different kind of jargon (broken language, slang), have influenced society. These words that we hear frequently on TV weaken language, which is considered a conduit of culture, by destroying the functionality of it. In this study, advertising copies have been studied linguistically and the effect of these foreign words on the language-culture bond has been analysed.

Key Words: Culture, The Turkish Language, Advertising, Advertising Discourses.

1.Introduction

As an important part of culture, language, which appears to us in various definitions; also appears to us as a factor that allows us to perceive and understand not only the present but also the past. Language, which could also be taken into account as a conduit for culture, provides many precedents regarding the mentality, structure, and lifestyle of the speakers of it. According to Uçok, since words are the building blocks of thought and since language is formed of words; then words are a creation of the minds of communities and a term that is given to the thought process of people. Language, is a social systematic whole, which allows us to convey our feelings and thoughts and which connects generations (Üçok, t.y.). As for culture; although it may be considered as all that humankind has created, it actually is the unique way in which each society lives, thinks, and behaves. The social behaviours and technical institutions belonging to a certain society are what make up ‘culture’ (Kafesoğlu, 1998; Göçer, 2013). Language unity is one of the main factors that a nation is made up of and just as we can attribute the existence of a society to language, we can also attribute its extinction to it. The famous philosopher Confucius emphasized the importance of language for a nation and its existence by saying, “... If I were to rule a country, the first thing I would do, undoubtedly, is to have a look at its language because if language is flawed, words cannot express thought properly. If thought is not expressed properly, then duties and services cannot be carried out as they should be. In places where duties and services are not carried out properly, norms, rules and culture breaks down. If norms, rules and culture breaks down, justice will lose its way. If justice loses its way, the dumbfounded people will not know what to do nor what awaits them. And it is for this reason that nothing is as important as language! (Trans. Başçetinçelik, t.y.).

While language and advertisements are two unseperable components, in today’s world advertising activities grow day by day. The biggest proof of this however, is the frequency in use of mass-communication mediums. Advertisements, which exist through language, is defined as the introduction of various goods, products, and services to target audiences and consumers for a determined fee. This is done via different channels like TV, newspapers, radio, billboards, magazines, the cinema and the internet. Advertisements, which are crucial to marketers, is aware of the fact that it needs to be engraved in people’s minds by the masterful use of language. It also makes full use of all the boons of language, knowing that language is the most important communications medium. Advertising, which is a motive mechanism and which needs new ideas and strategies, can have both positive and negative effects on consumers. Thanks to adverts, which consumers watch carefully; new things are learnt, all kinds of information about the product is gleaned, and information about the variety and brands of goods and services is acquired (The Ministry of Education Family and Consumer Services, 2012). However, apart from this positive aspect; advertising discourse, which builds the power of words by uniting them with the structural reality of language, affects language-the most valuable treasure of a nation- to a high degree and causes the structural integrity of the language to be damaged through the use of foreign words, slang and mispronunciation. When this case is studied linguistically, it proves that in advertising discourse, language is in the process of being polluted. As Mengü translates from Lull; “Individuals almost play with language. They shape it, exploit it, discover it, add various accents to it and sing with it. Therefore, while language truly constructs communication awareness

and functions as a glue that brings cultures together by forming common areas of meaning, it does not determine thought or behaviour. Language is a resource that enables the construction or deconstruction of culture” Lull, 2000; Trans. Mengü t.y.). Advertisements weaken language with the foreign words it harbours. Advertisements, which enable intercultural interaction however, frequently employ foreign words in their slogans. Foreign words, which are especially used despite the existence of their Turkish equivalents, become embalmed in the language after a while and the Turkish equivalents become obsolete. When language, which has its own rules and which can only develop within the framework of these rules; used in advertisements are studied; one observes that it disregards Turkish Grammar rules and Turkish vocabulary.

2.The Language, Culture And Advertisements Relationship From A Linguistic Perspective

Linguistics, which is a science, analyses languages in terms of grammar, phonetics, syntax etc. It also analyses words in terms of structure and meaning and it also involves pragmatics, which studies the relationship between speech acts and the people that comprehend them. Pragmatics is based on the context of language and what words signify to us. Vardar, who adapts Saussure’s timeless ‘Course in General Linguistics’ to the modern day, states that Saussure has created a universal epistemology. And that by creating a linguistic method, Saussure has approached language as a network formed by meaningful units or signs, which enable understanding and communication on various platforms. Vardar also states that Saussure places language within this framework. Thus, as Saussure puts forward, wherever there is meaningful units or signs that is where the linguistic method will prevail. This is because language is the most systematic and perfect medium compared to similar communications mediums. Linguistics offers the most appropriate theoretical framework that can be drawn on in explanations and the most practical approaches towards these kinds of phenomena (1998).

Linguistics is the study of things related to humankind. It approaches things from different perspectives and is in close contact with the other fields of humanities. All scientific methods that are approached from different perspectives prove that language is a system of systems. Saussure, who draws attention to the fact that semiology is on a social level, is the source of the understanding of signs in linguistics in the 20th century. He envisaged semiology as «a science that studies the life of signs within society». The Swiss linguist states:

“Semiology would show what constitutes signs, what laws govern them. Since the science does not yet exist, no one can say what it would be; but it has a right to existence, a place staked out in advance. Linguistics is only a part of the general science of semiology; the laws discovered by semiology will be applicable to linguistics and the latter will circumscribe a well-defined area within the mass of anthropological facts. Language is a system of signs that express ideas and is therefore comparable to a system of writing, the alphabet of deaf-mutes, symbolic rites, polite formulas, military signals, etc. But it is the most important of all these systems” (Trans. Barthes, 1979).

Apart from this approach, we encounter various works that follow different paths. It is also possible to come across more complex approaches other than Saussure’s semiotic/structuralist approach. Those that study the various connections between logic and language and metalanguage that enables us to achieve scientific knowledge from semiology, wait for the formation of conceptual sign systems. In this respect, the works of scholars like R. Camap, B. Russell, E. Cassier, A. Tarski as well as of Ch. Morris, come to mind (Barthes, 1979).

While linguistics studies these aspects of language, it also brings certain branching with it. According to Üçok, linguistics is a discipline that makes a comparison between all the signs in a language or language group and compares them to their form in other languages. It also draws conclusions from these manifestations. Thus, it is made up of many disciplines and deals closely with many of them. Since words come into existence through phonetic symbols, linguistics is a physical discipline (Üçok, t.y.). It has ties to many disciplines and has many subdivisions within itself. It has come into existence via humankind; it has feed all expectations and disciplines regarding humankind and has embraced social unity. It is as important as the importance of society since it is a cornerstone of the formation of society. It is a sign of humankind’s current and future existence. As a result, we would not be too wrong in claiming that it is the creator and the beginning of humanities. Sound formed words and words formed sentences, thus, language was able to be formed. This shows that linguistics is a physical science (Üçok, t.y.).

“Language is a nation’s most valuable commodity. Words are a language’s smallest unit as are sentences in speech. Since language individually connects each individual in society and since it is a bond made-of-steel left by our ancestors, then the traditions and mind-sets – in short – the cultures of communities are expressed in the languages of those communities. Thus, a nation’s language is one of the most reliable historical sources of a nation. It is a mirror on history. The fate and history of language unity

manifests in language and the transformations in language are nothing but a reflection of changes in that nation's history" (Üçok, t.y.).

The fact that linguistics studies languages in terms of grammar, phonology, syntax etc. and that it studies words structurally, meaningfully and performatively has been mentioned above. As a result of the works of many linguists, it has started to be studied in small units. Thus, by theorizing it, it is now easier to analyse. Roland Barthes is one of these people. He has published work in many areas such as the problem with ideology, the concept of a sign, the formation of a text, intertextuality, the importance of the process of reading, the gratification of a text, the difference between visual signs and verbal language, love, fashion, music, and movies. He has thought upon and in turn made others think upon all kinds of texts ranging from music to advertising copies. His aim is to form a link between linguistics and all other sciences, to continuously reproduce dominant meanings and correlate them to social, historical, and political events (İnal, 2003).

Barthes analysed all forms of linguistic and non-linguistic sign systems used with the purpose of communication as well as their communicative functions. He focused on what Saussure had skipped through the 'connotation' language model (İnal, 2003). Language is part of culture and it is possible to mention a 'connotative' language model when the effect of culture and language integrates within the individuality of signs. Connotation can be another set of signs in instances when the sign is not clear (Barthes, 1979). Naturally, this can only be explained through the cultural values of those using the language. In other words, connotation and myths are needed in order to understand and give meaning to the signifiers in language.

When the unbreakable link between culture and language, is looked at; in research conducted by Turkish language teacher candidates, which aimed, via metaphors, to find out the candidates' perception of the culture-language relationship; most of the 38 metaphors developed by the candidates turned out to be positive. As a result of the metaphors, it was realised that culture and language were inseparable and that language was very important in conveying culture into the future. The metaphors were grouped under nine categories and under the category 'whole-part relationship' it is touched upon how culture and language are two components that complete and need one another. Other than the 'inseparability' category, which denotes that these two terms are two main components that are intertwined, it also points to the fact that both act as 'mediums' for each other. Furthermore, the categories which draw attention to how they contribute to one another's efficacy in terms of 'functionality' and to the 'harmony' between them come into prominence (Göçer, 2013).

Advertisements, which display the relationship between culture and language for all to see, influence social culture especially through its use of language. Thus, it passes on all the details of the language-culture compound to the media. For example, Beer has been added to the McDonald's menu in Germany. In Chili, avocado is served instead of ketchup and mayonnaise. In another country, boiled rice is on the menu. And the doner kebab pizza at Dominoes pizza is perceived to be something that "only a Turk would do" (Serttaş Ertike, 2010). Then the thing that is wanted to be explained through all these practices is that language-culture and advertisements are values that are closely affiliated to each other.

3.The Use Of Foreign Words In Advertisements

The most effective factor in the magnificence that advertisements awaken in us is the language employed. If one takes a look at the different definitions given to advertisements, one can see that advertisements, which are important for both business managers and consumers, are an important medium of communication and an essential part of marketing communications (Serttaş Ertike, 2010).

"Advertising is a sector that is gradually growing in terms of its dimensions and costs. Furthermore, on the market also, businesses rapidly producing similar types of products and services are offering consumers many different products and services that are similar to each other and that can be substituted for one another whether it be in terms of mass-produced goods or services. Thus, its sole aim of transforming the market into an arena of competition was not too difficult to accomplish" (Topsümer ve Elden, 2015).

David Ogilvy, an important name in advertising, wrote down the rules of advertising in his works. Ogilvy, noted for his successful work in advertising, is as good a writer as he is an advertiser. Who especially draws attention to advertising copy penmanship, offers people that want to work in this area 10 pieces of advice on how to be a good advertiser and advertising copy writer:

- Read the Roman-Raphaelson book on writing. Read it three times.
- Write the way you talk. Naturally.
- Use short words, short sentences and short paragraphs.
- Never use jargon words like reconceptualise, demassification, attitudinally, judgmentally. They are hallmarks of a pretentious ass.
- Never write more than two pages on any subject.
- Check your quotations.
- Never send a letter or a memo on the day you write it. Read it aloud the next morning—and then edit it.

- If it is something important, get a colleague to improve it.
- Before you send your letter or your memo, make sure it is crystal clear what you want the recipient to do.
- If you want ACTION, don't write. Go and tell the guy what you want (Trans. Bişkin, 2011).

He especially notices the prominent mistakes that cannot go unnoticed and that are made beforehand and makes references to new generation advertisers. His ideas, write the way you talk, naturally, use short words, short sentences and short paragraphs and never use jargon words... They are hallmarks of a pretentious ass can be used to refer to the advertising going on in Turkey today. Similarly, the phrase "Everything stated in the text must be of value" acts as a warning that a lot of things stated in advertisements in today's world should not be employed. Mengü also puts forward the power of words in advertisements when she writes "advertisements are created through the combination of verbal and visual factors. Advertisement copy is not only comprised of signs, pictures, brands and all the visual factors; but it also includes sound and music. Thus, besides these factors, the slogans, catchphrases, and words used in advertisements become more prominent and the other factors more passive" (Mengü, t.y.).

In advertisements, these effective words are selected and used artfully. Advertisers especially, have equated advertisements with language and thus have provided marketing with the opportunity to flourish. It is obvious that both concepts are inseparable and that they are significant in terms of being a part of society. As they are both living things, they are integrated with one another. In order for the concepts of both language and advertisement to remain strong, it is necessary that they be open to change. Like the developments in globalisation, the information age, human needs, consumer trends and technology, language and advertisements experiences change very quickly. During this period of change, the mistakes in Turkish made in advertisements were recorded by The Association of Advertisement Creators (Reklam Yaratıcıları Derneği); and the use of foreign words in mass-communication tools was deemed the number one mistake (Türkçe Bilgisi, 2010). Today we can see that the names of many shops, radio stations, and TV channels are not Turkish; in fact, the names of individuals are also being chosen from foreign words and it is clear that the idolisation of the West increases day by day. These words, which we hear due to the idolisation of foreign words, do not disturb Turkish people. This situation that we face is trying to be normalised.

4. Purpose And Method

The use of foreign words, which is at the top of the list of mistakes made in the Turkish language, shall try to be shown via the analysis of advertisements slogan such as "*Wantedla Wan Wantedla*" and "*Layka Layk*". The fact that these uses form a threat to national unity shall also be attempted to be shown. In this respect, the first advertisement that will be analysed is the Eti Company's (a company in the Turkish food industry since 1962) "*Wanted*" chocolate advertisement. An analysis of the television advertisement of the "*Wanted*" chocolate brand, belonging to Eti, was conducted. The next advertisement that we will be analysing however, is the "*Atara Atar, Layka Layk*" (a slight for those who slight you, a like for those who like you) advertisement work of Casper, which is a Turkish brand known throughout the world and which manufactures computers and computer accessories. In the study of the effect of alienation on advertising language the existence of foreign words in the two advertisements that have been analysed has not gone unnoticed. Furthermore, the fact that phrases like "*Wantedla*" and "*Layka Layk*", which are used in the advertisements, are actually the English words "*like*" and "*wanted*" and that they have been transformed in an attempt to adapt them to Turkish, also, has not gone unnoticed.

5. Findings

5.1. Wanted TV Advertisement: "*Wantedla Wan Wantedla*"

A girl sitting in a park about to eat her "*Wanted*" chocolate is met by "*wanted*" girls and they start to sing. They tell her that she need not be coy and that she has the aura of a "*star*".

Girls: The spotlight awaits you, stop being coy. There's no need for you to be reluctant-t-t-t-t. You have the aura of a star-r-r-r-r-

"WANTEDLA WAN WANTEDLA"

"WANTEDLA WAN WANTEDLA"

After hearing these words from the girls, the girl eating her chocolate believes in herself and gets up on stage. Thinking herself her star, she starts to sing. She makes all on stage get off, grabs the microphone, and sings with an awful voice. As she sings, the people around her cover their ears and run away. Then the narrator begins:

Narrator: We cannot give you all you want in life; however, we can give you all you want from a chocolate bar. Crunchy, round, new "*wanted*". Just "*wanted*".

What is trying to be conveyed in the advertisement is that those that eat the "*Wanted*" chocolate bar emit the aura of a star and that eating the chocolate bar gives them courage. The girl in the advertisement eats her chocolate bar and despite her bad voice, by getting up on stage she shows courage. The foreign words in the advertising copy are "*star*" and "*wanted*". There is a Turkish equivalent of the word star and it is "*yıldız*". The meaning of

"*Wanted*" speaks for itself. In spite of there being Turkish equivalents of these two English words, Eti, a company of Turkish origin, chose to use foreign words in its advertisement.

Furthermore, Eti, who used the slogan "*Wantedla Wan Wantedla*", added a new mistake to language use. The English word is combined with the Turkish verb "-la, -le" to make the new verb "*Wantedla*". The name is transformed into an action. The resulting word is confusing and meaningless. When examined from the point of view of discourse and linguistics, it is seen that the structural rules are violated by emphasizing the variability of meaning. The advertisement produces a mixed and unintelligible word by adding a new one to the language usage mistakes.

The popular culture especially stands out with the dream of being a "star" when it is spoken to young people and encourages them. If we go out of Barthes' model, we live in an age where everyone has the chance to become famous by using consumer practices and media. Especially the fact that Instagram is viewed as a magazine program by young people and the number of rising followers reminds the following "phenomenon" status: "One day everyone will be famous for 15 minutes" (Andy Wahrol).

Therefore, without doing anything (without have a professional voice as a singer, without talent as an actor) occur an argument "be celebrity" and in this way "celebrity culture" is reproduced. This ad, which leads to language pollution (implicitly) by mistakes, indirectly opens the way for cultural degeneration.

5.2. Casper TV Advertisement: "*Atara Atar, Layka Layk*"

A band starts to sing in the street. Along with the other guys in the band, a young guy with a guitar is explaining, through song, that we should not get too hung up on things in life. Those in the street on the other hand are tapping their feet to the beat of the song. Then they start recording with their electronic devices and share the video on social media. The video quickly becomes viral. People watching the video at home, at work and on the road like the song and start to smile as they also tap their feet to the beat. And of course, all the while the jingle continues to play.

Young guy: Three, two, one (smiles and points) anddd...

Song: If you think it's not going to work, then don't bother. You mustn't let it worry you in the slightest. If you think it's not going to work, then don't bother. Don't worry about it all at all. Respond to a slight with a slight, to defiance with defiance, to a layk (like) with a layk. Respond to a slight with a slight, to defiance with defiance, to a layk (like) with a laykkkkk!

Reprise: Three two one! Respond to a slight with a slight, to defiance with defiance, to a layk (like) with a layk!

Narrator: As time passes and changes, a Casper is always in your life. It's your Casper! Own one or not. Casper. Your life. Your technology.

In its advertisement, Casper, a Turkish company, has determined young people interested in technology as its target demographic. The efficacy of the advertisement was more profound due to its use of fun young groups of people. Casper, which sells computers and their accessories, put all its products on display in this advertisement. This advertisement, which especially draws attention to how easily the conduits of social media can be used on Casper, has frequently used the word "*like*", which entered Turkish due to social media. By being used as "*layk*" in the advertisement, it has added another dimension to the language. Just like the "*Wantedla Wan Wantedla*" phrase used in the "*Wanted*" advertisement, the phrase "*layka layk*" has no equivalent in neither Turkish nor English. It neither fits into the structure of English nor of Turkish. This noun phrase, which can only be analysed under the term 'Turkification', has started to be used by young people, who are active social media users; and has awakened in marketers, whose target audience is young people, the urge to misuse the Turkish language.

The existence of these words, which are used as a result of wanting to be like the West and then in turn try to establish an impossible unity with the language through a different jargon (broken Turkish, slang), influence society. By destroying the functionality of the language, these words which we regularly hear on television advertisements actually pollute the language and damage the language-culture bond.

The presence of these words, which are used as the end result of the admiration to the west and which are trying to establish a unity with a different jargon, infects the society. Especially in the social media where virtual identities are staged, the profile who are alienated to their own selves become a kind of image indicators (Güzel, 2016: 87). Thus, by erasing all functionality of the language, it is actually damaging both language and culture, also points to the concept of digital culture.

Along with the development of the digital media, a unique culture is formed and, with Baudrillard's age of the objects, the lost of reality is expressed in the semantic reading through Casper advertisement. The subject of the Casper ad is about young people breaking out from real life moving to the virtual reality. Accordingly, new concepts like "*taglamak, layklamak, hashtaglemek*" frequently used in our lives have entered our life together with the digital world. The technology that creates new words, new concepts and new communication networks also feeds the consumption culture. This culture is concretized by the fact that the young individual publishers in the social media become an object of consumption. Being traceable from one end of the world to the other leads to the circulation of new cultural products and values. Therefore, young people who admire the West can easily

distinguish and adopt new trendy Western words. For this reason, the advertising writers quickly and comfortably use the new conception.

6. Discussion And Conclusion

In this study's theoretical and conceptual part, the linguistic relationship between language, culture, and advertisements were mainly examined through the approaches of Saussure and Barthes and it was discovered that the foreign words in advertisements can in no linguistic way become integrated. These non-Turkish words, which have been used in the advertising copies that we analysed in terms of the semiotical and structural approaches of Saussure and Barthes, have their equivalents in Turkish. This proves to us that advertisements disregard the undividable unity of language and that their only aim is to dazzle the society that they want to influence by using colourful and unusual terms; and promote 'consumer behaviour'. Whereas in fact, the idea that advertisements will have a stronger impact through the correct use of language is evident when David Ogilvy states: "You cannot bore people into buying your product. You can only interest them in buying it." What is trying to be stated is the power of words. The importance placed on language's power to get things done. Through this power; advertisements, which are undoubtedly the most important factor when it comes to the consumer becoming acquainted with the brand, have introduced us to various terms in the name of impressing the consumer. And as it is these terms have become a part of our lives and show no likelihood of disappearing i.e. "Hi", "bye", "thanks" etc.

If we take into consideration the fact that consumers, who today form the target audience of advertisers, are being bombarded with communication and are only reacting to a few of the many messages sent to them, then it can easily be stated that a great deal of meticulousness and professionalism is needed in every step of the advertising process (Topsümer ve Elden, 2015). Advertisements, which develop different approaches in order to influence the target audience, have damaged language and sociolinguistics. These differences, which emerge as a result of wanting to be like the West, destroy both the structure of the language and the language-culture bond. Sociolinguistics is a linguistic branch that studies all the phenomena that are based on the cause and effect relationship of the components that form the intersection of all things existing in the name of language and society (Vardar, 2002; Güven 2012). Culture however, is the sum of the material and moral values, a life-style that manifests over centuries through a nation's interests, perceptions, attitudes and behaviours, and a memory that internalizes the codes of the life-styles fashioned by a nation for centuries; and has been conveyed from generation to generation like an inheritance (Göçer, t.y.). Language is what makes this conveyance possible and in advertisements this conveyance has led society to misconceptions.

As we also noticed in the advertisements we analysed, phrases like "Wantedla Wan Wantedla" and "Layka Layk" etc. have been etched onto minds and these advertisements have implemented methods, which influence society. Today if we know immediately which product a person is talking about just by repeating this phrases, then the power of advertisements on society cannot be disregarded. Since the advertising copies and slogans being used have become infectious, it is also clear to see that television advertisements have been successful in terms of interaction. Thus, perhaps language's importance, not polluting its structural properties, and making people aware in this area ought to be at the top of the duties and responsibilities of advertisers. As a result, meaningless foreign words that cannot be explained by any term due to the Turkish languages structure would not be used and the Turkish language will not be exposed to the danger of pollution.

Abstract

Which methods will there be in seeking this with believing it to be life resource while we are leading a life? Somebody is pursuing this with believing that money and power belong to vitality. On the other hand, someone is living life according to this with believing that the adventure and the unknown world belong to energy. This study was begun from this question. A researcher has experienced a variety of healing and therapeutic techniques including integrative therapy in the meantime. These techniques are actually having great influence upon changing myself. Of course, the experience on this change is what has been developed after passing through the researcher's personally-embodied process, thereby being clarified to be a very subjective thought and judgment. Nevertheless, considering that all the experiences are begun from a human individual, the healing and therapeutic training courses that the researcher embodied in reality are considered to be capable of offering very crucial implication and clue even to therapists, who are taking this way, as well as to the researcher as an individual. First of all, what is thought to be a major variable in the process that the researcher proceeds with searching for the resource of life is to find out an implication of self-awareness on somatic sense and to develop this. Consequently, the purpose of this study is to classify the process of self-awareness on the body into three things such as ① healing touch in body-archive ② therapeutic dynamism in body and language ③ realization and developmental process in language and somatic sense according to the movement-based expressive art therapy that the researcher really experienced. Hence, the researcher in this study aims to suggest these three variables through the actual healing process and therapeutic experience that the U.S. Tamalpa Institute conducted from January 12th to 20th in 2018.

Introduction

The questions are very important as saying what does make me move in the healing and therapeutic process? and as what do I move by? It is so because these questions lead to finely feeling somatic sense in ourselves depending on body part in the healing process and to being capable of being aroused with being accompanied together the experiences and memories in life of being felt along with this. At this point, it is important for us as a human to behave with listening well to the external sound in gradually getting aging. But it will be considered to be significant more than anything to listen seriously to the internal voice in myself. If so, which methods will there be in seeing this with believing it to be life resource while we lead a life? Somebody is pursuing this with believing that money and power belong to vitality. On the other hand, someone is living life according to this with believing that the adventure and the unknown world belong to energy.

This study was begun from this question. As the researcher has experienced diverse healing and therapeutic techniques including integrative therapy in the meantime, these techniques are factually having a great impact on changing myself. Of course, the experience on this change is what has been developed after going through the researcher's personally-embodied process, thereby being disclosed to be a very subjective idea and judgment. Still, considering that all the experiences are begun from a human individual, the healing and therapeutic training courses that the researcher embodied in reality are considered to be capable of offering very critical implication and clue even to therapists, who are taking this way, as well as to the researcher as an individual. For a start, what is thought to be a major variable in the process that the researcher proceeds with looking for the resource of life is to discover an implication of self-consciousness on somatic sense and to develop this. Thus, this study aims to divide the process of self-awareness on the body into three things such as ① healing touch in body-archive ② therapeutic dynamism in body and language ③ realization and developmental process in language and somatic sense according to the movement-based expressive art therapy that the researcher experienced in reality. Hence, the researcher in this study aims to propose these three variables through the actual healing process and therapeutic experience that the U.S. Tamalpa Institute carried out from January 12th to 20th in 2018.

The Study

Literature text and body as a door and a passageway to memory archive.

The literature text, which comes to be listened through a therapist's voice in the process of adopting healing and therapy, is very important in this sense. That is because we can enter our own body through the text. In that sense, the body can be considered to be 'body-archive(Leibarchiv)' that contains our humans' life experiences and memories. Joachim Bauer named this as "memory of the body(Das Gedächtnis des Körpers)" and then thought that there is memory in the base of its agony when we suffer from a pain with an unknown cause. In other words, he considered that the pain of having lasted for a long time exercises power through meeting a strong opportunity at some points while remaining as 'epitaph' in the body. For instance, one scene in 『Breathing[Der Atem](1978)』, which is a short novel by Thomas Bernhard who is an Austrian playwright, not only stirred up the writer's memory of infancy in the body, but also could sympathize with body odor and warmth that can be felt in 'Grandfather's Room.' Especially, the paragraph of being felt comfort and safety while the narrator looks at grandfather's room and trifles could bring comfort and safety to the writer, too. In this way, the literature text is even a door to getting into the narrator's memory as to readers of reciting this, but is a passageway of entering the memory of the body in readers themselves of perusing it.

Aus dem Vorhaus, wo ich, aus Platzmangel und aus hier nicht näher zu erörternden, mir auch nicht vollkommen klaren familiären Gründen, mein Bett gehabt hatte, durfte ich, wahrscheinlich, weil allein der Anblick meines Zustandes eine solche Maßnahme als unbedingt und ganz einfach als selbstverständlich erfordert hatte, in das sogenannte Großvaterzimmer. Jetzt war es mir möglich, jede Einzelheit in dem Großvaterzimmer einer genaueren Betrachtung, ausgestreckt im Bett des Großvaters, jeden einzelnen ihm so lebensnotwendigen, mir auf die nützlichste Weise so vertrauten Gegenstand einer langen, ja ununterbrochenen Prüfung zu unterziehen(Bernhard, Der Atem 1978, p. 8).

Of course, the writing-material text that the therapist recites cannot give impression and sympathy to all people who participate in therapy. Yet, it is apparent that the viewpoints such as theme, image, situation, scene, family and relation in the text can bring the moment of a reason to all of us at any rate. It may naturally lead to thinking how important breathing is in the period of having a lot of fine dust in the atmosphere like these days. By the way, in case of the writer, the scene that the narrator feels the grandfather's body odor and lingering imagery with lying down on the bed of the grandfather who was admitted to hospital aroused very stable and comfortable feeling at the stage of introducing healing. Particularly despite the situation that even the narrator is confined to bed by fever, the relief and comfort that the speaker feels in the grandfather's room brought a connecting factor, which leads to recalling the writer's childhood.

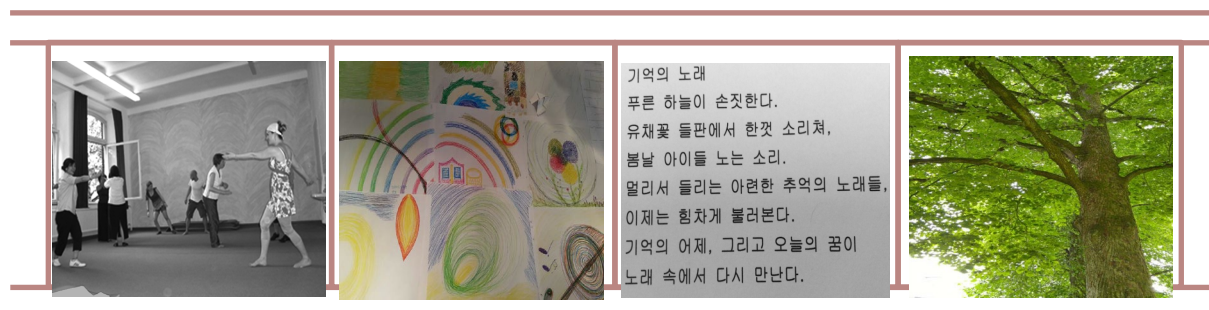

There are therapeutic function and application point of the literature text just at this point. That is to say, an author's own autobiographical elements are also melted in literature. But it is no exaggeration to say that all of our humans' common memories are contained at the same time. The memories, which were caused in this way, are very crucial healing variables of making the memory archive in the body work dynamically(Chae, 2015, p. 134). As the writer came to have time of experiencing my own body through Bernhard's narrator, and to have an opportunity of expressing senses by pain or region in the whole body, it can be considered to possibly have a special feeling about the shoulder area even among somatic senses. Accordingly, the writer could attempt to express movement focusing on the senses around the shoulders even out of my own body areas, to draw a body image of being captured through movement, and to describe this process through writing. This series of the process can be mentioned to be very critical factors to self-experience in the body-oriented therapy or the movement-based expressive art therapy. That is because of regarding this process itself as allowing the narrative in life to be possibly sublimated into aesthetic experience(Halprin 2018).

Findings

In this way, we, human beings, are leading a life with overlooking it in everyday life, but come to meet the moment of memory, which failed to be discerned for a long time, through five senses at some point. Especially, the body movement, which was met at the workshop of the movement-based expressive art therapy for the U.S. Tamalpa Institute, was being described and revived with numerous images and movements. This body movement could be re-experienced with verbal expression that ultimately meets with the moment of life after passing through the picture and image work. This process will be naturally considered to be what includes 'aesthetic function(ästhetische Funktion)' of containing the narrative in my own life. That is because this 'aesthetic function' itself can be regarded as evoking verbal message(Stierle 1996, p. 217).

In addition, the writer could embody an implication of breathing through the writing material in the healing and therapeutic process into three stages. ①-1. The healing touch in body-archive could be experienced. Owing to this, the body movement came to be free and smooth. ②-2. The therapeutic dynamism in body and language could be expressed by brief implementation. This made the writer available for experiencing new healing. ③-3. The realization and the developmental process in language and somatic sense could be known to be linked to the writer's

growth in body and mind. These results are possible because the writer experienced freedom in body through taking part in the movement-based expressive art process with open mind. Thus, this healing experience can be eventually considered to give the writer a meaning of body consciousness caused by “therapy method based on what is phenomenal and in-depth analytical[ein Verfahren phänomenologisch und tiefenhermeneutisch begründeter Behandlung](Petzold, Orth, 2017, p. 519.).”

[The process of movement-based expressive art therapy 1]

Conclusions

As the writer already clarified in the process of healing and therapeutic experience of the text, the human body is containing the narrative in life enough to have lived in the meantime. Regardless of what the narrative in such life is good memory or bad memory, our humans are expressed this narrative through a bowl called body. Of course, such body expression is described and again recorded finally with language, which is a human being's primary communication medium, namely, with spoken word and written language, after going through the shapes of movement dubbed motion and of image. This whole process corresponds to the self-experience contents of being carried out in the course of 'movement-based expressive art therapy.' Therefore, this study will be arranged the process that the writer participated in workshop of the movement-based expressive art therapy at the U.S. Tamalpa Institute last winter according to the writer's self-therapeutic feelings. In that sense, this study discloses that the writer's personal case record is not a universal case available for being applied to all participants. Nevertheless, considering that all the experiences are begun from a human individual, the healing and therapeutic training courses that the researcher embodied in reality will be able to offer very critical implication and clue even to therapists, who are taking this way, as well as to the researcher as an individual. Above all, what is thought to be a major variable in the process that the researcher proceeds with seeking the resource of life is to find out an implication of self-consciousness on somatic sense and to develop this. Hence, this study can be arranged the process of self-awareness in the body as the conclusion in about 3 things according to the movement-based expressive art therapy that the researcher actually experienced. First, the healing touch in body-archive may become a door and a passageway to our own life. Second, it is very crucial to change the healing narrative of body into the image and verbal resource. Third, the image and verbal narrative can ultimately bring vitality of leading to aesthetically feeling the life in 'now-here.' Hence, the writer could personally experience what the Tamalpa workshop course last winter leads to life of being sublimated and embodied into the aesthetic process dubbed body, image and verbal expression, resulting in being naturally opened the door to healing and therapy.

An Investigation Of Students' Motivation To Pursue Higher Education At A Czech University

Jitka VACULÍKOVÁ

Research Centre Tomas Bata University in Zlín Czech Republic

vaculikova@utb.cz

Abstract

Personally engaged study strategies focused on deep-level learning, internal fascination with the subject with a sense of its relevance, accomplishment in mastering it, and a sense of calling to it (DeLong & Winter, 2002) characterize intrinsically motivated students (Biggs, 1979; Janssen, 1996; Orsini et al., 2015). Intrinsic motivation can be long lasting and self-determined stemming from internal autonomy. On the other hand, making effort to foster students' intrinsic motivation can be slow with the need for a variety of approaches, special and lengthy preparations. However, previous findings show that increasing student success through instruction in self-determination (i.e., autonomy) better motivate students to learn at all educational levels, including those with disabilities (Ryan & Deci, 2000a). The aim of this paper was to investigate the type of motivation leading students to pursue higher education, and to describe the adaptation of the modified version of the Academic Motivation Scale (AMS), developed by Vallerand et al. (1989). This seven-point Likert-scaled instrument was designed to assess self-determination continuum and the types of motivation with their regulatory styles. The sample consisted of 467 university students in regular classroom settings enrolled at a Czech university. In EFA a 4-factor model was generated explaining 61% of the total variance. In this version, the questionnaire consisted of 16 items with Cronbach's α ranging from .82 to .60. The data proved a student's (F1) identified regulation, (F2) external regulation, (F3) amotivation, and (F4) intrinsic motivation to be strong predictors of students' motivation to pursue higher education. It was found out that amotivation showed a stronger negative correlation with identified regulation than with intrinsic motivation, which is between these two subscales on the self-determined continuum. Moreover, identified regulation showed a stronger positive correlation with intrinsic motivation than with external regulation, falling into the same external motivation and being placed towards non-self-determined behavior. These findings suggests that identified regulation represents a milestone on the self-determination continuum separating inner motives from external. Identified regulation itself was perceived by the Czech student as a part of intrinsic motivation rather than extrinsic motivation. Furthermore, the relationship between gender, age, GPA, year and field of study was further identified.

Introduction

Significance of an innate need to feel a sense of self-determination or personal causation was repeatedly tested (Deci & Flaste, 1996). Results of the stimulation indicated that those subjects who had, for example, competed on puzzle solving, displayed less subsequent intrinsic motivation than those who had simply been asked to do their best and solve these puzzles just for the fun of it. The experience of competition and pressuring students to behave in a particular way that leaves them feeling controlled kills a person's spirit and diminishes their feelings of self-determination. Questioning the quality and roles of self-determined and controlled behaviors in multidimensional perspective is a part of the Self-Determination Theory (SDT; Ryan & Deci, 2002). SDT was formulated in terms of four mini-theories sharing the organismic-dialectical metatheory and the concept of basic needs theory. Its primary focus is on the discussion between the growth-oriented human organism and social contexts that might support or undermine sense of self.

As shown in Figure 1, according to SDT a taxonomy of types of regulation from non-self-determined to a fully self-determined form of behavior representing autonomy exist as a continuum, arranged from left to right and motivation for the behavior changes in relation to whether it emanates from the self. At the left end, amotivation, is the state of lacking the intention to pursue an activity (Ryan & Deci, 2002). Amotivated individuals act passively with no sense of intending to do what they are doing. Extrinsic motivation, which is characterized by four types of regulation, lies between amotivation and intrinsic motivation and can be ordered along the self-determination continuum (Ryan & Deci, 2000b).

The lowest and the least autonomous form of extrinsic motivation is external regulation. Students holding this type of motivation are motivated to obtain rewards or avoid punishments. An external demand or a social environment can cause such behavior with externally perceived locus of causality. In introjected regulation an external regulation is at the phase of the beginning of internalization, however, is not truly accepted as one's own, i.e. as being part of the integrated self. Introjection-based behaviors are most likely chosen to attain ego enhancements

and feelings of worth. First, a more similar form of self-determined extrinsic regulation is identified regulation. Regulation through identification involves the evaluation of behavior as being personally valuable and important; although the aim of behavior is to achieve something. In this type of regulation, identification represents an important aspect of the process of transforming external regulation into the form of true self-regulation accompanied by a high level of perceived autonomy. Finally, there is integrated regulation, which is the most autonomous form of extrinsically motivated behavior. In this type of regulation, the previous identifications have been brought into congruence with the personal values, goals, and needs being part of the self. However, the behaviors are still considered extrinsic because the main goal of such a behavior is to attain personally important outcomes but not for their enjoyment or inherent interest. Following the continuum, the most self-determined form of regulation is intrinsic motivation. The state of behavior is for the pleasure and inherent satisfaction derived from it. Importantly, it is possible for individuals to take in a regulation at any point along the self-determination continuum. It means that one's behavior may change over time as a function of greater cognitive and ego development, and may get closer to the essence of self (Ryan & Deci, 2002).

Figure 1. Self-Determination continuum of motivation showing investigated types of motivation

In regard of the mentioned SDT, the Academic Motivation Scale (AMS) is one of the most used instruments (Vallerand et al., 1989). The scale was developed in the French-Canadian higher education environment and validated in various language settings, such as English (Vallerand et al., 1992; Cokley, 2000), French (Guay et al., 2003), Spanish (Orsini et al., 2015; Stover et al., 2012), Italian (Alivernini & Lucidi, 2008), Turkish (Karagüven, 2012), Greek (Barkoukis et al., 2008), and Malay (Caleon et al., 2015). The original version consists of 28-items that are divided into seven subscales, reflecting one subscale of amotivation, three subscales of extrinsic motivation (external, introjected and identified regulation), and three distinct subscales of intrinsic motivation (intrinsic motivation to know, to accomplish, and to experience stimulation). The psychometric characteristics of the AMS were widely tested indicating good internal consistency of α ranging between .83 to .86 (Vallerand et al., 1992).

With the respect of construct validity of the scales, a confirmatory factor analysis of the seven-factor structure provided good fit with the data fulfilled by the establishment of the correlation analysis. Specifically, Vallerand et al. (1993) expected that higher positive correlations will be found between the ordered subscales that fell next to each other on the self-determination continuum, with the highest negative correlation expected between those subscales lying on opposite ends. Thus, the subscales next to each other would have the strongest relationships which could weaken as distance becomes greater. However, these hypotheses were not fully supported empirically (Fairchild et al., 2005). For example, amotivation subscale had a stronger negative correlation with identified regulation than with intrinsic motivation to experience stimulation. Therefore, more research regarding the dimensionality of the scale is needed.

Since no coherent multidimensional instrument based on measuring student's different quality types of motivation exists in the Czech educational environment, the AMS selected and modified subscales' construct validity was assessed. The aim of the presented research was to investigate the type of motivation leading students to pursue higher education, and to describe the process of construct validity and internal consistency verification. First, an exploratory factor analysis (EFA) was used to explore the latent factor structure and to confirm construct validity of the scales. The number of important factors in EFA was based on a visual inspection of the Catell's scree plot that is examined for a natural break between the large eigenvalues and the remaining small eigenvalues, and a combination of the Kaiser-Guttman criterion. The principal component analyses (PCA) with the Varimax rotation was used with items loading over .30. The purpose of this setting is to make the orientation in the resulting structure more transparent. However, decisive was the meaningful interpretation of remaining factors. The scales' internal reliability by Cronbach's alpha was tested. Second, correlations among the motivation subscales assessing the self-determined continuum and correlations with GPA to test the predictive validity of the scales were examined. The final aim was to determine the overall average motivation and influence of the selected variables, i.e., age, gender, level and field of study.

Method

Participants

The research pool consisted of 467 university students from a medium-sized public university located in the southeast Czech Republic. All participating students were asked to participate on a voluntary basis and data was collected using a paper-pencil questionnaire in a regular classroom setting. The mean age of the sample was 22.25 ($SD = 1.7$) and ranged from 19 to 29 years. 29 (6.2%) males with an average age of 22.4 years (age ranged from 19 to 26 years, $SD = 1.94$) and 438 (93.8%) females with an average age of 22.2 years (age ranged from 20 to 29 years, $SD = 1.72$) participated on the study. Equally, one-third of respondents were full-time first year students (149, 31.9%) and second year students (150, 32.1%) in helping professions. 177 (37.9%) of students had chosen Social Education and 126 (27%) of students had chosen Preschool Teachers' Training for their future profession. A similar percentage of students (23.3%, 109) attended Healthcare classes and 55 students (11.8%) studied Philology. The distribution of gender, age, year and field of study is shown in Table 1.

Table 1: Demographic characteristics of the sample

Frequency	Gender		Age		Year of study					Specialization			
	male	female	19-21 years	22-29 years	1 st year Bc	2 nd year Bc	3 rd year Bc	1 st year Mgr	2 nd year Mgr	Social Education	Healthcare	Philology	Preschool Teachers' Training
n	29	438	184	278	149	150	86	39	43	177	109	55	126
%	6.2	93.8	39.4	59.5	31.9	32.1	18.4	8.4	9.2	37.9	23.3	11.8	27.0

Notes. Bc = Bachelor's degree. Mgr = Master's degree.

Measure

The selected modified scales of the Academic Motivation Scale (AMS; Vallerand et al., 1989) supported by self-determination theory were used to measure academic motivation. Selected items falling within the AMS subscales were translated into the Czech language with respect of the linguistic significance of the culture. For this reason, literal translation was not desirable. Additional items were developed by the author forming 4 subscales, each consisting of 4 items. Together, 16 items measured: (1) intrinsic motivation (IM) that is considered to be a global construct with four subdivisions: IM to know, IM to experience, IM to interest, and IM towards accomplishment (an example item is "Because I think that this activity is interesting"), (2) identified regulation (IDR), an example item is "Because I am doing it for my own good," external regulation (ER), an example item is "Because I am supposed to do it," and amotivation (AM), an example item is "There may be good reason to do this activity, but personally I don't see any." All items included the question "Why do you study university?," which was to be answered by selecting a response from a 7-point Likert scale ranging from 1 (*does not correspond at all*) to 7 (*corresponds exactly*). An average of the total scores on each subscale was taken as the mean score and was used for the further analysis.

Results

Data preparation and data analysis

Data cleaning was realized indicating occurrence of invalid responses, missing values or errors created during the data transcription. A non-significant Little's Missing Completely at Random test clarified the use of the EM algorithm to replace missing values with predicted values (Field, 2005). Since no coherent multidimensional instrument based on measuring student's different quality types of motivation exists in the Czech educational environment the scale's construct validity was assessed by exploratory factor analysis. The internal consistency was checked using Cronbach's alpha coefficient and item-total correlations. The preliminary assumptions of the employment of the parametric statistics using Kolmogorov-Smirnov and Shapiro-Wilk tests of normality were carried out suggesting violation of normality. Therefore, associations between variables (factors) were tested using Spearman (r_{rho}) correlations. To assess gender and age category differences the Mann-Whitney U test with the effect size (r) were conducted. To assess year of study and field of study differences, K-W ANOVA with eta squared (η^2) effect size statistics were computed. Moreover, means and standard deviations were calculated for each of the four-motivation subscale with the differences tested using Friedman test. Data were analyzed using SPSS v. 22.0.0 software.

Exploratory factor analysis

First, the Kaiser-Meyer-Olkin Measure of Sampling Adequacy was checked. KMO exceeded the recommended value of .60 (KMO = .85). Second, the Bartlett's Test of Sphericity reached statistical significance ($\chi^2(120) = 2679.91, p < .001$), supporting the factorability of the presented data.

The PCA with orthogonal Varimax rotation was conducted. The number of eigenvalues greater than 1 with the support of an inspection of the scree plot revealed four-factor solution as expected by theory. The new factor solution explained 61% of the variance (ranging from 32% to 7%). Moreover, new extraction with the fixed number of factors was checked yielding identical interpretable four-factor structures with items falling into the appropriate factor. The only exception was item 5 ("Because I want to learn something new") from the intrinsic motivation – to know, falling into the different factor showing that the motivation to learn something new during university studies was for students somewhat internal, valuing with a personal significance, but it was not entirely internal. Therefore, the item 5 might better correspond to external regulation in the form of identified regulation. The factor loadings of the extracted factors and their descriptive characteristics are displayed in Table 2.

Table 2: Rotated Component Matrix for PCA with Varimax Rotation on 4-factor Solution

No. Item*	F1	F2	F3	F4	<i>M (SD)</i>	α -i
14. Because I believe that this activity is important for me.	.75				4.66 (2.04)	.76
5. Because I want to learn something new.	.74				4.69 (1.89)	.78
7. Because I think that this activity is good for me.	.73				3.98 (2.01)	.76
3. Because I am doing it for my own good.	.72				5.15 (1.78)	.77
11. By personal decision.	.65				3.72 (2.11)	.80
6. Because it is something I have to do.		.78			3.36 (2.10)	.49
2. Because I am supposed to do it		.78			4.45 (1.83)	.57
10. Because I feel I have to do it.		.66			3.95 (1.95)	.64
15. Because I don't have any choice.		.44			2.35 (1.89)	.67
16. I do this activity, but I am not sure it is a good thing to pursue it.			.75		2.39 (1.74)	.74
4. I do this activity but I am not sure if it is worth it.			.70		3.91 (2.02)	.64
12. I don't know; I don't see what this activity brings me.			.65		3.37 (2.00)	.64
8. There may be good reason to do this activity, but personally I don't see any.			.54		2.55 (1.95)	.64
13. Because I feel good when doing this activity.				.83	5.10 (1.57)	.52
1. Because I think that this activity is interesting.				.43	4.99 (1.63)	.33
9. Because I can overcome myself.				.34	4.37 (1.82)	.54
Factor identification	IDR	ER	AM	IM		
Cronbach's alpha	.82	.67	.74	.60		
Number of items	5	4	4	3		
<i>M</i>	4.45	3.51	3.05	4.81		
<i>SD</i>	1.44	1.32	1.39	1.18		
Eigenvalue	5.1	2	1.5	1.2		
Explained variance in %	32	13	9	7		

Note: * = The items were provided to respondents in the Czech language. Presented English version is used for illustration purposes; *M* = Mean; *SD* = Standard deviation; α -i = Cronbach's alpha if the item is deleted.

The best explained variability of the 4-factor solution was in variable 13 ("Because I feel good when doing this activity") from the intrinsic motivation and variable 6 ("Because it is something I have to do") falling into the external regulation. Further inspection of the item-total correlations showed the correlation coefficients did not increase after deleting the items from the subscales. It means that measured items have the same meaning of the averaged measure and therefore are consistent with the particular factor.

Overall, the reliability of the 4-factor model fit covering 16 items reached good internal consistency. More specifically, **identified regulation** reached $\alpha = .82$ (5 items) in which behavior is valued and important with similar forms of self-determined regulation. However, the conduct still represents a behavior driven by extrinsic motivation (see Figure 1). The α coefficient for the **external regulation** covered by 4 items seems acceptable ($\alpha = .67$) and represents the lower form on the self-determined continuum driven by extrinsic motivation. Moreover, the behavior is motivated by reward or to avoid punishment. The **amotivation** scale consisted of 4 items reached $\alpha = .74$ representing the absence of intent interest to pursue an activity. The last scale, **intrinsic motivation** (3 items), represents the most self-determined form of behavior driven by the satisfaction. The α coefficient reached an acceptable value of .60. Taken together, EFA suggests that the general model representing a student's motivation to study at a university and enroll in the formal education system with four factors covered by 16 items is a reasonable representation of the data.

Correlation analysis

The internal relationship among the motivation scales supports the four-subscale factor structure based on the continuum pattern of the Self-Determination theory (Table 3). The higher form of the extrinsic motivation (i.e., identified regulation) subscale showed the strongest significant positive correlation ($r_{rho} = .530, p < .01, r^2 = 28\%$) with intrinsic motivation represented by intrinsic regulation. Identified regulation also significantly negatively correlated with amotivation ($r_{rho} = -.523, p < .01, r^2 = 27\%$) and with external regulation ($r_{rho} = -.143, p < .01, r^2 = 2\%$) belonging to lower self-determined behavior. Furthermore, amotivation positively correlated with external regulation ($r_{rho} = .394, p < .01, r^2 = 16\%$) and negatively correlated with intrinsic motivation ($r_{rho} = -.343, p < .01, r^2 = 12\%$). Lastly, the relationship between external regulation and intrinsic motivation was significantly negative ($r_{rho} = -.139, p < .01, r^2 = 2\%$). However, this explains only small proportion of the shared variance.

Table 3: Intercorrelations between the motivation scales and GPA

Subscale	IDR	ER	AM	IM
Identified regulation (IDR)	1.000			
External regulation (ER)	-.143**	1.000		
Amotivation (AM)	-.523**	.394**	1.000	
Intrinsic motivation (IM)	.530**	-.139**	-.343**	1.000
Grade point average (GPA)	-.399**	.173**	.278**	-.242**

Note: ** = $p < .01$.

Nevertheless, two deviations from the expected outcomes were found and should be highlighted. First, amotivation showed a stronger negative correlation with identified regulation ($r_{rho} = -.523$) than with intrinsic motivation ($r_{rho} = -.343$), which is between these two subscales on the self-determined continuum (see Figure 2). Second, identified regulation showed stronger positive correlation with intrinsic motivation ($r_{rho} = .530$) than with external regulation, falling into the same external motivation ($r_{rho} = -.143$) and being placed towards nonself-determined behavior. These findings suggests that identified regulation represents a milestone on the self-determination continuum separating inner motives from external. Identified regulation itself was perceived by the Czech students as a part of intrinsic motivation rather than extrinsic motivation.

Figure 2. Intercorrelations on the Self-Determination continuum

GPA of the students perceived during their studies significantly correlated with motivation scales as expected. The negative relationship was found between identified regulation ($r_{rho} = -.399, p < .01, r^2 = 16\%$) and intrinsic motivation ($r_{rho} = -.242, p < .01, r^2 = 6\%$). In other words, successful students with lower GPA reach higher levels of intrinsic forms of motivation. On the other hand, positive relationship was found between external motivation ($r_{rho} = .173, p < .01, r^2 = 3\%$) and amotivation ($r_{rho} = .278, p < .01, r^2 = 8\%$). This means the worse the GPA the higher the degree of the external motivation.

Selected variables differences

According to the results of the mean scores on the seven-point scale used in the survey, students reported that their primary reason to study the university was driven by intrinsic motivation ($M = 4.81, SD = 1.18$) representing self-determined regulation. That means that students study university for their own purposes and for the pleasure derived from it. On the other hand the students who scored the lowest on the amotivation scale ($M = 3.05, SD = 1.39$) showing desire show that students study at a university by their own motion and are not widely experiencing non-regulation in the form of amotivation. Furthermore, the differences in the mean values of the scales are statistically significant, $\chi^2(3, n = 467) = 307.96, p < .001$.

Female students scored significantly higher in identified regulation ($U = 4027.5, z = -1.74, p < .001, r = .15, \text{Mean difference} = .85$) and intrinsic motivation subscale ($U = 4564.5, z = -2.55, p < .01, r = .12, \text{Mean difference} = .67$) than males students. On the other hand, males reported higher score in amotivation subscale ($U = 4046, z = -3.28, p < .001, r = .15, \text{Mean difference} = .92$) indicating higher perceived level of influencing external reasons to study

university. Moreover, for amotivation, older students (19-21 years) reported significantly higher scores than younger mates ($U = 22638$, $z = -2.10$, $p < .05$, $r = .10$, *Mean difference* = .29). However, these findings represented a small-sized effect, meaning that these score differences are very small.

In contrast, all motivation subscales showed significant mean differences per year of study and field of study, with the exception of intrinsic motivation (Table 4). Intrinsic motivation was the highest reason to study university in all years of study, followed by identified motivation, external regulation and amotivation. First-year students had highest scores for identified regulation, which rolled up and down during the next years of study. For external regulation, second-year students reported the highest scores. Students in their final year of study reached the highest scores on amotivation and fourth-year students had highest scores for intrinsic motivation. Intrinsic motivation and identified regulation was also the highest for students in preschool teachers' specialization. For external regulation and amotivation, students in philology reported the highest scores suggesting that their tendency to study at university is more of an external origin.

Table 4: Means differences for groups of students deviated by year of study and field of study

Subscales	Year of study								Field of study							
	1 st year Bc	2 nd year Bc	3 rd year Bc	1 st year Mgr	2 nd year Mgr	F-test	p-value	Effect Size η^2	Social Education	Healthcare	Philology	Preschool Teachers'	F-test	p-value	Effect Size η^2

Note: Means on 7-point Likert scale ranging from 1 (does not correspond at all) to 7 (corresponds exactly) are displayed.

Discussion

The hypothesis that observed variables can be explained by four latent factors was investigated using EFA. Results of the analyses pointed out that the model fit with the expected level. Prior to performing PCA, the KMO value and the Bartlett's Test of Sphericity were checked supporting the factorability. The final four-factor solution covering identified regulation (5 items), external regulation (4 items), amotivation (4 items), and intrinsic motivation (3 items) accounted for 61% of the variance. Moreover, item 5 ("Because I want to learn something new") from the intrinsic motivation – to know, fell to another factor. Furthermore, reliability of the revised scales ranged from .60. to .82. More specifically, identified regulation reached $\alpha = .82$, external regulation reached $\alpha = .67$, amotivation reached α of .74, and intrinsic motivation reached $\alpha = .60$. Taken together, EFA suggests that the general model representing a student's motivation to study at a university and enroll in the formal education system with four factors covered by 16 items is a reasonable representation of the data.

The mixed evidence in support of AMS seven-factors of motivation is provided in the literature. The differences in the factor structure appear from minor (Alivernini & Lucidi, 2008; Karagüven, 2012; Orsini et al., 2015; Stover et al., 2012) to more significant (Fairchild et al., 2005) questioning the AMS underlying structure. For example, Smith, Davy and Rosenberg (2012) examined an alternative configuration of the AMS on a convenience sample of 2354 American business students. Exploratory factor analysis on the split sample (i.e., 1177 cases) reached a good model fit for a four-factor construct consisting of amotivation, external regulation, identified regulation, and intrinsic motivation. Confirmatory factor analysis and internal consistency of the item loadings on the reconfigured scale was checked on the holdout sample. Results repeatedly indicated good model fit for the four-factor construct. On the other hand, Caeon et al. (2015) supported invariant across gender and ability groups original seven-factor structure on 1482 Singapore secondary students using confirmatory factor analysis and correlation analysis with teacher autonomy support and academic engagement. However, it should be noted that the presented research assessed a modified version of the AMS and therefore does not represent a literal validation as represent aforementioned studies.

Discriminant validity of the subscales was further checked by calculating correlation coefficients. It was found out that amotivation showed a stronger negative correlation with identified regulation than with intrinsic motivation, which is between these two subscales on the self-determined continuum. Moreover, identified regulation showed a stronger positive correlation with intrinsic motivation than with external regulation, falling into the same external motivation and being placed towards non-self-determined behavior. These findings suggests that identified

regulation represents a milestone on the self-determination continuum separating inner motives from external. Identified regulation itself was perceived by the Czech student as a part of intrinsic motivation rather than extrinsic motivation. Similarly, Orsini et al. (2015) came across deviations from the predicted model in a dental sample of 989 Chilean undergraduate dental students. First, the stronger positive correlation between intrinsic motivation towards accomplishment and introjected regulation, which is farther apart when following the self-determination continuum. Second, amotivation showed also a stronger negative relationship with identified regulation than with intrinsic motivation. Likewise, Cokley (2000) noted that the correlations among the ordered subscales deviated from the pattern in the way of the strongest negative correlation found between amotivation and identified regulation. Cokley concluded based on his research that intrinsic and extrinsic motivation might not be as clear as SDT suggests.

According to the following results, Czech students reported being primarily motivated to study at university by intrinsic motivation, followed by the identified regulation, external regulation, and finally by amotivation. Such findings point to the autonomous profile of the students achieving self-regulated nature of their decision-making. Furthermore, the relationship between the type of motivation, age, gender, level and field of study was identified. With regards to gender differences, females had more autonomous self-determined profile than males, which is consistent with previous research (Baker, 2004; Smith et al., 2012; Vallerand et al., 1992). More specifically, female students scored higher in identified regulation and intrinsic motivation subscale. Intrinsic motivation, although reaching the highest level in all investigated groups, remained unchanged with the changing age of the students, year, and the field of study. Interesting was the development of amotivation according to the year of study. The first-year students had one of the lowest scores of amotivation together with fourth-year students. After finishing the first year of university a slightly increasing trend was recognized until the third-year of study with a decrease in the fourth year of study and slight final increase in the last year of study. The arising question contains findings of the reasons for reducing students' self-determined intrinsic motivation during the study. Did the lessons become monotonous or less practical and reduce students' interest? Further research could address this question. Nevertheless, these findings represent a small-sized effect, meaning that these score differences are very small. Additionally, the GPA of the students perceived during their studies significantly correlated with motivation scales as expected. However, students' performance is not always influenced only by motivation (Baker, 2004).

Despite the relevant findings, there are several limitations to the current study that should be acknowledged. First, the study represented the privilege of female students due to their majority in the helping professions. Second, the current findings apply only to Czech university students with similar demographic characteristics carried out in this study. Therefore, findings generalization to the entire population of university students would be irrelevant. Moreover, modified AMS subscales do not measure all dimensions of the self-determination continuum. However, the aim of this study was not a literal translation of AMS but to evaluate and validate the most appropriate regulatory styles covering amotivation, extrinsic and intrinsic motivation. A more subtle division of motivation styles was not necessary. Also, employment of the EFA can bring different results on the factor structure based on the researcher decision. Since the latent nature of the presented data was not known, this procedure is seen as adequate. Further, intrinsic motivation was considered to be a latent variable including intrinsic motivation to know, to experience, to interest, and intrinsic motivation towards accomplishment. Therefore, the mean score of the manifested variables was employed in the presented analysis. Lastly, future comparison of the results would be problematic due to the AMS scales modification that was done to better meet the aims of this study.

Conclusions

The aim of the presented research was to investigate the type of motivation leading students to pursue higher education, and to describe the process of construct validity and internal consistency verification. Discussed results contribute to the recent discussions on factorial structure of the self-determination continuum pattern as measured by the modified version of the Academic Motivation Scale (AMS), developed by Vallerand et al. (1989). Presented investigation suggests refinements of the subscales based on the further empirical research. More specifically, the position of the most self-determined type of extrinsic motivation on the self-determination continuum, i.e. identified regulation, seems to be inadequate within this sample of Czech university students. Therefore, following research involving large-sized sample could bring significant results explaining what significantly differs the factor structure.

Moreover, based on the investigated construct validity, discriminant validity, and internal consistency, tested factor structure of the modified AMS scales reflects the self-determination continuum. More specifically, the data proved a student's (F1) identified regulation, (F2) external regulation, (F3) amotivation, and (F4) intrinsic motivation to be strong predictors of students' motivation to pursue higher education with only one minor exception of item 5 ("Because I want to learn something new") from the intrinsic motivation – to know, falling into the identified

regulation. Furthermore, the hypothesis that Czech students are primary motivated by intrinsic motivation to attend the university was fully confirmed with the age, gender, GPA, level and field of study differences identified.

***An Investigation Of The Managerial And Cultural Values Adopted By The Managers In Universities**

Nuray YILDIRIM

Faculty of Education, Afyon Kocatepe University
nrytas@hotmail.com

Abstract

The purpose of this study was to determine the managerial and cultural values adopted by managers working in universities and whether these values differ according to gender, age, professional experience, managerial experience, and their faculties. This study was conducted as a survey. The participants of this study were composed of 100 deans, vice deans, and heads of departments in Afyon Kocatepe University. Study data were collected using the Managerial and Cultural Values Adopted by the Managers Scale developed by Turan, Durceylan and Şişman (2005). This study showed that university managers adopted feminine values more commonly, were closer to a collectivist value dimension, the power distance was higher, and ambiguity avoidance was lower.

Keywords: *Manager, University, Values.*

Introduction

Value is described as an abstract measurement that promotes knowledge, the usefulness of something, or its price (Turkish Language Association). Value is described as a tendency to prefer a certain situation to another. Values are understandings that source and judge behaviors (Erdem, 2003). Values refer to concepts which are given importance, preferred and wanted to be achieved and realized in a society (Turan, Durceylan, and Şişman, 2005). Each society has different values based on its culture. In this respect, value is one of the basic elements that shape people's behaviors. Humans are an entity that produce value and regulates and interprets their own world according to these values (Şişman, 1995). Therefore, based on the individuals' protection or ignorance of values in a society, they are either lost or transferred to the next generations. The persistence and permanence of values for years depends on their internalization and general acceptance (Akbaba-Altun, 2003).

Individuals in a society adjust their behaviors and expectations according to values. At the same time, values provide a legal identity to an organization's purpose, duties, authorities, and responsibilities (Sağnak, 2005). Although the people who form an organization have similar values to the culture they live in, their values differ. People with differing values have to balance their values and the organization's values to be able to achieve the purposes of the organization and make themselves happy. From the perspective of managers, recognition of other values and norms existing in the organization may provide them with multiple benefits. When those values are known, the members' behaviors can be predicted and precautions can be taken to correct those behaviors when necessary (Şişman, 2002).

This study used the "Managerial and Cultural Values Adopted by Managers Scale" developed by Turan et al. (2005) based on Hofstede's four value dimensions. Hofstede's model's dimensions on cultural values are as follows (Turan et al., 2005):

1. Femininity-masculinity dimension: Refers to the roles attributed to females and males. In societies where feminine values are dominant, there are sincere and warm relationships. Conversely, in societies where masculine values are considered as dominant, values like competition, success, and ambition are more commonly observed.
2. Individualist-collectivist dimension: This dimension shows whether people in society prefer to act as individuals or members of society. In individual-centered societies, the individual tends to consider himself and his benefits before the organization. However, for people with collectivist values, the organization's benefits are more important than their own.
3. Power distance dimension: This dimension refers to the level of acceptance or refusal of the differences or inequalities in a social system by the members. A great distance from power will make employees more dependent on their supervisors in organizations. In societies with lower power distance, the inequality between managers and employees is minimized.
4. Ambiguity avoidance dimension: This dimension refers to what extent the members of a society or culture avoid ambiguity. In organizations where the avoidance of ambiguity is strong, individuals are rule-centered. In societies where avoidance of ambiguity is weak, the rules may be stretched and there is no need for over prescriptivism.

According to Turkish Higher Education Law No. 2547, a university is a higher education institution with scientific autonomy and public legal entity in which higher levels of education, scientific research, publication, and consultancy activities are conducted. Universities are composed of faculties, colleges, and similar institutions and

departments. Higher education institutions have the function of producing solutions for the problems of the society and humanity besides the function of increasing human capital, scientific research, scientific accumulation protection, dissemination and development (Güçlüoğlu, 1996). Since universities are value-based organizations, the values adopted by managers are also important in these institutions and will contribute to the literature. In this respect, the purpose of this study was to investigate the managerial and cultural values adopted by the managers in universities. In line with this purpose, the sub-purposes of the study are as follows.

To investigate whether the managerial and cultural values adopted by the managers in universities:

1. differ according to gender.
2. differ according to age.
3. differ according to professional experience.
4. differ according to managerial experience.
5. differ according to faculties.

Methodology

This was a survey study. A survey study reveals the beliefs, views, characteristics, and past or current behaviors of the participants (Neuman, 2007). The participants of this study were composed of 100 deans, vice deans, and heads of departments in Afyon Kocatepe University. Table 1 gives background information of the participants including their gender, age, professional experience, managerial experience, and their faculty.

Table 1. The distribution of participants' demographics

Data Collection Tool

Study data were collected using the Managerial and Cultural Values Adopted by the Managers Scale that was developed by Turan et al. (2005). The scale was composed of 30 items and used a 5-point Likert type scale. The scale had a four-dimensional structure of "Values shared by managers on femininity-masculinity dimension",

“Values shared by managers on individualism-collectivism dimension”, “Values shared by managers on power distance dimension”, “Values shared by managers on ambiguity avoidance dimension”. The Cronbach’s Alpha internal consistency of the scale was calculated to determine the reliability of the scale, and it was found as 0.80.

The Confirmatory Factor Analysis (CFA) was conducted for the scale in order to ensure the construct validity of the scale. CFA is a method used to determine an existing theory (Matsunaga, 2010). At the end of the CFA, the scale was found to have a four-factor structure as in its original form and the following results were obtained $\chi^2 = 752.52$; $df = 399$; $\chi^2/df = 1.8886$; RMSEA = .095. Point one zero (.10) or a lower result is sufficient for fit in the results obtained from RMSEA. A χ^2/df ratio between 2 and 5 references a good fit and lower than this refers to a perfect fit (Jöreskog and Sörbom, 2001). When the goodness of fit values of the scale were investigated, the scale was found as acceptable. Additionally, at the end of the reliability analysis, the Cronbach’s Alpha value was found as 0.70.

The one-sample Kolmogorov-Smirnov Test was performed to investigate the distribution of data in the study and the coefficient of skewness was calculated. As seen in Table 2, an analysis of the skewness coefficients showed that the factors have a normal distribution although the data appears to not be normally distributed in each factor according to the Kolmogorov-Smirnov test data. If the skewness coefficient is between the $-1 < SC < 1$ limit, it can be interpreted that data does not show any important deviation from a normal distribution (Büyükoztürk, 2007; p. 40).

Table 2. The results of the one-sample Kolmogorov-Smirnov test and skewness coefficients

Factors	<i>n</i>	<i>p</i>	<i>S.C.</i>
Femininity-Masculinity	100	.000	.852
Individualism-Collectivism	100	.033	.418
Power distance	100	.002	-.445
Ambiguity Avoidance	100	.004	.198

Findings

Table 3 shows the mean scores and standard deviation values of factors regarding managerial and cultural values adopted by managers in universities.

Table 3. N, X and SD Values of managerial and cultural values adopted by managers in universities

Factors	N	Minimum	Maximum	X	sd
Femininity-Masculinity	100	1.13	3.75	2.22	.49
Individualism-Collectivism	100	2.22	4	2.89	.34
Power distance	100	1.71	4.43	3.36	.53
Ambiguity Avoidance	100	2	4	2.86	.40

According to Table 3, the mean score in femininity-masculinity values of 2.22 revealed that the managers in universities mostly agree on feminine value statements. Therefore, university managers adopted feminine values more. The 2.89 mean score in individualist-collectivist value dimension illustrates that university managers are slightly closer to the collectivist value dimension. The 3.36 mean score in power distance value expression reveals that the university managers agree on high power distance value statements. The 2.86 mean score in ambiguity avoidance value statements shows that the university managers tend to use weak ambiguity avoidance value statements.

Table 4 presents the results of an unpaired t-Test implemented to determine whether the managerial and cultural values adopted by university managers differed according to gender.

Table 4. t-Test according to the gender variable

Dimensions	Gender	N	X	S	SD	t	p
Femininity-Masculinity	Female	14	2.07	.301	98	1.212	.228
	Male	86	2.24	.518			
Individualism-Collectivism	Female	14	2.92	.327	98	.322	.748
	Male	86	2.89	.344			

Power Distance	Female	14	3.29	.593	98	.564	.574
	Male	86	3.37	.521			
Ambiguity Avoidance	Female	14	3.01	.431	98	1.557	.123
	Male	86	2.83	.393			

When the data in Table 4 was investigated it was observed that the managerial and cultural values adopted by university managers revealed no statistically significant difference in all dimensions according to genders ($t_{(98)}=1.212$; $t_{(98)}=.322$; $t_{(98)}=.564$; $t_{(98)}=1.557$, $p>.05$). Thus, the female and male university managers adopted similar managerial and cultural values in all dimensions.

Table 5 presents the results of a One-Way ANOVA Test implemented to determine whether the managerial and cultural values adopted by university managers differed according to age.

Table 5. ANOVA Test results according to the age variable

Dimensions	Age	N	X	S	F	p
Femininity-Masculinity	31-35	10	2.42	.627	2.016	.098
	36-40	24	2.03	.355		
	41-45	20	2.16	.534		
	46-50	27	2.24	.471		
	51 or more	19	2.38	.516		
Individualism-Collectivism	31-35	10	2.86	.314	.212	.931
	36-40	24	2.92	.346		
	41-45	20	2.93	.392		
	46-50	27	2.90	.330		
	51 or more	19	2.84	.330		
Power distance	31-35	10	3.67	.350	1.613	.177
	36-40	24	3.47	.574		
	41-45	20	3.26	.566		
	46-50	27	3.27	.394		
	51 or more	19	3.28	.633		
Ambiguity Avoidance	31-35	10	3.03	.489	.559	.693
	36-40	24	2.85	.364		
	41-45	20	2.82	.410		
	46-50	27	2.86	.366		
	51 or more	19	2.82	.451		

When the data in Table 5 was investigated it showed that the managerial and cultural values adopted by university managers did not reveal any statistically significant difference in any of the scale dimensions ($F_{(4,95)}=2.016$; $F_{(4,95)}=.212$; $F_{(4,95)}=1.613$; $F_{(4,95)}=.559$, $p>.05$). Consequently, the managerial and cultural values adopted by university managers were similar in different age groups in all dimensions.

Table 6 presents the results of the One-Way ANOVA carried out to determine whether the managerial and cultural values adopted by university managers revealed any statistically significant difference according to professional experience.

Table 6. ANOVA Test results according to the professional experience variable

Dimensions	Professional Experience	N	X	S	F	p
Femininity-Masculinity	1-5 years	4	1.97	.312	1.090	.371
	6-10 years	11	2.31	.571		
	11-15 years	20	2.07	.404		
	16-20 years	16	2.14	.591		
	21-25 years	29	2.34	.452		
	26 years or more	20	2.27	.531		
Individualism-Collectivism	1-5 years	4	2.50	.192	2.587	.031 (1-5/16-20)
	6-10 years	11	2.92	.311		
	11-15 years	20	2.89	.248		
	16-20 years	16	3.10	.468		
	21-25 years	29	2.84	.248		
	26 years or more	20	2.87	.385		
Power distance	1-5 years	4	3.39	.741	.627	.680
	6-10 years	11	3.44	.721		
	11-15 years	20	3.49	.438		
	16-20 years	16	3.38	.445		
	21-25 years	29	3.33	.508		
	26 years or more	20	3.21	.570		
Ambiguity Avoidance	1-5 years	4	2.79	.370	.921	.471
	6-10 years	11	3.01	.456		
	11-15 years	20	2.86	.398		
	16-20 years	16	2.83	.422		
	21-25 years	29	2.91	.402		
	26 years or more	20	2.72	.360		

The data in Table 6 showed that there was a significant difference in the managerial and cultural values adopted by university managers regarding individualism-collectivism dimension according to professional experience variable ($F_{(5,94)} = 2.587$, $p < .05$). The mean score of the answers given by university managers participants with 16-20 years of experience ($X=3.10$) revealed the highest mean score, and it was followed by participants with 6-10 years of experience ($X=2.92$), 11-15 years of experience ($X=2.89$), 26 years or more experience ($X=2.87$), and 1-5 years of experience ($X=2.50$). A statistically significant difference between the participants with 1-5 years of experience and 6-20 years of experience exists when the differences are investigated.

Evaluating the data in Table 6 showed no statistically significant difference in any of the dimensions except for professional experience dimension ($F_{(5,94)} = 1.090$; $F_{(5,94)} = .627$; $F_{(5,94)} = .921$, $p > .05$). The managerial and cultural values adopted by the participants are similar to each other for all dimensions except for individualism-collectivism dimension. Table 7 presented a One-Way ANOVA Test used to determine whether the managerial and cultural values adopted by university managers revealed any difference in managerial experience.

Table 7. ANOVA test results according to managerial experience variable

Dimensions	Managerial Experience	N	X	S	F	p
Femininity-Masculinity	1-5 years	45	2.23	.565	.959	.434
	6-10 years	29	2.12	.408		
	11-15 years	13	2.29	.416		
	16-20 years	10	2.44	.534		
	21 years or more	3	2.00	.000		
Individualism-Collectivism	1-5 years	45	2.89	.374	.731	.573
	6-10 years	29	2.94	.327		
	11-15 years	13	2.94	.300		
	16-20 years	10	2.78	.287		
	21 years or more	3	2.70	.257		

Power distance	1-5 years	45	3.49	.476	1.846	.127
	6-10 years	29	3.25	.566		
	11-15 years	13	3.24	.575		
	16-20 years	10	3.37	.491		
	21 years or more	3	2.90	.577		
Ambiguity Avoidance	1-5 years	45	2.92	.395	.730	.573
	6-10 years	29	2.76	.390		
	11-15 years	13	2.86	.359		
	16-20 years	10	2.87	.537		
	21 years or more	3	2.83	.289		

Table 7 illustrated no statistically significant difference according to the managerial experience variable in any of the dimensions ($F_{(4,95)} = .959$; $F_{(4,95)} = .731$; $F_{(4,95)} = 1.846$; $F_{(4,95)} = .730$, $p > .05$). University managers with different managerial experience adopted similar managerial and cultural values.

Table 8 shows the results of One-Way ANOVA Test which was carried out to determine whether there was any significant difference in the cultural and managerial values adopted by university managers according to the faculties.

Table 8. ANOVA test results according to the faculty variable

Dimensions	Faculty	N	X	S	F	p
Femininity-Masculinity	Education	12	2.18	.618	.723	.671
	Science and Literature	22	2.14	.516		
	Engineering	14	2.40	.433		
	Veterinary Medicine	15	2.17	.497		
	Economics and Managerial Sciences	13	2.12	.222		
	Tourism	3	2.37	.545		
	Technology	7	2.34	.443		
	Fine Arts	6	2.02	.215		
	Islamic Studies	8	2.41	.807		
Individualism-Collectivism	Education	12	2.85	.403	.815	.591
	Science and Literature	22	3.00	.450		
	Engineering	14	2.90	.252		
	Veterinary Medicine	15	2.81	.329		
	Economics and Managerial Sciences	13	2.96	.274		
	Tourism	3	2.70	.170		
	Technology	7	2.79	.290		
	Fine Arts	6	2.98	.237		
	Islamic Studies	8	2.79	.281		
Power Distance	Education	12	3.40	.541	.524	.016 ISF-SLF, Tourism, Vet.EA, FAF
	Science and Literature	22	3.35	.458		
	Engineering	14	3.42	.378		
	Veterinary Medicine	15	3.21	.497		
	Economics and Managerial Sciences	13	3.11	.529		
	Tourism	3	3.24	.359		
	Technology	7	3.65	.487		
	Fine Arts	6	3.05	.933		
	Islamic Studies	8	3.93	.241		
Ambiguity Avoidance	Education	12	2.87	.370	2.057	.048(SL F-Tech)
	Science and Literature	22	2.64	.314		
	Engineering	14	2.89	.311		
	Veterinary Medicine	15	2.98	.422		
	Economics and Managerial Sciences	13	2.90	.337		
	Tourism	3	3.00	.764		
	Technology	7	3.19	.531		

Fine Arts	6	2.94	.310
Islamic Studies	8	2.67	.454

The data in Table 8 exhibits a statistically significant difference between the managerial and cultural values adopted by university managers and their faculties ($F_{(8-91)} = 2.524$, $p < .05$). The university managers' answers regarding power distance dimension indicated that those in Islamic Studies Faculty had the highest mean score ($X=3.93$) followed by the members of Technology ($X=3.65$), Engineering ($X=3.42$), Education ($X=3.40$), Science and Literature ($X=3.35$), Tourism ($X=3.24$), Veterinary Medicine ($X=3.21$), Economics and Managerial Sciences ($X=3.11$), and Fine Arts ($X=3.05$) faculties. Interpreting the power distance dimension shows a statistically significant relationship between university managers who are members of Islamic Studies Faculty, and Science and Literature, Tourism, Veterinary Medicine, Economics and Managerial Sciences and Fine Arts Faculty members.

When the data in Table 8 was investigated, the ambiguity avoidance dimension of the managerial and cultural values adopted by university members revealed statistically significant differences according to their faculties ($F_{(8-91)} = 2.057$, $p < .05$). When the mean score of the university managers' answers was examined, the Faculty of Technology was found to have the highest mean score ($X=3.19$) followed by Tourism ($X=3.00$), Veterinary Medicine ($X=2.98$), Fine Arts ($X=2.94$), Economics and Managerial Sciences ($X=2.90$), Engineering ($X=2.89$), Education ($X=2.87$), Islamic Studies ($X=2.67$), and Science and Literature ($X=2.64$). A statistically significant difference between the university managers who are members of Science and Literature Faculty and the participants who are members of Faculty of Technology was emphasized.

The data in Table 8 reveals no statistically significant difference in femininity-masculinity and individualism-collectivism dimensions according to their faculties ($F_{(8-91)} = .723$; $F_{(8-91)} = .815$; $p > .05$). The managerial and cultural values adopted by university managers in different faculties were similar in femininity-masculinity and individualism-collectivism dimensions.

Conclusions, Discussion, And Implications

In this study, the mean scores and standard deviation values toward the data obtained were investigated first. The findings concluded that managers adopted feminine values more. The results of the study by Turan et al. (2008) was consistent with the results of this study since they also found that university managers adopt feminine values. Additionally, it was observed that university managers were closer to the collectivist dimension. Turan et al.'s (2005) study revealed that the managers were closer to the collectivist values, which is also consistent with the findings of the present study. Additionally, it is found that university managers had a high distance of power. Similarly, Turan et al. (2005) found in their study that in general, the managers agreed on statements with high power distance. Additionally, the results of this study revealed that the university managers tended to use statements in which ambiguity avoidance is weaker. The results of the study by Turan et al. (2005) indicated that not all managers were rule-centered, and thought that ambiguous situations increased the danger and risk possibility in their institutions.

Secondly, this study investigated whether the managerial and cultural values adopted by university managers revealed any statistically significant difference according to gender, age, professional experience, managerial experience, and their faculties. The findings concluded that university managers with different genders adopted similar managerial and cultural values in all dimensions. According to the findings of Turan et al.'s (2005) study, there was no statistically significant difference between the managers' preference of feminine or masculine values. In addition, their study's views regarding power distance, and views on ambiguity avoidance and gender variable were found to be partially consistent with this study.

Further, the managerial and cultural values adopted by university managers in different age groups revealed similar results in all dimensions. The study by Turan et al. (2005) revealed partially consistent results with this study as they found a statistically significant difference between the university managers' preference of feminine or masculine values and views on the ambiguity avoidance and age variable.

When the individualist-collectivist dimension of managerial and cultural values adopted by university managers was investigated according to professional experience, it was found that university managers with 1-5 years of experience adopted more collectivist values compared to the university managers with 16-20 years of experience. Along with this, the managerial and cultural values adopted by managers with different levels of experience revealed similar results in femininity-masculinity, power distance, and ambiguity avoidance dimensions.

An investigation of the change in the managerial and cultural values adopted by university managers according to experience showed that the university managers with different lengths of experience revealed similar results in all dimensions of managerial and cultural values. The results of Turan et al.'s (2005) study showing that managers with different managerial experience had similar managerial and cultural values were consistent with the results of this study.

When the power distance dimension of managerial and cultural values adopted by university managers was investigated according to their faculty, it disclosed that the university managers who are members of the Islamic Studies Faculty revealed values of higher power distance compared to members of Science and Literature, Tourism, Veterinary Medicine, Economics and Managerial Sciences and Fine Arts Faculties. University managers in Islamic Studies Faculty think that the managers are privileged, their decisions are right and hierarchical structure is important compared to managers in Science and Literature, Tourism, Veterinary Medicine, Economical and Managerial Sciences, and Fine Arts faculties.

When the change in the ambiguity avoidance dimension of managerial and cultural values adopted by university managers according to their faculties is considered, it highlighted that the ambiguity avoidance is higher in university managers who are members of the Technology Faculty compared to the university managers in Science and Literature faculty. Science and Literature Faculty members thought that rules should be more flexible compared to the university managers in Technology Faculty. In addition to this, it was seen that the managerial and cultural values adopted by university managers were similar in femininity-masculinity dimension and individualism-collectivism dimension. In line with the results of this study, the findings of Turan et al.'s (2005) study showed that there was no statistically significant difference in university managers' adopting individualism-collectivism values and their fields, however, their finding regarding the statistically significant difference between the preference of femininity and masculinity values by managers contradicts with the results of this study.

This study aimed to determine the managerial and cultural values adopted by university managers and was designed as a survey study. However, the author recommends that qualitative studies involving long-term observation and interviews should be designed to obtain in-depth information due to the limitations of quantitative studies. Additionally, the university staff's perception of the university managers' value judgment may be investigated as a follow-up study. The managerial and cultural values of the managers in different education levels may be investigated rather than limiting the study to university managers.

Analysis Of Cyber Home Learning System As An Informatization Model Of Education In Korea

Kang-Sik KIM

School of Business Korea Aerospace University South Korea

kskim@kau.ac.kr

Abstract

The Cyber Home Learning System started as a conceptual model in 2004 to alleviate gaps, to reduce private tuition expenses, and advance public education areas that have continued to plague Korean society as a whole. It is the representative learning system at schools and is still in operation today. Though there are a number of factors involved in the Cyber Home Learning System becoming Korea's education service of choice, the most notable factor may be the decision of the government to make it their mission to reduce private education fees, and to fulfill this mission through large amounts of investment capital. Other factors include the following: System Maintenance, Collaboration among Implementing and Operating Bodies, and Efficient Support and Management by Cyber Teachers and Learning Management System (LMS). As with EDUNET services, estimated expansions must be projected beforehand, and matching infrastructure planning and investment will need to occur throughout operations, and not simply in the initial phase. Moreover, ensured active and consistent cyber teacher participation will require other arrangements such as credits for the hours spent on the service.

Introduction

The Cyber Home Learning System started as a conceptual model in 2004 to alleviate gaps, to reduce private tuition expenses, and advance public education areas that have continued to plague Korean society as a whole (Korea Education & Research Information Service, 2007). It is the representative learning system at schools and is still in operation today. Following the 'Policy Measure for Reducing Private Education Costs Through Education Normalization' passed in July, 2004, the System initially served as a basis for servicing the home through e-learning revisions, cyber teacher counseling and consultations functions that evolved and expanded

Since its trial conception in September 2004, the Cyber Home Learning System - an education service providing an Internet environment for self-directed learning at home through the use of custom contents and cultivating an online community of students of the same grade - has entered successful implementation and dissemination with the help of experience accumulated among the 16 regional offices of education and agencies (UNESCO (2007). Each of these offices of education runs a unique service suited to each environment. The number of tutors designed to help cyber teachers are directly proportionate to the increasing number of students using Cyber Home Learning System Services, and parents or college students that demonstrate the more dynamic tutoring aspects. Under these circumstances, which involve plans for replacing several regular classes, connecting home and school can be understood as efforts to improve public education with the support of parents and to narrow the educational gap by socioregional differences (Presidential Committee on Education Innovation, 2007).

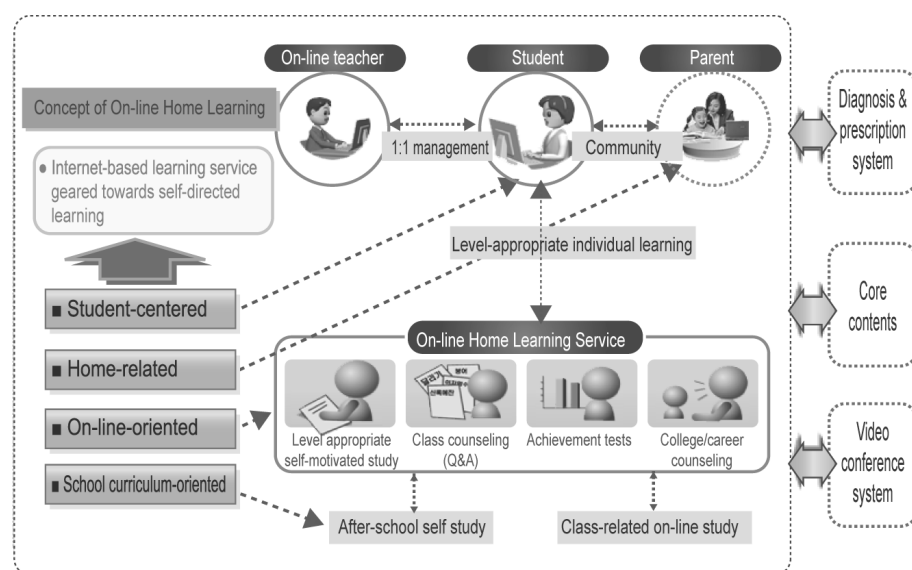

Policy Analysis

The diagram of the Cyber Home Learning System is shown in [Figure 1]. The core services of the Cyber Home Learning System as shown in [Figure 1] consist of the individual Learning Management System (LMS)-based study admin services, study guidance and counseling from a cyber teacher or tutor, self-directed learning services implementing Cyber Home Learning System contents, and additional services such as study diagnostics and video conferences.

Students who wish to study through the Cyber Home Learning System register through the system homepage run by their local office of education. If the class is class-specific, the student is assigned to an online class and begins e-learning with the content provided by the teacher; if the class is term-based, questions may be directed to available cyber teachers or discussed among fellow students. Cyber teachers are chosen among current instructors known for their strong sense of responsibility, and must be evaluated by students to continue the following term. Class-specific students are managed on the Learning Management System (LMS), where the cyber teacher can monitor student progress at any given time. For those not in class-specific systems, learning is self-regulated: by logging-in to the self-directed system, the student can study at his or her leisure regardless of one's academic history and without class management or learning admin services.

Cyber Home Learning System contents for each grade had expanded phase-by-phase to service elementary grades 4-6, middle school, and 1st year high school students by the first semester of 2007. One basic set of contents was available for each year, however, it caused many to voice concerns over contents shortages; to truly foster self-directed learning, additional contents including supplementary study, intensive study, and video lectures were developed (Han, 2008).

[Figure 1] Cyber Home Learning System: Diagram

Supplementary study contents were delegated to the regional offices of education for development, and later passed through quality inspections by the e-learning contents quality control office, and KERIS. To address issues like standards, level of contents, and time-tables, that arise from such division of labor, the central Cyber Home Learning System Service, KERIS drew up guidelines for developing contents and oversees all administration. Intensive study contents, on the other hand, were joint efforts from the 16 regional offices of education, with KERIS supervising progress. This sort of contents made it possible for learners to study cooperatively and was later reconfigured for the Learning Contents Management System (LCMS).

According to student surveys, current animation-oriented contents have the advantage of facilitating a range of different learner interactions, which has led to a growing demand for even more diversity in video contents. Consequently, plans are underway to package video contents for 4th graders to 1st year high school students aired on EBS from 2014 to 2016 to be serviced from 2015 to 2017 for a total of 16,539 episodes. As the Cyber Home Learning System flourished, various services reflecting student demands, such as core material reviews and quizzes have been developed. Current services include 3 core contents for each of the 9 subjects per exam period for the biggest market, 3-year middle school students.

The main function of the Cyber Home Learning System is to provide a venue where the cyber teacher and student can come together. Of course, interaction is best achieved face to face, and there was criticism regarding the limitations of the System in this respect. This is why it is important to foster a longer lasting relationship with the learner, the central Cyber Home Learning System Service introduced real-time video consultation. Supplementary coursework geared towards enriching level-specific study and performance is available on the System, as well. However, shortcomings in the current system in reaching these aims have prompted the development of a new system management tool in which the learner's scholastic ability and study style can be diagnosed, the appropriate study material and strategies can be suggested, and the contents for the diagnosed intellectual standard generated. Cyber teachers will be able to implement the resulting analysis of the learner's standing and study patterns in counseling the student, and students can make up for their weaknesses via the correction clinic, revision, and extra problem-solving contents prescribed to them.

Outcomes

Since its trial operation in September 2004, the Cyber Home Learning System usage has fast grown through a collaborative effort from the Ministry of Education, Science and Technology, KERIS, and the 16 regional offices of education.

The number of Cyber Home Learning System users has increased over time. The total number of registered users as of August 2015 was 6.09 million, a 800% increase since 2005. This increase is also reflected in the number of class-oriented classes and students, as well as the number of self-regulated learners. The number of logins has also increased by 962% since 2005, with an average of 800 thousand per day. Steady increase is shown in cyber-teacher and parent/college tutor participation, to reach 90,900 and 14,500, respectively.

The major objectives of the Cyber Home Learning System are to provide individual learners with customized learning services for academic success, and to reduce private education fees. It follows, then, that these objectives target those in farming or fishing villages or less financially fortunate homes. This user bracket is as follows: 63% of service priority students use the same services, and these students show higher rates of academic improvement than regular students. This may be a sign that the system is doing its part in narrowing the educational gap between different regional and social groups. Bridging the education gap and reducing private education costs actually seem viable. The latter has had savings of approximately 800 billion won (2012) and 4,061.4 trillion won (2015)²¹). Student satisfaction rates for the Cyber Home Learning System show a steady increase year to year, from 57.1 in 2005 to 69.6 in 2015 with 81% of those responding that the Cyber Home Learning System has helped their academic improvement.

According to the 2015 Research and Analysis on the Efficacy of the Cyber Home Learning System, the highest ranking element was 'increased interest in the subject' at 32.5%, followed by 'became more autonomous' at 25.3%, 'improved grades' at 20.7%, and 'more confident in the subject' at 20.1%. Interestingly, 'increased interest in the subject' and 'more confident in the subject' were found to be higher in self-motivated learners, at 36.1% and 22.2%, respectively, while 'improved grades' and 'became more autonomous' were high in those who were introduced to the service by parents or friends.

The higher the grade of the student, the lower their opinion regarding the service (UNESCO UIL 2010). The lower the school grade, the higher the opinion that it has promised as an alternative to private education. Those who have ceased or plan to cease private education felt the Cyber Home Learning System alone would be sufficient, whereas those who continue or plan to resume thought the Service 'merely supplements school lessons.'

Overall satisfaction levels are on the rise as services find stability. But because new contents for different levels have not yet been added, numbers are not expected to make a sudden leap. With the introduction of these new contents in late 2008, and added services including diagnostics and prescribed learning, and video conferences, however, satisfaction levels are expected to jump. Concerning the socio-educational effects of the Cyber Home Learning System: 24% of instructors replied it has played a part in resolving knowledge gap issues, with approximately 30% who felt it aided the otherwise alienated classes, and approximately 25% claiming it reduced private education fees. Though these figures are lower than was initially expected, considering the nature of the current Cyber Home Learning System, these statistics should be seen as showing that it is well on its way to fulfilling the project aims.

Critical Factors

Though there are a number of factors involved in the Cyber Home Learning System becoming Korea's education service of choice, the most notable factor may be the decision of the government to make it their mission to reduce private education fees, and to fulfill this mission through large amounts of investment capital. Other success factors include the following:

System Maintenance

As an integral part of the measures to reduce the costs of private education, this system was actively pursued by both the government and regional offices of education and aggressively implemented in academic activities. Specifically, the integration of KERIS in the early stages of system installation for an optimal response team, composed of specialists, was very important. Likewise, as a result of having regional offices of education establish their own Cyber Home Learning System service, while designating the Cyber Home Learning System Advancement Committee (Ministry of Education, KERIS, and regional offices of education participating) as part of the official cooperative community, it was possible to distribute a balanced amount of resources between the regions and share know-how, as well as stabilize and spark system operation in the short amount of time given. There were efforts to run Cyber Home Learning System demonstration and research training centers for the purpose of verifying the merits of the service in the field, which helped to quickly establish it under the time constraints.

Collaboration among Implementing and Operating Bodies

With consideration to its target subjects (students of every level across the nation) and its objective of stimulating customized learning, the service divided relevant tasks between the participating agencies and hence set up a cooperative community. For example, systems installation and operation, cyber teacher recruitment and management would fall under the jurisdiction of each regional office, whereas general tasks including the Cyber Home Learning System planning and evaluation, service contents development and quality control fall within the scope of the core system, KERIS. In other words, the regional offices deal with field-related components, while KERIS oversees the progress of these offices by isolating elements that apply to all and focusing on these elements to push for an efficient execution of policy (Han, 2010).

Efficient Support and Management by Cyber Teachers and Learning Management System (LMS)

The most vital components of the Cyber Home Learning System are quality content, enthusiastic cyber teachers, and maximal Learning Management System (LMS) -applied efficiency. The quality of contents is monitored by KERIS, in which all contents, be it developed by the Center or municipal/provincial offices, are equally checked and verified. Cyber teachers were hired and managed by the regional offices of education; though not all the same, these offices offered teachers an array of incentives including financial bonuses to encourage cyber teacher participation and continued zeal. In the case of LMS, a myriad of tools such as cyber class programming, individual progress monitoring, and various teacher support to stimulate student interest and keep them engaged played a part in maximizing the operations efficiency.

Conclusion And Implications

In the early stages of the Cyber Home Learning System operations, the mediocre quality of LMS and contents that left something to be desired posed many problems. One such example had to do with hasty planning: appointed with the nation's mission to reduce private education costs, the system hurried to attain quantitative results even before qualitative standards were established. As a result, user satisfaction faltered, and implementers often found themselves overwhelmed by the aftermath.

Afterwards, when contents met standards and passed quality control, user numbers experienced a rapid increase each year. However, infrastructure could not match the expansion, resulting in a number of problems including server delays. Especially under the time constraints, LMS that usually applied to cyber universities or civilian remote education institutions, had to be customized and introduced, which made developing, running, and even maintaining services catering to elementary, middle, and high school learning altogether challenging. Of course, measures were underway at KERIS. It ordered each metropolitan and provincial office of education to evaluate the Cyber Home Learning System infrastructure, and initiated system consultation to come up with solutions; service improvements, which however, would prove inadequate as the core underlying problems of infrastructure investment shortages and counter-intuitive system structure persisted (Presidential Committee on Education Innovation, 2007).

Attracting cyber teachers in the early stages consisted of encouraging voluntary involvement, which quickly fell short: teachers were not easily convinced to continue their role and responsibility after-school for extended periods of time. Soon, many cyber teachers who were initially active began to drop, which, in turn, caused problems in operations. To resolve this issue, each metropolitan and provincial education office planned and offered incentives to cyber teachers, budget permitting. Due to limited funding, this incentive method could not be promoted on a wider scale (Noesgaard and Ørngreen, 2015).

Therefore, as with EDUNET services, estimated expansions must be projected beforehand, and matching infrastructure planning and investment will need to occur throughout operations, and not simply in the initial phase. Moreover, ensured active and consistent cyber teacher participation will require other arrangements such as credits for the hours spent on the service.

Analysis Of Sources Of Help To Residents Of A Socially Excluded Locality In The Moravian-Silesian Region Related To An Increase In Social Inclusion – Implications For Educators In Social Work

Abstract

The number of segregated localities in the Czech Republic continues to rise, with the largest increase being mainly in the Moravian-Silesian Region (hereinafter as “MSR”). Of 26 localities identified as socially excluded in this region in 2006, the number increased to 78 in 2015 and continues to have a rising tendency. One of the key instruments of local social inclusion strategies and thus the mitigation of social exclusion, which is seen as a multi-dimensional problem, is considered to be social work. Social work interventions are not primarily focused on mitigating the problem of spatial segregation, and therefore this research through the identification of sources of help seeks to find the use of these sources for social inclusion. The research sought an answer to the following research question: “How do participants operating in a socially excluded locality in the MSR interpret sources of help that could lead to the process of social inclusion?” The research was carried out using a case study method, with one excluded neighbourhood of a middle-sized town in the MSR being selected for the case study, the research participants being social and community workers working in the locality and actual residents of this locality. Significant differences were identified in the interpretation of sources of help by the residents themselves and by the social workers. The residents mostly saw a source of solutions to the current problems in their own informal social networks and the method of community work, which helps to solve the common interests of the residents. In contrast, social workers identified the institutional sources as the source of the solution to the population’s problems. The challenge for social work educators is to provide social workers with competencies for analysis of social networks of their clients, and at the same time to be able to create the offer of help in such a way that would be considered important by the residents of the localities affected by social exclusion for solving their adverse situation.

Key Words: *Sources of help, socially excluded localities, education in social work*

Introduction

In recent years, there has been an increase in the number of socially excluded localities (SEL) in the Czech Republic. According to research carried out based on an agreement with the Ministry of Labour and Social Affairs, the largest increase in their number is in the Moravian-Silesian Region (hereinafter MSR). In the period from 2006 to 2015 there was an increase of 50 municipal localities in the region, which according to the research methodology were evaluated and marked as segregated. According to the research methodology, “SELs” denote spaces (house, street, neighbourhood) with a high concentration of persons who we can identify with the signs of social exclusion and limited access to: (1) the labour market; (2) public services, including social services or education system; (3) social contacts with their surroundings; (4) resources for solving their personal crises; (5) political participation; or they limit the skills and abilities to use these resources, as well as the negative perception of the locality by the surrounding population (GAC, 2015). The Czech Republic has formulated a solution to social exclusion (and therefore the SEL too) in the Social Inclusion Strategy for 2014-2020. At the regional level, this strategy is followed upon by the Strategy for Integration of the Roma Community 2015-2020 in the Moravian-Silesian Region. These key documents identify as a basic source of solutions to socially excluded localities the intervention of social work and the coordinated cooperation of all involved participants (i.e. at the level of the actual community – residents living SELs and at the level of individual local administrations, non-governmental non-profit organisations, schools etc.)

Given the deepening problem of social exclusion and the rather low efficacy of social work interventions in its mitigation, we wanted to find out how the sources contributing to the social inclusion process are understood by the actors (including the residents themselves) operating and living in a SEL. In our research we therefore asked the question, “How do participants operating in a socially excluded locality in the MSR interpret sources of help that could lead to the process of social inclusion?” The data collected will help to understand the sources of help for people residing in these segregated localities and actors operating in SELs, which can provide insights into the design of social work interventions and the training of social workers.

Theoretical Background

The theoretical background for research is social constructivism and an interpretative paradigm. In their interpretation, social reality is constructed on the basis of interactions. It is the actual actors who interpret phenomena on the basis of their own understanding (Denzin, Lincoln, 2005). Research conducted within this paradigm is strongly geared towards the process of knowledge creation and the use of the methods as natural as possible in their acquisition, such as interviewing and observation (Angen, 2016). In an interpretativist concept we try to understand macro-social phenomena such as inequalities in society through in-depth analysis, where we explore social interactions and their interpretations by research actors at a micro-level. The research result is not the reconstruction of reality but the understanding of the possible sources of help in socially excluded localities. Social exclusion is understood as a threat to the social integrity and cohesion of society (Mareš, Sirovátka, 2008) and as a mechanism of social, material and cultural isolation (Giddens, 2004) as well as a limited participation in the society activities (Hills, Le Grand, Pichaud, 2002). We conceptualize social exclusion for the purpose of this research as a multi-dimensional phenomenon (Percy-Smith, 2000), a comprehensive and multi-dimensional process that includes the lack or denial of sources of help, rights, goods and services, and the inability to engage in normal relationships and activities that are available to the majority population, whether in economic, social, cultural or political areas (Levitas, R., Pantazis, et al., 2007).

Defining social exclusion requires access to resources, rights and services.

As part of this research, I will refer to the division of the sources of help as per Levitas and Pantazis, (2007) into three areas.

1. Material and economic resources
2. Access to public and private services
3. Social resources

I assign this concept to the fourth resource domain: Personal resources¹ (see Törnblom and Kazemi, 2007).

The material resources domain plays an important role in determining the income and financial resources of the population at risk of social exclusion (Scharf et al., 2005). The most obvious indicator of material and economic resources is income. Of course, debt can be understood to be the opposite of financial assets, thus rendering such material resource problematic or even negative, further deepening social exclusion (e.g. Kempson and Whyley, 1999, SEU, 2004, Kempson et al., 2004; McKay and Collard, 2006). The domain, which is no less important, is access to services, whether private or public, including domestic public services, which is related to the concept of sources of help that can lead to social inclusion (e.g. Howarth et al., 2001). These services include public services, transport (infrastructure accessibility), private services (e.g. hairdresser and cinema visits, etc.) and access to financial services. Social resources are understood as elements of a social network of actors or an “interpersonal environment.” They provide opportunities to realize the interests of an individual or a group, and at the same time enable them to acquire information leading to a personal development (Halbesleben, 2014). The extent and quality of social networks is also dependent on participation in the labour market and access to public services (Demos, 1997). We do not associate social resources in this research with the concept of social capital as this concept is rather a perspective of an individual than of communities, even though there are common elements of these concepts.

In reference to the above, we base our research theory on the concept of social inclusion as a development of the capacity and possibility to participate in society not only in economic terms, but also in social, psychological and political terms (Levitas, R., Pantazis et al., 2007). Integration is a two-way multi-dimensional process where, on the one hand, there is a majority society that has power or access to resources and, on the other hand, there is a minority society that only partially participates in access to power and resources or has no access at all (Rákoczyová, Pořízková, 2009).

Methodology

The research method used was a case study (Yin, 2009), with the research subject being a socially excluded site in one of the towns of the Moravian-Silesian region, and the case being the interpretations of the sources of help by all actors operating in SEL, including the actual SEL residents. The data collection was conducted using semi-structured interviews, in particular group interviews (with families, groups of workers, etc.), direct observation in the research area. The interviews were recorded and transcribed word-by-word; the observation outputs were recorded by taking field notes. The research was carried out in one SEL on the territory of MSR, which was chosen by purposeful sampling and met the following selection criteria:

¹ Personal resources represent the characteristics of an affected person and the contextual and situational conditions in which these resources are used (Törnblom and Kazemi, 2012).

- The SEL cooperates with the Agency for Social Inclusion² (assumption of strategic concepts on social inclusion).
- Social inclusion instruments are implemented in the SEL, specifically field social service programmes (MLSA, 2014) and community work (Schuringa, 2008).
- The SEL actors are willing to participate in research.

Research participants were those in the municipality community and social workers as well as field social workers from non-governmental organisations. The workers helped mediate contacts with families living in an excluded neighbourhood, while other families were already contacted through snowball sampling. A total of 6 female workers (identified as KPW, only female) and 14 residents (identified as KPRM – Male and KPRF – Female) were involved in the research. The research was carried out in Spring 2018 and was funded under the Grant Project SGS02/FSS/2018 Analysis of Sources of Help to Residents of a Socially Excluded Locality in the Moravian-Silesian Region Related to an Increase in Social Inclusion. The research adhered to basic ethical principles of qualitative research, including the informed consent on research participation, and confidentiality rules (Guillemin, Gillam, 2004, Silverman, 2013).

Data Analysis And Interpretation

The interview transcripts were re-read and analysed using open encoding techniques and notes containing ad hoc interpretations and conceptualisations (Howard, Berg, 2016). The codes were then grouped into larger units from which a categorical system was created. Individual categories represent different interpretations of the sources of help, which was followed by assigning of individual topics addressed by the actors to these sources.

The workers active in a socially excluded locality identified 5 key sources of help: 1. Social work methods – community work, field social work implemented by NGOs 2; Social work focused on a housing issue of the residents provided by the municipal authority; 3. Self-help – the residents manage to solve their problems themselves or with little support; 4. Coordination of all entities operating in SEL; 5. Personal ties of workers who use them to solve the topics/issues of SEL residents

Methods of social work (especially community work and field social work carried out mainly by NGOs) are used to address the topics of discrimination in the labour market, networking of doctors, debt counselling, discrimination in the housing market, and events for children. KPW 1: “It's different than with what a client is coming to see me for. The topics are quite diverse, you see. There are some discriminatory issues, also relationship problems, doctor search, debt counselling, that's a frequent topic here... families who have children are interested in past time activities of their kids. There's a lot that people want to deal with. But most of all, if I were to express it as a percentage, 70% of the interventions focus on debt counselling and housing issues, such as housing networking, housing conditions, etc.” NGO workers are trying to address all identified needs of clients (field notes), including health-related topics, using social work methods. KPW2: “It's different, last year I was dealing with social and medical assistance a lot...we had oncology patients, and in fact, these patients were also provided with certain material assistance.”

Another source of help to the residents is the social workers employed by a municipality who are supposed to help address housing issues related to municipal flats. Through social casework, they address housing issues in particular, but also work with the residents toward getting and keeping jobs, and mediate food aid for the poorest. KPW3: “In the first place, we're here to resolve housing issues, but we also help to write CVs, and we've also at times arranged food aid for the families in need.” Social workers who intervene at SEL also identified the ability of people to address some topics themselves, through their own competencies, information and/or social networks. KPW4: “And those people here are capable of helping themselves. They can solve some problems on their own.” KPW1: “I would just like to add that we provide some counselling, but I have already learned for myself that these people are doing much better arranging for this. For example, they can negotiate better Internet rates for themselves than the city.” As for self-help by the residents, social workers ranked also the ability of administration of social benefits. KPW5: “But they are able to fill out a social benefit form, go there, file it in, and hand it over to their contact worker and communicate well their needs. Because they are very skilled and well oriented in their own financial situation and those benefits.”

The fourth identified source of help to the residents of a segregated site in the investigated city by the workers operating in the SEL was the coordination of all entities intervening or affecting SEL. The social work workers pointed out that this coordination works in particular when dealing with more complex and long-term topics affecting the locality or the residents, usually the housing issue, especially poor housing conditions and the poor

² The Social Inclusion Agency is one of the departments of the Human Rights Section of the Office of the Government of the Czech Republic and falls under the responsibility of the Czech Ministry of Justice. The agency has been active since 2008 and is a governmental instrument to support municipalities that address social exclusion.

technical condition of the residential buildings located in these parts of the city, and the issue of executions. KPW2: "We work with the labour office, the city's housing department...we attend crime prevention coordination meetings and cooperate with the school...I would like to say that we meet frequently and work together mostly in dealing with the long-term problems such as housing." At the same time, the coordination of different entities is referred to by professional workers as a key instrument for social inclusion of the excluded population. KPW1: "...if that cooperation worked perfectly, the population would be integrated, which is the only way, in my opinion, toward inclusion."

The fifth source of help was personal ties of workers used to solve the topics of SEL residents. This source was emphasized by one of the workers. KPW2: "If I no longer know how to help people get some housing, I call some other people I know, make a reference for the families and ask them to rent it to the Roma, otherwise there's no chance that they would get a flat."

Figure 1 below summarizes the sources of help identified by SEL workers and the topics that are addressed by these sources.

Figure 1: Sources and addressed topics from the perspective of professional workers

Another group of communication partners were residents of a socially excluded locality who identified five sources of help to address their current topics/needs: 1. Nuclear family 2. Relatives (distant family) 3. Community work 4. Social networks and 5. Self-reliance. The statements by residents themselves show that the greatest source of help for them is their social ties and family.

The nuclear family is a source of help used primarily for housing financing, but also for family budgets. KPRM2: "It's my mother or mother-in-law who help me most when I need money." KPRF4: "Who else can help you but the family...that's a foundation stone, especially with money, right?" An extended family is the source of informal social networking, especially when looking for some new rental housing. KPRM1: "If I need to find a new flat, I call my family cousins or aunts if they know about something available or I ask them where they lived before and whether they have an owner's phone number." An identified need by the residents/respondents themselves was the difficulty with getting and maintaining a job. Residents spoke of great barriers when trying to secure jobs; those barriers ranged from failing to complete secondary education and their ethnicity. KPRF4: "I went to that office but I didn't get the job because I dropped out of school and have no qualification." KPRF5: "The woman in the labour office treats all the Roma in the same way." KPRM3: "I'm trying to find a job to feed my family, I show up...they see the Roma and no one hires you." They use social networks as a source of handling employment issues. KPRM2: "I'm going to see and ask the guys with whom I've been already working, but I'm sometimes forced to 'work under the table' and that's no good."

Another identified source of help and strong support, particularly in addressing shared issues affecting the majority of residents was a community work method with which they have some experience in the site. In particular, they emphasized that community work helps them improve the site's condition and offers different activities and events for children. KPRF1: "It helps cleaning a mess around the house, helps painting hallways, they organize activities for kids... so it would look nicer here." Above all, the communication partners talked about the already implemented activities. KPRF2: "We took children to the ZOO, or the community worker helped those families to solve eviction problems." This source, which, in their opinion, produces immediate results, was perceived by all in a very positive manner. KPRF5: "I'm glad that it's here, we wouldn't be able to manage anything...for example, the container was perfect, we got rid of a mess, etc."

The last identified category of sources of help is self-reliance. The research respondents identified self-reliance as a very important source of solutions to their problems, which they did not associate with their ethnic group traditions (KPRF1: "With other Roma...we all just mind our own business...I can't rely on anybody here but myself"), but with the faith in their own competences and personal resources (KPRM2: "What I can do, I do myself. I arrange for it on my own...I do not need anyone."). They use their personal resources to tackle discrimination in access to public services... KPRF2: "I'm giving myself a haircut, doing my nails, everything by myself, I don't need anyone," and also to finance the running of their household... KPRM3: "I'm a guy, so I have to take care of myself."

Figure 2 below summarizes the sources of help identified by the residents and the topics that are addressed using these sources.

Figure 2: Sources and addressed topics from the perspective of the residents

When comparing sources of help between professional workers and SEL residents (see Figures 1 and 2 above), we observe that both respondent groups do agree on identification of the topics and needs, however both groups interpret different sources of help in addressing them. Professional workers primarily use institutional, or else institutionalized resources as opposed to the residents who interpret their sources primarily as using their supporting social networks and community work methods.

Conclusions – Implications For Educators In Social Work

The results of a case study focused on interpretation of sources of help for the residents of a socially excluded locality show that both types of respondents identified identical key topics and issues in the locality but interpreted various sources of their solution. Research has shown that the local residents use support and informal networks to address their problems; the networks, which are very powerful but not very extensive, and that the residents also rely to a large extent on their own competencies. On the other hand, professional workers, in order to meet the needs of the socially excluded population, prefer using organisational, institutional networks, which are more extensive and have a wider reach, however they are not so strong in terms of relations and personal ties and may constitute a certain dependence on social services. It follows from the above that the challenge for social work educators is to equip social workers with competencies for analysing the social networks of their clients and with more intensive work methods encouraging the development of their competencies. The challenge is also to create an offer of help in a way that will be considered by the residents of the localities affected by social exclusion important to finding solution to their situation. The use of social networks is so important for residents that social worker educators should focus on teaching methods of working with support networks (informal groups, self-help groups, etc.) in the context of SELs.

Abstract

This study of cross-cultural competence (ICC) by Byram model theory, to Chinese college students as subjects, for their ability to cross-cultural dimensions and evaluation questionnaire a empirical investigation, system comprehensive analysis of China's college students' intercultural competence awareness, attitude, knowledge, skills, such as dimension, and carries on the exploratory and confirmatory factor analysis, so as to build a good reliability and validity of Chinese college students' ICC evaluation questionnaire, the questionnaire including native culture and foreign culture knowledge, attitude and cross-cultural communication skills, cross-cultural cognitive skills, consciousness and so on six major factors. The results showed that the localized ICC evaluation scale of Chinese university students was proved to be reliable and effective in actual measurement. The intercultural ability of Chinese college students is multidimensional. The six factors evaluate and explain the effects of intercultural ability of Chinese college students, among which foreign cultural knowledge has the strongest influence, intercultural communication skill has the second influence, national cultural knowledge and attitude have the middle influence, intercultural cognitive skill has the weakest influence, and intercultural consciousness has the weakest influence.

Introduction

In the era of globalization integration, the most important issue of education will be how to foster competent human resources in the global society. The training of talented people with the ability to achieve future achievements and outstanding achievements is a very important task in university education and will become the power of national competitiveness.

From the perspective of the "internationalization" development path of personnel flows directly across national boundaries and across regions in the early days, although it can cultivate students' international ability and expand students' international vision, the effect is often limited to the individual participants, and it is difficult to meet the demand of international talents in the popularization of education. So, the internationalization of higher education internationalization urgently calls for a new form and new path to develop.

At the same time, In China, the outline of the national medium and long-term plan for the reform and development of education (2010-2020) has clearly stated that it is necessary to meet the requirements of the country's economic and social opening to the outside world and cultivate a large number of international talents with international vision, international rules, international affairs and international competition. This indicates that developing a global perspective, applying an international perspective and understanding the international talents of different cultures have risen to national strategic dimensions.

Under the background of economic globalization, China's international cooperation and exchanges are increasing, and the demand for international talents is also increasing. Therefore, colleges and universities should not only cultivate solid professional talents, but also cultivate internationalized talents with cross-culture ability. In foreign countries, many higher education institutions emphasize not only the professional quality of cultivating talents, but also the improvement of their intercultural ability (Hayward2000). Stier, 2003); Various education institutions have adopted various international talent training methods to improve students' intercultural communication and communication skills (Deardorff 2004:11).

In recent one hundred and twenty years domestic linguistic in cross-cultural ability (Intel - cultural communicative competence, ICC) cultivation framework and method of the composition, got a lot of research results, some around the intercultural competence and dimensions of theory and empirical research (Yang, en-ping zhuang 2007; Wang yanping, yu weihua 2008; Xu lisheng 2011 Zhang weidong and Yang li 2012), some discussed how to cultivate the intercultural ability of college students from the aspects of foreign language classroom environment and language skills courses such as foreign language listening, speaking, reading, writing and translation (jia yuxin 1997). Xu lisheng 2000; Gao yihong 2002; Zhang hongling 2007; Zhang weidong and Yang li 2012), some of them discussed the factors influencing the cultivation of intercultural ability of college students from the perspectives of motivation, attitude and cultural sensitivity (xu lisheng 2000). Gao yongchen 2006; Hu yan 2011). However, there are few empirical studies in China to analyze the dimensions of intercultural ability and evaluation

scale of college students, and there are few influential intercultural ability evaluation scales in China. Some relevant studies generally lack empirical data support. Therefore, it is particularly urgent to conduct a systematic and comprehensive empirical investigation and analysis on the dimensions and evaluation scales of intercultural competence of Chinese university students.

The Necessity Of Intercultural Learning

Why is intercultural cultural necessary to cultivate intercultural competence in Chinese universities? As mentioned earlier, education is a worldwide trend for education. In order to successfully enter the society in the era of the global village, Chinese universities also focus on policies of "strengthening global power" on certain education contents. In order to adapt to this trend, the opportunity to learn the languages and cultures of various regions of the world locally, if given to most students, will be of great help to improve their intercultural ability. But it is no easy task, given the high cost to Chinese students. In particular, research has shown that the global competencies of students wherein the local universities and those in capital circles universities vary greatly (간미석, 2013).

To overcome these problems and limitations, it is necessary to develop lectures or education programs related to learning across competencies. Therefore, we decided to focus on the requirements of the rapidly changing times and the abilities emphasized at home and abroad to observe the necessity of cross-cultural capacity learning.

Intercultural competence has become a very important factor in the 21st century, when international exchanges have become commonplace at all levels. In order to cope with these situations properly, mutual cultural capacity should be cultivated. As cultures of the world come into contact and exchange through media and business, opportunities for interpersonal interaction with people from different cultural backgrounds are increasing, and mutual cultural communication is inevitable in such a process. Therefore, Intercultural competence is at a higher level than ever before in the global era where many cultures meet.

In addition, for each culture ability, the requirements of the population statistics (mixed culture, cultural diversity), and technology are developed, and the mass media, network, satellite, mutual cultural contact connection), economic development, capital, technology, information exchanges between countries, information). In the modern society, and culture to meet each other almost not limited by time and place, such as beyond national boundaries, through the media channels, in the business situation, travel, political meetings, etc., culture meet each other happens. In such meetings, it is necessary to learn from each other's cultural abilities in order to have good communication with each other.

The Concept And Dimension Of Intercultural Ability

Foreign scholars began their research on intercultural ability in the 1950s. They have conducted extensive research on intercultural ability from different perspectives and fields, and gradually formed a relatively consistent understanding of the connotation of intercultural ability. They generally believe that intercultural ability is an individual's ability to effectively and appropriately complete communication activities in a specific intercultural environment (Chen&Starosta1996). Byram1997; Spitzber g2000; Wiseman2001; Deardorff, 2004). It is not difficult to find that their understanding of the connotation of intercultural ability refers to two elements: specific intercultural environment and effective and appropriate. Deardorff (2004) through the expert investigation method, the study found Byram (1997) definition of cross-cultural ability expert highest recognition, its content is summarized as follows, "other countries' cultural knowledge, their cultural knowledge, cross-cultural communication skills, communication skills, cognitive and interactive skills, recognition and respect different cultural values, beliefs, and behaviors, critical cultural awareness and sense of self ability dimension for the individual in specific cross-cultural environment effectively with people from different cultures appropriate exchange and interaction plays a key role" (Byram1997:34; Deardorff, 2004).

In addition, some scholars also put forward their views on the dimension of intercultural ability from different research perspectives, with different focuses. Ability of cross-cultural dimension is one of the most influential Byram (1997) put forward the mode of European Union, represented by the cross-cultural ability is divided into four and so on knowledge, skills, attitudes and awareness capability dimensions, namely the attitude dimension Including respect, openness, curiosity, optimistic to accept and tolerance, and so on (Byram1997; Deardorff, 2004; Risager 2007); The knowledge dimension includes the cultural knowledge of the country and other countries (such as social politics, religion, history and geography, social etiquette, behavior norms, living customs and values, etc.) (Byram1997). Skill dimensions are divided into two categories. One is intercultural communication skills, namely, the ability to explain, understand, relate, observe, analyze and evaluate cultural differences or conflicts and effectively coordinate and solve them. The other is cross-cultural cognitive skills, namely the ability to learn new cultural knowledge, attitude and awareness through language or non-language communication and interaction (Byram1997; Deardorff, 2004); The dimensions of consciousness include critical cultural awareness, self-awareness, sociolinguistic awareness and so on (Byram1997; Fantini 2001). Later, some scholars think that effectively appropriate communication among people of different cultural motivation is particularly important in the cross-cultural ability, in the European Union Byram model based on substitute motivation for attitude is put

forward by knowledge, motivation, skills of three dimensions of cross-cultural can force model (Spitzberg 1997; Samovar & Porter 2004; Gudykunst 2004; Spitzberg & Changnon 2009). Other scholars describe the dimensions of intercultural ability from the perspective of development process, and divide intercultural ability into three development stages, including consciousness, knowledge and skills. They believe that the development of intercultural ability is based on the continuous learning process in the three development stages (Bennett 1993). Pedersen 1994). In recent years, most scholars have reflected their different western perspectives on the connotation and dimensions of cross-cultural competence, while there is still a gap in how to view cross-cultural competence from a non-western perspective. Some Oriental scholars have discussed intercultural abilities from the perspective of interpersonal relations and attitudes in east Asian culture, including empathy, adaptation and tolerance, which are often mentioned. Kim 2001), emotions, relationships (Jia Yuxin 1997; Kim 2001), etc. Although the dimensions of intercultural competence in the eastern perspective are different from those in the western perspective, there is consensus on the dimensions of competence such as knowledge, skills, attitudes and consciousness (Chen 1996; Jia Yuxin 1997; Kim 2001; Yang Ying, Zhuang Enping 2007; Zhang Weidong, Yang Li, 2012). Moreover, at present, most foreign intercultural experts also have a commonly agreed opinion, that knowledge, skills, consciousness, attitude and other ability dimensions are indispensable in intercultural ability dimensions (Byram 1997; Dodd 1998; Fantini 2000, 2006; Wiseman 2001; Kim 2001; Hammer et al. 2003; Samovar & Porter 2004; Deardorff, 2004, 2006; Spitzberg & Changnon 2009; Behrndt 2011).

These measurement concerns (respondent faking, adequate predictive validity, and incorporation of the interactional and culture-general domain without over reliance on specific culture content) challenge those seeking to assess ICC. Furthermore, conceptual concerns regarding existing ICC models also complicate the task. A useful framework for ICC must provide specific definitions, clearly delineate between the construct and its nomological network, incorporate both the cognitive and noncognitive subdimensions, and clarify the relationships between the subdimensions. Moreover, such a framework offers the most utility when constructed to redress the measurement concerns described herein. Based on all the above reasons, a new framework designed to overcome both sets of concerns is developed.

A Proposed Framework For Intercultural Competence In Higher Education

Are view of the literature (see Appendix for a description of the literature search process) revealed a multitude of definitions of ICC. The ICC definitions (Richard L. Griffith, 2016) used in the higher education literature tend to be associated with models used in education, training, and research. These models fall in to five categories: compositional, co-orientational, developmental, adaptational, and causal (Spitzberg & Changnon, 2009). Compositional models (e.g., Deardorff, 2006; W.D. Hunter, White, & Godbey, 2006; Ting-Toomey & Kurogi, 1998) merely describe the characteristics (knowledge, skills, and attitudes) of ICC. Co-orientational models (e.g., Fantini, 1995; Kupka, 2008; Rathje, 2007) tend to describe the components or process of a successful intercultural interaction. Developmental models describe ICC in terms of individual development over time (e.g., Bennett, 1986; P. M. King & Baxter Magolda, 2005). Adaptational models (e.g., J. W. Berry, Kim, Power, Young, & Bujaki, 1989; Gallois, Franklin-Stokes, Giles, & Coupland, 1988) combine the developmental components of the aforementioned models and present the main interactional context of adapting to a foreign culture. Finally, causal path models (e.g., Arasaratnam, 2008; Deardorff, 2006; D. A. Griffith & Harvey, 2000; Hammer, Wiseman, Rasmussen, & Bruschke, 1998) attempt to integrate the characteristics of compositional models and situate the main interaction in which variables influence each other to predict ICC. A recent review of ICC focusing on research across multiple contexts (Leung, Ang, & Tan, 2014) presented another system of grouping ICC model. This system differentiates between models that include intercultural traits, intercultural attitudes and worldviews, and intercultural capabilities, or some mix thereof. The term intercultural traits refers to stable personality traits that drive likely behavior, and they commonly include openness to experience and tolerance for ambiguity. The term intercultural attitudes and worldviews refers to constructs involving the perception and evaluation of information from outside an individual's own culture.

To begin, we draw on a definition from prior research: ICC "reflects a person's capability to gather, interpret, and act upon these radically different cues to function effectively across cultural settings or in a multicultural situation" (Earley & Peterson, 2004, p. 105). Next, we propose a framework that builds on a process model of social thinking (Grossman, Thayer, Shuffler, Burke, & Salas, 2015) by splitting cross-cultural interactions into three stages and specifying the skills necessary to support successful performance in each stage. This process model breaks individual behavior in a complex social situation down into four stages (scan, appraise, interpret, and interact) and the cognitive and behavioral skills that support them. In this way, the ICC framework is also developed. Intercultural interaction may be conceptualized as occurring in three stages: approach, analyze, and act, see [Figure 1].

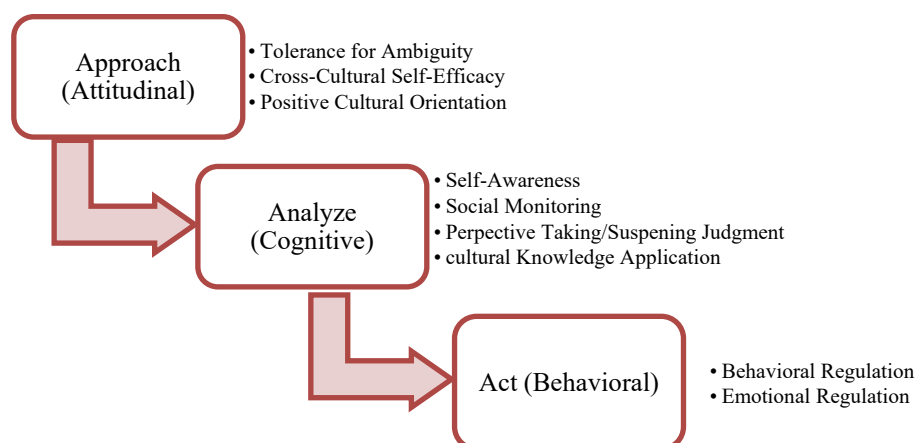

Figure1. The conceptual model of the approach, analyze, and act intercultural competence framework.

These stages act as the dimensions of the framework. The approach dimension includes the characteristics that impact the likelihood that an individual will initiate and maintain intercultural contact voluntarily, as well as those traits that will define the overall positivity with which an individual respond to cross-cultural interactions. These characteristics include a positive cultural orientation, a tolerance for ambiguity, and self-efficacy. The analyze dimension captures an individual's ability to take in, evaluate, and synthesize relevant information without the bias of preconceived judgments and stereotyped thinking. The analyze dimension includes the following traits: self-awareness, social monitoring, perspective taking/suspending judgment, and cultural knowledge application. The act dimension incorporates the behaviors determined by the previous dimension to assess individuals' ability to translate thought into action while maintaining control in potentially challenging and stressful situations. The act dimension includes behavioral regulation and emotional regulation.

Research Design

Research Questions This study mainly answers the following three questions:

- (1) What is the reliability and validity of the Chinese University Students Intercultural Competency Assessment Scale?
 - (2) Does the cross-cultural competence of Chinese college students have multidimensionality?
 - (3) What is the importance of each competency dimension of Chinese college students' cross-cultural competence?
- 3.2 Study Samples** The sample of this study was from 447 second-year university students from five comprehensive universities in the country. These students were from computer, automation control, management, materials, law, electronic information engineering, etc. The proportion of liberal arts is 21%, science and engineering accounts for 69%, and other disciplines account for 10%.

Survey tool

The design evaluation scale of this study is based on the cross-cultural competence (ICC) multi-dimensional model (knowledge, skills, consciousness, attitude) proposed by Byram (1997), with reference to the cross-cultural ability evaluation compiled by Fantini (2000, 2006). Table (A YOGA FORM, with 4 dimensions, 22 descriptions) and the Federal International Life Experience (FEIL) research project Intercultural Competency Assessment Scale (AIC, with 4 dimensions, 43 descriptions), combined with Chinese college students The actual situation of cross-cultural communication has made the following improvements to the two scales compiled by Fantini: First, the description items of the four competency dimensions of knowledge, skills, consciousness and attitude in the two scales are combined and then invited. Three experts who have been engaged in cross-cultural research for many years participated in the discussion and revised the new scale. At the same time, the new scale was distributed to some students for group discussion and selection of their own descriptions, and some students were interviewed integrated expert And the students' opinions screen and eliminate the unimportant or repetitive description items, construct a set of cross-cultural competence test scales for Chinese college students with 4 dimensions and 60 description items. Finally, through small-scale test research on college students, The factor analysis method was used to extract the factors, and the ICC test scale was revised again. A set of Chinese college students' cross-cultural competence (ICC) evaluation scales with 4 dimensions and 40 description items was designed. The localization of the scale includes: 1) the knowledge dimension (understanding the knowledge of domestic/foreign lifestyles and values, understanding the basics of concepts such as culture and cross-cultural communication and communication); 2) the attitude dimension (willing to be as tolerant as possible) Foreigners' different values, eating habits, taboos, etc.) 3) Skills dimension (the ability to communicate through body language or other non-verbal means when language communication barriers occur, try to avoid prejudice against foreigners when

communicating with foreigners) And the ability to prejudice, when communicating with foreigners, avoids mentioning foreigners' ability to be concerned about privacy topics, and has the ability to be sensitive to cross-cultural differences. When it comes to events in other countries such as politics, economics, and religion, it will The ability to look at issues from different cultures and perspectives; 4) The dimension of consciousness (be aware of the differences between one's own cultural identity and the other's cultural identity when communicating with foreigners). From the above, we can see the empathy, adaptation, tolerance, emotion, and interpersonal relationship that are common in Chinese university students in intercultural communication. The questionnaire consists of two parts: the first part is personal information, including gender, grade, major, college English score, going abroad and cross-cultural contact experience, etc. The second part is the cross-cultural ability evaluation scale, including 4 main Dimensions: Consciousness, Attitude, Skills, and Knowledge are represented by 40 description items. They are scored from "0" to "5" by using the Lectra scale, and "0" stands for "Nothing". 1" stands for "very weak/slightly", "2" stands for "weaker/some", "3" stands for "general/some", "4" stands for "stronger/more", and "5" stands for "very strong" /Much".

Data Collection And Analysis

In Oct 2016, a total of 447 questionnaires were distributed through student classrooms, express mailings and e-mails. A total of 331 valid questionnaires were collected, with an effective rate of 74%. Questionnaire data were statistically analyzed by SPSS. Firstly, the structural validity analysis of the questionnaire data--factor analysis, through the exploratory factor analysis (EFA) to find out the number of key factors affecting the cross-cultural ability of Chinese college students, and the correlation between each factor and its observed variables. Then, the reliability of the questionnaire was analyzed, and the consistency of the scale (Cronbach α coefficient) was tested. Finally, Amos was used for confirmatory factor analysis to evaluate the model fit of the Chinese college students' cross-cultural competence evaluation scale.

Research Result

Exploratory Factor Analysis

The exploratory factor analysis method was used to extract the factors of the collected questionnaire data. The principal component analysis method and the variance maximum rotation method were used for orthogonal rotation. The rotation converges after 14 iterations. The first EFA The KMO value of the analysis results is $0.915 > 0.9$, and the Bartlett spherical test result is significant (approximate chi-square value is 66818.58, degree of freedom is 780, $p = .000 < .05$), indicating that the selected sample size meets the requirements. The data collected is suitable for factor analysis. Subsequent two EFA analysis results showed that 12 description items such as ic14, ic15, ic16, ic17, ic18, ic33, ic35, ic36, ic37, ic38, ic39, and ic40 did not meet the requirements for factor extraction, such as factor load value is less than 0.4 (Kumar 1999), or both factors with a factor load of 0.4 or higher (Diamantopoulos & Si guaw 2000), or distributed in the same independent factor, and the number of items included in the factor is less than 3 (Bandalos 1993), so delete it. The third EFA analysis showed a KMO value of $0.896 > 0.8$, and Bartlett's spherical test results were significant (approximate chi-squared value is 459.2.37, degree of freedom was 378, $p = .000 < .05$), after orthogonal rotation. The rotation converges after 7 iterations, extracting 6 main factors, the eigenvalues are all greater than 1.0, and the cumulative variance contribution rate is 63.020%, a more comprehensive explanation of the characteristics of the major factors in the scale, constitutes a scale of evaluation of cross-cultural competence of Chinese college students composed of 28 description items.

There are twenty-eight description items for the Chinese University Students Intercultural Competency Assessment Scale. Six factors with eigenvalues greater than 1 can be extracted. All the description items are aggregated into six main factors: "Knowledge A" has three (ic1, ic2, Ic3), "Knowledge B" seven (ic4, ic5, ic6, ic7, ic8, ic9, ic10), "attitude" three (ic11, ic12, ic13), "skill A" nine (ic19, ic20, ic21) , ic22, ic23, ic24, ic25, ic27, ic30), "skill B" three (ic26, ic28, ic29), "conscious" three (ic31, ic32, ic34). The total variance of the cumulative interpretation of the scale is 63.020%, and the factor load of all description items is between 0.479 and 0.859, indicating that the above six major factors more comprehensively reflect the knowledge, attitudes and skills in cross-cultural competence. And four dimensions of consciousness and other content.

Trust Level Analysis

In order to ensure the reliability and effectiveness of the research tool, a reliability test is performed on the improved ICC evaluation scale, that is, the consistency Cronbach alpha coefficient value in the test scale. see Table 1.

Factor	knowledge A	knowledge B	attitude	skill A	skill B	consciousness	total amount
Cronbach A coefficient	0.734	0.910	0.863	0.873	0.779	0.878	0.913
Number of items	3	7	3	9	3	3	28

Table 1. Reliability analysis results of six factors in the ICC evaluation scale

It can be seen from Table 2 that the Cronbach α coefficient of the six factors in the ICC evaluation scale is between 0.734 and 0.910, and the Cronbach α coefficient of the overall scale is 0.913, indicating that the scale has strong internal consistency. Higher reliability.

Confirmatory Factor Analysis

A confirmatory factor analysis was performed using Amos 17.0, and the model fit evaluation was performed on the improved ICC evaluation scale obtained by EFA. The model fitness index results are obtained by CFA hypothesis model verification (see Table 3), χ^2/df (chi-square degree of freedom ratio), NFI (standard fit index), NNFI (non-standard fit index), CFI (Comparative Adaptation Index), GFI (Compatibility Index), AGFI (Adjusted Fit Index), RMR (Residual Mean Square and Square Root), RMSEA (Relative Residual Mean Square and Square Root), etc. The index is within the acceptable range and meets the evaluation criteria of the SEM overall model fit degree, indicating that the ICC evaluation scale structure model path map (see Figure 1) has a good fit to its actual observation data, or improved The ICC six-factor model has high validity. Thus, the combination of EFA and CFA confirmed that the improved ICC six-factor evaluation scale has good structural validity.

Index	χ^2/df	NFI	NNFI	CFI	GFI	AGFI	RMR	RMSEA
Reference value	1-3	>0.80	>0.90	>0.90	>0.90	>0.90	<0.08	<0.08
Index value	2.14	0.82	0.91	0.92	0.91	0.93	0.07	0.03

Table 2. Confirmatory factor analysis results of ICC evaluation scale fitness index

Discussion And Analysis

The Multidimensionality of Chinese College Students' Intercultural Competence

This study used exploratory factor analysis to analyze the data from the ICC evaluation scale and extracted six main factors, including: (1) knowledge related to national culture (knowledge A); (2) knowledge related to foreign culture (Knowledge B); (3) Attitude; (4) Intercultural Communication Skills (Skills A); (5) Cross-Cultural Cognitive Skills (Skill B); (6) Consciousness. The above factor extraction results show that the cross-cultural competence of Chinese college students is composed of six dimensions. The multi-dimensional competence of cross-cultural competence can be derived from the cross-cultural competence dimension proposed by foreign intercultural competence research scholars Byram (1997), Fantini (2001, 2006), Gudykunst (2004), Deardorff (2004, 2006), and Risage (2007). The model is fully supported by theory. The multi-dimensional model of cross-cultural competence represented by Byram is a cross-cultural competence model based on cross-cultural experience in European context (Byram 1997; Risage 2007); Fantini (2000) builds knowledge with core consciousness as A four-dimensional model of cross-cultural competence of attitudes and skills; Gudykunst (2004) proposes a three-dimensional model of cross-cultural competence motivation, knowledge and skills with “motivation instead of attitude”. The multi-dimensional model of cross-cultural competence proposed by the above scholars can strongly support the multi-dimensionality of Chinese college students' cross-cultural competence.

The Importance Of Each Competency Dimension In The ICC Evaluation Scale Structure

The data after EFA and CFA analysis proves that the Chinese college student ICC evaluation scale has good reliability and validity. Six of these factors have different roles in evaluating and explaining the cross-cultural competence of Chinese college students. Factor 1 “Knowledge related to national culture” (Knowledge A) includes three descriptive items covering knowledge from national history, geography, socio-politics, social etiquette, religious culture, lifestyle and values, explaining 4.790% The total variance is a factor of importance in the six factors.

Factor 2 “Knowledge related to foreign cultures” (Knowledge B) includes seven descriptive items covering foreign history, geography, socio-politics, social etiquette, religious culture, lifestyles and values, cultural taboos, cross-cultural communication and communication strategies, and Skills, basic norms and behaviors of different cultures, among which “understanding and contrasting the basic norms and behaviors of different cultures” have the highest factor load in all twenty-eight descriptions. Moreover, the second factor explains the total variance of 30.790% and is the most important factor in the overall ICC evaluation scale. The above two factors can be attributed to a common dimension—knowledge, and the degree of importance can also be supported by some field survey data and conclusions abroad. For example, the American Council for Education (ACE) fosters internationalization of six universities across the United States. A three-year (2004-2007) field survey was conducted on the talent development plan and the specific implementation strategy. The study found that almost all the schools under test emphasized the promotion and enhancement of cross-cultural communication knowledge as the primary evaluation index (Norris 2007). Moreover, Baumann & Shelley (2006) conducted a cross-cultural competence level survey of some advanced learners of distance learning in the German Open University. It was found that most students

generally believe that knowledge about cultural, community and social aspects of other countries is closely related to intercultural competence. Contact, and they also believe that understanding and mastering German native culture is also important.

Factor 3 “attitude” includes three description items, such as “willing to learn foreign languages and understand foreigners”, “willing to communicate and learn from foreigners from different cultures”, “willing to try to tolerate different values and eating habits of foreigners. , taboos, etc., explained the total variance of 5.745%, with a middle degree of importance among the six factors. Byram (1997)'s study of Europeans found that attitude factors are the cornerstone for evaluating cross-cultural competence. This view was also endorsed by scholars such as Lynch, Hanson, Okayama, Furuto, Edmondson, and Deardorff (Berardo 2005). Similarly, to support this view, it is worth mentioning that the “attitude” in the Delphi expert survey method used by Deardorff (2004) is the only impact factor that is 100% endorsed by all cross-cultural experts.

Factor 4 “Cross-Cultural Communication Skills” (Skill A) includes nine descriptive items that can be summarized as explanations and comprehension skills, such as negotiating and interpreting with communication obstacles and misunderstandings, communicating with non-verbal means such as body and gestures, etc. Relevance and observation skills, such as viewing political, economic, religious and other events in other countries, can look at problems from multiple perspectives, and avoid avoiding prejudice, prejudice, privacy or offense when communicating with foreigners (in speech, behavior, wearing Analytical, evaluation and interactive skills, such as evaluating and analysing the sensitivity of cross-cultural differences, objectively evaluating and analysing foreigners, being polite, using foreign languages and being effective with people from different social and cultural backgrounds and fields. Successful communication. Of the six factors, factor 4 explained the total variance of 13.279%, which is second to none.

Factor 5 “Cross-Cultural Cognitive Skills” (Skill B) includes three descriptive items such as “the ability to use a variety of methods, techniques and strategies to help learn foreign languages and cultures”, “Rethinking when cross-cultural conflicts and misunderstandings arise” And the ability to learn and seek a proper solution, “the ability to directly acquire intercultural communication knowledge through contact with foreigners”, explaining the total variance of 4.339%, which is relatively important in the six factors. weak. The above two factors can also be summarized as a common dimension—the skill, which is subdivided into two, on the grounds that the importance of the two is somewhat different. In terms of two types of skill factors, especially cross-cultural communication skills, almost all scholars use it as a key factor in evaluating cross-cultural competence (Fantini 2006). In the doctoral dissertation written by Deardorff (2004), an striking conclusion was drawn that all skills-related abilities were unanimously endorsed by the subject, including analysis, interpretation, association, cognitive skills, and so on.

Factor 6 “Awareness” includes three descriptive items, such as “Aware of cultural similarities and differences between each other when communicating with foreigners”, “Aware of the differences in cultural styles and language use, and their impact on society and work situations. "Impact", "Aware of the difference between one's own cultural identity and the other's cultural identity when communicating with foreigners" explains the total variance of 4.077%, which is the weakest among the six factors. However, many years ago, as international education goals increased emotional factors into knowledge and skills, consciousness began to become more and more considered to be another essential factor in the development of cross-cultural competence. Therefore, intercultural scholars generally believe that consciousness and attitude, knowledge, and skills together constitute the main dimension of intercultural competence, but consciousness is not the same as the importance of other three factors. Fantini is building awareness, attitude, skills and knowledge. When the four-dimensional model is used, the consciousness is placed at its center (Fantini 1995, 2000). In addition, consciousness cannot be reversed. In other words, once a consciousness is formed, it is difficult to return to an unconscious state. And as awareness increases, it will lead to deeper understanding, stronger skills and more complex attitudes. Thus, awareness is one of the key factors in cross-cultural competence (Freire & Macedo 1998).

Conclusions

At present, the application research of ICC evaluation scales at home and abroad generally lacks systematic empirical data support and relatively mature statistical tests. This study combines the actual situation of Chinese college students, improves and corrects the internationally accepted ICC evaluation scale, and uses the exploratory factor analysis and confirmatory factor analysis commonly accepted by the international statistical community as statistical tools for Chinese college students ICC. It is important to carry out reliability analysis and validity test on the evaluation scale. The improved localized ICC evaluation scale in this study has good reliability and validity. It can be used to measure the actual situation of Chinese college students' cross-cultural competence development. The empirical survey data can help college students predict their cross-cultural competence. The actual level helps them to better understand their strengths in cross-cultural competence or to help them develop a self-awareness of their intercultural competence (ie, the factors that many scholars are concerned with when studying cross-cultural competence). At the same time, it can also provide reference for domestic universities to train international talents and provide relevant cultural capacity training courses. However, the improved localized ICC evaluation scale in

this study needs to be combined with more diverse subjects for lateral and vertical empirical studies to further confirm its validity and reliability, as well as other methods such as interviews and cross-cultural competence test data. Wait for a comprehensive evaluation together.

Abstract

This study, through the study of the self-reflection of the teacher behavior of the GCED leaders' teachers, how to understand the GCED, a new global education system at the regional level, and how to practice empirical research at the school site. This study analyzes the factors that influence the self-reflective behavior of the leader teachers of global citizenship education (GCED) in China and applies GCED's new educational content to Chinese schools. On the basis of literature research, the self-reflective behavior analysis model of GCED class teacher is constructed to explore the contextual factors that influence their self-reflective behavior. By doing so, this study aims to discover the significance of improving the role of teachers as agents of change in schools.

Introduction

As globalization progresses, the national curriculum is affected by the global education agenda. In particular, as educational achievements and results between countries become comparable, the accountability of educational systems has been emphasized more than ever (Nagel, Martens & Windzio, 2010; Zhao, 2010). This global trend demands that schools constantly adapt to change, and countries are investing a lot of resources in revising curricula and implementing new educational policies. How will this effort change the actual school scene? The role of teachers in this trend is emphasized. Teachers are now expected to play the role of experts, learners, and researchers in the school scene. Teachers' daily teaching and learning choices determine how educational policies are realized in the school setting and determine whether institutionalized practices or behaviors in the school will continue or change, and teachers as institutional agents can see. Recently, the discourse about teachers has been viewed as agents of change (Fullan, 2003), not just those who execute the curriculum and convey knowledge, but actively reorganize and practice the curriculum.

With the one-belt-one policy promoted by the Chinese government now, all of its students should realize that China's opportunities for cooperation with neighboring countries and the world are expanding gradually. In order to achieve this goal, being in China is key to enhancing the cultural capabilities surrounding the education of cultural diversity, and it is necessary to develop a cultural literacy that finds different meanings in various cultures for all people (郑金洲, 2013: 56). In particular, it is an essential capability for teachers who are responsible for cultural diversity education. Recently, the discourse of teachers has been regarded as agents of change, which is not a person who simply carries out a curriculum and communicates knowledge but reorganizes and practices the curriculum positively (Fullan, 2003). This viewpoint seeks to realize the educational policy and change the school scene through the development of the professionalism of teachers and the development of competence. In other words, it can be seen that education change can be achieved by deepening understanding of teachers' individual education policies and curriculum and strengthening motivation for practice. However, this approach can overlook the situational context of teachers by emphasizing the individual ability of teachers to practice education policy.

Teachers are accepted as key stakeholders in the implementation of the new educational policy, but the teachers have to reflect on the difficulties of applying the school site. This is due to the lack of training of individual teachers, but also to the structural context in which teachers are involved. Recently, the concept of teacher activeness, which is actively being studied overseas, can provide a useful framework for understanding the contextual contexts experienced by teachers in the school field in the course of implementing educational policy. According to Biesta & Tedder (2007), activeness is accomplished in the context of the teachers rather than as a characteristic of the teacher. This position calls for attention to the cultures and structures that interact with teacher actors.

The purpose of this study is to investigate how teachers' participation and activities in teachers' participation in the Global Citizenship Education Leadership Competency Enhancement Project are expressed through interaction with situational contexts. The importance of global citizen education is increasingly emphasized in the Chinese school scene, and the role of teachers is also emphasized. Therefore, previous studies analyzing the experiences and perceptions of Korean teachers on global citizen education suggest that Chinese teachers recognize that global citizen education is an 'alternative educational paradigm' that will bring about changes in the school scene, but it is inevitable that the traditional education paradigm. It is inevitable to face a dilemma at the school site (Lee, Sung-ho, 2016). Through the in-depth exploration of the momentum, motivation, and practice of teachers' interest in

global citizenship education, and that they are practicing global citizen education in other ways (Park, Soon-Yong, Kangbo, 2017).

These studies suggest that individual factors such as teachers' perceptions, values, and motivation are preconditions for the effective diffusion and settlement of the global citizen education on the Chinese school site. However, the teachers' suggests that further research is needed on how these individual factors interact with the environmental and situational conditions in which teachers are involved since they cannot be separated from the context and environment in which they are located. The purpose of this study is to understand the experiences of leading teachers in global civil education by focusing on situational and environmental factors that promote or obstruct activity by applying the concept of teacher's behavioral concept.

Ecological Approach To Teacher Behavior Self-Reflection

Schweisfurth (2006) found teacher network as a facilitator, hierarchy of the school, hierarchy of the school, and hierarchy of the school as the obstacles. This is useful because it is a good factor to apply to Korean teachers. The usefulness of the Priestly, Biesta & Robinson (2015) model in understanding and explaining the experience of leading citizen education teachers is due to the fact that contextual factors are subdivided into cultural, to be. Bridwell-Mitchell (2012), Vahasantanen (2013), and Pantic (2015) focus on teacher competence, which considers that facilitating teacher conduct depends on the competence of teachers.

In this sense, the policies on the development of teachers' competencies focus on improving individual teachers' competencies rather than on how teachers contribute to their situation and how they affect (restrict or promote) do. For this, Priestly et al. (2015) suggested that researchers should pay more attention to the cultural and structural dimensions of the teacher's work, and that attempts to reinforce the teacher's behavior are not merely focused on individual competence and that teachers should pay attention to the factors and dimensions that make up the work world. Therefore, the ecological approach to teacher behavior is fundamentally different from the claim that "teacher is the most important factor," and is also distinguished from the concept of 'teacher leadership' and 'teacher autonomy' (Priestly et al., 2015).

Teacher Behavior The premise of the phenomenon being achieved by the interplay of context and teacher competence, rather than having a teacher, and not having a teacher, is that all teachers, not a few teachers, (Priestly et al., 2015: 5). In this way, teachers are more likely to be educated. Likewise, in order for global citizenship education to take place in the Korean school scene, more teachers, not a few teachers, need to be involved and participate in global citizen education. Therefore, it is important for teachers to have easy and convenient access to global citizen education. If global citizenship education is perceived as an education that requires a high level of dedication and enthusiasm by highly qualified teachers, teachers who are not able to devote such enthusiasm and energy to world citizenship education will feel frustrated or worried about world citizenship education and will lose interest. As the empirical data presented in subsequent chapters show, it is suggested that the project of leading global citizen education is dependent on the dedication and enthusiasm of individual teachers. This suggests that institutional support should be accompanied by the strengthening of teachers' capacity to educate the world's citizens. Therefore, in order to be a global citizen education in which all teachers can participate, it is necessary to deeply grasp the situation context that promoted or obstructed their behavior based on the experience of the leaders of global citizenship education, based on this, it is necessary to provide institutional support to enable global citizen education in school field in the future.

In this study, we try to make an analysis focusing on the ecological environmental condition of the teacher in this view and set up the analysis model as shown in Figure 1.

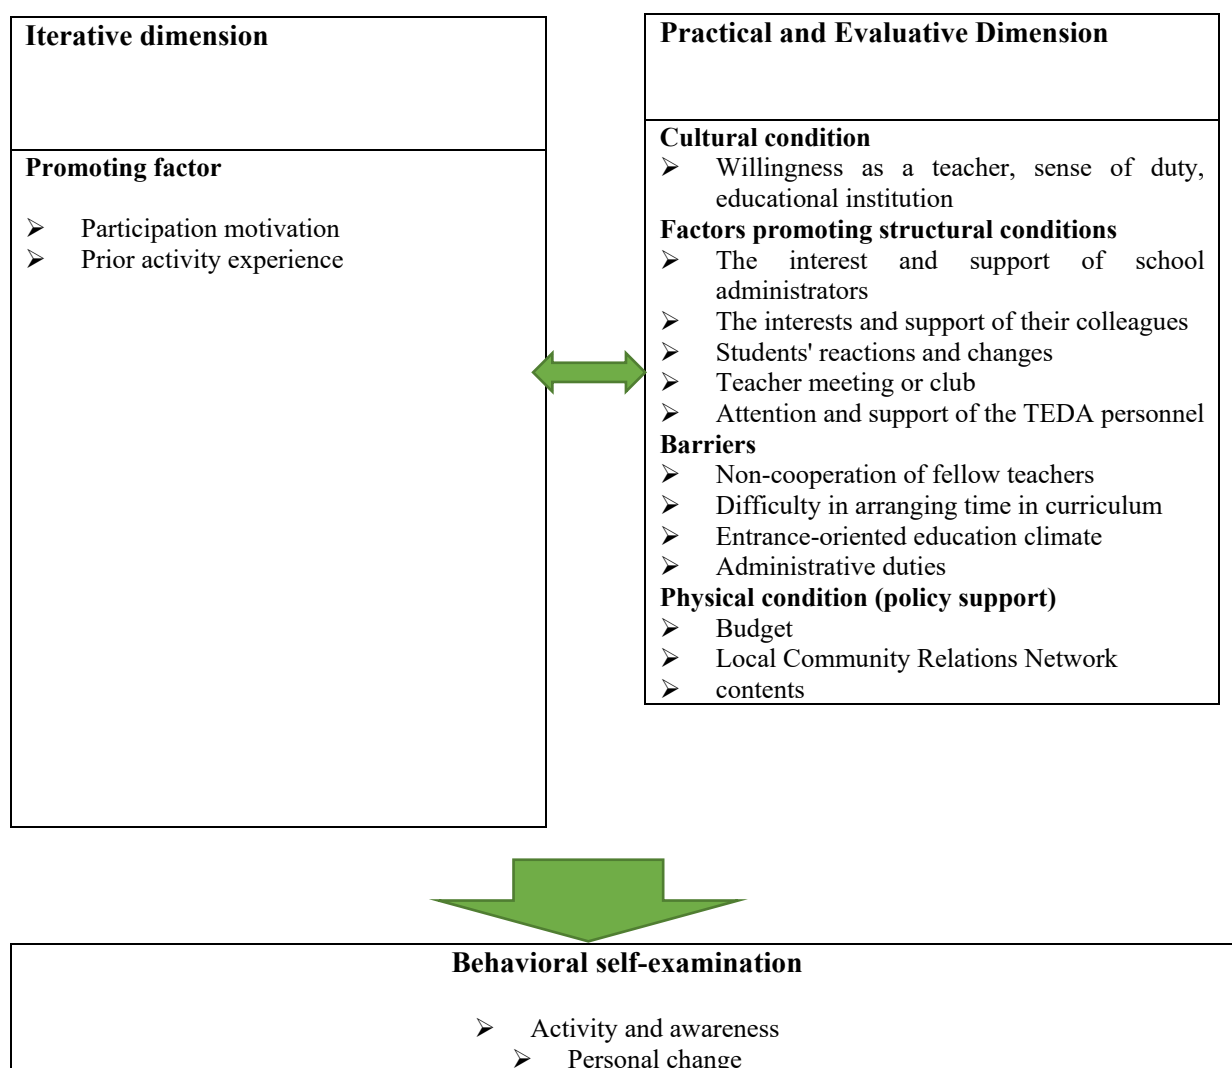

Figure 1 The analysis model of teacher behavior self-reflection in this study

Global Policy Formation For Global Citizenship Education

Global Citizenship Education aims to strengthen learners' capacities to ensure that they have an active role to address and address global challenges locally or globally. The ultimate goal of global citizen education is to enable learners to make a leading contribution to creating a more just, peaceful, tolerant, inclusive, safe and sustainable world. The global citizen education is attracting global attention in earnest, as the global education first initiative initiated by UN Secretary-General Ban Ki-moon in 2012 is expected to expand educational opportunities and improve the quality of education. Since the introduction of the 'fostering global citizenship' as one of the priorities of the education-related ages. Since then, UNESCO has hosted expert meetings and forums on global civic education, contributing to the global shaping of global citizen education. In response to this, the global citizen education began to attract attention in Korea. In May 2015, ahead of the UNESCO World Education Forum in Incheon, Korea has embarked on the task of shaping global education as a host nation.

This effort contributed to the global citizen education reflected in the "Sustainable Development Goals" adopted by the United Nations in 2015. Among the 17 sustainable development goals, SDG4 related to education aims at ensuring inclusive and equitable quality education and ensuring inclusive and equitable quality education and promoting lifelong opportunities for all, With the inclusion of global citizenship in Target 4.7, one of the targets, the promotion of global citizen education has become one of the development goals that the world must endeavor to achieve by 2030. At the UNESCO General Conference in November 2015, the Implementation Plan of the World Education Forum Incheon Declaration, including the Global Citizenship Education, was adopted, so that the United Nations and UNESCO Member States have the obligation to include and actively promote global citizen education in national education policy. In this regard, the OECD is expected to continue to increase interest in this area in the future as it introduces global competencies to PISA 2018 (OECD, 2016).

The Role Of Teachers Prescribed In Global Citizenship Education

Global citizenship education is an education that expresses transformative education. The goal of global citizenship

education is to nurture citizens of the world who think, share and act for a more just, peaceful, and sustainable society. Instead of learning the skills and skills needed to live with knowledge, emphasize active action to change. It is innovation-oriented and change-oriented in that it seeks the arrival of a better world through education. Thus, it emphasizes that learners not only understand and understand the problems that are happening in the world, but also think critically about them. Emphasis is also placed on defining areas such as empathy and care and emphasizing moving things into action. The following transformative pedagogy is important for carrying out this transformational education.

First, it enables learners to critically analyze real life problems and find possible solutions in creative and innovative ways.

Second, the learner critically examines the hypothesis of mainstream discourse, the relationship between worldview and power, and helps the alienated people and groups to be considered.

Third, we respect diversity and diversity. Fourth, emphasize participation in action to bring about hopeful change.

Fifth, involve a variety of stakeholders, including those outside the educational environment of the community or in a broader social context.

To implement such a teaching method, additional training and support for educators will be needed (UNESCO, 2014). Therefore, global citizenship education emphasizes learner involvement, dialogue, interaction, and cooperation in an integrated way of learning, and requires teachers to become accustomed to these learner-centered teaching methods (UNESCO, 2014). At this time, the role of teachers is facilitators of learning, not mere knowledge transferors, and agents of change. International organizations such as UNESCO are encouraging the educational departments of each Member State to present entry points into the curriculum and to innovate the curriculum to introduce transformational pedagogy, and to encourage teachers to interact with learners in the classroom, (UNESCO, 2014b) to encourage training opportunities and system reforms so that they can use pedagogical methods to develop their skills.

In Chinese, the emphasis is on the development of school-centered curriculum after the 7th curriculum. In addition, the teacher has to characterize the national curriculum according to the characteristics and needs of the unit school. It is recommended to use. Therefore, support for the application of national curriculum requires teachers to shift their expertise and to encourage teachers to cooperate with each other, rather than allowing them to passively follow curriculum guidelines.

Policy Interpretation At The National Level

At the national curriculum level, efforts are being made to link the elements of the curriculum to the elements of global citizenship education. Among the statements on the human image pursued by the 2015 revised education curriculum, the world citizens' education pursues the expression of 'creative person', 'understanding of plural value', 'expression of community', 'democratic citizen communicating with the world'. And the relationship between the characteristics of the students and the students (Ministry of Education, 2015).

In addition, the 2015 revised curriculum features the 'core competencies' that students should develop, and it can be seen that the learning outcomes pursued by the global citizenship education are reflected well. In addition, · Includes topics that can be linked to global citizen education such as health education, personality education, career education, democratic civic education, human rights education, multicultural education, unification education, economic and financial education, environment and sustainable development education (Ministry of Education, 2015).

In addition, the curriculum of each subject can identify the parts that can be linked with the global citizen education. For example, the core competencies pursued by Chinese language schools in the revised education in 2015 are critical and creative thinking ability, data and information utilization ability, communication ability, community and interpersonal ability, cultural enjoyment ability, self-reflection, , Which is a learner with knowledge and critical literacy that is a characteristic of the learner pursued by global citizenship education, a learner with diversity in abundant social relations, a learner with ethical responsibility, They have very similar characteristics (Ministry of Education, 2015).

Research Method

A total of 99 teachers who participated in the global civic education center in 2015 and 2016 were surveyed in order to investigate the teachers' Day to May 17. The questionnaire was made online through the Google survey and 74 respondents (75%) were recovered. The questionnaire was developed by the researcher in consultation with the on-the-spot researcher and consulted by the on-the-spot researcher. The detailed contents are shown in Table 1.

classification		number
Personal Information	Gender	1
	Position	2
	Teaching career	3
	School level	4
	Responsible for curriculum	5
Personal Experience Factors	Participation motivation	6
	Experience with prior related activities	7
	The type of activities related to their prior experience	8
A factor in self-reflection	Performance by type and type of activity as a leading teacher	9-1~9-5
	Awareness of GCED activity outcomes	10-1~10-5
	Personal change after participation	11-1~11-3
Influence factor	The level of agreement on the promotion of global education activities	12-1~12-5
	The level of agreement on the factors that impede education in the world	13-1~13-5
	the sufficiency of institutional support	18-1~18-5
	the reaction of one's peers at one's school	14
	Response of school administrators	15

Table 1 The constitution of survey tools

SPSS 23.0 version was used for statistical analysis. Frequency analysis, factor analysis, correlation analysis and multiple regression analysis were used as statistical methods.

Research Result

Topic	Factor analysis
Experience of participating in the project as a leading teacher of GCED	<ul style="list-style-type: none"> ✓ Activities as a leading teaching experience ✓ Participation time and experience of the prior activity ✓ Awareness of global citizenship education performance ✓ Changes in personal experience
Factors Related to GCED Activity and Personal Change	<ul style="list-style-type: none"> ✓ Factors Promoting the Activities of Leading Teachers of Global Citizenship Education ✓ Factors Preventing the Activities of Leading Teachers of Global Citizenship Education
Analysis of factors influencing perception and personal change in activity performance	<ul style="list-style-type: none"> ✓ Activity and Personal Change as a Self-motor of Teacher Behavior. ✓ An Analysis of Factors Affecting Activity, Recognition, and Personal Change

Table 2 The subject of factor analysis in this study

Experience of participating in the project as a leading citizen education teacher

1. Experience as a leading teacher

The results of this study are summarized as follows: 1) The question 2 (What kind of method did global citizen education teachers implement in this policy framework?), see Table 3

Kinds	Average	Standard Deviation	Minimum value	Maximum value
Classroom activities for students	3.811	.7706	2.0	5.0
Extracurricular activities for students	3.595	1.0057	1.0	5.0
Sharing activities with fellow teachers	3.676	.9807	1.0	5.0
Institutional spreading activity	3.324	1.0351	1.0	5.0
R & D Activities	3.581	1.0204	1.0	5.0

Table 3 The type and frequency of activities conducted by leading teachers of global citizenship education (N = 74)

As a result, it was revealed that the leading teachers of global citizenship education performed the most 'classroom activities for students' and 'sharing activities with fellow teachers'. The following were 'extracurricular activities for students' and 'research and development activities'. On the other hand, it was found that they participated in 'institutional expansion activities' in a limited manner.

2. Participation time and experience of prior activity

Participation time and related activity experience prior to project participation can be a factor in promoting teacher activeness. In order to explore the research question 3 (what are the factors promoting or restricting teachers' awareness of global citizenship education teachers), we surveyed the participating teachers of the global citizens' 37% (50%) of the respondents said that they participated in the personal interest or mission of the global citizen education, and 23 (31.1%) responded that they participated in the invitation of MOE officials, (8.1%), and five (6.8%) answered that they participated in the invitation by the principal.

In the other responses, one (1.4%) participated in the invitation by the assistant principal, and one participated in the curiosity of the world citizen when the senior teacher participated in the invitation. The percentage of participation in personal interest and mission, and the involvement of others such as school officials, school administrators (principals, vice-principal), and other teachers (including senior teachers).

3. Citizen Education Activity and Recognition

The area that teachers perceive as the most accomplishment is that 'meaningful educational activities in the classroom have been done and it was rewarding', and the teacher community for the practice of global citizen education was formed in the affiliation. 'The evaluation of fellow teachers and school administrators' awareness of global citizen education in the school has improved more than usual. However, there was a moderate evaluation of the formation of a group of teachers who would like to do this in school.

Items	Average	Standard Deviation	Minimum value	Maximum value
Meaningful educational activities were carried out in the classroom and I felt rewarded.	4.338	.7635	2.0	5.0
Fellow teachers' awareness of global citizen education in the school has increased	3.662	.9257	1.0	5.0
A group of teachers for the practice of global citizenship education was formed in the school	3.054	1.2702	1.0	5.0
School administrators' awareness of global citizen education in the school has increased	3.541	1.1726	1.0	5.0
A community of teachers for the practice of global citizen education was formed within the group	4.095	1.1955	1.0	5.0

Table 4 Global Citizen Education Leadership Teacher Activity and Recognition (N = 74)

Factors Related to Global Citizen Education Activity and Personal Change

1. Factors that Promote the Activities of Leading Teachers of Global Citizenship Education

Based on the analysis of the previous research, we selected factors that could affect the teacher's behavior of the

leading teachers of global citizenship education and asked whether each factor promoted the global citizen education activities or whether they are obstacles. Table 2 shows the responses to the facilitation factors. Leading teachers most agreed that 'willingness, mission, and education as a teacher' are the driving forces of global civil education. In addition, many responded that 'response and change of students' and 'teacher study group / club that share the same interests' were also facilitating factors. On the other hand, the interest rate and support of the school fellow teachers and the school administrators were low in the agreement rate.

Factors	Average	Standard Deviation	Minimum value	Maximum value
As the will and sense of mission, educational view of teachers	4.392	.5926	3.0	5.0
The interest and support of school administrators	3.419	1.1227	1.0	5.0
Interest and Support of Peer Teachers in Their Schools	3.432	.9943	1.0	5.0
Students' Responses and Changes	4.203	.6821	2.0	5.0
Share common concerns of teacher seminar/association	4.000	1.0068	1.0	5.0

Table 5 Promoting the Activities of Leading Teachers of Global Citizen Education (N = 74)

2. Disability Factors of Leading Teachers of Global Citizenship Education

Table 6 shows the results of responses to the obstacles to the activities of leading teachers in global civic education. As a result of the frequency analysis, it was found that 'administrative work' and 'educational climate focusing on the entrance examination' were relatively recognized as the most obstacles. Also, 'difficulty of preparing time in curriculum', 'Chinese tribe' also showed similar response level. Relatively 'non-cooperative attitudes of fellow teachers' were less recognized as obstacles.

Factors	Average	Standard Deviation	Minimum value	Maximum value
Uncooperative attitude of fellow teachers	2.743	1.1111	1.0	5.0
Difficulty in preparing for the education course	3.595	1.0057	1.0	5.0
Exam-oriented education	3.703	.9894	1.0	5.0
Heavy administrative work	3.865	.9411	2.0	5.0
Lack of understanding of global citizen education at the school site	3.622	.8868	1.0	5.0

Table 6 Disability Factors of Leading Teachers of Global Citizenship Education (N = 74)

Analysis of factors influencing perception and personal change in activity performance

1. Activity and Personal Change as a Self-motor of Teacher Behavior

In this study, the factor analysis of 'citizenship education activity and perception' and 'individual change' as the factors of teacher's activeness are shown. 'Global Citizenship Education Activity and Awareness' all showed a value of .630 or more, and all three items showed a value of .762.

This is the result of analyzing the needs of the teacher to explore the facilitation and obstacles of the actor's character. The results of this study are as follows. First, teachers' interests and support of school administrators, teachers' associations or clubs (learning communities) sharing their interests, interest and support of their fellow teachers, and they were named as structural promoters. The lack of understanding about global citizenship education in the school field, the uncooperative attitude of fellow teachers were tied to one factor with a value of 0.764 ~ 0.583, Respectively.

2. Factors Affecting Activity, Recognition, and Personal Change

This is the result of a key analysis conducted to explore factors that facilitate and prevent teachers' behavior. The school manager's interest and support was shared by the teachers' association or seminar (study community), the

interests and support of their fellow school teachers, the intent to serve as teachers, and the educational institution promoted them to a single group of 0.829 to 0.5088. Educational climate for college entrance exam, difficulties in establishing time for the curriculum, administrative work, lack of understanding of world citizenship at school sites, and uncooperative attitudes of fellow teachers were cited as one factor.

Conclusions

This study started from the awareness of the need for attention not only to the strengthening of individual teachers' capacity but also to the situational and environmental context of the leading teachers in supporting the activities of the leading citizens' education teachers. Therefore, in this study, we tried to analyze the factors that promote or obstruct their behaviorally by recognizing that teachers are actors interacting with the context in which they are placed by applying the concepts of teacher conduct and ecological approach.

The main factor affecting teachers' behavior was the learning community. The change in education field and school change were more important than anything, and the starting point for this was teacher activation. However, the results showed that teachers' will, mission and education centers have failed to influence their performance and personal changes, and that the interests and support of school administrators are important factors. The principal's interest and support will be in line with the education office's policy support. To change education, it is necessary to attract the principal's attention and support, and to simultaneously enhance teachers' performance through the teacher learning community.

hasanucar@aksaray.edu.tr

Öğr. Gör. Abdullah UÇAR
Aksaray Üniversitesi
TÜRKÇEM
abdullahucar@aksaray.edu.tr

Özet

Ortadoğu'daki savaşlar sonucu son yıllarda Türkiye'ye yerleşen Arap göçmenler içerisinde eğitimi ülkemizde sürdürmek veya son zamanlarda Arap ülkelerin rağbet etmesiyle eğitimlerini tamamlamak üzere Türkiye'ye gelen ve farklı fakültelere kayıt yaptıran öğrenciler öncelikle TÖMER'lerde Türkçe eğitimi almaktadırlar.

Aksaray Üniversitesi Türkçe Öğretimi Uygulama ve Araştırma Merkezi (TÜRKÇEM) bu bağlamda her yıl 50'ye yakın Arap öğrenciye hizmet vermektedir. Bu öğrenciler üzerinde yapılan çalışmada test tekniğine dayalı bir dil öğretiminin zararları görüldüğü gibi A1 ve A2 sürecinde özellikle konuşma ve yazma becerilerinin gelişmesi için kaynak dil ile hedef dil arasındaki transferin kolaylıkla sağlanabilmesi için her iki dili bilen öğretim elemanının önemi gözlenmiştir.

Arapçanın tersine Türkçenin cümle yapısında yüklem sona olması bir Arap öğrencinin ilk öğrenmesi gereken konulardandır ve öğelerin yer değiştirmesi yaşadıkları en temel problemidir. Ayrıca okul ve yurt ortamı dışına çıkıp sosyal yaşama karışan öğrencilerin daha kısa sürede ilerleme sağladığı ve televizyonun Türkçeyi öğrenmede etkili bir araç olduğu tespit edilmiştir. Çalışmada öğrencilerin yaşadıkları en önemli problemlerin isim tamlamalarında ilgi hâli eki ve iyelik ekini düşürmeleri, hâl eklerini kaynak dildeki şekliyle hedef dile aktarmaları gibi problemler sıklık oranına göre en önemliden başlanarak çözüm önerileriyle birlikte ele alınmıştır.

Giriş

Gramerin dil öğretiminde önemli bir yeri vardır. Sentaks (Nahiv) dilin sistem yapısını ortaya koyan kurallar bütünü olmakla birlikte bir dilin sağlıklı gelişmesinin de temel dayanağıdır.¹ Konu bir dilin bir yabancıya öğretimi meselesine gelince problem hâline gelen gramere dayalı dil öğretim metodu, diğer yöntemlerin² de eksileri göz önüne alındığında farklı boyutlarıyla³ etkinliğini hâlâ devam ettirmektedir. Zira hiçbir dil öğretim metodu gramerden bağımsız değildir.

Aksaray Üniversitesi Türkçe Öğretimi Uygulama ve Araştırma Merkezinde (TÜRKÇEM) eğitim gören 50'ye yakın Arap öğrencinin sınav kâğıtlarındaki ortak hataların kaynaklık ettiği bu çalışma farklı dil ailelerine ait olan iki dilin öğretiminde -öge dizilimlerinin de tamamen farklı olduğu düşünüldüğünde- gramer yapılarını bilmenin önemini, her iki dile vukufiyeti olan eğiticinin avantajını ve Georgi Lozanov'un Suggestopedia'nın (telkin yöntemi) dil öğretimindeki artısını ortaya koymaktadır.

Derslerin Türkçe olarak işlenmesi, iletişimci yaklaşımın hâkim olması, gramer anlatımının kısıtlı olması, ders dışı etkinliklerin artırılması ve öğrencilerin yaşadıkları ortamlarda zorunlu olarak dil öğrenmeleri gereğinin sağladığı motivasyonun öğrenme sürecini hızlandırdığı ile ilgili çalışmalar⁴ olduğu için bu çalışma ders içinde öğrencilerin yaşadıkları problemlerin çözümünde kolaylaştırıcı pratik konulara değinecektir.

Problemler ve Çözümünde Kolaylaştırıcı Etkenler

Öğrenme yeteneğimizin sınırlı olduğu düşüncesi öğrenmeyi olumsuz etkilemektedir. Georgi Lozanov'a göre başarısız olma ve öğrenememe korkusu kişinin kapasitesini tam olarak kullanmasına engel olmaktadır.⁵

⁵ Georgi Lozanov, *Suggestology and Outlines of Suggestopedia*, New York, Gordon & Breach Science Publishers, 1978, s. 64-77.

Öğrencinin öğretmene saygı ve güven duyması, sınıf içerisinde yanlışlara karşı toleranslı olunması⁶ ve özverili bir eğitimcinin eğitimi Suggestopedia'nın da ilkesi sayılan öğrencinin kendisini rahat hissettiği bir ortama taşıması öğrenim sürecini kısaltan etkenlerdendir.

Eğitim-öğretim uzun bir süreçtir. Hedef dil ile eğitim yapılması, öğrencinin motivasyonunun tam olması gibi bütün pozitif adımlar atılmış olsa da süreç gerektiren hataların düzelmesi kararlılık gerektirir. Bu süreçte karşılaşılan problemler ve bu problemlerin çözümündeki kolaylaştırıcı etkenlere geçmeden önce konuyla ilgili bazı bilgilerin verilmesi faydalı olacaktır.

İsimler, cümledeki görevlerine göre bir takım ekler alırlar. Bu ekler, ismin ilişkili olduğu kelimenin türüne ve ilişkisine göre değişir.

İsmin hâlleri ismin diğer kelimelerle münasebeti sırasında içinde bulunduğu durumlardır. İsim bu münasebetleri bazen eksiz olarak fakat çok defa da ek alarak ifade eder. İsimleri çeşitli münasebetler için türlü hâllere, durumlara sokan bu eklerle hâl ekleri denir. Hâl ekleri ismi isimlere, edatlara ve özellikle fiillere bağlayarak birçok ilişki kurar ve bu ilişkilerden birçok isim, edat ve fiil grupları ile cümleler doğar.⁷ Türkçede ad durumları şöyle sıralanabilir:⁸ “Yalın durum, ilgi durumu, yükleme durumu, yönelme durumu, bulunma durumu, çıkma durumu, vasıta durumu, eşitlik durumu.”⁹

Çalışma içerisinde ele aldığımız konulardan biri de sıfat fiillerdir. Sıfat fiiller, Türk dilinin ek sınıflaması içinde önemli bir yer tutan fiilimsilerin; diğer türleri olan zarf fiil ve isim fiil gibi fiillere getirilen çeşitli eklerle oluşturulan bir alt türüdür.¹⁰ “Eylem kavramı taşıdıkları hâlde, çekilme kabiliyetinden mahrum olan, yan cümleciklerde yüklem görevi alabilen niteleyici kelimelere sıfat fiil denir.”¹¹

Bu ön bilgilerden sonra öğrencilerin karşılaştığı problemler ve bu problemlerin çözümündeki kolaylaştırıcı etkenlere değinebiliriz.

1. İsim tamlamasının ilgi hâli eki ve iyelik ekini düşürme:

Arap öğrencilerin en fazla hata ettiği konu budur. “Babasının haberi” “piyanonun tuşları” gibi tamlamaların sorulduğu sınavlarda öğrencilerin tamlayandaki ilgi hâli ekini, “müzik yarışması” ve “kapı kolu” tamlamalarında ise tamlanandaki iyelik ekini düşürdüğü görülmüştür. Ayrıca öğrenciler “bir kedinin hikâyesi” ile “kedinin hikâyesi” tamlamaları arasındaki farkı yazıya geçirmede zorlanmaktadırlar.

Arap öğrencilerin tamlamalardaki ilgi hâli ekini ve iyelik ekini düşürmesi sıfat tamlaması gibi düşünmelerinden kaynaklanmaktadır. Örneğin “Arap dili” Türkçede isim tamlaması iken Arapçada اللغة العربية terkihi sıfat tamlamasıdır. Öğrencilere bir tamlamanın sonundaki nispet ya'sının Arapçada sıfat tamlaması eki olduğunun izah edilmesi konunun anlaşılmasını kolaylaştırmaktadır. Ayrıca nasıl ki قصة ve قصة kelimelerinin yan yana gelmesi bir tamlama olmasına yetmiyor ve muzafun ileyhın sonunun قطة şeklinde mecrur olması terkibe anlam kazandırıyor Türkiye'de hâl ve iyelik eklerinin aynı işlevi gördüğünün öğrenciye kavratılması gerekmektedir. قصة قصة قطة ile قطة tamlamaları arasındaki farkın izahı da problemin çözümündeki diğer bir yönüdür. Nitekim kaynak dilin marife ve nekra kelimelerinden müteşekkil tamlama örneklerinden yapılan transferler meselenin kavranmasını kolaylaştırmıştır.

2. Hâl eklerini kaynak dildeki şekliyle hedef dile aktarma:

Özellikle belirtme hâli ve bulunma hâline ilişkin yanlışlar öğrencilerin en fazla sıkıntı yaşadığı ikinci konudur. Örneğin öğrenciler “Babasının haberini yoktu.” cümlesinde belirtme hâli ekini fazladan kullanmaktadırlar. Ayrıca “Akşamda arkadaşlarla çarşıya gittik.” cümlesindeki gibi bulunma hâli ekinin gereksiz kullanımı da konuyla ilgili güzel bir örnektir.

Belirtme hâli ekinin gereksiz kullanımının Arap öğrencilere harf-i tarif ile marife olmuş bir kelimenin sonuna getirilen mecrur muttasıl zamirin (iyelik eki) Arapçada ne kadar gereksiz olduğu örneği ile anlatılması problemin çözümünde kolaylık sağlamıştır. Öğrencilerin problem yaşadığı ve çözümü zaman gerektiren bu konuda kaynak dildeki zarflara vurgu yapılması gerektiği aşikârdır. Zira bir Arap öğrenci “sabahleyin” anlamında في الصباح ifadesini kullanmaktadır. Dolayısıyla Türkçe ifadesine de harf-i cer yansımaktadır.

3. Ad durum eklerinin kavranması:

⁶ Diane Larsen-Freeman, *Techniques and Principles in Language Teaching*, Oxford University Press, 1986, 72-76.

⁷ Muharrem Ergin, *Türk Dil Bilgisi*, İstanbul, Bayrak Yay., 1993, s. 227-228.

⁸ Zeynep Korkmaz, *Türkiye Türkçesi Grameri (Şekil Bilgisi)*, Ankara, TDK Yay., 2003, s. 266.

⁹ Ancak bu isimlendirmeler yazarlar arasında değişiklik göstermektedir. Örneğin Muharrem Ergin, “Nominatif hâli (yalın hâl), genitif hâli (ilgi hâli), akkuzatif hâli (yapma hâli), datif hâli (yaklaşma hâli), lokatif hâli (bulunma hâli), ablatif hâli (uzaklaşma hâli), instrumental hâli (vasıta hâli), ekvatif hâli (eşitlik hâli), direktif hâli (yön gösterme hâli).” şeklinde isimlendirirken Mehmet Hengirmen'e göre ise ad durumları şöyledir: “Yalın durum, belirtme durumu, yönelme durumu, kalma durumu, çıkma durumu.” Hengirmen, eşitlik durumu ve araç durumunu tartışmalı iki durum olarak göstermektedir. Ergin, age., 227-228; Hengirmen, age., s. 12.

¹⁰ Çiğdem Topçu, *Türkçede Sıfat Fiil Kategorisi*, Basılmamış Doktora Tezi, Sakarya-2011, s. 7-10.

¹¹ Kaya Bilgegil, *Türkçe Dilbilgisi*, İstanbul, Dergah Yay., 1984, s. 197.

Öğrencilerin sınavda “Sıkıntı çözmek için bir yol arıyor.” “Çocuk piyano görünce çok sevindi.” cümlelerinde belirtme hâli eklerini düşürdükleri görülmüştür. Ayrıca öğrenciler “En sevdiğim sporu yüzmek.” ve “Benim şehrimde namaz vaktinde her yeri kapalı.” cümlelerinde de belirtme hâli ekini gereksiz kullanmışlardır. Öğrencilerin yaşadığı en önemli problemlerden olan bu konunun çözümünde ad durum eklerinin fiillere göre değişeceğinin kavratılması gerektiğinin ve bu konuda zamana ihtiyaç duyulacağına bilinmesi gerekir. Öncelikle öğrenci fiili öğrenirken ekleriyle birlikte öğrenmelidir. Ancak yukarıda verilen örneklerde olduğu gibi “sıkıntı” ve “piyano” kelimeleri paragraf içerisinde kullanıldığı ve daha önce mevzu bahis olduğu için marife kelime olduklarının hatırlatılması gerekmektedir. Marife kelimenin cümle içerisinde ad durum eki alması gerektiği vurgulanmalıdır. “En sevdiğim sporu yüzmek.” cümlesindeki söz konusu ekin fazlalığı ise cümlede mübtada durumunda olan kelimenin merfu olduğu, kullarındaki hatanın ise mansubattan bir tümleç gibi algılanmasından kaynaklandığı ile izah edilmelidir. Nitekim bunun hata oranını düşürdüğü görülmüştür.

4. Sıfat fiil eklerinin kullanımı:

Arap öğrencilerin sıfat fiil eklerinin kullanımında da çokça hata yaptığı görülmektedir. Hedef dilde karşılığı olmayan ism-i mevsul konusunun eğitimci tarafından bilinmesi veya sıfat fiil eklerinin ism-i mevsuller ile tercüme edileceğinin ifade edilmesi problemi büyük oranda çözmektedir.

Örnek:

رأيت الرجل الذي يجري في الشارع “Caddede koşan adamı gördüm.”
 احترمو الشهداء الذين قدموا أرواحهم للوطن “Vatan için canlarını vermiş şehitlere saygı gösterin!”
 هذا هو القميص الذي سأرتديه في العيد. “İşte bu, bayramda giyeceği gömlek.”
 من هذا الرجل الذي ضربته؟ “Vurduğun bu adam kim?”

Bu örnekler dikkatle incelendiğinde kendisinden sonra muzari fiil gelen ilk örnekte ismi mevsulun –an, –en eki ile, mazi fiilin –mış, –miş eki ile, gelecek zaman ifade eden bir etkenden önce ise –acak, –ecek ile sıfat fiile dönüştüğü görülecektir. Mübtedadan sonra gelen ismi mevsul ise isme –dık, –dik eki ile bağlanmıştır. Ayrıca kendisinden önce isim gelmemiş olan ismi mevsullerin akıllı varlıklarda “kişi”, akılsız varlıklarda “şey” ile tercüme edilebileceğini öğrenmek öğrencilere büyük kolaylık sağlamıştır.

Sonuç

Bu çalışma Aksaray Üniversitesi Türkçe Öğretimi Uygulama ve Araştırma Merkezinde (TÜRKÇEM) Türkçe öğrenimi gören 50’ye yakın Arap öğrencinin sınav kâğıtlarındaki ortak hatalardan hareketle hazırlanmıştır. Hataların giderilmesine yönelik birkaç pratik ders işlenerek problemlerin çözümündeki kolaylaştırıcı etkenler tespit edilmiştir.

Derslerin Türkçe olarak işlenmesi, iletişimci yaklaşımın hâkim olması, ders dışı etkinliklerin artırılması ve öğrencilerin yaşadıkları ortamlarda zorunlu olarak dil öğrenmeleri gereğinin sağladığı motivasyon öğrenme sürecini hızlandırmaktadır. Ancak isim tamlamalarının ilgi hâli eki ve iyelik eki ile ilgili yanlışlıklar, sıfat fiillerin kullanımda yapılan hatalar birkaç konunun izahı ile öğrencilere kavratılabilmektedir. Tabi bu durum eğitimciye kaynak dil konusunda yardım almayı gerekli kılmaktadır.

Bu çalışmada kaynak dile hâkim olmanın hedef dili öğretmeyi kolaylaştırdığı görülmüştür. Fakat özne yüklem uyumsuzluğu, fiil çekimi yanlışları, ünlü düşmesi ve yüklemdeki kişi eklerinde yapılan yanlışlıkların ise ancak B2 ve C1 seviyelerinde, zamanla çözülebilen problemler olduğu sonucuna da ulaşılmıştır.

Abstract

Sustainability and sustainable urban development are key concepts of the globalized world in last decades. Architecture as an applied discipline has a vital role in achieving sustainable urban development. Architectural education should be a guide for the architectural students in their future professional life in order to make attempts to achieve sustainable urban development. Being the backbone of architectural education, architectural design studio is a great opportunity in order to make the students conscious about their important role for the future of the world. In the scope of this paper, one of the architectural design studios at department of architecture of Bursa Uludağ University is presented. The aim of this design studio is to develop environmental awareness of the architects of the future during the fourteen weeks of the semester via design practices of a production plant in which local agricultural products will be processed. Architectural design criteria were the requirements of environmental, socio-cultural and economic sustainability. Students experienced to develop architectural proposals in order to solve the problems of a local community and support sustainable development of their living environments. This experience let them to increase their awareness about sustainability as the architects of the future. The paper presents and evaluates the architectural projects of the students with their concepts and technical drawings.

Introduction

Architectural Design Studio And Sustainability Awareness

Architecture is one of the main professions that plays a great role in achieving sustainability. Thus, architectural education has a vital responsibility of making students aware of sustainability concept and its importance for their career. The UNESCO-UIA (International Union of Architects) charter on architectural education puts stress on this role when explaining the main aims of architectural education. These are; *to produce competent, creative, critically minded and ethical professionals* and *to produce good world citizens who are intellectually mature, ecologically sensitive and socially responsible designers and builders* (UIA,2002). UIA (2008) also defines architecture as a creative intellectual task of research and design that draws on humanity, culture, nature and society. As understood from the definitions the notion of architecture and architects have a vital role for achieving sustainability.

The architectural design studio constitutes a great part of the curriculum and is the core of architectural education. Theoretical knowledge and designing skills penetrate each other in architectural design studios. The students begin to feel and act like an architect throughout this designing experience and develop their ability of holistic and also problem-solving thought. Shon (1985), stated that the central pedagogic vehicle for architectural education is project-based learning. Students are expected to offer architectural design proposals for a given problem and a preliminary program. However, there is no one correct form of this design project. Rather the works of the students are unique and individualistic, but they should meet the requirements of the architectural program and should offer a sufficient solution for every actor included in the given problem.

The nature of architectural design studios also fits to the requirements of sustainability. Designing for sustainability needs to have an holistic approach. On the other hand, it should be sensitive to the local conditions and requirements. As Keitsch (2012) indicates, the main criteria of sustainable architecture can be determined as; minimizing the negative environmental impact of buildings by enhancing efficiency and moderating the use of materials, energy and development space, developing measures to relate form and adapt the design to the site, the region and the climate and as the last one; establishing a harmonious, long lasting relationship between the inhabitants and their surroundings by addressing the essence of good form-giving (Abidin, et. al,2008).

Being conscious about the responsibilities of architecture and architects for a sustainable future, the authors put stress on the necessities of sustainability throughout architectural design studios they supervise. In the context of this paper, the process and final products of these design studios undertaken in undergraduate program of architecture at the Faculty of Architecture, Bursa Uludag University are discussed via some example projects of 3rd. grade undergraduate student. In the following section, after explaining the aims, inclusion and development of

the studio process, some examples of student projects are presented. The students' proposals to improve the quality of life in the project area, a valuable local environment, and the change in their degree of sustainability awareness are discussed as a conclusion.

The Study

'Design For Local Production' Architectural Project

Today, it is an accepted fact that 'locality' has been gaining more and more importance in spite of the unrelenting speed of globalization. In fact, some sustainability explanations highlighting locality were made over the last decade. Levine, et.al,(1999), defined sustainability as; *"a local, informed, participatory, balance-seeking process, operating within an equitable ecological region, exporting no problems beyond its territory or into the future"* at the XX. UIA Congress. The concept of sustainability is also defined as; *"a dynamic process which enables all people to realize their potential, and to improve their quality of life, in ways which simultaneously protect and enhance the Earth's life support systems"* in the report of the Forum for the Future Annual 2000 (DETR, 2000).

The researches and implementations all around the world show the contributions of local production as; improvement of sustainability performance, product security, provision of social connectivity, cohesion and community participation, build-up of stronger local economies. What's more, local production minimizes transport emissions, enables efficient resource and energy use, improves overall carbon footprints and facilitates better human-nature relationships for better biodiversity. So, it is obvious that supporting local people to produce their unique products around their territories will contribute to the achievement of sustainability.

In the light of these, the authors thought that an architectural design problem of which main aim is to provide proper spatial and physical conditions for local production will let the students to understand the role of architecture for achievement of sustainability and help them to gain sustainability awareness. Sericulture, which has been a unique traditional production for Bursa since 14th. century, was chosen as the problematic of the architectural design studio. As Oral and Ahunbay (2005) indicate, Bursa, being the first capital city of the Ottoman Empire, became an important sericulture center on the Silk Road during the fourteenth century and preserved its importance until mid-twentieth century. Nowadays, the local government has been making a great effort in order to redevelop sericulture in Bursa. The local production of silkworm and silk is financially supported. These were important facts for the decision of the type of local production to be studied throughout the semester. The studio took place in 2017-2018 autumn term Architectural Project 5, class of 3rd graders. The Studio lasted for 14 weeks with participation of 30 students and 2 moderators.

The expected gains of this architectural studio were (1) to understand the necessity of natural and built environment and socio-cultural factors and the relationships between them for architectural and urban design (2) to gain the ability of using these relationships in favour of local people during the design process (3) to handle the architectural and urban design problems with a holistic and integrative approach (4) to gain consciousness about the importance of local values for development of the village (5) to improve sustainability awareness and earn the ability to design sensitively for a unique local settlement.

As the study area; Misia village was chosen not only for its natural properties and local sericulture history, but also for its cultural and historical values (Figure 1). It is also very close to the city of Bursa where architectural studio participants study and live (Figure 2).

Figure 1: The Layout Pattern of Misia Village (adapted from google earth, 26.04.2018)

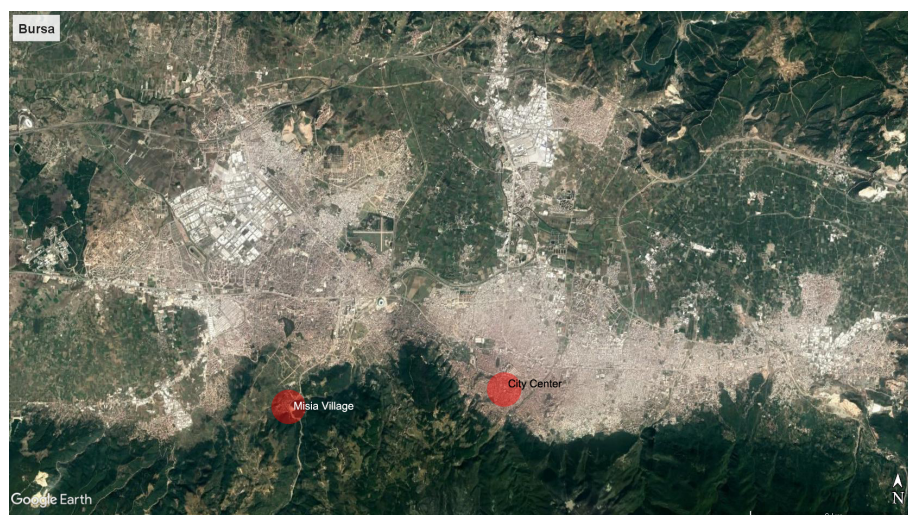

Figure 2: Misia Village in Bursa (adapted from google earth, 26.04.2018)

At the beginning of the studio, participants were enlightened about the project theme, workload distribution throughout 14 weeks of study, the expectations and the evaluation criteria of the moderators, which are based on the curriculum and Bologna credit system were stated. The main parts of the architectural program that was expected from the students to design were; the production plant including all the required sections of sericulture, a small museum in order to present sericulture, a small accommodation unit for the visitors and supportive units for shopping, eating, etc.

After explaining the theme, participants were asked for the preliminary work to overview the project area by analyzing via physical and socio-cultural researches (observations, surveys, field identification studies, etc.) throughout their field trips. They also made archive analysis about sericulture at the end of which they found out data related with physical requirements of sericulture, and also information about its history. Studio took place 2 days a week and during studio time. Every student had a chance to show and explain their ideas to the moderators who acted not as a commentator but a guide helping the participants to find their own deficiencies and fulfill them. Three interim juries took place during 14 weeks of study and a final jury was made at the end of the semester for the final evaluation. During the juries not only the moderators but also the students spoke their minds about their projects to improve them.

Evaluation criteria can be listed under two main headings as subjective and objective. Subjective criteria include the answers of the following questions; does the project include an integrative and holistic approach?

Is the project proposed able to protect the unique image of the settlement together with providing it to be used in a sufficient way today? Does the project propose suitable architectural and urban design solutions for the determined problems? Do the architectural solutions and details offer suitable places for the production type? Does the architectural proposal offer sustainable solutions? Objective criteria refer to the two-dimensional and three-dimensional presentation techniques of the project and quality of the presentation. Some examples of student projects are as follows.

Example Projects

Figure 3. Participant: Hande Akar, Project Theme: Revive Traditional Production Resources

The aim of this project was to revive a forgotten tradition, sericulture, in the village of Misia, which was one of its centers at the past. The inspiration of this project was the silk bogs' cocoon motifs. The geometrical design of these motifs was used to create a layout plan for the production complex. This geometrical organization also affected the structural system of the roof and the canopies.

Figure 4. Participator : Sabri Gelen, Project Theme: Renovation of a Traditional Production

The concept of this project was to integrate the sericulture education with the production process. One of the main aims was to make the school of the village a part of this complex and let the young villagers to learn about new technologies of sericulture and accept it as a career. The complex itself also includes some places for education.

Figure 5. Participator: Zeynep Fazilet Kaya, Project Theme: Production-based Cultural Interaction

The main aim of this project was to provide a multicultural sericulture center. Besides the required units, it also includes places for education, workshops and presentation in which the villagers and the visitors can come together and share their knowledge and experiences. This production complex was designed for hosting different sericulture producers from different cultures of the world.

Figure 6. Participator: Eylem Akdemir, Project Theme: Live in and Develop the Village

This project consists of four parts in four different locations of the village. The main aim of this decision is to be able to provide close relationships with the entire village. It is thought that the visitors and the workers of this sericulture complex should be a part of the village and suitable locations were defined for different functions. On the other hand, the visual similarity of the buildings let the users to understand that they are the parts of the same complex.

Conclusions

The presented architectural studio experience shows again, that in order to promote students' sustainability awareness the design studio courses are very important tools. Working in a traditional environment is an enriching experience, which not only combines the creative aspects of architectural design with in-depth research to understand the existing environment and its context, but also a great training to improve the design of new buildings in a traditional built environment. Throughout this 14 weeks design studio, the students of architecture - in the other words the architects of the future- were given a chance to understand how essential is to have an integrated and holistic approach in order to offer sustainable architectural solutions for development of local environments together with their unique values. They also understood the links between all the physical, social, cultural and economic aspects of complicated architectural and urban design projects. At the end of this 14 weeks course time, it is monitored that the students understanding about relationship between architecture and local sustainability progressed. They gained the ability of analyzing the existing situation of the natural and the built environment together with the local social and economic needs.

Are State Subsidized Student Loans So Attractive? Recent Study From Slovakia

Maria BARTEKOVA

Faculty of Management Comenius University in Bratislava Slovakia
maya.bartekova@gmail.com

Ludomir SLAHOR

Faculty of Management Comenius University in Bratislava Slovakia
ludomir.slahor@fm.uniba.sk

Abstract

This paper describes a system of providing student loans in Slovakia and the loans attractiveness for tertiary students. The higher education sector in Slovakia is subject to a wide reform covering accreditation, funding, cooperation with employers and widening the social makeup of the student population. The number of students enrolled in tertiary education determines, in part, a country's future competitiveness in terms of its ability to create, transform, and use knowledge in innovative ways. The Education support fund, Slovak student loan institution, is a non-state special-purpose fund established in 2013. The Education support fund provides loans to students in higher degrees in Slovakia and Slovak students studying abroad. The state subsidized student loans are accessible to every student actively enrolled in higher education. Student may applied for maximum EUR 2,300 per academic year regardless of the type of course. In January 2018, we carried out the survey focused on the financial habits of the tertiary students in Slovakia. The survey was anonymous and went online through the website about student finance. Most of the participants were in the age of 19-24 years. In the present study, a sample of 1,250 current students at the Higher Education Institutions in Slovakia was questioned to identify their actual financial situation and usefulness of various types of state financial direct support. The purpose of the survey was to analyze the social and economic conditions of Slovak tertiary students as well as their financial habits. Savings are just one way of securing the future. Our study found that around 36 % of tertiary students can not save money because of the poor social situation in their family. More than 8% of the participants said that they did not need to save because their parents donate their living expenses. We found that two thirds of students save money every month. Research has also identified social and economic implications of being in debt. Research demonstrated that the attractiveness of the state subsidized student loans is decreasing. Implications of current findings are mentioned. Limitations and directions for future research are discussed.

Introduction

We have gained a better understanding of the students' social characteristics, economic, and study conditions indicating significant changes in students' composition. Understanding these changes is fundamental to having the ability to ensure accessibility to higher education.

The higher education sector in Slovakia is subject to a wide reform covering accreditation, funding, cooperation with employers and widening the social makeup of the student population. The number of students enrolled in tertiary education determines, in part, a country's future competitiveness in terms of its ability to create, transform, and use knowledge in innovative ways (Figure 1). The tertiary educational attainment rate nearly doubled over the last decade, increasing from 14.4 % in 2006 to 28.4 % in 2015. In view of the strong correlation between tertiary education and the educational attainment of parents in Slovakia, pointing to low social mobility, efforts are needed to broaden the socioeconomic make-up of the student population (Saxunová and Chrovatovičová, 2018). Due to demographic trends, the absolute number of students entering tertiary education is decreasing, putting pressure on higher education institutions. Slovak adults with tertiary education qualifications earn on average nearly 75 % more than those who attained upper-secondary education. The employment rate for higher education graduates was 80.3 % in 2015, compared to the EU average of 81.8 % (Eurostat, 2018b).

Figure 1: Students enrolled in tertiary education in Slovakia (2007 - 2017)

While income and wealth are two distinct concepts (Skopek, Bucholz and Blossfeld, 2014), both have been shown to influence the educational attainment across generations in families in different countries (Pfeffer and Hällsten, 2012). A family's income is not only related to prior educational attainment, but also to the possibilities for the acquisition of social and cultural capital and of course directly affects the amount of direct financial support a family is able to offer their children (Wightman and Danziger, 2014). In addition, family wealth may provide "insurance against negative mobility outcomes during the status attainment process" (Pfeffer and Hällsten, 2012). The highest shares of students from – by their own assessment – averagely well-off families can be found in Romania, Slovakia, Lithuania, and Norway, where at least 55 % of students agree (Figure 2).

Figure 2: Students' assessment of parental financial status

The Financial Conditions Of Tertiary Students In Europe

In countries with a high GDP per capita – such as those at the bottom end of the axis – the overall price level is also usually markedly higher than in countries with a low GDP per capita (Figure 3). GDP per capita in Slovakia was under the EU 28 average in 2017 (Eurostat, 2018a). This will affect any minimum amount of income students need to cover their expenses (Stachová and Paškrťová, 2015). There are also indications that the students' expenses in the high-GDP countries are especially driven by their living costs. In Finland, Norway, Sweden, and Switzerland, students who are not living with parents spend on cross-country average 94 % of total expenses on living costs, whereas this share amounts only to 82 % across Armenia, Georgia, Serbia, and Slovakia

Figure 3: GDP per capita in PPS (2017)

On aggregate, students who are depending on family support dedicate 292 Euro per month to accommodation and utilities. Their peers who are depending on own earnings pay slightly less (287 Euro per month) for this purpose. Students who are depending on public support spend 215 Euro on housing. In all Scandinavian countries and Switzerland, the values for the three student groups are rather high. The amounts paid by students dependent on family support, for instance, are clearly above 500 Euro, with a maximum in Denmark with more than 1,200 Euro. In Latvia, Romania, Serbia, Slovakia, Georgia, and Armenia, the level of accommodation costs is relatively low. Students depending on family support spend less than 100 Euro per month on housing (Hauschildt, Vögtle, and Gwosc', 2018).

A student is depending on an income source if the respective source provides more than 50 % of total monthly income (including transfers in kind). Again, three sources are differentiated, which are considered to be the most important ones: "family support", "own earnings", and "public support" (Lacy, Conzelmann and Smith, 2018). There are clear differences between the student groups depending on the different sources (Looney and Yannelis, 2015). Across all countries displayed in the figure 4, students who depend on gainful employment receive on average a total income (from all sources) of 1,197 Euro per month. If students depend on family support they have a mean income of 959 Euro and those who depend on public support receive 607 Euro per month. On a more disaggregated level, this pattern is even clearer: Out of 25 countries for which data on at least two income groups are available, students who depend on own earnings have the highest income in 21 countries (Hauschildt, Gwosc', Netz, and Mishra, 2015). Only in Norway, Denmark, Malta, and Montenegro, there are students who are depending on family support who reach the highest income level.

Figure 4: Magnitude of students' income by dependency on income source – students not living with parents

Most systems offer need-based grants to financially support the participation of disadvantaged students (Figure 5). Eligibility is determined on the basis of a set of socio-economic criteria. The most frequent criterion is family income. Other criteria include whether students live with their families, parents' employment status and/or education (Hungary), special educational needs or orphan status (Bulgaria and Romania) or whether students have dependent children. Seven countries (Bulgaria, Greece, Ireland, France, Italy, Cyprus and Austria) have developed grants based on a mixture of need- and merit-based criteria. Often these grants aim to reward academic performance giving priority to disadvantaged students. In Norway, all students can take a study loan and 40 % of their borrowed amount can be converted into a nonreimbursable grant if they pass all their exams and they do not live with their parents. About 49 % of first cycle full-time students obtained a grant in 2015/16. Grants with need- and merit-based criteria together are awarded on the basis of an assessment of the financial situation/socio-economic conditions of the students and academic performance. Countries may differ based on the weighting they give to certain criteria (need or merit). There is no grant based on socio-economic need in Latvia, Bosnia and Herzegovina, Iceland, Montenegro and Serbia. (Monks, 2014).

Figure 5: National public student support (2015)

Data And Methodology

Student income derives from a variety of public and private sources (OECD, 2017). Official statistics are usually not able to reflect all these income items. This already applies to the reporting of public support, especially when it is granted from various institutional levels. Especially in countries where students can receive public support directly from the HEI they attend, data on this sometimes cannot be included in the country's official statistics on public support.

Four sources of student income are distinguished. The respective categories are named family/partner contributions, public sources, self-earned income and other income. This source of student income refers to support

that students receive from their parents, other relatives, or their partner. It comprises on the one hand disposable income such as cash/money transfers which students can freely use for monthly spending (= transfers in cash). On the other hand, it contains so-called “transfers in kind”. Transfers in kind are students’ living and study-related costs that are paid by the students’ parents, other relatives, or their partner. Public sources comprise payments, which students receive directly from the state, usually because of their student status. It includes on the one hand grants and scholarships (= non-repayable support) and on the other hand loans which may be subject to interest or not (= repayable support). Support from all possible institutional levels as well as from the HE institutions (HEIs) is taken into account.

In collecting the data, we conducted an electronic survey in May 2018 from tertiary students studying at the HEIs in Slovakia or abroad. The survey was anonymous and went online through the website about students’ finance. Most of the participants were in the age of 19-24 years. The final reports of the EUROSTUDENT survey and the survey conducted by the authors of this study among a sample consists of 3 154 tertiary students are the main sources of data in this paper. The survey consists of 15 questions related to the financial habits of the tertiary students. The survey focused on three main topic areas: characteristics of students, students’ employment as well as current financial conditions.

Results

On cross-country average, 9 % of students report to currently have very serious financial difficulties and another 17 % state serious problems. There are seven countries, in which more than half of students have only slight or no difficulties at all; this includes Germany, Finland, Sweden, Slovakia, the Czech Republic, Switzerland, and the Netherlands (Figure 6).

Figure 6: Students’ assessment of their financial situation

Figure 7 displays financial habits of tertiary students related to saving money. The results of the survey showed that around 44 % of tertiary students save money by themselves. More than third of tertiary students do not need to save money. Their current financial conditions are above the average. Their actual decision can lead to an irresponsible financial habit.

Figure 7: Are tertiary students in Slovakia saving money?

The amounts of self-earned income differ not only between countries, but also between various student groups (Figure 8). Monthly earnings of students with regular paid jobs during the lecture period differ greatly by field of

study. Students in the field of education, in business, administration and law, and in ICTs have rather high earnings, with cross - country median of more than 360 PPS per month. The median earnings are rather low at 240 PPS per month for students in the field of natural sciences, mathematics, statistics, as well as in agriculture, forestry, fisheries and veterinary subjects (Rall and Olin, 2018).

Figure 8: Students' income from current paid job

Figure 9 shows the frequency how often tertiary students in Slovakia save money. Most of students who save money by themselves save money regularly - every month. Almost one third of students saves money irregularly.

Figure 9: Tertiary students' frequency of saving money in Slovakia

Monthly saving is a responsible financial habit (Whatley, 2017). There is also evidence that the financial expectations of the head of household have an influence on their offspring's saving behavior (Shireman, 2017). Around a half of tertiary students saves money on monthly base between 10 and 29 euros.

Figure 10: Amount of monthly saved money by tertiary students in Slovakia

Table 1: Total costs for student loans in Slovakia approved in the academic year 2017/2018

Amount of the loan	EUR 500	EUR 1 600	EUR 2 300
--------------------	---------	-----------	-----------

Maturity	10 years	10 years	10 years
Postponed repayment	7 years	7 years	7 years
Annual interest rate	3.00 % p.a.	3.00 % p.a.	3.00 % p.a.
Monthly instalment	EUR 5.02	EUR 16.07	EUR 23.10
Annual percentage rate	1.57 % p.a.	1.57 % p.a.	1.57 % p.a.
Total paid	EUR 602.40	EUR 1928.40	EUR 2 772
Interests paid	EUR 102.40	EUR 328.40	EUR 472

The comparison of the state subsidised loan system and the commercial bank's model is showing the advantages of the student loans provided by the Education Support Fund (Table 1 and Table 2). The biggest disadvantage of the student loan provided by the commercial bank is immediate maturity of the student debt.

Table 2: Total costs for student loans provided by the Slovak commercial bank – Slovenska sporitelna, a.s. in 2018

Amount of the loan	EUR 1 000	EUR 2 300	EUR 8 500
Maturity	8 years	8 years	8 years
Postponed repayment	0 years	0 years	0 years
Annual interest rate	8.50 % p.a.	8.50 % p.a.	8.50 % p.a.
Monthly instalment	EUR 15.63	EUR 35.17	EUR 129.52
Annual percentage rate	10.86 % p.a.	10.22 % p.a.	10.12 % p.a.
Total paid	EUR 1 500.77	EUR 3 376.21	12 433.99
Interests paid	EUR 500.77	EUR 1 076.21	3 933.99

Table 3 identifies the most significant differences between the student loan from the Education Support Fund and the student loan from the commercial bank – Slovenska sporitelna, a.s. In case of the student loan from Slovenska sporitelna, a.s., the paid interest will reach EUR 1 076.21. Difference between interests paid in these two loans achieved EUR 604.21.

Table 3: Direct comparison of the student loan from the Education Support Fund with the student loan from the Slovak commercial bank

	Education Support Fund	Slovenska sporitelna, a.s.
Amount of the loan	EUR 2 300	EUR 2 300
Maturity	10 years	8 years
Postponed repayment	7 years	0 years
Annual interest rate	3.00 % p.a.	8.50 % p.a.
Monthly instalment	EUR 23.10	EUR 35.17
Annual percentage rate	1.57 % p.a.	10.22 % p.a.
Total paid	EUR 2 772	EUR 3 376.21
Interests paid	EUR 472	EUR 1 076.21

Conclusions

Our findings suggest that parental allowances/pocket money lower (increase) the probability that student saves. There is also evidence that the financial expectations of the head of household have an influence on their offspring's saving behavior.

Accommodation is, in all countries, an important expenditure item for students who have moved away from their parents' home and in more than four fifths of the countries observed it proves to be the most expensive item. However, depending on the type of housing, expenses for accommodation burden the budget of students and their

parents/partner in different ways. Students who are living alone supported by family/partner pay across the countries an average monthly amount for accommodation including utilities of 294 Euro. For students who are living with their partner/children the respective amount is 320 Euro. The average housing costs for living in a student accommodation amount to 212 Euro per month.

On aggregate across countries, the students' families/partners provide about half of students' total monthly income. Students themselves earn about one third of their income through gainful employment. Public support accounts roughly for one tenth of students' means. The rest is provided by other sources. These results hold for both groups, students who are living with parents and those who are not. Our research showed that tertiary students in Slovakia save money by themselves.

The most attractive for students is the student loan provided by the Education Support Fund. The best loans for students will almost always be the loans designed exclusively for them and provided by the Education Support Fund. These state subsidized loans are the most popular due to the lowest interest rate and the easiest to obtain.

Attitudes of English Language & Literature Students towards Methodology Courses

Nuray Okumuş Ceylan
Bulent Ecevit University Zonguldak, Turkey
nurayokumus@yahoo.com

Abstract:

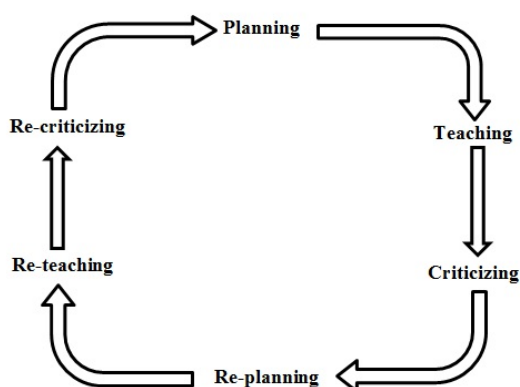

This paper evaluates the attitudes of Bulent Ecevit University English Language & Literature Department third year students towards microteaching experiences. The research was conducted with a total of 59 students. The data were collected via a five-point Likert-type scale questionnaire developed by the researcher. The research results were evaluated regarding the benefits and disadvantages of microteaching. The findings revealed that although microteaching experience was short, it provided students to have a sample picture of a real classroom and themselves as teachers.

Keywords: *Microteaching; student-teacher attitudes; ELT; teaching experience*

Introduction

Microteaching as a professional development tool provides students with opportunities to explore and reflect on their own and others' teaching styles. In the process of microteaching, students acquire new teaching techniques and strategies and develop their teaching skills. Thus, we may state that it has an important role in preparing students for the teaching profession. A number of studies reveal that microteaching is an effective means of improving student teachers' teaching skills depending on the preparation of lesson plans (Yeany, 1978, Arends, 2000; Demirel, 2004) and a tool of continuous training applicable at all stages of the teaching profession. Microteaching is "a favorable learning and teaching experience" (Ogeyik, 2009; p, 210).

Figure 1. Stages of Microteaching

Microteaching is teacher-training technique which practices one skill at a time, reducing the duration of micro lesson to 5-10 minutes and limiting the content. The students are provided immediate feedback from their peers and the instructor. The microteaching cycle, in general, includes the stages shown in Figure 1 below; process of teaching, criticizing, re-planning, re-teaching and re-criticizing (Peker, 2009).

Some researchers believe it enables student teachers to improve pedagogical skills in presentation and participation or to increase the range of behaviors (Mayhew, 1982). Others claim microteaching can create awareness among student teachers of the values, assumptions and attitudes that inform their practice. Sadiq (2011) highlights the fact that microteaching is more

beneficial for pre-service teachers because they are more receptive to feedback and that microteaching encourages self-evaluation. Sadker and Cooper (1972) believe in the importance of microteaching in creating greater awareness on teachers' behavior. Among them are specific personal habits and mannerism, teaching acts and techniques, activities and interrelationships of children in the classroom, problems of structuring and pacing in the classroom and effective acquisition of alternative teaching patterns.

Students attending the English Language & Literature Departments in Turkey generally prefer to work as English teachers or instructors. Since they lack the basic teaching training provided in English Language Teaching departments, they start teaching with advanced level of English proficiency; however, without any theoretical or practical knowledge in language teaching. They pay a high fee and take "Teacher Training Practicum" for a year beforehand. Generally, professors from other departments give courses in the practicum, and they lack English Language Teaching background. In 2016-2017 education year fall term, third year students attending the English Language & Literature Department at Bulent Ecevit University attended elective "Methodology I and II" courses. The goal of Methodology I and II courses in English Language and Literature department was to provide students with English Language Teaching background and an awareness on teaching English. The Methodology I syllabus included overall structure and how to teach four language skills; reading, writing, speaking and listening, a brief summary of approaches, how to prepare a lesson plan and microteaching. The aim of the course was to raise consciousness in students about teaching profession with the theory and practice. Students prepared 10-minute microteaching sessions in their own class. In Methodology II course, students attended classes in near-by state primary, secondary and high schools. They were called teacher-trainees in official papers to receive permission; thus, they were known as teacher-trainees by the students in those schools. There was a group of four teacher-trainees in each classroom. They observed the teacher of the class for 6 weeks, and then, they taught lessons for 4

weeks. Each teacher-trainee has taught at least 4 lessons under supervision of the teacher of the class and their professor. The other group members observed them while teaching.

The Findings The aim of this study was to identify thoughts and attitudes of students taking “Methodology I and II” courses to understand whether the courses have reached their aim or not. Thus, firstly, a questionnaire on the attitudes towards and beliefs on microteaching was administered to the students taking “Methodology I” course after they have fulfilled their microteaching sessions. The aim of the questionnaire was to make students reflect on their microteaching experience and learn about their first-microteaching experiences.

The results displayed in Table 1 indicate that almost all students believe microteaching was beneficial for their future occupation to see course designs in different linguistic and age levels through microteaching activities. For most of the students microteaching offered them a practical opportunity to teach a lesson and gave them an opportunity to improve their lesson planning. It also encouraged most of the students to develop teaching activities and materials, and it was enjoyable and beneficial when applied individually. Microteaching gave them an opportunity to learn by observing others, and it was beneficial for evaluating their teaching performance.

Table 1. The Results of Frequency Analysis of the Microteaching Questionnaire

No	Microteaching	Frequency %	
		Mean	Std D
1	consumed a lot of my time.	3,31	1,307
2	was carried out in an artificial environment	3,38	1,024
3	forced me to do difficult tasks	3,08	1,269
4	made me feel embarrassed when teaching my colleagues	3,00	1,321
5	forced me to think of the evaluation criteria while planning	3,38	1,214
6	helped me learn to organize my time	3,98	,934
7	helped me learn how to manage the class	4,12	1,044
8	offered me a practical opportunity to teach a lesson	4,25	,688
9	gave me an opportunity to improve my lesson planning	4,23	,660
10	encouraged me to develop teaching activities and materials	4,15	,875
11	helped me learn to use technology appropriately	3,77	1,115
12	helped me develop awareness of my teaching competence	3,94	,998
13	helped me develop the actual teaching skills I'll need later.	4,00	,989
14	gave me an opportunity to learn by observing others	4,10	,751
15	made me aware of what makes a good teacher	4,00	1,011
16	helped me discover my teaching strengths and weaknesses	4,00	,923
17	helped me develop confidence in my speaking ability	3,75	1,158
18	helped me learn to speak clearly	3,58	1,145
19	allowed me to apply ideas I learned from different courses	3,75	,934
20	raised my motivation in the present methods course	3,81	1,104
21	helped me to better understand different teaching methods	4,04	,988
22	was beneficial for my future occupation to see course designs in different linguistic and age levels through microteaching activities	4,85	,850
23	forced me to learn how to prepare lesson plans	3,79	,944
24	was beneficial for evaluating my teaching performance	4,10	,805
25	was enjoyable and beneficial when applied individually	4,12	,733
26	was time consuming (i.e., not useful)	2,60	1,300

In the second term, these students attended “Teacher Training Practicum” in Methodology II course. They attended English classes with the English teacher of the class in groups of four in state primary, secondary and high schools. There were 56 students taking the course. Primary and secondary schools had 2 hour-English lessons every week for each class starting with 2nd grade. Anatolian High schools had 6 hour-English courses every week for each class. Thus, we had a variety of schools for “Teacher Training Practicum”. The students fulfilled a ten-week program; six weeks for observation and 4 weeks for teaching. They prepared a file including their observation of the school, the class, the teacher, the lessons, the materials, the technological devices, the methods and techniques the teacher used and their class-mates while they were teaching. They wrote reports each week reflecting on one.

They also reflected on their own teaching experience. The teacher and their instructor observed them while teaching and reported their observations both orally and written. They were asked to write about the benefits and shortcomings of “Teacher Training Practicum” at the end of the term. The researcher grouped their answers below as “The benefits of Teacher Training Practicum”:

- it helped them to put theory in practice
- made them the responsible of the class
- gave them self-confidence
- became aware of the difficulties of teaching
- made them realize that they are role-models for the students
- gained experience in communicating with students
- learned to be patient
- gained experience in preparing lesson plans
- realized that they should have extra materials or extra plans
- gained classroom management skills
- learned how to plan/ organize a lesson
- learned how to prepare materials
- realized the dimensions of the teaching profession

The shortcomings of the program:

- it made them feel the pressure of being a role model
- communicating with students was difficult
- they had discipline problems in the classroom
- it was hard to prepare students to start a lesson, and it took time
- they were nervous, and it caused them to make mistakes or forget things
- their time-management skills were not adequate
- they could not use smart boards effectively
- they had low self-confidence
- they couldn't understand clearly whether the students grabbed the content or the pattern or not
- they were regarded as student-teachers by the students and the teachers in schools
- it was hard to be a student and a teacher at the same time
- they felt they needed to be more talkative, patient and outgoing for a good lesson
- it was very short
-

Conclusion

As the related literature suggests, microteaching is effective in developing teaching skills. This study also suggests and supports that although microteaching experience was short, it provided students to have a sample picture of a real classroom and themselves as teachers. The constructive feedback on their teaching styles, performance and material evaluation provided after the observation may assist them to become aware of themselves with their strengths and weaknesses as teachers.

Attitudes Of Students And Faculty Members At The College Of Communication Toward The Blackboard Usage In The Practical Courses.

Prof. Essam Nasr Selim

College of Communication, Acting Dean, University of Sharjah United Arab Emirates
eselim@sharjah.ac.ae

Abstract

There are many scientific and electronic methods that support the educational process and transform it from the stage of indoctrination to the stage of creativity, interaction and skills development, in terms of using the latest methods in the fields of education and management of the educational system, in light of the boom and rapid transfer in the field of technology, Self-development, especially in the fields and patterns of e-learning.

Despite the importance of learning management systems, only about 15% of Arab universities have e-learning management systems that include open universities, virtual universities, some science and technology universities in Arab countries, Gulf universities,

The aim of the research is to study the reality of the attitude of students and faculty members in the communication field of the Black Board Learning Management System, especially in the practical courses. To achieve this goal, the research attempted to answer the following questions:

- What is the use of students and faculty members for the practical courses at the faculty of communication for the Blackboard system?
- What are the views of students and faculty members on the practical courses at the Faculty of Communication on the pros and cons of using the Blackboard?
- Are there any statistically significant differentiation between the responses of the study sample towards the use of Blackboard system due to the variable of degree?
- Are there any statistically significant differentiation between the responses of the study sample from faculty members towards the use of the Blackboard system due to the variable training courses?

Based on the objectives of the research and its questions, the researcher used the descriptive approach to suit the research objectives. The research sample was chosen for a community of 100 students and 19 faculty members in the faculty of communication. The researcher used the questionnaire as a main research tool.

The research found that e-mail and forums are the most active tasks by students, and duties are the most active among the faculty members, and participated in the fact that the glossary of terms less operational tasks. The disadvantages of the system from the point of view of the students are the lack of follow-up of some of the teachers to the site of the course, and the need for a long time to follow up and management of the decisions from the point of view of faculty members. And the absence of significant differences between the responses of the research sample from the faculty members towards the use of the Blackboard system) due to the variables of the degree and training courses.

The researcher recommended adding the standard of using the Blackboard system for learning management within the standards of assessment of faculty members at College of Communication.

Keywords: *Blackboard, Blackboard usage, Colleges of Applied Sciences, Faculty members,*

Introduction

Media and its arts studies rely heavily on developments in information, communication and technology. Most of the operative concepts like 'Information and Network Society', 'Knowledge-based Economy', 'Interactivity', 'Mediation', 'E-Learning', 'New Media', 'Cyborg' and so on, are founded on technological innovations.

These concepts would not have entered the academic curricula without social and cultural values that provide the necessary political, educational and business frameworks. Thus, the link between theoretical frameworks and practical developments is crucial in media studies.

However, traditionally, many academics in media studies have theorized on technology without firsthand experience. Some of experts describe how the lack of experience and practice in media and technology among European media scholars and lecturers leads to a situation of widespread disdain for media industries, such as television, games and the Internet.

As a result, the young students of media studies do not consider practice and effort in learning technology as a fundamental necessity of theorizing media.

Teachers and students are still somehow used to a talking head, the professor, and an audience taking notes. (Shirmacher, 1991)

A scholar of new media needs to be in tune with new developments in the media industries and know how to incorporate them into his/her pedagogy.

Practice has to be reflected upon, while theory needs to be grounded in actual experience. Among other strategies to help students understand the importance of collaboration between theorists and practitioners.

Teaching theory is challenging, especially theories of new media. The concepts are often abstract and may seem speculative to students who do not have experience with either art or creative media. Using relevant examples can help alleviate the problem of comprehension, but this method has limitations.

Students learn mainly from their practical creative projects that constitute the largest proportion of the final grade.

Currently, educational community became one of the communities which radically modified because of the information revolution that affected all fields of life.

Education turned from the learning based on transferring knowledge from the teacher, to student-based learning due to new technology utilizing in teaching, such as Learning Management System (Blackboard).

Learning Management Systems (LMS), such as Blackboard are innovative technological applications that support the endeavor of online learning and e-learning especially in the institutions of higher education.

With its varying features as instructional tools Blackboard offers faculty innovative choices in delivering classroom content in spite the distance and time (D'silva and Reeder, 2005).

Blackboard has many features that support teaching and learning because it is available to both students and their teachers as a web-based and accessed Platform on the internet. So, faculty can upload their course materials, lecture, quizzes, assignments, and grades, all of which students can access blackboard anytime, anywhere.

Blackboard is considered as a fast communication tool not only between students and their instructors but also between the students themselves.

This kind of communication between the students themselves can use a different kinds of tools such as announcements, discussion boards, virtual classroom, blogs and email options (Bradford, et al, 2007).

Currently, many educational specialists consider e-learning as one of the promising types of learning which enhance learning and education to motivate learners to continue education (Al-Khaneen, 2017).

Review of Literature

Education literature states that students' actively engaging with content and assuming larger responsibility for learning are keys to knowledge retention.

The rationale for moving toward a more learner-centered teaching approach instead of passive instruction varies among curricula. Many proponents of such pedagogy often cite the need to engage students, develop problem-solving and critical-thinking skills, and enhance application of course content as reasons for implementation.

Our analysis aimed to present the findings of a student survey about their attitudes toward change in the course format, homework completion, their academic performance, and incoming grade point average (GPA) ranges based on preference for content delivery.

Literature review Research on college-level online learning, though sparse and sparse, as analyzed in the synthesis study by Patrick & Powell (2009), revealed "no significant difference" in student performance in online courses versus traditional face-to-face courses; and in particular programs, researchers also found that students learning online are performing "equally well or better" than their peers in traditional instructional media (Patrick & Powell, 2009, p. 8).

The present study is compatible with lots of previous studies in the objective, investigating the effectiveness of e-learning in the development of academic achievement such as Al-Kandri study who aimed to identify the impact of using e-activities in Blackboard- based learning on the academic achievement and motivation in the Environmental Education Course, College of Education, Kuwait University. His study comprised experimental group, of 102 students, that utilized e-learning strategy through Blackboard with e-activities and control group of 50 students that assumed e-learning through Blackboard without e-activities.

His study Results showed significant differences between the average scores of both groups' students in the academic achievement in favor of the experimental group. (Al-Kandri, 2013) ; and Al-Kadri study which aimed to identify the effectiveness of teaching physics electronically utilizing Blackboard on 52 of third-year students achievement of physics concepts on two groups; where the experimental group studied on the internet, the control group adopted the traditional method.

Results showed significant differences in the achievement test of physics concepts in favor of the experimental group. (Al-Kadri, 2013); Akyuz (2009) examined the effects of blended learning on students' critical thinking skills.

The sample of this study comprised 44 students in the computer department at Ankara University. This study used the pretest posttest single model.

Findings indicated no significant difference between pretest and posttest results. According to the researcher, this may be attributed to the short duration of the study (five weeks).

The study of Abdel Aziz aimed to investigate the impact of comprehensive, blended and supporting e-learning level in teaching courses based on the e-learning management system "Blackboard" on cognitive achievement and learning

competence among the 195 female students on three groups: comprehensive e-learning system blended e-learning system and supporting e-learning system.

It showed significant differences in favor of supporting e-learning in academic achievement and learning competence (Abdel Aziz, 2014); Artino (2010) examined the relation between personal factors and students' choice of instructional format.

Findings showed that students who preferred to enroll in online courses reported greater confidence in their ability to learn online and greater satisfaction with their online learning experience than other students.

Sawafta and Al-Garewai studied the effectiveness Blackboard in achievement of physics and learning retention among 53 students divided into two groups; where the experimental group studied physics by Blackboard and control group studied the same course traditionally.

Results indicated the effectiveness of Blackboard in both direct and delayed achievement among the students. (Sawafta & Al Garewai, 2016), regarding self-confidence, Al-Ghamdi and Afshi aimed to explore the effectiveness of collaborative e-learning strategy in the development of self-confidence and critical thinking skills among 12 students divided into both experimental and control groups.

Results showed no significant differences in self-confidence scale and critical thinking test which concluded that literature illustrates the interest in blended teaching, based on Blackboard and the development of study skills and self-confidence. (Al-Ghamdi & Afshi, 2017).

Aliweh (2011) explored Egyptian EFL students' learning styles and satisfaction with web-based materials, and the study showed highly positive perceptions because of an array of benefits (e.g., usefulness, enjoyment, accessibility, convenience, and richness of resources).

Although students' gender had a significant effect on students' learning style preferences, it had no bearing on their satisfaction with web-based materials. Bendania (2011) attempted to explore instructors' and learners' attitudes toward teaching and learning online at King Fahd University of Petroleum and Minerals in Saudi Arabia.

The results of the study showed positive attitudes toward the use of ICT in instruction and learning. In this study, the factors related to attitudes, mainly experience, confidence, enjoyment, usefulness, intention to use, motivation and whether students had ICT skills were all correlated.

Finally, in her study of the obstacles facing faculty members in using Blackboard as a blended learning system in Saudi Arabia, El Zawaidy also found lack of needed training in using ICT as being the main obstacles.

She also found that slowness of internet signal tended to interrupt faculty use (El Zawaidy, 2014). Limited experience and unfamiliarity with Blackboard, which can be linked to insufficient training and support, besides technology constraints, is one of the factors highlighted by researchers in the field.

Previous studies aimed to investigate the effectiveness of blended teaching, based on the e-learning management system "Blackboard", in the development of various variables, such as academic achievement

This paper matches the former studies concerning the academic level of the participants; university students. However, it only handled the effectiveness of blended teaching, based on the e-learning management system "Blackboard", in the development of academic achievement, study skills and self-confidence among students.

Statement of the Problem

The traditional educational systems at universities are no longer able to meet the needs of all those wishing to enroll in higher education. Because of the increasing number of people who wishing to obtain university education, the sources of knowledge acquisition have become more widespread. The principle of lifelong learning and self-learning has become an urgent necessity.

There has also been a need to facilitate knowledge dissemination among learners on the basis of ICT.

The Black Board system is considered as one of the methods of achieving e-learning. It has been applied at University of Sharjah for many years in all colleges.

Because of the students in the traditional education have no role in gaining and developing information in a proper way, this kind of education method proved inappropriate for the students of this stage who should gain and apply knowledge by themselves.

It doesn't also match the prospects of learners who are preoccupied with modern technology, e.g. tablets and smart phones, which they handle efficiently and proudly.

Moreover, university classroom teaching faces some educational issues, such as the tremendous number of students in the classroom. Consequently, students cannot comprehend and follow-up the course easily and on time.

Also, the instructor is unable to identify individual differences among students and apply the strategies of modern teaching. Blended teaching, which solves the problem of the large number of students in classrooms, is one of the strategies which can be utilized and blended with classroom learning.

The present study aims to investigate the differences between the students and their teachers' attitude toward the e-learning management system "Blackboard" as one of the most famous platform of blended teaching.

Study Questions

This study asking the following main question: What is the students and their teachers' attitude toward the e-learning management system "Blackboard"?

It is further subdivided into the following minor questions:

- 1) What is the effectiveness of blended teaching, based on the e-learning management system "Blackboard", in the development of study skills among the students?
- 2) What is the use of students and faculty members for the practical courses at the faculty of communication for the Blackboard system?
- 3) What are the views of students and faculty members on the practical courses at the Faculty of Communication on the pros and cons of using the Blackboard?
- 4) What are students and faculty's perceptions regarding the advantages and limitations of blended e-learning?
- 5) To which extend there are any significant differentiation between the responses of the study sample towards the use of Blackboard system due to the variable of degree?
- 6) To which extend there are any significant differentiation between the responses of the study sample from faculty members towards the use of the Blackboard system due to the variable training courses?

Definition of Terms

Blended teaching is considered as a blending e-learning with traditional teaching to overcome its weaknesses (Al-Omari, 2013). It is defined procedurally as combining teaching based on classroom traditional teaching and the e-learning management system "Blackboard" and its technologies where the practical courses of media and its evaluation is presented.

Learning Management System "Blackboard": According to the official site of Blackboard Company, it is software that enhances virtual learning environments to keep pace with traditional learning and distance education programs. Thus, learners will be capable of managing courses efficiently, creating course content, making tests and enhancing collaborative learning. It also helps educational institutions accomplish objectives of learning, communication and assessment through providing course management facilities, discussion board, virtual classrooms, cooperative projects, questionnaires, assessment and other learning tools. It is defined procedurally as a learning management system that presents the practical courses of media and its evaluation and e-content using text, sound, video, image, movement and drawings to match student learning methods, cooperative learning through discussion forums, assessment through assignments, tests and questionnaires, following-up through student evaluation center, and virtual classrooms.

The attitude, in psychology, an attitude refers to a set of emotions, beliefs, and behaviors toward a particular object, person, thing, or event. Attitudes are often the result of experience or upbringing, and they can have a powerful influence over behavior.

Research Instrument

A questionnaire was designed to collect the data required for this research from faculty members and students in the college of communication, University of Sharjah. The Questionnaire of students consisted of three parts:

- The first part was designed to collect demographic information about students, i.e. gender, age, and the specialization. The information collected by this section is used to explore the variation in Blackboard usage among students as a result of these demographic variables, and thus to answer the second research question.
- The second part consisted of 8 items eliciting from students their reported use of different functions of Blackboard. The data obtained from these items is used to answer the research questions.
- The third part contained 20 items relating to assist the student's experience of learning and studying perceive as having an effect on their Blackboard usage (resources availability on blackboard, general effectiveness of blackboard on their teaching experience and attitudes). In this section the participants were asked to give their opinions about each statement using a five point-scale (1= Disagree, 2=Disagree somewhat, 3=unsure 4=agree somewhat, 5=agree).

The second Questionnaire was to faculty members consisted of two parts:

- The first part was designed to collect demographic information about faculty, i.e. gender, age, academic rank, teaching experience and specializations. The information collected by this part is used to explore the variation in Blackboard usage among faculty members as a result of these demographic variables, and thus to answer the research question.

-The second part consisted of 25 items eliciting from faculty members their reported use of different functions of Blackboard. The data obtained from these items is used to answer the research question. In this part the participants were asked to rate their usage of each function of Blackboard using a five-point scale (1=disagree, 2=disagree somewhat, 3=unsure, 4=agree somewhat, 5=agree).

Methodology

This study applied a descriptive method employing quantitative data collection and analyses methods through the administration of two instruments: Students and faculty's Perceptions and Attitudes towards the effectiveness of blackboard as an educational platform to teach the practical courses in media studies field.

This study made use of two surveys: a survey that was distributed to a sample of students and a the other one to the faculty members at the college of Communication, university of Sharjah, dealing with different dimensions of attitude towards using virtual learning technology, Perceived Self-effectiveness, Enjoyment, Usefulness and System Satisfaction. Each item was statements indicating a positive attitude towards the dimension in which it was located and respondents were asked to respond on a five point scale ranging from strongly agree with statements presented to strongly disagree.

Sampling and Population

Sample of 250 out of 850 students were chosen to participate in the study, but only 204 of them has been responded. This number included 33 male and 171 females. Regarding the sample of faculty, the college's entire faculty participated in this survey (20 faculty members).

Survey was distributed to a sample of 204 students of different educational levels randomly drawn from the student population of the college of communication, University of Sharjah. The Faculty's Perceptions and Attitudes towards Online Testing Survey were distributed to 25 teachers in the college of the same institution.

Student's Sample

As shown in table (1) below, 204 students from the college of communication participated in this study. This table provides a detailed description of the research sample. Within the semester, 204 students (92.73% response rate) completed the survey. 83.82% of participants were female, and 46.57% were juniors and 42.16 were seniors, age of 44.61 of them between 20-24 years and 42.16 of them between 18-20, Broadcasting came on the top of specialization with 32.35%, then graphic design with 23.35% while public relation came at the end of specialization list with 21.57% which reflect the demographics of the college of communication student body.

48.04% of them study practical courses via blackboard, and 53.92% of them rated themselves as excellent in computer literacy and 40.96% of them as very good.

In the survey, students were provided with examples of blackboard tools types of and, based on those, expressed content delivery preferences as follows: traditional lecture-based (traditional, 19%),

Table 1
Description of the students' sample

Independent Variables	Categories	N.	%
Academic Level	2 nd year undergraduate	23	11.27
	3 rd year Undergraduate	95	46.57
	4 th year undergraduate	86	42.16
Gender	Male	33	16.18
	Female	171	83.82
Age	18-20	86	42.16
	20-24	91	44.61
	More than 24	27	13.23
Specialization	Public Relations	44	21.57
	Graphic Design	48	23.53
	Broadcasting	66	32.35
	Mass Communication	46	22.55
	General		

Number of practical courses via blackboard	1-2	98	48.04
	2-3	91	44.61
	3-4	15	07.35
Computer literacy	Weak	00	00.00
	Good	11	05.39
	Very good	83	40.69
	Excellent	110	53.92

Faculty's sample:

As shown in table (2) below, 20 faculties from the college of communication participated in this study. This table provides a detailed description of the research sample. All faculty members at the college of communication completed the survey. The job ranking of 35% of them are associate professors, the age of 40% of them are between 45-55 years old.

Public relations came on the top of specialization of the faculty with 45%, then mass communication (general) with 35% while graphic design came at the end of specialization list with 10% which reflect the demographics of the college of communication faculty body.

48.04% of them study practical courses via blackboard, and 53.92% of them rated themselves as excellent in computer literacy and 40.96% of them as very good.

In the survey, students were provided with examples of blackboard tools types of and, based on those, expressed content delivery preferences as follows: traditional lecture-based (traditional, 19%),

Table 2
Description of the faculty's sample

Independent Variables	Categories	N.	%
Job/Position	Lecturer	06	30%
	Assistant Professor	05	25%
	Associate Professor	07	35%
	Full Professor	02	10%
Age	25-35	07	35%
	35-45	01	05%
	45-55	08	40%
	55 and above	04	20%
Specialization	Public Relations	09	45%
	Graphic Design	02	10%
	Broadcasting	04	20%
	Mass Communication (General)	07	35%
Teaching any practical courses	Yes	12	60%
	No	8	40%
Teaching Experience	Less than 5 years	06	30%
	5-10 year	05	25%
	10-20 year	05	25%
	More than 20 years	04	20%

Evaluation and Assessment:**Students usage of Blackboard:****Table 3**

Student's usage of Blackboard

Independent Variables	Categories	N.	%
having a computer at home	Yes	200	98.040
	No	04	01.960
having Internet connection at home	Yes	189	92.647
	No	15	07.353
hours of using Blackboard per day	Less than 1 hour	79	38.725
	1 to 3	113	55.392
	3 to 5	12	05.883
	Above 5	00	00.000
Accessing Blackboard ratio	Daily	32	15.686
	Every other day	41	20.098
	Twice a week	128	62.745
	Once a week	03	01.471
	Less than once a week	00	00.000
	Occasionally	00	00.000
type(s) of networked device	Mobile Phone	184	90.196
	Tablet(e.g., iPad,Nexus,Galaxy)	12	05.882
	Laptop/netbook computer	202	99.019
	Desktop computer	196	96.078

Within the spring semester 2017/2018, 204 students (92.73% response rate) completed the survey. 83.82% of participants were female, and 46.57% were juniors and 42.16 were seniors, which reflect the demographics of the college of communication student body.

53.93% of them rated themselves as excellent in computer literacy and 40.96% of them as very good.

In the survey, students were provided with examples of blackboard tools types of and, based on those, expressed content delivery preferences as follows: traditional lecture-based (traditional, 19%).

Table (2) indicated that the majority of students having a computer and Internet connection at home and they are accessing Blackboard 1 to 3 hours per day, twice a week. Most of them access Blackboard by Laptop/netbook computer, then Desktop computer and Mobile Phones.

Student's usage of Blackboard features:

Figure (1)

Student's usage of Blackboard features

Figure (1) indicated that the majority of students are using only 4 of blackboard features with a very high percentage more than 97%.

Students 'experience of learning and studying

When students have been asked to give their reaction to every comment listed below, indicating how they really have been studying, they indicated the following:

Students' perceptions regarding the advantages and disadvantage of Blackboard

Table 4

Students' perceptions of Blackboard

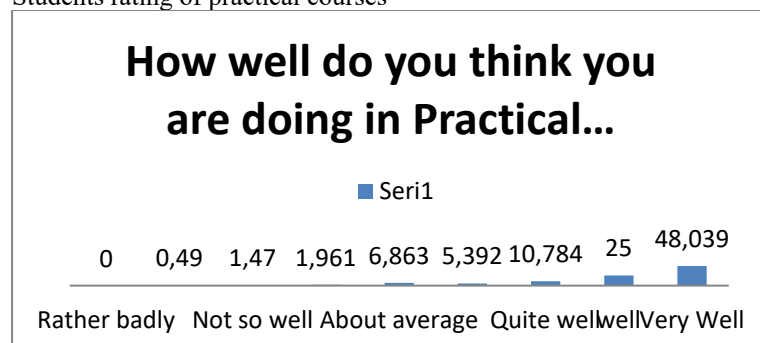

The Statements	agree	agree somewhat	unsure	Disagree somewhat	disagree	Mean	SLD
1. In e-learning by Blackboard, a good interaction using appropriate technology can give the same result of traditional education?	22 10.784	23 11.274	61 29.902	18 8.823	80 39.216	3.99A	1.2
2. I always organise my study time carefully to make the best use of it.	15 07.353	41 20.098	112 54.902	16 07.843	20 09.804	3.69A	1.1
3. Lecture notes and slides on Blackboard allow me to read ahead of the lectures and prepare in advance; I know 'what I'm going in for' when I go to lectures.	24 11.765	12 05.882	20 09.804	60 29.412	88 43.137	3.62A	1.2
4. Lecture notes and slides available on Blackboard help me to revise after lectures of my practical courses	71 34.803	56 27.451	23 11.274	32 15.686	22 10.784	3.62A	1.1
5. Technology plays a key role in the delivery of learning by using Blackboard and can affect positively?	90 44.117	32 15.686	22 10.784	31 15.196	29 14.216	3.61A	1.1
6. Lecture notes and slides available on Blackboard help me to complete the notes that I took during lectures my practical courses	122 59.804	61 29.902	02 00.980	10 04.902	09 04.412	3.63A	1.2
7. Notes and other video material on Blackboard help me to understand lectures or topics that I found difficult in my practical courses	109 53.431	42 20.588	14 06.863	19 9.314	20 09.804	3.59A	1
8. Is Blackboard student's users (learn) in practical courses of Media as much as students receiving traditional face-to-face instruction?	10 04.902	18 08.823	09 04.412	52 25.490	115 56.372	3.72A	1.1
9. Blackboard is helpful for me to catch up on the practical exercises that I missed	12 05.882	03 01.471	36 17.647	53 25.980	100 49.020	3.89A	1.4
10. Blackboard serves as a backup for the practical skills that were Practiced by lecturers	02 00.981	06 02.941	22 10.784	51 25.000	123 60.294	3.64A	1.2
11. Variety of resources available on Blackboard (external links, sample exercises, practice assignments) is helpful for my practical studies.	82 40.196	41 20.098	35 17.157	40 19.608	06 02.941	3.41N S	1.1
12. Learning by using Blackboard is effective in general and in media practical courses specifically?	16 07.843	11 05.392	96 47.059	43 21.078	38 18.627	3.30N S	1
13. Blackboard is a useful means of contacting staff members	18 08.823	24 11.765	93 45.588	55 26.961	14 06.863	3.25N S	1.4
14. Blackboard enables me to ask questions that I normally find difficult to ask in lectures/practical classes	104 01.961	10 04.902	44 21.569	62 30.392	84 41.176	2.83N S	1.4
15. Blackboard helps me to communicate with other learners who are doing the same module	00 00.000	02 00.980	02 00.980	36 17.637	164 80.392	3.30N S	1.1
16. Learning by using Blackboard is important nowadays?	163 79.902	22 10.784	04 01.961	05 02.451	10 04.902	3.44N S	1.2
17. Blackboard gives me the opportunity to revise and learn at places and times convenient to me	132 64.706	61 29.902	09 04.412	02 00.980	00 00.000	3.15N S	1.2
18. Announcements in Blackboard enables me to plan my study time/how I spend my time in the university	121 59.314	49 24.020	23 11.274	06 02.941	05 02.351	2.83N S	1.1
19. Blackboard enables me to study effectively	151	34	06	07	07		

	74.20	16.667	02.941	03.431	03.431	2.73N	1
--	-------	--------	--------	--------	--------	-------	---

- As shown in the table (4), eleven important advantages were reported and agreed (agreed & agreed somewhat). The highest rated advantage was the Learning by using Blackboard is important nowadays followed by Blackboard enables students to study effectively then Blackboard gives them the opportunity to revise and learn at places and times convenient to them and then Lecture notes and slides available on Blackboard help them to complete the notes that they took during lectures their practical courses. The students also appreciated the advantage of blackboard when Announcements enable them to plan their study time/how they spend their time in the university
- They also agree with the statement that Notes and other video material on Blackboard help them to understand lectures or topics that they found difficult in their practical courses and they appreciated that Technology plays a key role in the delivery of learning by using Blackboard and can affect positively and Variety of resources available on Blackboard (external links, sample exercises, practice assignments) is helpful for their practical studies.
- However, the students' responses revealed uncertainty when they were asked if they always organize their study time carefully to make the best use of it and when they were asked if Learning by using Blackboard is effective in general and in media practical courses specifically, also they were uncured if Blackboard is a useful means of contacting staff members
- They were also quite skeptical of the effectiveness of e-learning by Blackboard, as a good interaction using appropriate technology which can give the same result of traditional education and they also disagreed that Blackboard student's users (learn) in practical courses of Media as much as students receiving traditional face-to-face instruction, which is considered blackboard's advantage.
- Also As shown in the table, eight important advantages were disagreed by the students that Blackboard is helpful for them to catch up on the practical exercises that they missed and they disagree that Blackboard serves as a backup for the practical skills that were Practiced by lecturers and also Blackboard doesn't enable them to ask questions that they normally find difficult to ask in lectures/practical classes, they also disagree that Blackboard help them to communicate with other learners who are doing the same module.

Figure (2)

Students rating of practical courses

- When the students were asked how they would they are doing in Practical course units as a whole, most of them indicated that are very well.

Faculty's Background Information:**Faculty usage of Blackboard in teaching:****Table 5**

Faculty usage of Blackboard in teaching

Independent Variables	Categories	N.	%
-----------------------	------------	----	---

Teaching experience using Blackboard	Less than 1 year	01	05%
	1 to less than 3 years	03	15%
	3 to less than 6 years	10	50%
	More than 6 years	06	30%
Attending training workshop on Blackboard	Yes	16	80%
	No	04	20%
Training effects on Blackboard usage	Not at all	00	00%
	Small Increase	04	20%
	Significant Increase	16	80%

As faculty members are becoming comfortable delivering content in this format and engaging students during in-class activities, they are also beginning to share their experiences with colleagues internally, planting a seed for the future curricular changes.

As shown in the table (5) the majority of faculty has teaching experience using Blackboard 3 to less than 6 years, and most of them attended training workshop on Blackboard and they believe that training has significant Increase effects on their Blackboard experience and usage.

Faculty usage of Blackboard features in teaching:

Figure (3)

Faculty usage of Blackboard features

Figure (3) indicated that the majority of faculty are using 5 of blackboard features with a 100%, which are announcements, course messages, content- course material, grades, roster (for viewing a list of the other people in the course) and sending emails.

Then quizzes/tests (online) 75%, calendar 65%, assignments 60%, chat 50% and tasks with 50%.

Faculty 'experience of learning and teaching:

When faculty has been asked to give their reaction to every comment listed below, indicating how they really have been teaching, they indicated the following:

Faculty perceptions regarding the advantages and disadvantage of Blackboard

Table 6

Faculty perceptions of Blackboard

	S/ A	A	D/ S	D
1. Blackboard is user friendly	19	1	0	0
	95	5	0	0
2. Blackboard helps improve the teacher-student relationship in a course.	12	6	1	1
	60	30	5	5
3. Blackboard helps make teaching practical courses more successful	3	2	5	10
	15	10	25	50
4. Blackboard facilitates the way I teach	15	3	1	1
	75	15	5	5
5. Blackboard supports the pedagogical principles that I want to use for teaching practical courses with technology.	11	3	5	1
	55	15	25	5

6. I find it too time consuming to use Blackboard	3	2	9	6
	15	10	45	30
7. Blackboard lacks customization.	8	4	5	3
	40	20	25	15
8. I do not think using Blackboard will improve overall student performance in practical courses.	8	3	1	8
	40	15	5	40
9. The technical aspects of Blackboard discourage me from using it more frequently	4	2	2	12
	20	10	10	60
10. I like Blackboard because it is a structured e-learning platform	15	2	2	1
	75	10	10	5
11. I think Blackboard has enough functionality for managing my course skills.	6	3	5	6
	30	15	25	30
12. My perception of Blackboard changed as I have gained more online teaching experience	14	4	1	1
	70	20	5	5
13. Blackboard helps students improve their practical skills	15	3	2	0
	75	15	10	0
14. The rate of students' interaction with materials provided on Blackboard is encouraging.	8	2	1	9
	40	10	5	45
15. Blackboard is a good platform for students to learn a new skills and practical experience	7	2	4	7
	35	10	20	35
16. I believe that teaching practical skills via Blackboard will increase students' motivation to gain new experience.	9	6	3	2
	45	30	15	10
17. I think students get more exposure to practical courses learning via online activities available on Blackboard.	5	3	3	9

23. I believe learning practical courses via Blackboard would make student feel autonomous.	4	2	6	8
	20	10	30	40
24. I would not recommend using Blackboard because it has several technical problems	0	0	4	16
	0	0	20	80
25. I do not think that learning via Blackboard is efficient as some teachers may find it difficult to handle.	0	1	5	14
	0	5	25	70

-As shown in the table (6), 17 important advantages were reported and agreed (strongly agreed & agreed) by the faculty. All of them agreed that Blackboard is user friendly, and the highest rated advantage from their point of view was that the usage of Blackboard would enhance working collaboratively in peers as well as in groups followed by, that Blackboard helps improve the teacher-student relationship in a course. Then they believe that Blackboard facilitates the way they teach and their perception of Blackboard changed as they have gained more online teaching experience. The faculty also appreciated the advantage of blackboard as they like Blackboard because it is a structured e-learning platform and the component of Blackboard would draw students' attention to learn practical skills efficiently.

-They also agree with the statement that Blackboard tools focuses on students-centered learning and they believe students' usage of Blackboard would reinforce self- study learning. They also believe that teaching practical skills via Blackboard will increase students' motivation to gain new experience.

-However, the faculty disagreed when they were asked if they find it too time consuming to use Blackboard, and they didn't agree also that Blackboard helps make teaching practical courses more successful. They think Blackboard will promote students' usage of their skills to produce media production, also they think that students don't get more

exposure to practical courses learning via online activities available on Blackboard, while they consider Blackboard is a good platform for students to learn a new skills and practical experience

Discussion

The majority reported to have an increase in course interest, retention of knowledge, and preparation for summative assessments and future practice experiences.

As shown by figure(4),an important finding was that both students and faculty members have been used Announcements, Assignments, Content- course material and grades of blackboard features while there is a big difference between both in using all other features .

Figure (4)
Comparison between students and faculty in blackboard features

Conclusions:

Blackboard was positively received by the students and faculty members in general, while they didn't appreciate it as the proper helping tool for teaching the practical courses.

A minority of students with a preference for traditional teaching format appeared not to enjoy Blackboard to the same extent.

It was found that the majority of users of Blackboard (students and faculty) used announcements, assignment, full grade center and content course material, while less than half who responded didn't use Blackboard features that foster communication between the faculty and their students, namely discussion board, course calendar, and performance dashboard.

Recommendations

The present study recommends the following:

- 1) Utilizing blended teaching, based on e-learning management system "Blackboard", in university teaching and creating supporting plans in universities;
- 2) Providing faculty members with various training courses to be capable of activating blended teaching, based on e-learning management system "Blackboard", in university teaching of various courses;
- 3) Providing classrooms equipped with the technologies essential for blended teaching.

Automatic Illustration Of Arabic Story Text

Prof. Jihad Mohamad ALJA'AM
Qatar University
jaam@qu.edu.qa

Abstract

In this paper, we approach the task of representing simple Arabic children's stories with suitable pictures that can efficiently and effectively convey the meaning of the words or concepts within the text. The approach proposes a methodology for automatically illustrating a given Children's story supported by multimedia learning, which analyzes text and presents a list of candidate images to illustrate it. Based on connecting a knowledge base, a multimedia collection and a lexicon, we realize an automatic illustration process that can illustrate story text in three stages. First, we investigate natural language techniques to process the story to get a semantic representation of main characters and events in each paragraph. Second, we construct expanded queries for each paragraph using output of previous step. Third, through image search, we could find a list of top candidate pictures. Exploring the results, a user or instructor can refine the results of an automatic illustration step by selecting few suitable pictures to compose the final visualization for each paragraph.

Autonomous Learning Gained By Escuela Nueva Primary Schools In Colombia: Comparison Between Grade 6 And Grade 9

Takako Suzuki

Kyushu University, Japan

tsuzuki@flc.kyushu-u.ac.jp

Abstract

1.Objectives and purposes

Escuela Nueva (EN) of Colombia is one of the well-known excellent education programmes for rural schools. It promotes high quality education not only for high academic scores but also non-cognitive skills and behavior including autonomous learning. These skills are especially recently highlighted and required for the next generations to survive in the highly globalized society and sustainable development. Thus we aim to prove the effects of EN implementation on autonomous learning.

2.Main perspective or theoretical/conceptual framework

The theoretical framework used for this research is the effective school model including “education inputs,” “education process,” and “education outputs.” In this framework, appropriate school inputs and process lead effective school outputs and then school outcomes should be maintained. As Escuela Nueva is a famous programme, a number of researchers and practitioners have been investigating it. However, while extensive researches have been conducted on “education inputs,” “education process,” and “education outputs” of Escuela Nueva, its “education outcomes” is rather limited. In our literature reviewed, international researchers have been proving its successful school outputs. Therefore, this research investigates how Escuela Nueva benefits the society and individuals after the graduation.

3.Research design and modes of inquiry

This five-year international research tries to proof if this successful achievement is maintained years after graduation by longitudinal studies of its graduates. We evaluated the EN graduates’ attitude, when primary graduates became grades 6 and 9. We conducted the baseline survey in 2014 with 1,037 Grade 6 students at 19 secondary schools who have just graduated from primary schools (Gs 1-5) and now attending at conventional secondary schools in two rural departments. We constructed a questionnaire and measured their autonomous learning to understand how far graduates gained autonomous learning through primary schools. Then we distributed the same questionnaires to the same students when they became Grade 9 in 2017, and compared the results from 2014.

4.Analytical methods

This study reveals how EN graduates gained autonomous learning throughout their EN primary school experiences, and how they maintained it throughout the secondary education. Their primary schools are categorized into four levels according to the degrees of EN implementation. The answers related to autonomous learning are analyzed in the relation with the four EN implementation levels. The collected data was analyzed through factor analysis, analysis of variance, and correlation analysis.

5.Results and conclusions

As conclusion, we see the correlation between autonomous learning and EN implementation levels when they were Grade 6. Students graduated from higher EN implementing primary schools indicated more positive behavior and attitude in autonomous learning, particularly with the following four components: initiative, motivation and heterogeneity. When they became Grade 9, however, we did not see the correlations except initiative.

6.Significance of the study

In 2015, Sustainable Development Goals including education targets are declared and the entire world is now addressing these goals to sustain our planet. Non-cognitive skills and behavior are necessary to the next generations to sustain the global world. Thus investigating and identifying the good practice to acquire these skills contributes a lot to the education in this century and the future.

Avrupa'da Türkçe Televizyon Yayıncılığı

Ersoy Soydan
Kastamonu Üniversitesi İletişim Fakültesi RTS Bölümü
ersoy.soydan@gmail.com

Özet

Günümüzde Avrupa'da beş milyon civarında Türk'ün yaşadığı bilinmektedir. 1960'lı yılların başında Türkiye'den Avrupa ülkelerine doğru Avrupa ülkelerinin işgücü açığını karşılamak için göçmen akını başlamıştır. Türk göçmenlere yönelik ilk Türkçe radyo yayını 1964 yılında Almanya'da WDR tarafından yapılmıştır. 1985 yılında da ilk Türkçe yayın yapan televizyon kanalı TD1 yine Almanya'da yayına başlamıştır. Bu televizyonu Belçika, Hollanda ve Avrupa'nın diğer ülkelerin televizyonlarında yayınlanan Türkçe programlar izlemiştir. Son yıllarda Hollanda ve Avusturya'da internet üzerinden yayın yapan Türk televizyonları da kurulmuştur. Bu çalışmada Avrupa'daki Türkçe televizyon yayıncılığı anlatılacaktır. Günümüzde Avrupa'da Türkçe yayın yapan 500 kanal izlenebilmektedir. Ancak bu çalışma Avrupa ülkelerinde yapılan Türkçe televizyon yayıncılığı deneyimleriyle sınırlıdır. Yöntem olarak literatür taraması kullanılmıştır.

Bachelor Of Civil Engineering Technology: Alignment Of Programme Educational Objectives With The Learning Outcomes In Accordance With Sydney Accord

Chee-Ming. CHAN, Angzzas Sari MOHD KASSIM, Nor Haslina HASHIM, Peniel ANG, Tze-Mi YONG, F.

Mustafa and Ishak BABA

Faculty of Engineering Technology, Universiti Tun Hussein Onn Malaysia (MALAYSIA)
chan@uthm.edu.my

Abstract

In widening the horizon of academic programmes offered at local universities, the compliance with international academic standards and guidelines are of utmost importance to ensure unified global recognition and accreditation for future prospects of the graduates. The Sydney Accord recognizes 4-year engineering technology programmes, and assists in determining if a bachelor-level programme attains the required level for purposes of licensure and registration, employment or admission to graduate school in another jurisdiction or signatories (International Engineering Alliance, 2017). As such, this paper examines the alignment of Programme Educational Objectives (PEOs) and Programme Outcomes (POs) of an undergraduate Civil Engineering Technology programme with stipulations of the Sydney Accord. At institution and faculty levels, the objectives and learning outcomes are oriented with the vision and mission respectively, assuring consistency of the programme outputs with the organizational aspirations in general. The mechanisms and processes involved to establish and then review the objectives from time to time are elaborated, showing a collaborative effort with stakeholders to keep the curriculum of the Programme abreast with current industrial needs and market trends. A discourse on how the POs are put in line with the PEOs ensues, detailing the mapping of the Programme's POs with the 12 standard outcomes of the Accord, as set forth in the Engineering Technology Accreditation Council (ETAC) Manual 2015, administered by the Board of Engineers Malaysia (BEM) as a provisional signatory of the Sydney Accord. Also, a graduate engineering technologist is to be equipped with the essential attributes embodied in the POs, which capture both academic and non-academic skills and competencies expected of a graduate of the Programme. Similar to the PEOs, the POs underwent review and revision periodically to maintain the relevance of the Programme with industrial demands. Finally attainment of the POs from the graduates is analysed and discussed with emphasis on the integrated monitoring and continual improvement mechanism substantiated by collective work-based evidence of staff and students alike. In a nutshell, coordination and alignment with the Accord is meaningless lest supported by a monitoring-feedback close-loop system for continual improvement of the programme implementation in the highly dynamic and driven field of technology

Introduction

The rapid growth of international engagement among institutions of higher learning is a result of dissolving national borders, figuratively. It is also driven by inter-related factors such as demand of stakeholders for profitable and sustainable academic programmes, regional and international trade activities, unified recognition of degrees awarded as well as inbound / outbound mobility or exchange of academicians and students (Stella & Woodhouse, 2010). In addition, technical graduates especially are expected to complement their technical knowhow with an acute awareness of not only the professional standards, but also environmental and societal demands (Embi, 2010). Mismatch of what the university teaches the students and what the industry needs would be disastrous, as exemplified by the increasingly high levels of unemployment in various fields of the job market (Bassey & Atan, 2012). This problem may have been further compounded by the general massification of higher education which overlooked the resulting inequalities in social mobility and teaching-practice mismatch (Mok, 2016).

In an effort to provide internationally recognised and competitive programmes, higher education providers in both the public and private sectors are obliged to adapt their respective engineering technology programmes to the requirements of Sydney Accord. Accreditation primarily derives from core operational values of an institution, which comprise of the institutional mission, autonomy and academic freedom (Eaton, 2010). A successful accreditation enables smooth processes of licensure and registration, employment or admission to graduate school in another jurisdiction or signatories of the Accord. This paper describes the development of a Civil Engineering Technology programme in accordance with the Sydney Accord, with emphasis on the establishment, alignment and monitoring of the programme outcomes.

Programme Development

While the Faculty is officially established in year 2012, the Programme has been developed at FKAAS (Faculty

of Civil & Environmental Engineering) since 2010 (Figure 1). Approval for development of the new programme was received from KPT (Ministry of Higher Education Malaysia) on 05 July 2011, while the Provisional Accreditation (PA) was awarded by MQA (Malaysian Qualification Agency) on 29 March 2012. As the Faculty was officially open in the same year (KPT's letter: 22 July 2012), the first review of the Programme (P1) was carried out and endorsed by Senate (01 August 2012) and LPU (13 September 2012), followed by KPT the following year, i.e. 14 April 2013. The review was primarily for content fine-tuning and refinement to align with the current as well as projected market trend and demand, as reflected in the updated PEOs and PLOs. With the programme refined, the Faculty welcomed its inaugural intake of 29 BNA students in September 2013 (Sem1 Session 13/14). Note that this first batch of students undertook a total of 141 credits for the Programme.

The second review of the Programme (P2) was carried out in year 2015, with endorsements by Senate, LPU and KPT on 11 January 2015, 24 February 2015 and 30 October 2015, respectively. One of the primary review outcomes was the revision and reorganization of the curriculum, which marginally reduced the total credits from 141 credits to 140 credits. This revised curriculum was adopted by the second intake of students in September 2015 onwards. Indeed, the Faculty began a double intake of students from 2016, i.e. in February and September. This is indicative of the maturity of the Programme and firm footing made in the arena of similar technical programmes, where the number of applications and enrolment is consistently encouraging.

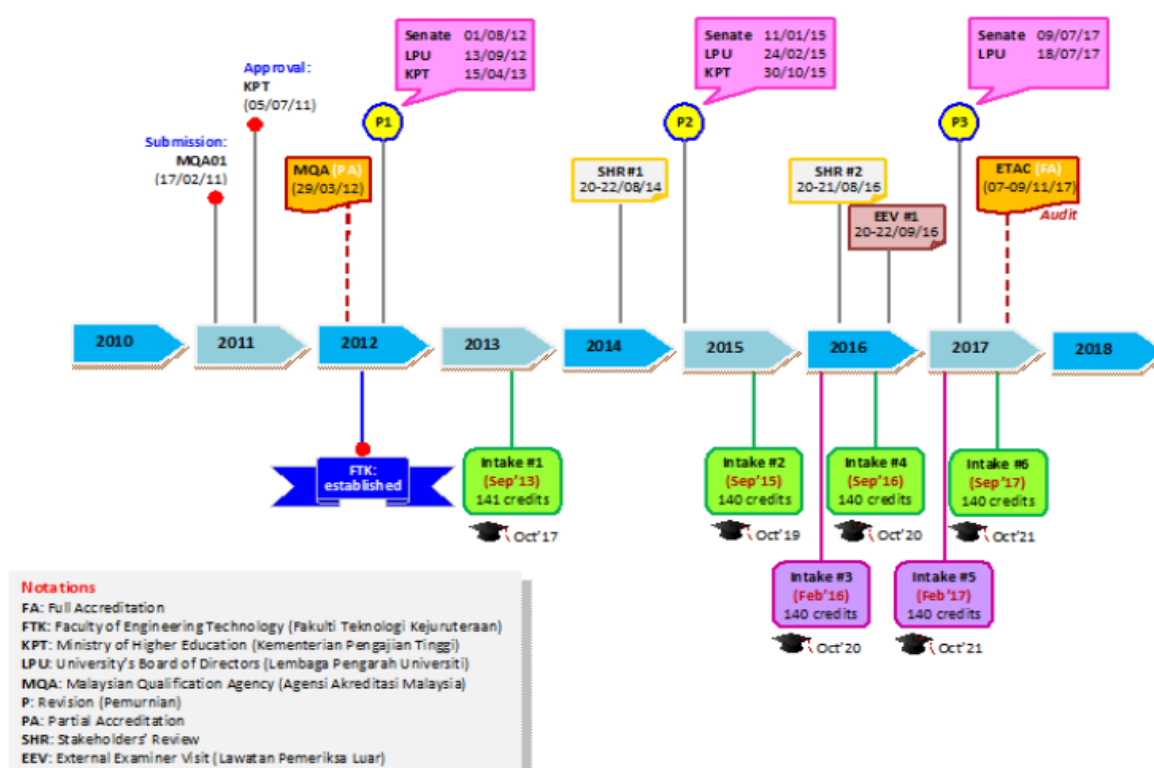

Figure 1. Chronological development of Programme.

The first External Examiner Visit (EEV) was carried out on 20-22 September 2016, with further revisions and improvements being introduced for the betterment of the Programme. This is ensued by the third Programme review (P3) as endorsed by Senate on 09 July 2017 and LPU on 18 July 2017. All in all, to date, the Programme has undergone 3 Stakeholders' Reviews and 1 External Examiner's Review from year 2012 till 2017. With the first batch of graduates to be conferred their degrees in the University's 17th Convocation (14-16 October 2017), and the on-going 5 batches of students in various stages of their respective studies (intakes September 2015, February & September 2016 and February and September 2017), the BNA programme has indeed come a long way from its inception in 2012 and first intake of students in 2013. Continuous monitoring, review and improvement exercises would be carried out to ensure regular self-check of the Programme to remain current, relevant and at the forefront of technical workforce tertiary training, specifically in the field of environment within the wider scope of civil engineering technology.

Vision And Mission: Institutional And Faculty Levels

UTHM is a public university established as one of four of the Malaysian Technical University Network (MTUN)

league, exclusively for engineering and technical education. The vision and mission of the University were specifically formulated to fulfill its purpose of establishment, and to function as beacons for charting the future development of the University, particularly in the fields of engineering and technical education. As such, it follows that the Faculty charted its own vision and mission oriented towards the University's aspirations for the present and future.

i. Vision and Mission of UTHM

- Vision: Towards a world class university in engineering, science and technology for sustainable development.
- Mission: UTHM is committed to generate and disseminate knowledge, to meet the needs of the industry and the community and to nurture creative and innovative human capital, based on the *tauhidic* paradigm.

ii. Vision and Mission of FTK

- Vision: Leadership excellence in generating and applying knowledge of engineering technology for sustainable development.
- Mission: FTK is committed to produce dynamic, creative and ethical graduates who will lead in the application of engineering technology to fulfill industrial and community need based on *tauhidic* paradigm.

Programme Educational Objectives

The Programme, Bachelor of Civil Engineering Technology (Environment), with Honours (BNA) has the Programme Educational Objectives (PEOs) as the foundation in its development. In consequence, the PEOs served as the foundation upon which the Programme Learning Outcomes (PLOs) and Course Learning Outcomes (CLOs) were formulated. Developed through a series of discussions and workshops involving both in-house staff and stakeholders from related fields, the PEOs were ensured to stay consistent with the Vision and Mission of UTHM in encapsulating the expected achievements of graduates of the Programme in their career and professional life 3-5 years after graduation.

Table 1. Programme Educational Objectives (PEO).

PEO	Statement	Key Performance Index
PEO1:	Practice with strong fundamental knowledge in Civil Engineering Technology.	At least 60% of graduates are involved in the field of civil engineering technology related to environmental engineering technology assessment, management and testing.
PEO2:	Engage in activities related to Civil Engineering Technology with technical competency.	At least 30% of graduates are registered as members in any professional bodies related to engineering technology.
PEO3:	Communicate with people in the related profession and stakeholders.	At least 30% of graduates are involved in technical, advisory or taskforce committees at national or international levels; or involved themselves in community efforts contributing to civil engineering technology issues
PEO4:	Adapt to changes related to civil engineering technology and the environment.	At least 30% of graduates are furthering or have furthered their studies; or have been attending professional development courses at least once in a year.

As listed in Table 1, the PEOs lay emphasis on equipping the students with a strong fundamental knowledge in civil engineering technology, technical competency, communication skills and adaption to changes related to civil engineering technology and the environment. Note that assessment of the attainment of PEOs would be conducted through a tracer study of graduates returning for the 17th Convocation on 14-16 October 2017. The survey results would be presented to the Auditors during the audit visit.

In order to instill awareness and understanding of the PEOs among Faculty staff and students, the Faculty has undertaken several initiatives to ensure that they are adequately published and publicized through:

- i. Programme Proforma.
- ii. FTK website: <http://ftk.uthm.edu.my/v3/academic/peo-plo.html>.

- iii. Posters: A3-size posters are displayed at strategic locations including laboratories, lecturer rooms, classroom and the Faculty's main office lobby.
- iv. Font cards: Handy pocket-size font cards are distributed to the Faculty staff and students for easy reference.

Relating Vision, Mission, Peo And Plo

The PEOs incorporate the spirit of the Faculty's mission (refer C1-1), where PEO 1 relates to the desirable attributes of being 'dynamic' and 'creative', PEO2 emphasizes on effective 'application' of technical competencies in meeting 'industrial needs', PEO3 focuses on the cultivation of graduates who uphold 'ethical conduct', while PEO4 relates to a sense of responsibility of services to the 'community'. Indeed, the PEOs are a reflection of the essence of the Programme, and the motivating force for the Faculty to produce highly competent, charismatic and market-ready environmental engineering technology is for civil engineering technologist with forte in the environmental aspect. These are future leaders of the nation's technical workforce who would propel the industry towards greater heights with their firmly instilled values and cultivated skills, always striving to be at the forefront of their respective sub-fields of the profession and evident 3-5 years post-graduation.

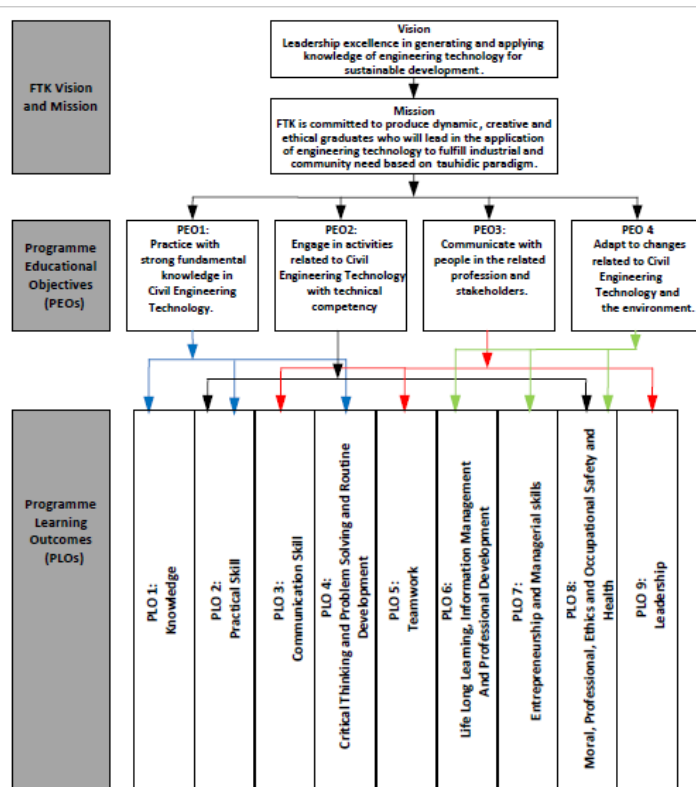

Figure 2. Relationship between vision, mission, PEO and PLO.

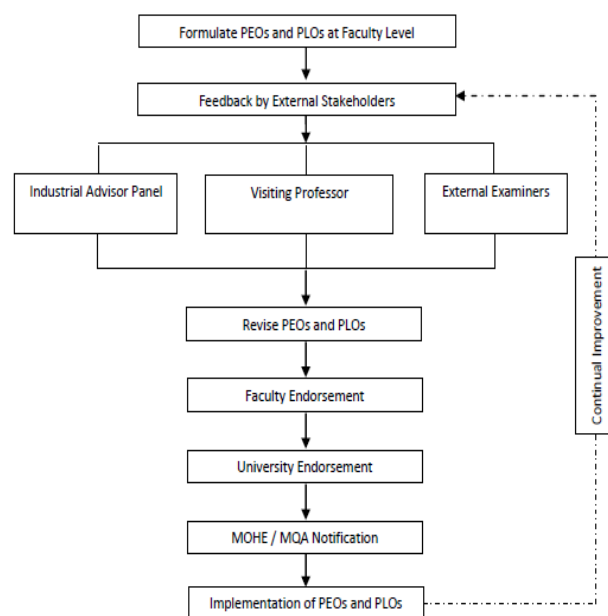

Figure 3. Establish, review and revise PEO and PLO.

As representation of the cumulative learning outcomes of all courses within the Programme's curriculum, the PLOs are necessarily derived from the PEOs and are measurable immediately upon completion of the Programme. Therefore there must appear a link threading through the PEOs and PLOs, demonstrating a trickle-down mechanism from a long to short term expectations of the graduates. Relationship and alignment of the Faculty's vision and mission, PEOs and PLOs are shown in Figure 2.

The PEOs were initially formulated by the Faculty, based on specific requirements of the Ministry of Higher Education (MOHE) and stipulations in the Malaysia Qualification Framework (MQF). As part of the initial steps in the Programme development, a market survey was conducted to ascertain the relevance, need for and expectations of the Programme among the related industries. The survey results were also referred to in designing the PEOs while not diverging from the Faculty's aspirations. The PEOs were then presented to the stakeholders (e.g. Industrial Advisor Panels, Visiting Professor, External Examiner and lecturers) for inputs, feedbacks and their respective requirements. Upon the review exercises, necessary and relevant inputs were adopted to revise the PEO. Revision to the PEOs, if necessary, was carried out in accordance to the procedures stated in **RPK-02 – Curriculum Review Procedures**. The revised PEOs were then forwarded to relevant in-house committees for

further debate and refinement, i.e. Faculty Academic Committee, Faculty Management Committee and Senate for endorsement. The process of establishing, reviewing and revising the PEOs and PLOs at the Faculty level as illustrated in Figure 3. As in a trickledown mechanism mentioned earlier, implementation of the revised PEOs was followed through attainment of the PLOs, with subsequent periodic reviews by the stakeholders to ensure continual improvement.

Mapping And Detailing Of Peo-Plo

Accrue of skills and knowledge throughout the 4-year programme, as illustrated in the 9 PLOs, are to be further enhanced and developed within the subsequent 3-5 years in the job market to fulfil the 4 PEOs. The relationships between outlined PLOs with the Programme Education Objectives (PEOs) are summarised in Table 2.

Table 2. PEO-PLO mapping.

Programme Educational Objectives (PEO)		Programme Learning Outcomes (PLOs)								
		PLO1	PLO2	PLO3	PLO4	PLO5	PLO6	PLO7	PLO8	PLO9
		Knowledge	Practical Skill	Communication Skill	Critical Thinking & Problem Solving	Teamwork Skill	Life Long Learning & Professional Development	Entrepreneurship Skill	Moral & Professional Ethics	Leadership Skill
PEO 1	Practice with strong fundamental knowledge in Civil Engineering Technology.	✓	✓		✓					
PEO 2	Engage in activities related to Civil Engineering Technology with technical competency.		✓						✓	
PEO 3	Communicate with people in the related profession and stakeholders.			✓		✓		✓		✓
PEO 4	Adapt to changes related to civil engineering technology and the environment.						✓		✓	

Note that PLO and PO (Programme Outcomes) refer to the same item in this report, where PO is the term adopted in the ETAC Manual (2015). Briefly, POs are statements that describe what students are expected to know and be able to perform or attain by the time of graduation. The desired attributes relate to the skills, knowledge and behaviour students acquire and accrue throughout the duration of the programme. Referring to Section 5.0 of the Manual (2015), ETAC highlighted 12 outcomes that should be achieved by an engineering technology student upon graduation.

Students of an engineering technology programme are expected to attain the following in a practice-oriented learning environment:

- Knowledge:** Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialisation to define and applied engineering procedures, processes, systems or methodologies.
- Problem analysis:** Identify, formulate, research literature and analyse broadly defined engineering problems reaching substantiated conclusions using analytical tools appropriate to their discipline or area of specialisation.
- Design/ development of solutions:** Design solutions for broadly-defined technology problems and contribute to the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.
- Investigation:** Conduct investigations of broadly-defined problems; locate, search and select relevant data from codes, data bases and literature, design and conduct experiments to provide valid conclusions.
- Modern Tool Usage:** Select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to broadly defined engineering activities, with an understanding of the limitations.
- The Engineer and Society:** Demonstrate understanding of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technology practice.
- Environment and Sustainability:** Understand the impact of engineering technology solutions in societal and environmental context and demonstrate knowledge of and need for sustainable development.
- Ethics:** Understand and commit to professional ethics and responsibilities and norms of engineering technology practice.
- Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse technical teams.
- Communications:** Communicate effectively on broadly-defined engineering activities with the engineering community and with society at large, by being able to comprehend and write effective reports

- and design documentation, make effective presentations, and give and receive clear instructions.
- xi. **Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member and leader in a team and to manage projects in multidisciplinary environments.
 - xii. **Life Long Learning:** Recognize the need for, and have the ability to engage in independent and life-long learning in specialist technologies.

It is worth noting that while the POs are defined and numbered in different forms between the Manual (2015), MQA standard and the Faculty, they really encompass the same fundamental attributes expected of an engineering technology graduate who successfully undergoes the Programme. For ease of comparison, the 9 PLOs formulated by the Faculty are mapped against the ETAC's PO and MQA's LO in Table 3.

Table 3. Alignment of PLO to ETAC PO, MQA LO and learning domains: cognitive (C), psychomotor (P) and affective (A).

PLO	DOMAIN	ABBRV.	PRIMARY LEARNING DOMAIN			UTHM/ FTK	ETAC	MQA (Eng.Tech.)
			C	P	A			
1	Knowledge	K	x			1	1	1
2	Practical Skill	PS		x		2	2,5	2,5
3	Communication Skill	CS			x	3	10	7
4	Critical Thinking, Problem Solving & Routine Design	CTPS & RD	x			4	3,4	3,4
5	Teamwork Skill	TS			x	5	9	6
6	Life Long Learning Information Management and Professional Development	LL, IM & PD			x	6	6,12	12
7	Entrepreneurship & Managerial Skills	ES & MS			x	7	11	11
8	Moral, Professional Ethics & Safety	M, PE & OSH			x	8	7,8	8,9,10
9	Leadership Skill	LS			x	9	11	6

In Table 4, the Programme's original 9 PLOs (FTK) are listed on the left most column while the ETAC's 12 POs are on the right most. The middle 2 columns indicate the overlapping Learning Outcomes of the FTK and ETAC domains, as demonstrated in Table 3 and explained in the previous paragraph. Nonetheless there are a couple of key matters to be noted from the map in Table 4. Firstly, 4 of the PLOs (i.e. PLOs 2, 4, 6 and 8) correspond with a pair each of the ETAC's POs. Secondly, ETAC's PO9 appears to be separately covered by FTK's at PLOs 5 and 9 respectively. This elaboration further proves the compatibility of the Programme's original Learning Outcomes with those stipulated in the Manual.

Table 4. Mapping of FTK PLO (9PLOs) to ETAC PO.

FTK Domain (9)	Mapping of Outcomes		ETAC Domain (12)
	FTK(9)	ETAC (12)	
PLO1. Knowledge	PLO1	PO1	PO1. Knowledge

PLO12. Environment & Sustainability	PO12	PO7	PO12. Lifelong Learning
PLO13. Engineering Technologist & Society	PO13	PO6	

The formulation of PLOs follows the same processes as undergone by the establishment of the PEOs (refer 4-5). With strict adherence to the PEOs, the PLOs were subjected to reviews and revisions by relevant stakeholders and academic committees or authorities in-house and externally. These processes ensured impartiality in the review exercises to avoid the 'silo effect' of excessive self-indulgence and tunnel vision which could impair the all-roundedness of the Programme often visible only through the eyes of outsiders, so to speak. In a nutshell, the processes of establishing and reviewing the PLOs in conjunction with the PEOs were carried out according to the workflow illustrated in Figure 3. Note that reviews of the PLOs were conducted simultaneously as the PEOs from time to time to maintain the relevance, timeliness and compliance to current industrial demands.

Attainment Of Po Via Student Assessment

In order to identify the attainment of POs via student assessment, it is necessary to first illustrate the overall academic performance management system adopted in the University. A comprehensive and interlinked online data capture and monitoring system was developed in-house to record, manage and measure individual student's academic achievement. The online system consists of 3 independent but connected sub-systems, namely Student Assessment System (SAS), Outcome-based Education System (OBESys) and Student Information System (SMP).

Essentially, all formative and summative assessments for each course of the Programme form the inputs for SAS, enabling measurement of the CLO attainment for the respective courses. Linked to OBESys, the cumulative attainment of PLOs, as contributed by the respective courses via the CLOs, are analysed and retrievable throughout the student's period of study at the University. The OBESys is accessible only by academic staff and authorities for reference and adoption in CQI of the Programme, for instance. On the other hand, students can access their academic performance via SMP for self-monitoring and improvement where applicable. To ensure CLOs of the specific course is properly assessed and achieved, the Table of Specification (TOS) and cognitive, psychomotor and affective (C, P, A) guidelines are used as instruments to assist in the planning of lecture delivery and assessment.

The key performance index (KPI) for all CLOs were set to 50% students achieving at least 50% marks or above. With each CLO is mapped to a specific PLO, the CLOs of selected courses would contribute to a particular PLO in an accumulative manner. Thus, with the assessment of CLOs completed, attainment level of the respective PLO mapped to the CLO is assessed. Figure 3 shows the results of the average PLOs attainment for each cohort of the Programme. PLO attainment is measured at the end of the 4-year programme, however, OBESys enables the current attainment of each cohort at the end of every semester.

Figure 4. Average attainment of PO by different cohorts of students.

Conclusions

In line with the Sydney Accord programme accreditation requirements, the Programme Educational Objectives (PEO) and Programme Outcomes (PO) have been defined, reviewed and translated into implementation of the Programme. Students undergo a structured learning process, achieving the targeted outcomes in a cumulative manner over the 4-year period of study, i.e. becoming qualified professional civil engineering technologists with the competencies and skills expected of them.

Abstract

All over the world, online education is being increasingly incorporated into educational institutions. Most universities have developed online courses, often leaving students no other options but to abandon the traditional classroom settings and to embark in this new pedagogy. In this research, over a thousand business students enrolled in an online undergraduate course in a Canadian university were surveyed. Their belief and confidence in the online learning technology is studied and the impact of gender and age is investigated. It was found that online learning is perceived as a very good test of students' time management skills for both male and female students. In general, older students show higher level of confidence in the benefits of online courses. The survey also revealed that male students show higher level of confidence about all aspects of online learning, especially the perceived easiness of the course and their expectation of higher grades. Overall gender and age have a certain impact on students' beliefs and confidence in virtual education.

Introduction

Throughout the world, the proliferation of "online information technologies" has impacted the education sector in general, and the rapidly growing electronic learning market, in specific. Some evidence on improved learning using Information Communication Technologies (ICT) has been trickling throughout the research community. This is especially true when pedagogy is more learner-centered (Wang, Wu, & Wang, 2009). From desktops to handheld devices, the massive integration and subsequently influence of computing devices, coupled with improving internet capabilities have altered the educational terrain.

There seems to be an 'electronic pressure' to participate in online education, felt at all levels from elementary school to higher education. Everybody is urged to use some form of information technology whether that may be a mobile device, a personal digital assistant or simply a laptop to connect to the internet for school, and continuing education. Considering this perspective, we can safely assume that the use of information technology for learning is becoming the more mandatory. It may therefore be expected that judgment on user satisfaction would be based on productivity gains using the information technology (Saadé, Kira, & Otrakji, 2012). In other words, the expectations to perform in an online learning environment continues to increase. Considering the simple task of internet surfing and playing games this may not be the case, since the driving motive of usage and satisfaction is more intrinsic. One can therefore assume that user satisfaction is based on the total subjective interactive experience in using an online environment (Lingaard & Dudek, 2002).

Background

The online learning technology has potentially transformed higher education (De Freitas, Morgan, & Gibson, 2015; McPherson & Bacow, 2015; Van Dijk & Poell, 2015). There are multiple explanations for that (Bonnici et al., 2016). First, the effectivity and efficiency of online education are indisputable. (Alavi & Leidner, 2001). The main issue for online learning is usability. According to the international standard on usability, ISO/DIS 9241-11 (ISO, 1997), the three pillars of usability are efficiency, effectiveness and satisfaction. Based on this definition, today's human-computer interface (HCI), regardless of its application (e.g. cellular phone, software, Internet, personal digital assistant ...), should be designed to meet these three pillars.

Second, there is a reduced cost involved with this method of learning. (Bryan, Leeds, & Wiley, 2018). Also, the learners' active participation and persistent self-learning (McLaren, 2004) create a more positive feeling in online students. This effect combined with other properties of online education like its availability and convenience (Kilburn, Kilburn, & Cates, 2014) as well as students' ability to learn on his own time and pace makes online education very appealing. (Rodriguez-Ardura & Meseguer-Artola, 2016). The important aspect is that a certain quality of online course material and course work should be reached for the best possible results (Dykman & Davis, 2008a; Santos & Boticario, 2015).

The personalized characteristics of online learning give the students a greater sense of responsibility and independency towards their education. (Balanskat, Blamire, & Kefala, 2006). Learners' dynamic contribution in terms of achievements, knowledge creation and sharing add value to online learning experiences and empower the students to achieve abundant results (Anshari et al., 2015; Sikand, 2017; Onyema & Daniil, 2017).

In online education it is expected of students to have some level of technical ability to use and interact with the online web-based platforms. (Baturay & Yukselturk, 2015). There are potential challenges, one of them is the failure to notice the possible individual setbacks that could be noticed early on in a face-to-face environment. Therefore, it is necessary that the teachers communicate with students and encourage them to keep their commitments (Dykman & Davis, 2008b; Collins, Weber, & Zambrano, 2014; Glazier, 2016). Learners who are the students with better self-regulation skills develop better learning strategies and achieve better academic performances than others (Zimmerman & Kitsantas, 2014). Proper self-regulatory activities and strategies are vital for achieving online learning goals and completing tasks (Lin et al. 2018).

Students become learners in the online educational environment since their personal qualities such as belief in themselves as active learners, self-motivation and determination, as well as belief in their IT, internet and time management skills are instrumental in their learning progress (Klopfenstein, 2003; Fish, 2016). Their belief in their personal and scholarship skills can guide them towards sustainable learning and give them perceptions concerning their strengths and challenges. To help students and improve their belief in being able to succeed in online courses it is recommended for students to take a mandatory online orientation course to prepare them for potential challenges and test their skills (Fish & Snodgrass, 2015).

The Online education has given students different beneficial ways to apply their knowledge and skills, for example by partaking in methodized assignments, like discussion panels, tests, and short papers (Rogers, 2015). Students can engage with the several aspects of the course for how often or how long that they choose (Vininsky & Saxe, 2017; Martin & Bolliger, 2018). This gives students a high level of control on how to interact with the online learning system which contributes to confidence in them. Studies have shown that, students identify online education to be offering more advantage than face-to-face education regarding areas of active learning and autonomy (Carver & Kosloski, 2015; Dendir, 2016).

With regards to individual traits, research has proven that different areas in the brain are used for different activities such as memory, language, learning and problem-solving. It is accepted by the research community that there are deviations in the structure and organization between the brain of one person and another across gender and age. This results in variations of the person's traits, interests, behavior, and psychological state such as anxieties, and confidence. To the point of this study, traits between men and women and across age groups have different expectations, behavior and confidence levels towards online learning. For example, (Saadé, Kira, & Otrakji, 2012) explain that many gender studies related to performance differences on spatial problems have been conducted in the past. Considering spatial orientation, women tend to rely on landmarks whereas men use simple geometric cues. Females memorize objects which are located on the route they take (Kimura, 2002). If those objects are removed or their position changed, women might get problems in reaching their destination. Men usually do not face such problems in finding their routes when following the geometric characteristics. Additionally, men perform better on more complex tasks. Men do well in mental manipulation of objects such as mentally rotating objects. The importance of noting these gender differences becomes acute in designing and using online learning platforms and pedagogy.

However, other finding suggests that men are as sensitive as women to perceived control therefore, we can say that gender does not have an effect in the level of self-efficacy of the students. The reason can be because cutting-edge online learning technology can offer high levels of adaptability and services to individual requirements (Rodriguez-Ardura & Meseguer-Artola, 2016). Women contemplate more on privacy and risk when sharing information online, this should be considered when designing online features (Hajli & Lin, 2016). Nonetheless, when female students engage and interact socially in conversations about the course or the events related to it, study suggests that they learn better due to active nature of online learning (Steyn & Van Tonder, 2017; Morante, et al., 2017). Other recent studies on gender differences show that male and female students in online education exhibit homogeneous behavior. (Harvey, Parahoo, & Santally, 2017; Mady & Seiling, 2017).

From a student behavior and satisfaction perspective, UTAUT-based studies (UTAUT: Unified Theory of Acceptance and Use of Technology) and previous literature (Wang, Wu, & Wang, 2009), gender and age are theorized to play an important role on the influence of performance expectancy, effort expectancy, social influence and facilitating conditions, on behavioral intention. That is, the influence of these constructs on behavioral intention will be moderated by gender and age, such that the effect will be stronger for men and particularly for younger men (Venkatesh, Morris, Davis, & Davis, 2003).

Venkatesh, et al. (2003) define effort expectancy as the degree of ease associated with the use of information systems and in the context of this study, online learning system. This construct is the extension of the Perceived Ease of Use from the Technology Acceptance Model. Previous studies show that constructs associated with effort expectancy may be stronger determinants of student's intention for women and for older workers (Venkatesh & Morris, 2000). Accordingly, based on the UTAUT, it was found that individual acceptance of online learning will depend on whether the online learning environment and learning tasks are easy to use, and that the influence of effort expectancy on behavioral intention will be moderated by gender and age, such that the effect will be stronger for older women.

With respect to social influence, Venkatesh et al. (2003) define it as the extent to which a person perceives that important others believe he or she should use a new information system such as learning management systems for online learning. Social influence is significant in shaping an individual's intention to use new technology and based on previous studies it was found that the effect of social influence on behavioral was moderated by gender and age, such that the effect is stronger for older women.

Another behavioral and confidence construct is perceived playfulness which can be either a state of mind (Moon & Kim, 2001) or an individual trait (Webster & Martocchio, 1992). Whereas, a state of mind refers to affective or cognitive episodes that are experienced in the short run and fluctuate over time, traits refer to comparatively stable characteristics of individuals that tend to be relatively invariant to situational stimuli. Previous research found that there are significant gender differences in attitudes towards computers. Moreover, previous studies found that the older the individual, the less interest they are likely to have in using ICT.

It has been known that with older, more mature students and technical course material, online learning provides reasonable success (George, 2001). Also, age has been considered a significant predictor of engagement. It is suggested that older students are more likely to engage with the coursework than the younger students (Spence & Usher, 2007). Reasons for taking online courses have been shown to be related to age of students (Morin et al. 2018). The main issue for younger students is that education is not only about learning for them, it is a way to become mature and develop personally, this part is missing in online learning (Bart, 2004). There are indications that the age of students makes a difference in their motivational factors (Yoo & Huang, 2013; Boyle & Abdullah, 2015). It is important to take into consideration that there is an increase in the number of mature students in higher education, mostly for 30-year-old till 39 and for 50 years old to 59. (Durkin, Filbey, & McCartan-Quinn, 2014).

In this study, we investigate the beliefs and confidence of students taking an online class in their online learning, as they differ across age and gender. As elaborated above, beliefs, confidence and behavior are anchored in behavioral and psychological theory and were found to differ in across age and gender. All the studies have investigated these relevant constructs from an information systems usage perspective, which is significantly different that online learning due to the important and less studied factor that in online learning there not only exists an information system (learning management system) but also the high stakes of performing while engaging in this online environment – and this adds to the complexity of understanding behavior.

The Study

This study was conducted in an undergraduate fundamental business technology course offered in a large Canadian university over a period of three years. The course is mandatory for all business students. It is offered entirely online through a series of virtual tutorials, electronic book and applied problem solving activities. Students registered in the course are invited to participate in the current study in exchange for some bonus points. Near the end of the semester, a survey instrument is administered. The questionnaire has several components, and for the purpose of this research, the following three segments are considered:

- **Demographics**
Respondents were asked to specify their gender and age.
- **Beliefs related to Online Learning**
A list of twelve common beliefs about online courses was established and respondents are asked to indicate their level of agreement with each of those beliefs. The levels of agreement are as follows: 1 corresponds to strongly disagree and 5 strongly agree with 3 as neither disagree nor agree.
- **Confidence towards Online Learning**
Respondents are presented with a list of nine statements concerning their confidence and impression about online learning. They are also asked to indicate their level of agreement with each statement. The levels are quantified as for the beliefs.

The research question investigated is:

Do beliefs and confidence towards online learning differ according to gender and age?

Findings

The findings are divided into three parts, demographics, beliefs and confidence.

Demographics

Nearly 1400 students took part in the study, completing the questionnaire, with close to 47% female and 53% male. The average age of the participants is 21.4 years. For the purpose of the analysis, the variable Age is organized into four categories, as presented in Table 1.

Table 1: Distribution of respondents based on Age and Gender			
Age	Male	Female	Total
< 20	47.4%	52.6%	27.5%
20 - 24	56.5%	43.5%	57.1%
24 - 30	5.4%	4.3%	11.4%
>30	55.6%	44.4%	4.0%
Total	53.2%	46.8%	100%

In the younger category, we observe more female students than male students with 52.6% compared to 47.4%. However, in the other three categories, the proportion of male students is higher especially among those of 30 years of age or more. Overall, there are 6.4% more male than female students.

Beliefs

The average level of agreement with the different common beliefs about online courses by gender and age are presented in Table 2. The levels of agreement are 1 for strongly disagree, 5 for strongly agree and 3 for neither agree nor disagree.

Table 2 provides very interesting information about the respondents' beliefs about online courses. We first note as indicated in bold in the last column that the three most highly supported beliefs about online courses are B7: *A good test for my learning skills*, B8: *A good test of my time management skills* and B9: *A good test of my internet skills*. In general, it appears that students believe that online courses can be used as an assessment tool of their learning abilities. We can also note that respondents tend to be indifferent or slightly disagree with the belief B4: *I will be registering in as many as possible online courses*. It is not a supported belief that students will want to have more online courses.

Table 2 also reveals different levels of agreement between male and female respondents. We note that male respondents give higher level of agreement for all beliefs except for B8: *A good test of my time management skills*. Of those beliefs, some are highly significant different at 5% indicated by (G*). This is the case for statements B1: *Ability to learn more*, B3: *Becoming dependent on online courses* and B4: *Registering in as many online courses as possible* where male students are more convinced.

Using Table 2, we can compare the average levels of agreement across age categories. We first note that students in the older category of 30 years of age or more, indicated higher level of agreement with most of the beliefs. The highest levels are indicated by the shaded cells. It is interesting to see that this group perceive online courses as a good test to assess B6: *their IT skills*, B7: *their learning skills*, B8: *their time management skills*, B9: *their internet skills*, B10: *their personality skills*, B11: *their research skills* and B12: *their work coordination skills*. This could be explained by the fact that the course under study is taken at the beginning of the business program, and older students might see it as the ultimate test for their return to school after several years.

TABLE 2 Beliefs about online courses Average Level of Agreement by Gender and Age							
	Gender		Age category				All
In taking online courses, I think:	Male	Female	<20	20-24	24-30	>30	Total
B1: I would be able to learn more G**	3.32	3.06	3.17	3.21	3.15	3.44	3.20
B2: I would find it easier to manage my course work load A*	3.51	3.43	3.35	3.49	3.59	3.68	3.47
B3: I will become dependent on online courses G**	3.10	2.88	2.97	3.04	2.94	2.77	3.00
B4: I will be registering in as many online courses as possible G**	2.95	2.70	2.72	2.89	2.88	2.88	2.83
B5: I would be challenged to perform to the best of my abilities	3.33	3.26	3.25	3.34	3.27	3.50	3.30
B6: it would provide me with a good test of my IT skills A*	3.51	3.44	3.38	3.49	3.55	3.77	3.48
B7: it would provide me with a good test of my Learning skills A*	3.56	3.52	3.45	3.55	3.66	3.75	3.54
B8: it would provide me with a good test of my time management skills G** A**	3.68	3.79	3.62	3.75	3.77	4.07	3.73
B9: it would provide me with a good test of my internet skills	3.57	3.56	4.49	3.60	3.58	3.68	3.57
B10: it would provide me with a good test of my personality skills	3.06	2.99	2.97	3.07	2.87	3.16	3.02
B11: it would provide me with a good test of my conducting research skills	3.39	3.30	3.29	3.35	3.39	3.60	3.35
B12: it would provide me with a good test of my work coordination skills A*	3.44	3.38	3.30	3.45	3.45	3.61	3.42
G*: Significant Gender differences at 10% G**: Significant Gender differences at 5% A*: Significant Age differences at 10% A**: Significant Age differences at 5%							

An analysis of variance is performed to see if the average level of agreement across age categories are significantly different. Significant differences exist at the 10% level as indicated by (A*) and at the 10 level with (A**). Significance age differences exist for B2: *Easier to manage course workload*, B6: *Good test for IT skills*, B7: *Good test for learning skills*, B8: *Good test for management skills* and B12: *Good test for work coordination skills*. Overall we can conclude that Male students give higher levels of agreement for most of the common beliefs about online courses. We also observe that older students give higher levels of agreement than the other age categories.

In Table 3, we examine more closely how the levels of agreement are influenced differently according to the age categories. The first thing we note is that male students in the first age category are much more assertive in their levels of agreement than female students. When we exclude Beliefs B3 and B4, which lie in the neutral category (neither agree nor disagree), we see a very clear picture of the behaviour changing over the age categories. We note that 100% of the average agreement for the list of common beliefs is stronger for male students. For 20 to 24 years category, that percentage drops to 80%, and for the 24 to 30, group to 60% and to 0% for the older age category. In fact, the highest level of support is by older female respondents. As was mentioned previously, older students, especially female students of that category, might be returning to school after a few years and see this first course, which happens to be online as a very good test of their overall abilities, in IT skills, learning skills, Time management skills, Internet skills, personality skills, research skills and work coordination skills.

TABLE 3 Beliefs about online courses								
Average Level of Agreement by Gender and Age								
In taking online courses, I think:								
	<20		20 - 24		24 - 30		30+	
Beliefs	Male	Female	Male	Female	Male	Female	Male	Female
B1	3.38	2.97	3.33	3.05	3.16	3.12	3.17	3.64
B2	3.43	2.28	3.51	3.47	3.66	3.50	3.67	3.69
B3	3.12	2.82	3.13	2.92	2.85	2.92	2.83	2.73
B4	2.92	2.53	2.99	2.73	2.84	2.96	2.78	2.96
B5	3.36	3.14	3.36	3.25	3.15	3.43	3.22	3.69
B6	3.55	3.23	3.50	3.46	3.47	3.65	3.44	4.00
B7	3.58	3.34	3.55	3.56	3.68	3.63	3.28	4.08
B8	3.63	3.61	3.70	3.83	3.73	3.83	3.78	4.27
B9	3.58	3.41	3.61	3.60	3.48	3.71	3.22	4.00
B10	3.03	2.91	3.12	3.00	2.94	2.79	2.56	3.58
B11	3.44	3.15	3.38	3.32	3.40	3.38	3.78	3.84
B12	3.41	2.20	3.46	3.44	3.48	3.40	3.28	3.85

Confidence

Respondents were also asked to indicate their level of agreement with a list of statements about different aspects of online courses about their impact and confidence. The levels of agreement are 1 for strongly disagree, 5 for strongly agree and 3 for neither agree nor disagree.

TABLE 4: Confidence about Online Courses							
Average Level of Agreement by Gender and Age							
	Gender		Age category				
	Male	Female	<20	20-24	24-30	>30	Total
Online web-based courses:							
C1: give me confidence in getting a good grade G**	3.40	3.07	3.22	3.23	3.39	3.30	3.25
C2: make it easier to study for tests and exams G**	3.28	3.06	3.12	3.17	3.27	3.27	3.18
C3: make it easier to manage the course workload G** A**	3.49	3.33	3.28	3.41	3.70	3.70	3.42
C4: would help me to achieve my learning goals G** A**	3.39	3.13	3.13	3.28	3.49	3.53	3.27
C5: would help me reduce my chances of making errors during tests G**	3.20	2.84	2.99	3.04	3.17	2.95	3.04
C6: would help me use online learning system efficiently	3.84	3.69	3.68	3.79	3.83	3.93	3.77
C7: would help me use online learning system effectively A*	3.74	3.67	3.60	3.74	3.80	3.86	3.71
C8: I think that using online learning systems are entirely within my control G**	3.66	3.52	3.52	3.60	3.73	3.73	3.60
C9: I have the abilities, skills and knowledge to use online learning system to my learning benefit G* A**	3.74	3.65	3.61	3.69	3.88	4.07	3.70
G*: Significant gender differences at 10%							
G**: Significant gender differences at 5%							
A*: Significant age differences at 10%							
A**: Significant age differences at 5%							

Table 4 provides information about the respondents' confidence about different aspects of online courses. We first note as indicated in bold in the last column that the four most highly supported statements are Online web-based courses C6: *would help me use online learning system efficiently*, C7: *would help me use online learning system effectively*, C8: *are entirely within my control* and C9: *I have the abilities, skills and knowledge to use online*

learning system to my learning benefit. Since the course under study is taken at the beginning of the Business program, these results are encouraging for the instructors in the programs, since students view this first experience with online courses as a beneficial in helping them using online pedagogical systems efficiently and effectively. Most interesting, is the confidence expressed by respondents about their abilities, skills and knowledge to benefit from these courses and that the online learning systems are entirely under their control.

Table 4 also reveals different levels of agreement between male and female respondents. We note that male respondents always give higher level of agreement for all the confidence statements as indicated by the shaded cells. Some of these differences are highly significant ($p\text{-value} < 0.05$) as indicated by G^{**} . It is the case for statements C1 to C5. In fact, male respondents are more confident C1: *to get a good grade*, C2: *it is easier to study for tests and exams*, C3: *it is easier to manage the course workload*, C4: *it helps to achieve learning goals* and C5: *it reduces the chances of making errors in tests*. Male respondents also score higher on C8: *Online learning systems are entirely within their control*. The confidence in C9: *abilities, skills and knowledge to use online learning system to my learning benefit* is also significantly higher for male students ($p\text{-value} < 0.10$).

Across the age categories, it is interesting to note that the average levels of agreement are higher for the older two groups as shown by the shaded cells. There are significant differences between the average levels of agreement for different age categories. Highly significant ($p\text{-value} < 0.05$) differences exist for statements C3: *Easier to manage the course workload*, C4: *Helps to achieve learning goals*, and C9: *Being able to use online system beneficially*. Additional analysis using the Tukey-Cramer test reveals that the significant differences is found between between the younger group (<20) and the older two categories (24 to 30 and more than 30). Significant differences also exist for statement C7: *Ability to use the online system effectively* with $p\text{-value} < 0.10$ and the difference is found between the younger group (<20) and the older group (>30).

When Gender and Age categories are merged together as in Table 6, we find as we did for the beliefs analysis, that male respondents of the first two age categories consistently give higher average levels of agreement. However, for the older respondents' category, their average level of agreement is higher than female students for only 5 of the 9 statements. When reviewing all gender and age categories, we find that highest support is given by males of the 30+ category for statements C6 to C9. Older male students are more confident in their abilities to use the online system efficiently, effectively and beneficially while being in control.

TABLE 6 Confidence about online courses								
Average Level of Confidence by Gender and Age								
In taking online courses, I think:								
	<20		20 - 24		24 - 30		30+	
Confidence	Male	Female	Male	Female	Male	Female	Male	Female
C1	3.41	3.05	3.40	3.02	3.47	3.29	3.28	3.31
C2	3.22	3.02	3.29	3.00	3.39	3.35	3.22	3.32
C3	3.36	3.20	3.48	3.33	3.82	3.53	3.67	3.73
C4	3.29	2.97	3.38	3.15	3.61	3.33	3.50	3.56
C5	3.16	2.83	3.21	2.82	3.29	3.02	3.17	2.81
C6	3.73	3.64	3.85	3.70	3.92	3.71	4.11	3.81
C7	3.64	3.58	3.76	3.71	3.79	3.81	4.11	3.68
C8	3.58	3.47	3.66	3.53	3.81	3.63	3.94	3.58
C9	3.66	3.56	3.72	3.65	3.94	3.81	4.22	3.96

Conclusions

Students' beliefs and confidence in online courses do seem to be impacted by gender and age group as seen by the results in this study. We observe that male students are more convinced that online courses will be beneficial to them as they believe that they will learn more. Female students on the other hand, view online courses as a very good test of their time management skills, significantly more than male students.

We also observe that older students agree more that online courses are a good test of their IT skills, their learning skills, their time management skills, their research skills and their work coordination skills. This could be explained by the fact that the course under study is a first year course taken by all undergraduate students. Since these older students might be returning to university after a few years, they might view the experience as a test or a predictor

of their academic success. Therefore, it is even more important that this online experience be successful. When gender and age are analyzed together, we find that it is female students in the older category who feel more strongly about seeing online courses as a test of their abilities.

When it comes to confidence in different aspects of online learning, male students are more confident that online courses will help them get a good grade, that the exams will be easier, the workload will be more manageable, that it will be easier to attain their learning goals and that learning is entirely under their control. When gender and age are analyzed together, we observe that the confidence of female students in the older category surpasses that of male students in the same group, when it comes to obtaining good grades, easier exams, workload and learning goals. Male students in the older category have the highest confidence in the efficiency and efficacy and control. Male students in that category are the most convinced that they have the abilities to use the online courses to their learning benefits.

When studied together, gender and age of students play an important role in the learning virtual environment. It is left to be seen if these results could be replicated in other courses, at different levels and if the seniority of students in the program would be an additional factor to consider. Since new virtual pedagogies are constantly being developed, more testing will have to be done to address students' beliefs and confidence in the environment.

Abstract

21. yüzyılda dünya ülkelerinin evrensel değerler kapsamındaki hedefleri incelendiğinde problem çözme becerisinin çocuklarda kazandırılmak istenen en önemli becerilerden birisi olduğu ortaya çıkmaktadır. Çocuklar günlük yaşantılarında farklı problemlerle yüzleşmektedirler (Çetinkale, 2006). Çocukların birçok becerileri var olan veya olası problemlere karşı farklı ve birden fazla çözüm önerileri getirdikçe gelişir. Çocuk problemlerle karşılaştıkça problemleri çözebilmek için neler yapabileceğini görmeye başlar. Zorlu problem durumları çocukların yaratıcı düşünme becerilerini geliştirerek kendilerini keşfetmelerine yardım eder. Problemlere çözüm üreten çocuğun kendine olan güveni de artar. Öğrenmenin temelini oluşturan problem çözme bireyin yaşantısının sadece bir bölümünü kapsamayıp yaşamları boyunca bireyin farklı alanlarda başarıya ulaşmasını sağlayacaktır. Günümüzde düşünmeyi, sorgulamayı ve çözüm üretmeyi daha fazla sağlayabilecek bir ortam yaratmak önem kazanmıştır. Açıklanan nedenlerle bu araştırmada çocukların problem çözme becerilerinin incelenerek sorgulama, düşündüğünü ifade edebilme gibi becerileri kazandırmak için neler yapılması gerektiğini belirlemek amaçlanmaktadır. Araştırma kapsamında özel bir anaokulunda 5-6 yaş grubundaki yaklaşık 30 civarında çocuk ile birebir görüşme yapılacaktır. Görüşmelerde önceden belirlenen 9 farklı problem durumundan oluşan senaryolara çocuklar tarafından çözüm üretilip üretilmediğinin saptanması ve üretilen çözümlerin yaratıcılık düzeylerinin incelenmesi tasarlanmaktadır. Bulgular, çocukların problem çözme becerileri akıcılık, orijinallik ve problemleri duruma verilen cevap sayısı olarak 3 temel başlıkta incelenecektir. Akıcılık kapsamında çocuğun her bir soruya cevap vermek için harcadığı süreye bakılacaktır. Orijinallik kapsamında ise 3 ayrı uzman tarafından çocukların senaryolara verdiği cevapların yaratıcılık düzeyine ilişkin verdiği puanların uyumu incelenecektir. Senaryolardaki problemlere ilişkin üretilen çözüm (cevap) sayısı da çözüm çeşitliliği bağlamında puanlanacaktır. Bu amaçla çocukların uygun olan her bir cevabına 1 puan verilecektir. Uygun cevap verilmediğinde veya hiç cevap verilmediği durumda çocuklara puan verilmeyecektir. Çocukların senaryolardaki problemlere ilişkin verdiği cevapların (çözümlerin) puanlanmasında bütünsel puanlama anahtarı (holistic rubric) kullanılacaktır.

Bilgi İletişim Teknolojileri Alanındaki Yayımlanan Yaratıcı Düşünme Becerisini Geliştiren Çalışmaların İncelenmesi

Özet

Son dönemlerde dünyada bilgi ve iletişim teknolojilerinin öğrenme-öğretme etkinlikleriyle birleştirilmesi çalışmaları büyük bir hızla artarken Türkiye’de bilgi iletişim teknolojileri destekli eğitime geçiş ağırlık kazanmaya başlamıştır. Eğitimde bilgi iletişim teknolojileri kullanımı; öğrenme süreçlerinin nitelikli olmasında, bireysel gelişimin ve toplumsal kalkınmanın önünü açmada, çağı yakalamada ve çağa öncülük etmede önemli bir bileşen haline gelmiştir (Çelebi Uzguur ve Aykaç, 2016). Bununla birlikte yaratıcı düşünme ve yaratıcılık, değişen ve gelişen dünyaya ayak uydurmada önemli bir etken olduğu düşünülmektedir. Yaratıcılık; her bireyde farklı seviyelerde bulunan bir özelliktir (Runco, 1996). Literatüre bakıldığında ise bilgi ve iletişim teknolojileri alanındaki yayımlanan, yaratıcı düşünme becerisini geliştiren çalışmaların ele alındığı tarama ve analiz çalışmalarının eksikliği göze çarpmaktadır. Bu bilgiler ışığında analiz çalışmalarının düzenli olarak tekrarlanması, teknolojik gelişmelerin sürekli olması nedeniyle bu gelişmelerin öğrenme-öğretme süreçlerine yansımalarının ortaya çıkarılması açısından önemli olduğu düşünülmektedir. Buradan hareketle bu çalışmada bilgi iletişim teknolojileri alanındaki yayımlanan yaratıcı düşünme becerisini geliştiren çalışmaların ele alındığı çalışmalar incelenerek bir içerik analizi çalışması yapılmıştır.

Bu araştırmada ilk aşamada önceden belirlenen kavramlara (tarama ve seçim ölçütleri) göre kodlama yapılmış ve bu bağlamda temalar elde edilmiştir. Bu aşamadan sonra veriler düzenlenmiş, temalara göre gruplandırılmış ve uygun durumlarda sayısal hale getirilerek sunulmuştur. Son olarak, elde edilen bulgular yorumlanmıştır. Makalelerin seçim ölçütleri 2010 – 2017 yılları arasında bilgi iletişim teknolojileri alanındaki yayımlanan yaratıcı düşünme becerisini geliştiren çalışmalar ele alınmıştır. Makaleler; araştırma konusu, çalışma grubunu belirleme türü, çalışma grubu büyüklüğü, araştırma türü, araştırma modelleri, veri toplama araçları, veri analiz yöntemleri ve ulaşılan sonuçlar gibi değişkenler açısından incelenmiştir.

Anahtar Kelimeler: *Bilişim teknolojileri, Yaratıcılık, Eğitim*

Giriş

Son dönemlerde dünyada bilgi ve iletişim teknolojilerinin öğrenme-öğretme etkinlikleriyle birleştirilmesi çalışmaları büyük bir hızla artarken Türkiye’de bilgi iletişim teknolojileri destekli eğitime geçiş ağırlık kazanmaya başlamıştır. Eğitimde bilgi iletişim teknolojileri kullanımı; öğrenme süreçlerinin nitelikli olmasında, bireysel gelişimin ve toplumsal kalkınmanın önünü açmada, çağı yakalamada ve çağa öncülük etmede önemli bir bileşen haline gelmiştir (Çelebi Uzguur ve Aykaç, 2016). Bilgi iletişim teknolojileri alanında yaşanan değişiklikler ve ortaya çıkan yenilikler öğretim programlarının yapısının güncellenmesinde etkili olmaktadır (MEB, 2012). Söz konusu genellemeler, uygulanan yenilikçi yöntem ve teknikler, bilgi iletişim teknolojileri dersinin hedeflerine ulaşılmasına, alanda çalışana yönetici ve farklı branşlardan öğretmenlerin de bilgi iletişim teknolojileri dersine karşı olan tutumlarında olumlu yönde değişim yaratacağı, hem de günümüz eğitim kurumlarının hedeflemiş olduğu öğrencilerin yetişmesine katkı sağlayacaktır.

Yaratıcı düşünme ve yaratıcılık, değişen ve gelişen dünyaya ayak uydurmada önemli bir etken olduğu düşünülmektedir. Yaratıcılık; her bireyde farklı seviyelerde bulunan bir özelliktir (Runco, 1996). Bununla birlikte çevre koşullarının da yaratıcılığı etkilediği söylenebilir. Bir diğer açıdan baktığımızda ise bireyin alacağı eğitimler sayesinde yaratıcılığını geliştirebileceği bilinmektedir.

Bir alanda yapılan bilimsel çalışmaların araştırılması ve incelenmesi, o konuyla ilgili araştırmaların nitelikleri ile ilgili bilgi vermesi bir diğer taraftan, araştırılan konu ile ilgili literatürün analiz edilmesine katkıda bulunmaktadır. Yayımlanan araştırmaların incelenmesi bundan sonraki zamanlarda yapılması planlanan yeni araştırmalara da ışık tutacaktır. Buna ek olarak bir konu ile ilgili bilimsel araştırmaların incelenmesi ve analiz edilmesi, hem o konu hakkında derinliğine bilgi sahibi olunmasını sağlar hem de alanın genel görünümünün ortaya konulmasına yardımcı olur (Göktaş ve Erdem, 2006).

İnternet kullanımının yaygınlaşmasıyla birlikte son bilimsel gelişmelere ve çeşitli diğer bilgilere büyük bir hızla ulaşılabilir de araştırmacılar kendi alanlarındaki gelişmeleri bilimsel makalelerden izlemeyi tercih etmektedirler (Edyburn, 2000). Budan dolayıdır ki yapılacak olan araştırmalarda alan yazında yer almasının araştırmacılara yeni yöntemler ve araştırma uygulamaları ile ilgili bilgi vermek açısından gerekli ve önemli bir kaynak olacağı ileri

sürülmektedir (Edyburn, 2004). Alan yazın taramalarının, ayrıca, araştırmacılara alanı tanımada yardımcı olacağı ve alana genel bir bakış sağlayacağı da düşünülmektedir.

Literatüre bakıldığında bilgi iletişim teknolojileri alanındaki yayımlanan yaratıcı düşünme becerisini geliştiren çalışmaların ele alındığı tarama ve analiz çalışmalarının eksikliği göze çarpmaktadır. Bununla birlikte analiz çalışmalarının düzenli olarak tekrarlanması, teknolojik gelişmelerin sürekli olması nedeniyle bu gelişmelerin öğrenme-öğretme süreçlerine yansımalarının ortaya çıkarılması açısından önemli olduğu düşünülmektedir. Buradan hareketle bu çalışmada bilgi iletişim teknolojileri alanındaki yayımlanan yaratıcı düşünme becerisini geliştiren çalışmaların ele alındığı çalışmalar incelenerek bir içerik analizi çalışması yapılmıştır. Çalışmada aşağıdaki sorulara yanıt aranmıştır;

1. İncelenen çalışmamaların yıllara göre dağılımı nasıldır?
2. İncelenen çalışmamaların konuları nasıl bir eğilim göstermektedir?
3. İncelenen çalışmalar da, kullanılan yöntem (çalışma grubu büyüklüğü, çalışma grubunu belirleme türü, araştırma türü, veri toplama araçları, veri analiz yöntemleri (kullanılan istatistiksel yöntemler) açısından nasıl bir dağılım göstermektedir?

Yöntem

Bu çalışmada bilgi iletişim teknolojileri alanındaki yayımlanan yaratıcı düşünme becerisini geliştiren çalışmaları incelemek hedefiyle içerik analizi yöntemi kullanılmıştır. Cohen, Manion ve Morrison'a (2007) göre içerik analizi, eldeki yazılı bilgilerin temel içeriklerinin ve içerdikleri mesajların özetlenmesi ve belirtilmesi işlemi olarak tanımlanmaktadır. İçerik analizinin temel amacı Yıldırım ve Şimşek'e (2006) göre, toplanan verileri açıklayabilecek kavramlara ve ilişkilere ulaşmak olarak ifade edilmiştir. Gülbahar ve Alper (2009) ise içerik analizi yoluyla verileri tanımlama ve verilerin içinde saklı gerçekleri ortaya çıkarmanın amaçlandığını belirtmişlerdir. İçerik analizinde, dokümanlardan elde edilen nitel araştırma verilerinin işlenmesi, verilerin kodlanması, temaların bulunması, kodların ve temaların düzenlenmesi, bulguların tanımlanması ve yorumlanması şeklinde dört aşama kullanılır (Yıldırım & Şimşek, 2006).

Bu çalışmada ilk aşamada önceden belirlenen kavramlara (tarama ve seçim ölçütleri) göre kodlama yapılmış ve bu bağlamda temalar elde edilmiştir. Bu aşamadan sonra veriler düzenlenmiş, temalara göre gruplandırılmış ve uygun durumlarda sayısal hale getirilerek sunulmuştur. Son olarak, elde edilen bulgular yorumlanmıştır.

Makale Seçim Ölçütleri

Bu çalışmada da 2010 – 2017 yılları arasında bilgi iletişim teknolojileri alanındaki yayımlanan yaratıcı düşünme becerisini geliştiren çalışmalar ele alınmıştır. Makaleler; araştırma konusu, çalışma grubunu belirleme türü, çalışma grubu büyüklüğü, araştırma türü, araştırma modelleri, veri toplama araçları, veri analiz yöntemleri ve ulaşılan sonuçlar gibi değişkenler açısından incelenmiştir.

Makale İnceleme Formu

Bu çalışmada makalelerin incelenmesi için kullanılan formun seçilmesi aşamasında, literatürde kullanılmış formlar incelenmiş ve (Kurtuluş, Meltem, ve Seferoğlu, 2013) yılında geliştirdikleri form kullanılmaya karar verilmiştir.

Verilerin Analizi

Araştırma kapsamında içerik analiziyle incelenen makalelerden elde edilen veriler, Microsoft Office Excel 2013 programından faydalanılarak betimsel istatistiksel yöntemlerden olan yüzde ve frekans kullanılarak analiz edilmiştir.

Bulgular ve Yorumlar

Bulgular çalışma problemlerinin cevaplarına sırasıyla yer verilecek şekilde sunulmaktadır.

İncelenen Çalışmaların Yayımlandıkları Dergilere Göre Dağılımı

Çalışmanın birinci sorusu “İncelenen dergilerde yer alan makalelerin yıllara göre dağılımı nasıldır?” olarak belirlenmiştir. Grafik 1 incelendiğinde her yıl en az bir çalışmanın yayınlandığı görülmektedir. Sadece 2012 yılına ait bir çalışma bulunulmamıştır.

Grafik 1: Çalışmaların yıllara göre dağılımı

İncelenen Çalışmaların Araştırma Konularının Eğilimi

İncelenen çalışmalarda çalışılan konuların eşit bir dağılım gösterdiği Grafik 2’de görülmektedir. Bir tek yapılan çalışmaların öğrencilerin akademik başarılarına etkisini 2010 ile 2017 yılları arasında yapılan çalışmalarda diğerlerine göre daha az araştırıldığı görülmektedir.

Grafik 2: Çalışmaların konularına göre dağılımı

İncelenen Çalışmaların Kullanılan Araştırma Türleri ve Araştırma Modelleri

Yapılan araştırmada 2010 ile 2017 yılları arasında yayınlanmış makaleleri büyük çoğunluğunun nicel ve nitel araştırma yönteminin beraber kullanıldığı görülmüştür. Bununla birlikte sadece nitel veya sadece nicel çalışmalarında eşit ağırlıkta yapıldığı görülmektedir.

Grafik 3: Çalışmaların araştırma türüne göre dağılımı

İncelenen Çalışmaların Kullanılan Veri Toplama Araçları

Makalelerde kullanılan veri toplama araçlarıyla ilgili dağılımların sunulduğu Grafik 4'te en çok kullanılan aracın anket ve görüşme formunun olduğu görülmektedir. Bunun dışında kullanılan diğer araçlar ile ölçek ve Test olmuştur. Bu testlerin çalışmalarda geçen adı ise yaratıcılığı ölçen testler. Bununla birlikte çoğunlukla ön test ve son test te kullanılmıştır.

Grafik 4: Çalışmalarda kullanılan veri toplama araçlarının dağılımı

İncelenen Çalışmaların Kullanılan Araştırma Modelleri ile ilgili dağılım

Makalelerdeki araştırma modelleri ile ilgili bulguların yer aldığı Grafik 5 incelendiğinde en fazla kullanılan modelin Durum çalışması modeli olduğu sonucuna ulaşılmıştır. Tarama modelinden sonra en fazla Betimsel çalışmaların olduğu görülmektedir. Bunu dışında bir diğer tercih edilen model de örnek olay modelidir.

Grafik 5: Çalışmalarda kullanılan model dağılımı

Tartışma ve Sonuç

Yaratıcı düşünme becerisi, bir temel fikri ve ürünü değiştirme, birleştirme, yeniden farklı ortamlarda kullanma ya da tamamen kendi düşüncelerinden yola çıkarak yeni ve farklı ürünler ve bilgiler üretme, olaylara farklı bakabilme, küçük çaplı da olsa bazı buluşlar yapabilmeyi kapsamaktadır (Kıncal, Avcu, ve Kartal 2016).

Bir diğer taraftan bilişim teknolojileri destekli yaratıcı düşünme etkinliklerinin yaratıcılık potansiyelini geliştirilebileceği anlaşılmaktadır. Öğrencilerde var olan yaratıcı düşünme becerilerini ortaya çıkarma ve bunları destekleme noktasında eğitimcilerin teknolojiye dayanabilecekleri (Liu, 1998; Loveless, 2008; Ma, 2008; Ma, 2009; Özcan, 2009) düşünüldüğünde, bilgi iletişim teknolojileri desteği ile öğrenme ortamların yaratıcı düşünme gibi becerilerinin ortaya çıkmasını veya geliştirilmesini destekleyici alternatif ortamlar yaratabileceği söylenebilir. Günümüz teknolojisinin kullanılması değil programlaması beklenen geleceğin yetişkinleri (öğrencilerin), sadece programlama bilgisine sahip olarak bunu yapabilmeleri mümkün değildir. Bununla birlikte farklı düşünebilmeleri, yaratıcı çözümler üretmeleri gerekmektedir. Buda ancak yaratıcı düşünme becerisine sahip olmakla mümkündür.

Bu Çalışma ile Literatürde Bilgi İletişim Teknolojileri Alanındaki Yayımlanan Yaratıcı Düşünme Becerisini Geliştiren Çalışmaların İncelenmesi amaçlanmıştır. Bu amaç doğrultusunda son 7 yılın (2010 – 2017 yılları arasında) yayınlanmış çalışmalar taranmıştır. Yapılan araştırmalarda bilgi iletişim teknolojileri ve yaratıcılık konularının beraber işlendiği çok fazla makalenin olmadığı görülmüştür. Hem Türkiye’de hem de İngilizce yayınlanan makaleler içerisinde yapılan taramada sınırlı sayıda çalışma içerisinde ise yaratıcı düşünme becerisi ile öğrencilerin akademik başarıları arasındaki başarı incelenmiştir. Bunun la birlikte öğrencilerin yaratıcı düşünme becerisi ile problem çözme başarılarındaki ilişkiler incelenmiştir. Bir diğer ağırlık kazanan çalışma konusu ise yaratıcı düşünme becerisinin geliştirilmesidir.

Bir Siyasal Eğitim Kurumu Olarak Halkevleri

Prof. Dr. Sadık KARTAL
Mehmet Akif Ersoy Üniversitesi,
skartal@mehmetakif.edu.tr

Abstract

Halkevleri birer siyasi terbiye yeri olarak açılmış, Türk milletini Kemalizm'e bağlı kılmaya çalışmıştır. Aynı zamanda Türkiye'de yaşayan halkı bir millet haline getirme, milli sınırlar içinde özü halka ve milli yapıya temeli tarihe dayanan medeni ve kaynaşık bir millet yaratmak diye tanımlanan milli ülküyü, altı temel ilkenin ışığında ve dokuz koldan halka ulaştırma harekâtıdır. Her zaman Türk kültürünün milli değerleri işlenmiştir. Halkın yeni Türk kültürü tarafından yoğrulmasında ve Kemalizmin halk arasında yayılmasında eğitim açısından en önemli görevi Halkevleri yüklenmiştir.

Giriş

Halkevleri, Mustafa Kemal Atatürk devrimlerinin benimsetilmesini, Cumhuriyetin kültür etkinliklerini, milli eğitimle birlikte yürütmek için 1931 yılında kapatılan Türk ocaklarının yerine kuruldu. Çoğunlukla öğretmenlerin görev aldığı halkevlerinde Cumhuriyet kurumlarının ve ideallerinin yerleştirilmesine yönelik çalışmalar yapıldı. Temel amaç, halkın devrimleri benimsemesini cumhuriyet ilkeleri ile donanmasını sağlamak olmuştur. Halkevlerinde devrim ve yerli malı sergileriyle İmparatorluk devrinde yapılanlarla Cumhuriyet dönemi karşılaştırılarak halkın Cumhuriyete bağlılığı sağlanmaya çalışılmıştır.

Kemalist ideoloji Halkçılık ilkesinin gereği olarak ciddi bir yetişkin eğitime de girişti. Çünkü yetişkinler okulda değildi. Türk Ocakları, Halk Odaları, Millet Mektepleri ve Halkevleri, Türk Dil ve Tarih Kurumu ideolojik bir aygıt niteliğinde çalışarak köylüden sadık yurttaş ve modern birey yaratmaya çalıştı. Bu yapılandırma hak olarak lanse edildi. Kamusal katılım, siyasal, kültürel, hukuksal vb. alanların yanı sıra eğitime katılım köylü için bir hak olarak ifade edildi. Bu hak aşağıdan yukarıya bir talep olarak değil, yukarıdan çerçevesi çizilen ideolojik olarak Türk milliyetçiliği idi (İnal, 2018, s.78).

Neden Halkevleri

Halkevlerinin asıl kuruluş nedeni CHP yöneticileri ile halk arasındaki kopukluğu gidermekti. Başka bir deyişle CHP'nin ideolojisini geliştirerek halka benimsetmek böylece rejimin geleceğini sağlamlaştırmaktı. Halkevlerinin 1934 yılında yayımladığı yönetmelikte çalışmalarında Parti programının göz önünde bulundurulması ve her durumda yaygınlaştırılıp kökleştirilmesi benimsenmiştir. İsmet İnönü, Halkevlerinin CHP ilkelerinin halka anlatılmasında başlı başına bir merkez olduğunu söyler. Genel olarak Halkevleri aracılığıyla yeniliği ve devrimleri halka götürmek, Arap, Acem ve Avrupa kültürünün etkilerini ortadan kaldırarak yeni bir Türk kimliği yaratmak, yerel unsurları gün yüzüne çıkarıp halkı uluslaştırmaktır. 1930'lu yıllarda oluşturulmaya çalışılan Türk kültür devriminin alt yapısı Halkevleri aracılığıyla oluşturulmaya çalışıldı (Zeyrek, 2006, s.16).

Cumhuriyet Halk Partisi'nin ilkelerinin halka yaymak Halkevlerinin görevlerindendir. Ankara Halkevi tarafından 1933 yılında "Cumhuriyetin 10. Yılı" adlı yazıda şöyle denilmiştir; "CHP'nin yaptığı büyük inkılabın milletin ruhuna sindirilmesi lazımdı. İnkılabın en derin manasıyla bütün varlığımızı yeni bir hayata ve yeni bir istikamete götürüyordu. Bu yeni görüşü halka telkin ederek, yeni zamanların anlayışına göre, milleti tek tek fertler halinden çıkararak onları görüş, anlayış ve yapıda bir birlik haline sokmak, onun iç varlığını inkişaf ettirmek ve benliğinin derinliklerinde kaynayan emsalsiz kıymetleri meydana çıkarmak vazife idi. Partinin görüşüne göre milletin hususi vasıflarına uyacak yollardan yürüyerek her derecedeki resmi tahsil dışında onu bir halk terbiyesi ile yükseltmek elzemdi. Bunun için cemiyet hayatının ve kültür hayatının yeni anlayışlarla ve toplumumuzun kendi unsurlarından kurulacak yeni ve milli bir teşekkülün çalışmasıyla beslenmesi düşünüldü. Bu fikir, Partinin 1931'deki üçüncü büyük kongresinde yapılan tüzüğe Halkevlerinin sokulması neticesini verdi." (Ergün, 1982, s.154).

Mustafa Kemal Atatürk'ün "Gençlik, istikbalin ışığıdır. Gençlik, sürekli gelişen ve yetiştiren bir çalışmanın içinde yaşatılmalıdır. Milleti, şuurlu, birbirini anlayan, birbirini seven, ideale bağlı bir halk kütlesi halinde teşkilatlandırmak lazımdır. En kuvvetli ders araçlarına ve yetişkin öğretmen ordularına sahip olmak yeterli değildir. Halkı yetiştirmek, halkı bir kütle haline getirmek için ayrıca bir milli halk mesaisine ihtiyaç vardır. Silah kuvvetinden her türlü cebir ve madde kuvvetinden daha etkili olan fikir kuvvetidir. Milleti bu sahada yetiştireceğiz." Bu cümlelere uygun olarak Halkevleri yönetmeliği evlerin kuruluş gerekçesini şöyle açıklıyor;

"...biz bu sahada her milletten daha çok çalışacağız. Çünkü onlardan her yönden eksikiz. Resmi ve gayri resmi gayretlerimizi hep bu konuya yönelteceğiz. Cemiyetin bünyesine yerleşmiş bir takım kurumları söküp atmak ve yerine Cumhuriyet ve inkılap esaslarını bütün ruhlara hâkim kılmak, onu bir iman haline getirmek için çalışacağız. Menemen hadisesinden çok uzak değiliz." Burada da belirtildiği üzere Mustafa Kemal Atatürk'ün sözleri ve Menemen olayı vb. olaylar Halkevlerinin açılmasında etken olmuştur (Ergün, 1982, s.152).

Cumhuriyet Halk Partisi Genel Sekreteri Recep Peker, Halkevlerinin açılışında yaptığı konuşmada şunları söyler; “ Partinin son genel kurulunda milli kültür alanında yeniden teşkilatlanma kararı alındığını, bu amaçla Halkevlerinin kurulmasına karar verildiğini belirterek, medeniyet seviyesine gelmiş milletlerin okul eğitimini yeterli görmediklerini, militleşme sürecinin tamamlanabilmesi için kesinlikle okul eğitiminin yanı sıra bir halk eğitimine ve terbiyesine ihtiyaç bulunduğunu ve bunun için CHP’nin Halkevlerini kurduğunu.” belirtir (Yiğit, 1992, s. 69).

Mustafa Kemal Atatürk “Partimizin¹, Halkevleriyle bütün yurttaşlara kucağını açması vatanda sosyal bir devrim yaptı”, zamanın Başbakanı İsmet İnönü; “...Halkevleri bizim anlayışımıza göre Türk vatanında Türk Cumhuriyetinde ahlak, ilim ve anlayış kavramlarının tatbik edildiği, açıklandığı, genişletildiği ve kökleştirilip yerleştirildiği yerlerdir.” CHP Genel Sekreterliği yapmış olan Şükrü Kaya, “ Halkevleri, Atatürk inkılabı prensiplerinin halk arasında yayılması, derinleşmesi ve kökleşmesi için kurulmuştur. Bu itibarla Halkevleri ihtilalin kültürel yayın ve koruma yurdu.” Yazar Necip Ali, “Halkevleri okul dışında vatandaşların inkılap ülkülerini almaları için birer okul ve bu ülküler etrafında kuvvetlerini birleştirmeleri için birer merkezdir.” Kısacası Halkevleri Mustafa Kemal Atatürk’ün düşüncelerini yurdun her köşesine yayımını sağlayan, bu çizgideki Türk aydınlarının bulunduğu, Türk devrim stratejisi kararlarının alındığı ve uygulandığı bir yerdir (Zeyrek, 2006, s.19).

Cumhuriyet Halk Partisi, köye ilkelerini benimsetme ve Cumhuriyet ideolojisini yerleştirme konusunda Halkevleri kanalının en ücre köye gidememesinden dolayı aynı misyonla Halkodalarını kurdurdu. Odaların amacı Halkevleri ile ortak. Burada yapılan çalışmalarda başta Atatürkçülük olmak üzere vatandaşın bilgi ve becerilerini geliştirmek, CHP’ye yandaş toplamak ve düzenin savunucularını yetiştirmekti. Halk odaları CHP’nin ilkelerine ters düşmeyen ve diğer siyasal partilerle her hangi bir bağı olmayan tüm ulusal derneklere açıktı (Zeyrek, 2006, s.33).

1 Mustafa Kemal Atatürk 7 Şubat 1924’te Balıkesir’de yaptığı konuşmada şu ifadeyi kullanır; “ Halk Fırkası halkımıza siyasal eğitim vermek için bir okul olacaktır.”- M. Rauf İnan, Atatürk’ün Eğitimci Kişiliği, *Cumhuriyet döneminde eğitim* içinde, İstanbul; Milli Eğitim Basımevi, 1983, s.6.

Halkevleri ve Halkodaları başka unsurlardan arındırılmış ulusal bir kültür oluşturmak için çeşitli faaliyetler yapmışlardır. Halkevlerinin Kültür ve Edebiyat Kolu, öz Türkçe kelimeler için çalışmalar yapmış ve yazım dilinde öz Türkçe kelimelerin kullanılması için uyarılarda bulunmuşlardır. Bu kol, İnönü Zaferleri, 30 Ağustos Zafer Bayramı, 29 Ekim Cumhuriyet Bayramı, 23 Nisan Ulusal Egemenlik ve Çocuk Bayramı, il/ilçe kurtuluş günlerini kutlamışlardır. Yıl dönümü ve anma günlerinde Namık Kemal, Ziya Gökalp, Abdülhak Hamit, Mehmet Akif, Mehmet Emin Yurdakul, Mimar Sinan... gibi Türk büyükleri konferans ve yazılarla anılmışlardır. Güzel Sanatlar Kolu, Türk büyükleri ve ulusal kahramanlık olayları için yazı, resim ve kompozisyonlar yazdırarak sergiler düzenlemiş ve ödülleri dağıtmıştır. Halkevleri tarafından sergilenen oyunların çoğunluğu Türk tarihi, Kurtuluş Savaşı’na övgü, dinsel düşünce ve İmparatorluk döneminin eleştirisi ve inkılapların yerleşmesine yardımcı olan türdendir (Zeyrek, 2006, s.46).

Halkevleri yöneticilerinden Tahsin Banguoğlu, yeni bir milli kültür yaratmak bağlamında bu kurumların amaçlarını şöyle belirtir; “. Batı malzemesiyle yeniden bir sınıf kültürü yaratamayız. Yeni Türk kültürü bütün tabakaları aynı cevherden yapılmış yüksek bir halk kültürü olacaktır. Türk inkılabının büyük önderleri davayı öncelikle kavramışlar ve gereken adımları atmışlardır. Yeni Türk kültürü bütün insanlarımızın katılımı ile gerçekleşecektir. Halkçılık ilkesi bu görüşün ifade edilış tarzıdır. Bilginin bütün vatandaşlara dağılımını üstlenen cumhuriyet eğitimi de bu görevi üstlenmiştir. Milli kültür davamızın karakter verici kurumları Halkevleri olmuştur. Onlar bizim ihtiyaçlarımıza göre düşünülmüş ve bizim davamıza hizmet edecek olan milli kültür merkezleridir. Halka yayılan faydalı düşüncelerin çoğunluğu Halkevlerinden doğmaktadır. Eski Doğu ve yeni Batı değerleri arasında bocalayan Türk toplumuna Halkevleri doğru ve kendi malımız olan kültürel değerleri sunacaktır. Halk dili, halk müziği ve edebiyatı Halkevlerinden doğacak ve yaygınlaşacaktır.” (Yiğit, 1992, s. 70). Halkevlerinin temel amaçlarından birisi de halkı bilinçlendirerek kaynaştırmak ve bir kitle haline getirmekti. İmparatorluktan kalan ümmetçilik düşüncesi yerine ulusçuluk düşüncesinin verilmesi için çok çalışıldı. Halkevlerinin kurulmasından önce Doğu Anadolu’da aşiret, Orta ve Batı Anadolu’da bazı eşraf, din adamı, tefeci ve tezgâh sanayisinin büyük etkinliği söz konusu idi. Bunun yanında göç hareketleri ile nüfusta değiş tokuş yüksek oranda idi. Yani toplumsal kaynaşma düşük düzeyde ve ulus bilincinden toplum yoksundu. 13 Mayıs 1933 tarihinde Cumhuriyet Halk Partisi Genel Sekreterliği’nden Halkevlerine gönderilen genelgede partinin ulusalcılık ilkesine özel önem verilmesi gerektiği istendi. Bu yüzden Halkevleri ümmetçiliğe karşı ulusalcılığı savunmuş, birçok kitap ve dergide bu konuyu işleyerek temsillerde ulusalcılığa vurgu yapan gösterilerde bulunmuştur. Bu konudaki çalışmalar halkın geneline yönelik olsa da daha çok gençliğe yönelik faaliyetlerin olduğu dikkat çekicidir. Kısacası Halkevleri halkın ulusçuluk ruhunu geliştirerek aradaki ulusal bağların kuvvetlenmesi için çaba sarf etmiştir (Zeyrek, 2006, s.95). Halkevleri kurucularının iddia ettiği gibi siyaset dışı kaldıkları söylenemez. Cumhuriyetin laik karakteri başta olmak üzere rejimin siyasi dayanağı Halkevlerinde titizlikle işlenmiştir. Rejimin kültür ve siyasi meselelerdeki görüşleri ile çatışan fikirlerin Halkevleri çatısı altında yer almamasına daima dikkat edilmiştir (Başgöz, 2005, s.214).

Halkevleri birer siyasi terbiye yeri olarak açılmış, Türk milletini Kemalizm'e bağlı kılmaya çalışmıştır. Aynı zamanda Türkiye'de yaşayan halkı bir millet haline getirme, milli sınırlar içinde özü halka ve milli yapıya temeli tarihe dayanan medeni ve kaynaşık bir millet yaratmak diye tanımlanan milli ülküyü, altı temel ilkenin ışığında ve dokuz koldan halka ulaştırma harekâtıdır. Her zaman Türk kültürünün milli değerleri işlenmiştir. Halkın yeni Türk kültürü tarafından yoğrulmasında ve Kemalizmin halk arasında yayılmasında eğitim açısından en önemli görevi Halkevleri yüklenmiştir (Ergün, 1982, s.157).

Halkevleri bir üniversite, bir okul, bir tiyatro, bir müzik evi, dersane, mesleki gelişim okulu, dispanser veya çocuk evi değildir. Ancak bunların tüm işlevlerini yapan; halka yeni Türk rejimini öğreten, kültür ve milliyet sorunlarını örgün eğitim kurumlarından daha çok işleyen yaygın eğitim kuruluşlarıdır. CHP'nin bir ikmal bölüğüdür. O zamanın Türkiye'sinde sorumluluk makamında bulunan partinin bütün özünü Türk milletine anlatma ve sevdirmeye merkezleri ve partinin kültür politikasının bir eseridir. İçişleri Bakanı Şükrü Kaya; "Atatürk bu kurumu yaratmakla, kurduğu büyük binanın istikbale doğru emin olarak yürümesini temine çalışmıştır. Halkevleri, Türk halkının her bakımdan yüksek bir hayat ve kültür seviyesine bir an evvel ulaşmak için açılmıştır." (Ergün, 1982, s.158).

Mustafa Kemal Atatürk'e göre halk ve aydın olmak üzere iki tip insan vardı. Biri temiz bir kültüre değeri ise sağlam bir bilgiye sahipti. Bu iki grup insan hakkında Mustafa Kemal Atatürk şunları söylüyordu; "Aydın sınıfın halka telkin edeceği ülküler, halkın ruh ve vicdanından alınmış olmalı. Hâlbuki bizde böyle mi olmuştur? O aydınların telkinleri milletimizin ruhunun derinliğinden alınmış ülküler midir? Şüphesiz hayır! Aydınlarımız içinde çok iyi düşünenler vardır. Fakat genellikle şu hatalarımız da vardır ki, inceleme ve araştırmalarımıza zemin olacak çok kere kendi memleketimizi, kendi tarihimizi, kendi ananelerimizi, kendi özellik ve ihtiyaçlarımızı almıyoruz. Aydınlarımız belki bütün cihazı, bütün diğer milletleri tanır; lakin kendimizi bilmeyiz." Mustafa Kemal Atatürk, aydınlara Türk dili ve tarihi konusunda halka gitmeyi, onları eğitmeyi tavsiye ediyordu. Bu açıdan Halkevleri aydınların Türk kültürünü halka anlatma yeri olarak tasarlanmıştı (Ergün, 2010, s.51). Halkevleri, Mustafa Kemal Atatürk devrimlerinin benimsetilmesini, Cumhuriyetin kültür etkinliklerini, milli eğitimle birlikte yürütmek için 1931 yılında kapatılan Türk ocaklarının yerine kuruldu. Bu kuruluşların amacı "Ulus, aynı ülkeye bağlı bir kitle yapmak, kır-kent, köylü-aydın ayrımlarını azaltmaktır. Bu kurumlar İsmet İnönü'nün deyişiyle "garazsız ve menfaatsiz birer medeniyet ve irfan yurduydur." Yine İnönü, Halkevlerinde milli ve toplumsal hayatın odağı olduğunu açıkladıktan sonra bu kurumların gerekliliğini şöyle belirtiyordu; "Bir milletin yetişip geleceğe hazırlanmasında klasik kurumlar okullardır. Fakat çağdaş uluslar, bir varlık olarak yetişip örgütlenmek için okulların bilinen yöntemlerini yeterli görmüyorlar. Bu sırada, okul öğretiminin yanında mutlaka bir halk eğitimi yapmak ve halkı bir arada çalıştırmak gereklidir." (Sakaoğlu, 2003, s.198).

Halkevleri CHP'nin Altı Ok ilkelerine göre çalışan, kültür savaşı için görev yüklenmiş, yönetim kuruluna girmek ve komite üyesi olmak için partiye kayıtlı olma şartını arayan kuruluşlardı. Değişik kollar altında faaliyetini gösteren Halkevleri "mahalle kahvehanesinden halkevi kütüphanesine", "ümmiliğe karşı seferberlik" gibi sloganları kullanıyordu. Türkçeyi yayma ve öğretme girişimlerinde, Diyarbakır'ın bir köyündeki Türkçe bilen 42 kişinin, bilmeyen 55 kişiye öğretmenlik yapmakla görevlendirilmeleri, yıllarında en iyi öğretmenle en iyi öğrenene ökü verilmesi, Mardin'de gönüllü 50 gencin Türkçe öğretmeni olarak köylere gitmeleri Halkevlerinin uyguladığı ilginç Türkleştirme örnekleridir (Sakaoğlu, 2003, s.199).

Halkevleri, Osmanlıyı devre dışı bırakma ve yeni Türkiye'nin Misakı Milli Sınırları içinde yaşayan herkesi "vatandaş" yapmaya yönelik milliyetçilik anlayışını benimsetecek bir propaganda mekanizması idi. Bu kurumun yayın organı olan Yeni Türk her şeyden önce ismi ile dikkat çekicidir. Yeni Türkiye'ye uygun yeni vatandaş yetiştirmek amaç olarak belirlendiğine göre Yeni Türk ismi de gayet denk düşer. 1932 yılında yayın hayatına başlayan derginin ilk sayısında çıkış amacı olarak Türk inkılabının yayılması ve kökleşmesi, Türk milletinin muasır medeniyet seviyesinin üstüne çıkarmak olarak ifade edilir. İnkılabın yayılmasında aydınlardan katkı beklediğini belirtilen dergide Batılılaşmada da yol göstericilik yapıyorlardı. Böylece resmi ideoloji kendi aydın tipini tarif ederek beklentilerini de ortaya koyuyordu. Dergi, Türk devriminin milli dil ve milli tarih eksenli kültürel amacının olduğunu da ekliyordu (Karaca, 2015, s.201).

Sonuç

Halkevleri ve Halkodaları homojen bir toplum oluşturma eğitimin yaygın kısmını teşkil ederler. Bunlar CHP'nin bir birimi olarak ve bir anlamda halkı aynı doğrultuda düşünen bir toplum yaratma ideali doğrultusunda çalışmışlardır. Toplumdaki farklı kültürel yapı ve kimliklerin, toplumun top yekûn dönüşümünün başarılı olabilmesi için bu farklılıkların ortadan kaldırılarak, düşünce, yaşayış ve bilgide türdeş bir toplum yaratılması hedeflendi. Diğer bir deyişle, Kemalist rejimin yerleştirilebilmesi ve belirlenen toplum ideali için her türlü farklılıkların yok sayıldığı bir toplum yaratma hedefi doğrultusunda bir kitle oluşturmaya çalışıldı.

Abstract

The advancement of technologies has conditioned our social behavior, specifically the introduction of mobile phones has changed the way we relate to people and how we work in our day to day. These technological social changes have been introduced in education with more incidence in universities, as the first agent of change in education. This paper analyses the use of mobile phones by university students of the Primary Education degree for their academic education. A quantitative methodology has been used with a descriptive character, using as an instrument of data collection an ad hoc questionnaire based on a Likert scale. Among the results, it is found that although the use of mobile phones a priori has a leisure character, it is also used as a resource for accessing contents and activities in university academic training. Finally, the educational conception of the students and the fact of bringing your own device to the classroom conditions the teaching dynamics, which from methodologies such as mobile learning can influence the improvement of the teaching-learning process of the students.

Keywords: *Bring Your Own Device, Mobile phone, Higher Education, Training, Mobile Learning.*

Introduction

Mobile phones and specifically smartphones have revolutionized the daily use of technology. Its use has been generalized practically to the entire population in modern societies due to its small size, high performance and ubiquity (possibility of consultation at any time and place). In this sense, each person who carries a mobile device is like carrying a computer everywhere. This fact has had an impact on its habitual use as a work, academic and social tool.

Following Saussure (2016) we can consider the smartphone as a mobile digital device that presents the functionalities of a conventional telephone, while allowing connectivity to the internet and the use of mobile applications (apps). Focusing on the educational field, its application is increasingly common as a means to produce the learning, especially in higher education stage. Such is the case that the Horizon Report (a reference report on educational technology) highlights in its latest editions that the concept of "bring your own device" and "mobile learning" are presented as a technology to be implemented in short-term higher education (Johnson et al., 2015; 2016; Adams et al., 2017).

This introduction of mobile devices in the classroom for didactic purposes is specified within the mobile learning teaching methodology, which is defined as the learning that occurs from the mediation of mobile digital devices (smartphones and tablets) for the development of digital competences (Aznar, Romero, & Rodríguez-García, 2018). But really to correctly introduce this teaching methodology it is necessary to know previously the use that university students are giving to mobile phones, in order to understand their concerns, perceptions and applications they perform. Similarly, the concept "bring your own device" (BYOD), stands as a necessary ally to introduce the methodology mobile learning in the classroom, since taking into account the resources of universities it is unfeasible for the center to provide the mobile devices phones to students. Therefore, it is the students themselves who use their mobile phone in the classroom to carry out the different tasks proposed by the professor.

Attending to previous research on the use of the smartphone in the educational field, Organista, McAnally and Lavigne (2013) highlight three categories of the use of the smartphone in university students and teachers: ubiquity, internet access and personal organization. In addition, the findings highlight the possibility of using the mobile device as a pedagogical tool to help the student or teacher.

On the other hand, González and Salcines (2015) in their study on the perception of the use of the smartphone in the teaching-learning processes in the University establish as advantages the ubiquity, accessibility, increase in

motivation and ease of communication in relation to its academic use. While other studies (Saussure, 2016) specify that students use the smartphone to search for information in applications such as Google Chrome and to access social networks Facebook and YouTube. Likewise, the university students affirm that the use of the mobile device as an educational tool has facilitated the development of skills for the search of information.

Finally, in this same line is the research carried out by Gutiérrez, Santana and Pérez (2017) where it is emphasized that university students use the smartphone to listen to music, access the internet, search for information, share content with contacts, access social networks, and watch videos on YouTube, video games and check email.

In summary, if we look at the various previous studies, the use of the smartphone is varied, with a main component of leisure, although university students also make an academic use of the mobile phone. The educational conception of the smartphone is the first step to correctly apply a methodology based on mobile learning. So that being aware of its educational use decreases its incorrect use in the classroom and makes it easier for the teacher to implement different activities based on the mobile phone.

Methodology

The purpose of this study has been to know the use made of the mobile device by students of the Faculty of Educational Sciences of the University of Granada. For this, a deductive method has been used to approach the reality observed from a solid theoretical basis, which will help us previously to understand the object of study. In this line, the methodology used to respond to the purpose is quantitative with a descriptive character (Hernández, Fernández, & Baptista, 2016), since it allows us to describe the observed reality. Therefore, an ad hoc questionnaire based on the scientific literature has been developed as an instrument for data collection, with 4 levels of responses collected on a Likert scale that refer to: none, some, enough and many.

The initial questionnaire was composed of 16 items, but for this study were analyses those items directly related to the use of mobile devices. Likewise, the statistical program SPSS version 24 has been used for the statistical analysis of the data.

In relation to the sample, it was composed by students of the Faculty of Educational Sciences of the University of Granada ($n = 318$). The application of the questionnaire took place during two academic years 2015-2016 and 2016-2017, framed within a teaching innovation project. It is important to highlight the importance of the sample, since it is about students of the Primary Education degree, who in the future will be teachers who will be able to implement the mobile learning methodology in their classrooms.

Results

Attending to the responses in the different items related to the use of mobile devices by the 318 university students, the first question "What for do you mainly use the mobile device?" is divided into 7 indicators with a response rate of 100%: talking on phone with average usage (58.18% - sum of enough and many), messaging and chat has regular use very high (98.11%), surfing the internet has a regular use high (88.68%), listen to music has regular use medium-high (65.41%), take photos or videos, regular use high (73.27%), alarms and calendar management, regular use high (80.5%) and play games, regular use very low (9.12%) [Table 1]. In this way, it stands out as the main use "messaging and chat" with present the highest percentage.

Table 1: Indicators associated with the question "what for do you mainly use the mobile device?"

Indicators	%			
	None	Some	Enough	Many
Talking on phone	2.83	38.99	36.48	21.70
Messaging and chat	0.00	1.89	17.92	80.19
Surfing the Internet	0.00	11.32	34.28	54.40
Listen to music	9.43	25.16	28.93	36.48
Take photos or videos	1.57	25.16	40.25	33.02
Alarms and calendar management	1.26	18.24	38.05	42.45
Play video games	60.38	30.50	4.40	4.72

Regarding the question "with what purpose do you connect to the internet on your mobile?" it is divided into 8 indicators which indicate the most frequent uses of the internet with mobile: information search has regular use high (88.99%), participation in social networks regular use high (86.48%), communication, regular use very high (98.11%) coinciding with the previous item "messaging and chat" as main use of mobile phone in the first question, audiovisual entertainment has a regular use high (70.13%), check the email has a regular use very high (90.49%),

collaboration has a regular use medium-low (48.74%), shopping has a regular use low (19.49%) and games has a regular use very low (10.37%) [Table 2].

Table 2: Indicators associated with the question “with what purpose do you connect to the internet on your mobile?”

Indicators	%			
	None	Some	Enough	Many
Information search	0.31	10.69	45.91	43.08
Participation in social networks (Facebook, Instagram, Twitter, LinkedIn)	3.46	10.06	22.01	64.47
Communication (SMS, WhatsApp)	0.00	1.89	16.98	81.13
Audiovisual entertainment (YouTube, Spotify)	6.29	23.58	32.08	38.05
Check the email	0.63	8.81	40.88	49.69
Collaboration	12.58	38.68	38.36	10.38
Shopping	49.69	30.82	12.89	6.60
Games	60.38	29.25	6.60	3.77

The following item "the mobile phone allows you to search for information wherever you are", it has been obtained the response based on the Likert scale: none (0.94%), some (4.72%), enough (28.30%) and many (67.61%) [Figure 1]. Concentrating the majority of responses in positive values (95.91%).

Figure 1: Percentage of responses to the item “the mobile phone allows you to search for information wherever you are”.

On the other hand, the item "the mobile phone allows you to always be connected with your surroundings", is specified in none (0.00%), some (6.29%), enough (23.90%) and many (71.07%) [Figure 2]. Obtaining a positive value of 94.97% with respect to this sentence.

Figure 2: Percentage of responses to the item “the mobile phone allows you to always be connected with your surroundings”.

The results in the item "the mobile phone allows you to work from anywhere", the answers are none (1.57%), some (19.50%), enough (32.90%) and many (48.11%) [Figure 3]. Like the previous ones, the majority continues concentrating on positive values (80.5%) with respect to the item.

Figure 3: Percentage of responses to the item “the mobile phone allows you to work from anywhere”.

Focusing on the most specific items in relation to the use of mobile phones in university training, in the question "have you used your mobile device to access class contents?", Most of the answers are related to its frequent use (71.07%) in the University training, the answer are collected in: none (9.75%), some (21.38%), enough (33.96%) and many (37.11%) [Figure 4].

Figure 4: Percentage of responses to the item “have you used your mobile device to access class contents?”

Finally, in relation to the item "have you used your mobile device to access class activities?" The answers are similar to the access to the contents through the mobile phone, being exposed in the following way: none (11.32%), some (23.27%), enough (33.02%) and many (33.33%) [Figure 5]. The percentage of frequent use is 66.35%.

Figure 5: Percentage of responses to the item “have you used your mobile device to access class activities?”

Discussion

In relation to the results obtained, "messaging and chat" and "communication" (SMS and WhatsApp) are the most common uses of the smartphone with a very high percentage (98.11%), data similar to those obtained by Gutiérrez, Santana and Pérez (2017) where the 93% of young people consider contact through the mobile phone very important.

On the other hand, it is worth mentioning that talking on phone has an average use (58.18%) when the main function of a mobile phone in its origin has been the talking on phone, which denotes that smartphones have changed the use of the mobile device. Likewise, it highlights surfing the internet (88.68%) and take photo or videos (73.27%) as frequent uses, coinciding with the studies of Saussure (2016) and Gutiérrez, Santana and Pérez (2017).

These functions together with communication from apps like WhatsApp and participation in social networks (86.48%) are the main uses of the smartphone today (Saussure, 2016; Gómez, 2017).

In contrast, in this sample of students the use of mobile phones to play video games is very low (9.12%) in relation to other studies (Gutiérrez, Santana, & Pérez, 2017).

Regarding the intrinsic characteristic of mobile devices: ubiquity (Rodríguez-García, Aznar, & Alonso, 2016), students consider with a 95.91% that mobile devices allow you to search for information wherever you are, always being in touch with your environment (94.97%) and work from anywhere (80.5%), in the same way Organist, McAnally and Lavigne (2013) highlight it as one of the 3 characteristics associated with the use of the smartphone by students and university professors. Likewise, González and Salcines (2015) conclude in their study that ubiquity is one of the advantages of mobile devices.

Considering its use for university training, the smartphones are used by students to access content (71.07%) and activities (66.35%), so we could say that most of them have an educational conception of the use of the mobile device. In this same line González and Salcines (2015) highlight the ease of communication in university education that allows the mobile device. In agreement with this results, we found "check the email" has a regular use very high (90.49%) for communication from the institutional email. In turn, if we look at the use to search for information made by university students through the mobile phone, this function is associated with the development of digital skills in the management of information on the Internet (Aznar, Romero, & Rodríguez-García, 2018).

In summary, coinciding with the considerations of Organist, McAnally and Lavigne (2013) the mobile device acts as a pedagogical tool at the service of students.

Conclusions

Mobile devices allow new ways of teaching and learning through technology, its controlled and timely use can bring great benefits for learning and the development of digital competences. In this research we have analysed the uses that the students of the Faculty of Educational Sciences of the University of Granada perform of the mobile phone, thus fulfilling the stated objective.

As seen, the main functions of the mobile phone have evolved from a purely communicative use through the telephone call to a use related to Internet browsing, participation in social networks and communication via apps. Although first the uses of the smartphone are related to leisure, it is also observed its application as a resource for university training from access to content and activities. This fact awakens in the students an educational conception of the mobile phone, making it known as an educational tool for the improvement of the teaching-learning process.

Thus, the concept "bring your own device" is beginning to gain strength in the university classrooms, having overcome the previous step on the educational conception of smartphones by students. However there is still a long way to go for the mobile learning methodology is implemented as a natural part of the curriculum at the University.

Building Learning Organizations: Emulating Business Organizational Structures In Academic Environments

Kareem MARASHI

Chapman University, Dodge College of Film and Media Arts, California - USA

marashi@chapman.edu

Abstract

This paper will explore the underlying concepts and foundations upon which to build effective learning organizations, principally through emulation of corporate organizational structures. Business modeling applied to learning organizations can yield effective academic and administrative reporting structures, curriculum design and classroom teaching paradigms. By examining corporate industry structures in terms of academic learning, a case analysis uncovers learning disabilities through system archetypes. Consequently, recommendations for a corrective action plan can initiate academic solvency and positive learning outcomes. This specific educative stratagem will apply Peter Senge's five "Disciplines" as curative remediation. A final review applies a personal mastery plan to the organization that will employ a declaration of purpose, mission statement and sustaining vision for enduring and maintainable success.

Keywords: *Building Learning Organizations, Personal Mastery Plan, Peter Senge, Academic Structuring*

Introduction

Academic institutions and business organizations alike can stifle growth and inhibit positive change. By succumbing to common disabilities that invasively plague inert companies, academic institutions may also passively allow internal infirmities to riddle and ultimately incapacitate their organization from thriving. Identifying and addressing debilitating inefficiencies are only initial steps in rectifying an academic institutions' deficiencies and forging a counteractive blueprint for achievement. Explicit recommendations and thorough planning are integral to gauge accomplishments and attain scholastic success. Therefore, unremitting sustainability for any business organization is only possible with a clear and unobstructed statement of purpose and persisting vision for the company's future. Likewise, any learning organization's mission statement should focus on measurable goals and institutional growth. Whereas a corporation should be client-centric, an academic institution must also craft their own mission around their student constituency. A vision statement is similarly integral to maintaining a concentrated trajectory that affirms dedication to student learning while also advancing its pedagogical reach. Senge (2006) maintains that the "art of systems thinking lies in seeing through the detail complexity of the underlying structures generating change" (p.124). This systematic thinking is an attribute of successful business leadership whereby upper management and institutional leaders chart a course for the company by identifying business trends, institutional patterns and industry development. For an academic institution to successfully engage shifting student populations, they must, as Senge (2006) affirms, "...make the shift from seeing the world primarily from a linear perspective to seeing and acting systematically" (p. 125). Instituting systematic thinking into curriculum building fuses student engagement with academic organization. Forecasting for this evolution involves primarily identifying the limitations and "disabilities" that stifle an academic institution and cause it to disengage with its primary "client," the student. Thus, identifying these limitations and obstacles must be the initial first steps in curative remediation. These institutional confines are analogous in both business and academia. This study will assess organizational confines inclusive of both paradigms and then recognize a path to rectify these impediments to organizational success and institutional development.

Analysis

Learning disabilities evident in academic institutions are often reflexive of weak leadership. Consequently, weak leadership causes ineffective administrative management and yields dogmatic institutional policies which bear archaic teaching models. This in turn results in disaffected faculty and ultimately, reveals a disengaged student body. "A reinforcing (amplifying) process," as Senge (2006) states, "is set in motion to produce a desired result. It creates a spiral of success but also creates inadvertent secondary effects (manifested in a balancing process) which eventually slow down the success (p. 94). Successful leadership promotes effective management. Effective management achieves measurable benchmarks through staff participation. Staff participation facilitates best practices for positive faculty instruction. Positive faculty instruction engages student active participation. Active student participation promotes receptive learning.

Meadows (2008) states, "To be a highly functional system, hierarchy must balance the welfare, freedoms, and responsibilities of the subsystems and total system—there must be enough central control to achieve coordination toward the large-system goal, and enough autonomy to keep all subsystems flourishing, functioning, and self-organizing" (p. 85). She goes on to say, "Resilience, self-organization, and hierarchy are three of the reasons

dynamic systems can work so well. Promoting or managing for these properties of a system can improve its ability to function well over the long term—to be sustainable” (Meadows, 2008. p. 85). Academic institutions must be aware when crafting their own internal structural systems that leadership teams and managers are inclusive of existing subsystems and hierarchical structures within the organization.

In corporations when there is a lack of new product development or profits languish, participant constituencies can, as Senge (2006) asserts, “shift the burden” (103). Senge (2006) goes on to explain, that “The underlying problem grows worse...and the system loses whatever abilities it had to solve the underlying problem” (103). In this way, companies are stymied with an apathetic work force and “eroding goals” (Senge, 2006. P. 107). Senge (2006) warns, “Whenever there is a gap between our goals and our current situation there are two sets of pressures: to improve the situation and to lower our goals” (p. 107). This model plays out in academia as well. “Improving the situation” and “lowering goals” can be diametrically opposing objectives. Thus, a lack of real purpose and a muddled vision couples with inefficiencies in both time and purpose.

Results and Discussion

Senge’s (2006) “Five Disciplines” establish a substantive foundation upon which to formulate an actionable method for academic “systems thinking.” “Systems thinking,” according to Senge (2006), “...is a discipline for seeing wholes. It is a framework for seeing interrelationships rather than things, for seeing patterns of change rather than static ‘snapshots’” (p. 68). This shift of thinking is of primary importance if there is any desire to rectify a downward trajectory in teaching effectiveness. Because there is in its genesis a pattern of behaviors and not just individual exclusive events, an academic organization is best served to conceptualize the “mezzanine view” of its state of affairs, both leading up to its current state as well as where this trajectory will likely end up. In this sense, “Systems Thinking” is the “conceptual cornerstone that underlies all of the five learning disciplines,” and thus pertinent to address first and foremost (Senge, 2006. p. 69). Senge (2006) goes on to say, “Without systems thinking, there is neither the incentive nor the means to integrate the learning disciplines once they have come into practice” (p. 69).

Remaining cognizant of changing patterns and emerging trends, whether positive or detrimental, is central to preparing for change and tracking effectiveness of corrective measures. This self-awareness of over-arching principles, policies and practices is the essences of “seeing wholes” as a means to “learn how to foster health” (Senge, 2006. p. 69). Senge (2006) calls this awareness “seeing circles of causality” (p. 73). “If we want to see systemwide interrelationships, we need a language of interrelationships, a language made up of circles” (Senge, 2006. p. 73). In practice, an academic institution as an entity must simply be aware of the parts as well as the sum of those parts, both in administrative dealings as well as in operational acuity. Specifically, it is not solely the business outcomes or transactions, but also the mental causality precipitating those behaviors, decisions and actions.

“Personal Mastery,” as Senge (2006) avows, “means approaching one’s life as creative work, living life from a creative as opposed to reactive viewpoint” (p. 131). In this sense, academic institutions must become the creative talent it professes to be by creatively thinking outside of restrictive and outmoded teaching models. In this regard, that means providing new, novel and emerging learning paradigms within the scope of its pedagogy. By refusing to be constricted, passé modes in the creation of instructional learning academic institutions must provide a unique product and experience for both its clients and its students, which the institution should perceive as one in the same. To reiterate, in today’s landscape of higher learning, the student is also the client. The value, and in fact the monetary value in this case, is the message, how this message is taught and delivered, and also how it is received and perceived. In practice, this delivery mechanism is the creative transmission of erudition.

“Mental Models” come into play then, to discredit preexisting notions and resulting stereotyped, deeply held views that serve to limit growth and change. Senge (2006) concludes, it’s “why the best ideas fail” (p. 163). Conversely, he observes, “if mental models can *impede* learning—why can’t they also help *accelerate* learning” (Senge, 2006. p. 167). Here, what Senge (2006) suggests is, “...the impetus for the discipline of bringing mental models to the surface and challenging them so they can be improved” (p. 167). To accomplish this task, Senge (2006) provides “tools” and “skills,” specifically employing “skills of reflection and skills of inquiry” as a means to liberate the leader and engage the instructor in shifted, improved mental models (p. 175). In academia, outmoded attitudes in organizational teaching models must be abandoned from the starting point of academic administration and replaced with policy that integrates progressive inquiry methods and emerging trends in instructional teaching methods. Care must be taken to avoid new fads in classroom theatrics or instructional hyperbole, but instead seek out and embrace the creative realms of learning receptivity. Receptivity in this example is the crux of message delivery. In essence, the new message is always look for the *new* way to deliver a *new* message.

Logically, the next step is to recruit Senge's (2016) discipline of "building a shared vision" (p. 192). Senge (2006) asserts, "When people truly share a vision they are connected, bound together by a common aspiration" (192). He contends, "Shared vision is vital for the learning organization because it provides the focus and energy for learning" (Senge, 2006, p. 192). In reality, this shared vision is problematic because at this stage of the "five disciplines" a leader must recruit the subordinate support structure where the rest of the organization buys into the message. In academic institutions, this often comes across as vapid proselyting and unidirectional lecturing. Instead, administration must take the example from business models and empower organizational leaders to be "classroom" leaders to create and deliver a bold and identifiable message to their constituencies that is both accepted and consumed across a multitude of academic and classroom teaching models. In common parlance and in accord with the institution's prescription for change, the academic institution must adapt to *creatively* conceive and *creatively* deliver that message that is also *creatively* understood.

Once these disciplines are understood and the vision is shared by all, the academic leadership team must be molded to sustain the direction and viability of the enduring mission and that new vision. Concepts must be learned and repeatable, and not so stringently constricted. Instead, these notions must be adopted fully by the organization and continually adaptable to the changing needs of the marketplace. Senge (2006) writes, "Team learning is the process of aligning and developing the capacity of a team to create the results its members truly desire. It builds on the discipline of developing shared vision" (p. 218).

John Moorecraft (2007) notes, "The idea of rehearsing alternative futures is fundamental to contemporary strategic modelling and scenario development. The purpose of models and simulations is to prepare organizations and individuals for alternative futures by bringing these futures to life so they are imagined more vividly than would otherwise be possible" (p. 6). This notion assumes that modeling standards are necessary prerequisites functioning in academic modeling and business organizational structuring.

Relatedly, "team learning has three critical dimensions. First, there is the need to think insightfully about complex issues. Second, there is the need for innovative, coordinated action. Third, there is the role of team members on the other teams" (Senge, 2006, p. 219). In practice, this translates as the academic organization to explore new, but related avenues for innovative learning opportunities, to work collaboratively within a creative *workspace*, and finally, to work across cross-functional groups and amongst external departments with colleagues as well as the student/client both within and outside the organization.

Senge (2006) refers to these thinking paradigms as "metanoia" or a "shift in mind" (p. 219). "To grasp the meaning of 'metanoia' is to grasp the deeper meaning of learning, for learning also involves a fundamental shift or movement of mind" (Senge, 2006, p. 13). As Senge (2006) concludes, "This then, is the basic meaning of a 'learning organization' – an organization that is continually expanding its capacity to create its future" (p. 14). Extrapolating these concepts necessitates that academic organizations require a revived "shift of mind" and recommitment to embracing and incorporating change as a core tenant of doing business in the field of education.

Pragmatically, these disciplines espouse a plan of action that outlines feasible specific tactics that are easily implementable. Monthly reports by academic leadership should be instituted surveying how each department group interacts and integrates with the organization and across cross-functional teams. Additionally, upper administration must develop and regularly adhere to a primary and consistent purpose of business that provides a vision for continued success. At the same time, the organization should discard outdated mental models and instead embrace new mental models that allow adaptability of the unit to thrive in a changing academic landscape. Finally, care should be given to enlist the help of other members of this "new" organization to enact change and share this renewed vision for the company. In this case, the leadership team must sell the idea of creative change in the creative realm. Most importantly, however, academic leaders must provide personalized mentorship throughout the organization by measuring successes and quickly enacting corrective measures as a means of affecting institutionalizing effective learning practices and ingratiating new learning practices into the culture of the organization across all constituencies.

Conclusion

To most effectively adhere to these principles is to review personal mastery in the context of leadership organization and development. Developing a plan for personal mastery is contingent upon a clear understanding of that concept.

Bearing in mind, aspects of the "personal mastery" notion must be clearly understood by all individuals across all levels of the organization. In this definition, "Personal mastery is the discipline of continually clarifying and deepening our personal vision, of focusing our energies, of developing patience, and of seeing reality objectively"

(Senge, 2006. p. 7). As Sweeney and Meadows (1995) state, “Words are sometimes ill-equipped to convey the power, strength and dynamism of a clearly visualized goal or objective,” (34). Precisely for this reason, it is imperative that all members of the organization, and especially the leader, clearly understand how each member of the organization is crucial to implementing and furthering the institution’s message in accordance with the mission statement and in harmony with the outlined vision for the future.

To enact this fundamental alteration, an elemental approach to transformation must be embraced by the institution. In a sense, the company becomes an individual entity defined by values, purpose, vision and ultimately practice. A statement of purpose, therefore, is the most basic and primary foundation of which to build any organization, whether that be a business unit or academic institution. In the case of the academic model, the business at hand must exist outside of and exclusive of any one department head, and instead shared amongst administrative leaders as well as with faculty, staff and student constituencies. Consequently, the mission statement in its most rudimentary form should be to provide personalized, innovative and creative messaging that promotes erudition and inspired reception by the desired recipients, primarily the students in this scenario. Senge, Kleiner, Roberts, Ross, and Smith (1994) assert that this should be collaborative in an organization by “co-creating places [for] every member in a creative orientation. Every step involves choice. Individuals begin by drawing forth aspect of their personal vision” (p. 322). Therefore, an enduring vision can follow to subsist as a sustaining and positive creative force for learning effectiveness. Fundamentally, it is therefore the duty of an academic institution and its leadership to ratify and enthusiastically maintain positive change incorporating the values and disciplines outlined, in all future iterations and successive generations to continually adapt and reassess teaching practices for primary efficacy on an ongoing basis and in perpetuity.

Acknowledgements

I would like to pay special thankfulness, warmth and appreciation to the all the faculty, staff members and students of Chapman University’s Dodge College of Film and Media Arts, who provided support, guidance and insight into this topic.

Abstract

Teaching is one of the social works that most exposes to burnout. Moreover, the high average age of teachers, especially in the high schools, negatively influences the work ability. In this context, of general high burnout and moderate work ability, recently school reforms have introduced the information and communication technology (ICT) as a part of their pedagogical approach. The first aim of this study is to describe psychological health, work ability and teachers' perception and attitudes toward the use of ICT, in a sample of Italian primary, middle, and high school teachers. The second aim of this study is investigate the relationship between teachers' attitude toward the use of ICT, burnout and work ability. The study is cross-sectional; 985 self-reporting questionnaires were distributed and 755 teachers correctly filled out the questionnaire. Results show that there are differences about psychological health and work ability between different school grades: depersonalization is significantly higher among high school teachers ($F=8.43$; $p=.00$), while personal accomplishment ($F=11.04$; $p=.00$) and work ability ($F=3.08$; $p=.05$) are significantly higher among primary school teachers. Data show that there are differences also about teachers' perception and attitudes toward the use of ICT: high school teachers are more likely to use ICT ($F=3.39$; $p=.03$) and they believe that ICT is able to facilitate communication among students ($F=4.28$; $p=.01$). However, the primary school teachers perceive greater utility of ICT ($F=13.22$; $p=.00$). The regression model shows that believing that ICT facilitates communication among students has a positive impact on work ability ($B=.07$; $p=.05$). The study revealed some interesting findings, suggesting that there are differences about psychological health, work ability and teachers' attitudes toward the use of ICT between teachers of different school grades. In this direction, the study has relevant practical implications.

Introduction

Teaching represents a highly stressful occupation, like other human service professions that are highly demanding (Lodolo D'Oria et al. 2006; Stoeber and Rennert 2008; Viotti et al. 2015; Guidetti et al., 2017). It has been estimated that between 25% and 35% of European teachers are burned out (Quattrin et al., 2010). Burnout is a psychological syndrome involving emotional exhaustion, depersonalization, and a diminished sense of personal accomplishment that occurred among various professionals who work with other people (Maslach, 1982). Teachers show especially high levels of emotional exhaustion (especially women) and cynicism (especially men, Hakanen et al., 2006) that are the core dimensions of burnout (Maslach et al. 1996; Schaufeli and Enzmann, 1998). Some organizational and job characteristics of the teaching, such as high workload, conflict with colleagues, students and their parents, student behavioral problems are some of the main stressors linked to burnout of teachers (Lodolo D'Oria et al., 2003; Quattrin et al., 2010). As well, lack of social support from supervisors and students' parents, lack of self-efficacy (Grayson and Alvarez 2008; Otero-Lopez et al. 2010; Skaalvik and Skaalvik 2007, 2009; Velasco et al.2013) are linked to burnout of teachers. Generally, teachers have low autonomy, high accountability demands, and non-teaching-related workloads (Van Droogenbroeck and Spruyt, 2015).

However, the literature shows that some resources are important for reducing the risks of burnout at work and increasing the job wellbeing, especially skill discretion (Viotti and Converso, 2016), social support and users' gratitude (Loera et al. 2013; Martini et al., 2015; Converso et al., 2015; Viotti et al., 2016; Martini et al., 2018; Guidetti et al., 2018a). These seems to be particularly helpful for teachers (Velasco et al.2013; Loera et al. 2016). Another critical aspect of the teaching word is the high average of age. As a result of the recent legal reforms, the Italian teachers are the oldest in the world, especially in secondary school teachers (OECD, 2014). The aging of workers requires attention on two major issues that in the sustainability perspective are kept together: the first one involves workers' health; the second one involves performance and job productivity. The aging of workers is

associated to decline of work ability (WA). WA describes the physical and intellectual resources on which individuals can rely to respond to the emotional, cognitive, and physical demands posed by their work (Tuomi et al., 1991 and 2001). The literature shows an accentuated decline of the WA with aging, especially for teachers (Ilmarinen et al. 1997; Seibt et al., 2005; Freude et al., 2005; Converso et al. 2015; Viotti et al. 2016; 2017; Guidetti et al., 2018b).

However, even in this case, some organizational resources can improve work ability, like decision authority, social support, reward, skill discretion and meaning of work (Freude et al., 2005; Sottimano et al., 2017; Converso et al., 2018). In addition, some personal resources can improve work ability, especially self-efficacy (Guidetti et al., 2018b), hope and resilience (Converso et al., 2018).

In this context, of general high burnout and moderate work ability, recently school reforms have introduced the information and communication technology (ICT) as a part of their pedagogical approach, with the aim of facilitating learning processes of students (OECD, 2010). This changed aim at facilitating the learning process through the management of appropriate technological resources (Al-Emran and Shaalan, 2015). There are various technologies that have been employed in educational institutions in order to facilitate the learning process, such as tablets, smartphones, notebook, social media, forums and blogs.

One of the new research trend in this sector is Mobile Learning (M- Learning) that provides to students and teachers the opportunity to learn more into short time frame (Mostakhdemin-Hosseini, and Tuimala, 2005). It offers all the benefits of e-learning by allowing people to connect and interact using any other portable devices to exchange information (Georgiev, Georgieva and Smirkarov, 2004), encouraging both independent and collaborative experiences. Learning becomes more flexible, negotiable and fluid.

In this new context, teachers' attitude and the familiarity toward the use of ICT are crucial to foster its use in schools and to improve its educational affordances (González-Sanmamed et al., 2017).

The Study

In light of the critical issues (high burnout, reduced work ability) and the potentials (use of ICT) typical of the teaching and reported by the literature, the aims of study are:

1. to describe psychological health (three dimensions of burnout), work ability and teachers' perception and attitudes toward the use of ICT, in a sample of Italian teachers;
2. investigating the relationship between teachers' attitude toward the use of ICT, burnout and work ability in order to test if the attitude and the familiarity (in terms of ownership and usage) with ICT device and social network profile improve teachers' work ability.

The study sample (N= 755) consist of primary (37%), lower 821%) and upper secondary (42%) teachers in northern Italy. The majority of participants are female (81%), age ranged from 23 to 65 years (M=45, SD=9.8) and the average age increase by school levels.

Data were collected by the mean of a self-administered paper and pencil questionnaire, administered during the working hours. Since the answers had to be anonymous, in each school participants were instructed to close the compiled questionnaire into an envelope, and to put it into a dedicated box reserved to researchers. Teachers were volunteers and signed informed consent.

The study conformed to the provisions of the Declaration of Helsinki in 1995, revised in Edinburgh 2000 (World Medical Association, 2001). All ethical guidelines for conducting human research were followed, including adherence to the legal requirements of Italy.

The questionnaire included a demographic section to collect participants' characteristics, and a main set of scales aimed at measuring the key variables of the research. Specifically, burnout was measured with the Maslach Burnout Inventory (MBI, Maslach et al., 1996; Loera et al., 2014). The MBI measure the three dimension of burnout: exhaustion, cynicism and personal accomplishment. Exhaustion consist in 9 items, cynicism in 5 items and personal accomplishment in 8 items. Example of items are "I feel used up at the end of a working day" (Exhaustion), "I doubt the significance of my work" (Cynicism), "I feel confident that I am effective at getting things done" (Personal Accomplishment). All items are scored on a seven-point rating scale, ranging from 0 (never) to 6 (daily).

Work ability was measured with the Work Ability Index (WAI, Tuomi et al., 1998), which contains seven sections. These sections measure: (1) current WA compared with lifetime best (range of the score: 1–10); (2) WA in relation to mental and physical demands (range of the score: 2–10); (3) number of current diseases diagnosed by a physician (range of the score: 1–7); (4) estimated work impairment due to diseases (range of the scores 1–6); (5) sick leave during the past 12 months (range of the scores: 1–5); (6) self-prognosis of WA for the next 2 years (scores: 1–4 or 7); and (7) mental resources (range of the score: 1–4).

The teachers' perception and attitudes toward the use of ICT was measured with the short version of Mobile-Learning Perception Scale (Uzunboyu and Ozdamli, 2011) proposed by Roche (2013) and translated into Italian (Zaminga et al., 2017). The questionnaire is composed of 13 items divided in three dimensions: subjective

professional resource (consist in 5 items), communication support (consist in 5 items), and perceived utility (consist in 3 items). Example of items are “New technologies immediately allow the availability of useful material during the lessons” (Subjective professional resource), “Students communicate more effectively thanks to new technologies” (Communication support), “New technologies are a reliable learning tool” (Perceived utility). All items are scored on a four-point rating scale, ranging from 1 (not agree) to 4 (totally agree).

The familiarity with ICT was measured by two indices relative to devices (such as iphone, tablet, pc, ecc.) and social media profiles (facebook, whatsapp, instagram, ecc.). For both, the index was calculated by weighting the ownership by the frequency of usage so that the lowest score corresponds to a teacher that, for example, do not possess any device (or social media profile) or at most one device and use it only few times in a year, and the highest score is associated to a participant that possess many devices (or profiles) and use them every day.

Data analyses were performed using SPSS Statistics 24. To evaluate whether the averages of EE, DP, PA, WAI are statistically different between levels of teaching was used a model of ANOVA, and since age increase by the school levels where participants teach all the performed analysis were controlled by age.

To examine the underlying structure of the Attitude towards ICT structure Explorative Factor Analysis was conducted (method of extraction: GLS, Rotation: Oblimin). The following criteria were used to evaluate the factor solution: explained variance, the percentage of residuals (i.e., differences among observed correlations and model-reproduce ones) over $|0.05|$ (REPR). A REPR value of less than 10% is considered good, while a REPR less than 20% is satisfactory.

The reliability of the scale was evaluated with Cronbach's Alpha (α).

In order to determine the effects of attitude toward ICT and familiarity with ICT (devices and social network) on work ability, we performed a multiple linear regression analysis (OLS estimation, backward method). The model includes demographic variables (sex, age), levels of teaching (primary, low secondary, upper secondary used as reference category) and burnout scores as independent control variables. Model specification is focused on independent variables that measure relationship with ICT in terms of behavior and attitude. All these independent variables are regressed on the three indices of work ability, i.e. WAI, physical and mental WA, that constitute the dependent variables of the three estimated models. Goodness of models is evaluated considering the coefficient of determination adjusted R^2 , that is the percentage of explained variance respect to the observed variance of the dependent variable corrected by the complexity of the model. Since R^2 provide a general indication of the fit of the model considered as a whole, single t test on each standardized parameter is used to evaluate the contribute of every regressor and to preserve only the significant ones ($\alpha \leq 0.05$).

Findings

Burnout levels are quite low for all participants (EE: $M=15.5$, $SD=10.8$; DP: $M=2.9$, $SD=4.2$; PA: $M=38.1$, $SD=7.1$), and there are some significant differences in DP ($F(2,752)=8.9$, $p=0.000$) and PA ($F(2,752)=14.9$, $p=0.000$). DP is significantly more intense among the upper secondary school teachers, while PA is significantly higher into the primary subgroup of teachers.

The declared levels of WA, measured by the first item of the WAI, are quite high ($M=8.2$, $SD=1.1$), and remains stably high also considering both mental ($M=3.9$, $SD=0.8$) and physical ($M=4.1$, $SD=0.7$) work ability. There are no differences between groups based on school levels.

Teachers' device and social network profile possession are quite low: the index that measure the numbers of device, weighted by their usage at school, ranges from 0 to 53, while the mean of participants is 15.5(10.8), and the same occurs for social network profiles (range 0-27, $M=2.9$, $SD=4.2$).

The exploratory factor analysis (Explained variance=53.3%, REPR=18%) of the attitude towards ICT scale (Cronbach' $\alpha=0.89$) revealed the presence of three underling latent factors referred “Subjective professional resource”, a “Communication support”, and “Perceived utility” (Table 1).

Table 1: Explorative factor analysis of the attitude toward ICT: Pattern matrix and correlation between latent factors

Item	Subjective professional resource	Communication support	Perceived utility
11. New technologies immediately allow the availability of useful material during the lessons	0.780		
10. New technologies facilitate sharing of knowledge and information among colleagues	0.688		

12. New technologies allow the teachers to share and send school materials to their students	0.660		
9. Programs such as Messenger and Skype facilitate the debates without space-time limits	0.598		
13. New technologies can be useful during a classroom discussion	0.461		0.204
2. Students communicate more effectively thanks to new technologies		0.785	
3. New technologies facilitate the creation of a communicative environment		0.752	
4. New technologies can facilitate the quality of student relationships within the classroom		0.664	
1. Students can communicate more easily thanks to new technologies		0.611	
8. New technologies facilitate communication between professors and students		0.363	
6. New technologies increase the quality of the lessons			0.862
7. New technologies can be an important support for all classes and for all teaching subjects	0.228		0.635
5. New technologies are a reliable learning tool			0.618
<hr/>			
Subjective professional resource	1.000		
Communication support	0.530	1.000	
Perceived utility	0.559	0.427	1.000

The first factor includes the productive use of ICT in teaching, the second factor groups items inherent to the communication process in the classroom, and between teachers and students. The latest one regards the perceived reliability and usefulness of ICT in itself. The correlation between latent factors are quite high, and ranges from 0.43 to 0.56.

Results show that there are differences also about teachers' perception and attitudes toward the use of ICT: high school teachers are more likely to use ICT ($F=3.39$; $p=.03$) and they believe that ICT is able to facilitate communication among students ($F=4.28$; $p=.01$), whereas the primary school teachers perceive greater utility of ICT in itself ($F=13.22$; $p=.00$).

Regression models produce several interesting results (table 2). First, EE systematically reduce work ability, especially measured using WAI item, while PA improve all the ability, whit the greater effect on mental work ability. Age reduces work ability, but not perceived mental capacities, and the teaching level is significant only for mental work ability, stating a not intuitive result: teachers in the primary schools feels less able than those working in secondary upper courses. Second, going to the more interesting parts of the model, we can note that the belief about the supportive role for communication of ICT significantly improves WAI and physical work ability, while the perceived utility of ICT as professional resource increases mental work abilities. These latest are noticeably improved by the familiarity with social media too, and this is the more intense effect of ICT on work abilities.

Table 2: Regression analysis of burnout, ICT attitude, and familiarity with ICT on work ability: models determination coefficients (R^2) and standardized coefficients of the significant independents variables subset.

	WAI ($R^2=0.24$)			Physical work ability ($R^2=0.18$)			Mental work ability ($R^2=0.20$)		
	β	t	p.	β	t	p.	β	t	p.
Intercept		42.962	.000		31.980	.000		102.347	.000
Age	-.108	-2.835	.005	-.204	-5.122	.000			
EE	-.243	-6.275	.000	-.153	-3.776	.000	-.191	-4.817	.000
PA	.340	8.819	.000	.243	6.036	.000	.344	8.565	.000
Primary							-.080	-2.029	.043
Communication support	.066	1.730	.044	.097	2.456	.014			
Social media profile (ownership and usage)							.104	2.645	.008
Subjective professional resource							.074	1.886	.050

Conclusions

Considering all the psychological measures included in the study, data show that burnout levels of the sample are enough low (emotional exhaustion: ≤ 13 ; cynicism: ≤ 3) or medium (emotional exhaustion: 14-23; personal accomplishment: 39-34).

However, there are differences on burnout between school levels: teaching in a primary school protect against burnout, whereas working with young adults expose to emotional exhaustion and depersonalization, without the compensation of professional accomplishment. These results agree with the literature (Betoret, 2009; Shasheen and Mahmood, 2016) highlighting specific peculiarities for secondary schools. A possible reason of high burnout in secondary school as compared to primary school is the behavioral aspect of students of both age groups in form of different obedience levels. Young adults (secondary school level) are likely more demanding whereas students at primary school level are more affirmative (Shasheen and Mahmood, 2016).

About the WAI, the level is enough high, considering the first item, and there is no difference between school levels. The weak difference of mental work ability between teaching levels can be interpreted thinking at the posed demand: the item asks a prospective evaluation that might be meaningful for the youngest ones, and embarrassing for the oldest, i.e. the oldest teachers might have biased their answers to protect their identity, unconsciously too, acting a self-deception bias (Paulhus, 1984).

Also the attitude toward ICT, usage of ICT device and social media not differ between school levels. However, the regression models offer a lot of meaningful results on the role of attitude and familiarity with ICT on work abilities. The belief that ICT facilitate the communication with student is clearly a resource that facilitate homework assignments, sharing materials, class project and discussion, and above all the reduction, or elimination, of stationery and paper. Because of this facilitation the fact that this part of attitude toward ICT improves prospective physical work ability and limits the perception of reduced general work abilities is clearly understandable.

Remaining on the familiarity with ICT, the ownership and usage of devices do not result as a crucial characteristic for work abilities. On the other hand, interpreting ICT as a professional resource, or even more use social media profile to support teaching and relationships with students, requires a cognitive investing on teachers' activities, on work organization, shared information, and personal engagement in class life. Reasonably, we can interpret these results on mental abilities as a positive redefinition of teacher's role and work promoted by the familiarity with ICT and social media.

The findings are relevant for two reasons: the first one, these will help to implement effective intervention programs against occupational stress taking into account the differences between school levels. The second one, we can consider the positive attitude toward ICT like important resources for teachers, particularly it can improve the perceived ability to work. In this direction and in the light of the aging of the population, it is important to implement training courses in order to support teachers' digital skills, positive attitude and, indirectly, the work ability of teachers.

A. Mücahid Zengin
Necmettin Erbakan University
mucahidzengin@gmail.com

Abstract

Having an Instagram account and engaging with fans is important for brands. But brands do not limit their marketing communication efforts to their own accounts, they also partner with celebrities to promote their products and services. Celebrities have a special bond with their fans and social media platforms like Instagram helps celebrities to directly communicate with them. Brand recommendations are important for fans that admire and try to be like their favorite stars. Brands not only make use of the fame celebrities have, but also want to transfer the value and meaning that they possess. Celebrities employ various ways when sharing branded content. They also vary in properly disclosing their partnership with brands. That is why Federal Trade Commission issued a warning letter to “Instagram influencers” telling that they need to openly state paid partnerships. Turkish celebrities are heavy Instagram users too. They also share branded content with their fans. However we were yet to see a Turkish celebrity to disclose any paid partnerships. In this study our aim is to reveal how Turkish celebrities use Instagram to share branded posts with their fans, and if they properly disclose paid partnerships or not. Although there are many studies on brands’ Instagram use, studies focusing on celebrities’ paid brand partnerships are rare, thus this study is intended to fill a gap in the literature.

Central Bank Communication Activities: Challenges And Opportunities

Zeynep KARAŞ

School of Business, Düzce University, Turkey
zeynepkaras@duzce.edu.tr

Abstract

This paper fundamentally stresses on the challenges and opportunities encountered in central bank communication activities by referencing to the necessity and significance of these communication activities. In this context, as a background information, a connection will be tried to be established between the objectives of central bank communication and communication of central bank with its target groups. In that direction, first of all, the importance of central bank communication activities, the reasons why central banks should communicate effectively, the audiences of central bank, and the instruments and channels of central bank communication will be presented, and finally a comprehensive discussion will be made about the challenges and opportunities of central bank communication.

Introduction

Especially before 2008 global financial crisis, central banks shared little with the general public about what they were up to and why. They were doing their actions in secrecy and there was not any openness in their goals, and they had the view that it was best to say nothing. Therefore, central banks were less open to scrutiny and public accountability. This situation changed after the global financial crisis and central banks have become more open and transparent in their activities (Vayid, 2013, p.1-2).

Communication which is a typical behavior of human being plays a significant role in everyday life. Good and effective communication; increases understanding, minimizes confusion, builds trust between parties, influences the target audience, and ensures transparency. It is particularly very important in understanding the complex subjects and concepts. Communication, in different forms and shapes, can be a very powerful tool to help non-experts and ordinary people comprehend some subjects that are irrelevant for them. Therefore, government bodies and institutions have put special emphasis on communication with their intended audience, as a part of their responsibilities.

Some recent communication methods and channels have created an appropriate medium and direction for making the language used in certain professions understandable. The role of communication in conveying specialized knowledge to general public has increased significantly. Economy is one of the areas that involve specialized knowledge that needs to be narrated to the public. In that sense, the general public is very much interested in the condition and outlook of their country's economy and as an independent institution, central banks are expected to communicate with their audiences. The more central banks communicate with their audiences, the more they encounter challenges and opportunities.

Effective and successful communication is one of the important challenges for central banks to explain the reasons for their monetary policy decisions to the public. For this reason, central banks publish comprehensive information about their strategy, analyses, and decisions. However, it is very difficult to communicate to the public all information relevant to central bank's decision-making process in a non-exhaustive, clear, compact and comprehensible way. The need for addressing various target groups, including the financial markets, academics, journalists, politicians, and the general public is another difficulty possibly experienced by central banks. In order for a central bank to communicate in an expected way, a very well designed communication channels and instruments may be required for such non-homogeneous target groups (Issing, 2005, p. 72). The related literature has shown that there is no optimal central bank communication strategy which works for the majority of central banks. Central banks have different working environment and conditions. What works for one central bank may not work for another, in addition, what works today may not work tomorrow. How the decision-making process within the central bank is related to its communication strategy is therefore an important issue (De Haan, Eijffinger & Rybiński, 2007, p.5).

The paper is organized as follows. In the first section, background information about central bank communication activities will be presented. In this section, the necessity and importance of central bank communication activities, the audiences of central bank, and the instruments and channels of central bank communication will be overviewed. In the second section, challenges and opportunities in communication activities faced by central banks will be discussed.

Central Bank Communication Activities

This section addresses the various aspects of communication activities of central banks. In recent years, the increased independence of central banks has called for more transparency and accountability. In that regard, communication has become a very necessary and important toolkit for central banks, and they have developed different instruments and channels to reach their audiences to achieve their objectives. In the following subsections these points will be tried to be overviewed.

Necessity and Significance of Central Bank Communication

In today's conditions and expectations, central bank communication becomes necessity for the provision of information by central banks to the general public on the monetary policy objectives and strategy, the economic outlook, and the future policy decisions. As central banks have become more independent over time, increased transparency has been the requirement for greater accountability of independent central banks. Therefore, they have become more rigorous about sharing what they do and what underlies their decisions. For the sake of more transparency, they have increased the use of communication, and the significance of communication for central banks has been escalated as partly a logical consequence of this development (De Haan, Eijffinger & Rybiński, 2007, p.1-2).

Expert audiences can read, understand and comprehend lots of statistics, many pages long inflation reports, and long speeches with lots of charts. But this is not generally true for average people that are mostly interested in inflation and interest rates. Good and effective communication can be a very powerful and effective tool to help ordinary people comprehend and learn irrelevant subjects for them. Central bank communication with the public is therefore very important and essential for transparency and accountability reasons.

Over the last few decades, communication has become an increasingly important aspect of monetary policy of central banks. Experiences suggest that communication activities of central banks can be an important and powerful part of the central banks' assets since these actions have the potential to influence financial markets, enhance the predictability of monetary policy decisions, and help achieve central banks' macroeconomic targets. However, an optimal communication strategy has yet to be reached since there is no consensus among central banks (Blinder, Ehrmann, Fratzscher, DeHaan & Jansen, 2008, p.55-56).

Communication activities of central banks might be also an important instrument for influencing market behavior and information transmission and, in this regard, might work as a preventive tool in a risk-management sense. Central bank communication might affect volatility in financial markets via increased transparency and decreased uncertainty. Although financial market volatility can increase in the short term, it will decrease in the long term and thus contribute to financial stability in a positive sense. Uncertainty can be reduced by central banks by communicating relevant information about macroeconomic fundamentals, the condition of financial institutions and the financial sector more generally, and the management of policy. Hence, central bank communication is very significant in enhancing financial market efficiency and to calm down market volatilities (Knütter, Mohr & Wagner, 2011, p. 1,7,8).

Audiences of Central Bank

Academic literature on central bank communication has a tendency to treat central bank's audience as a single group, which is represented by financial markets. In practice, central bank's audiences are not composed of homogeneous groups. These groups have different backgrounds, experiences, interests and expectations (Reid, 2015, p.157).

Audiences of central banks are interested in central banks' policies and actions with different expectations and concerns. Therefore, central banks should adopt appropriate communications approach and engagement with their audiences. In general, central banks communicate with the following groups (Hannah, 2015, p.8-9):

- Public
- Media and journalists
- Business
- Regulated industries
- Markets
- Researchers and teachers, academics
- Government

As can be seen from above list, the target audience is heterogeneous, ranging from commentators in the media to politicians and ultimately to the general public. Due to aforementioned heterogeneity, "What needs to be communicated to whom?" is the important question to be addressed. The style, form and timeliness of

communication are very significant. Communication that is relevant, targeted, and accessible is highly desired. Central banks must therefore not only communicate clearly about their objectives, but also show why these objectives are reasonable and worth pursuing (Fracasso, Genberg & Wyplosz, 2003, p.7). Since central banks' audiences are composed of heterogeneous groups, both the policy and communication of central banks should be designed with this in mind. Although it is not practical to incorporate the full range of heterogeneity within a single economic model, it seems beneficial to first identify the characteristics of central banks' audiences, and then to tailor the communication to broad groups of the central banks' audience (Reid, 2015, p.157).

Instruments and Channels of Central Bank Communication

In recent decades, central banks have made many adjustments in the channels of communication for increased accountability and transparency concerns. This willingness to communicate more openly has increased the communication instruments and channels (Jeanneau, 2009, p.6). In today's conditions, many central banks describe their objectives, their decisions and underlying reasons within the framework of a communication strategy and through various communication channels (TCMB, 2011, p.1). These communication instruments range from brief press releases about monetary policy decisions to the publication of voting results, regularly published reports to the customary annual reports, as well as speeches delivered by central bank representatives. The communication instruments and channels commonly used by central banks are tried to be listed in the following table (Issing, 2005, p.72,76,78).

Table 1. Communication Instruments and Channels Used by Central Banks

Instruments	Channels
Press releases	Website/hard copy
Press conference	Direct communication, subsequently also website/hard copy
Publication of the minutes of meetings	Website/hard copy
Publication of voting behavior	Website/hard copy
Reports (monthly bulletin, annual report, etc.)	Website/hard copy
Publication of projections	Website/hard copy
Publication of statistical data and surveys	Website/hard copy
Public hearings/report to the legislature	Live reporting, print media, website/hard copy
Interviews	TV, radio, and/or print media
Speeches	Direct interaction; TV, radio, and/or reporting in the media
Briefings	Direct interaction
Conferences	Direct interaction, subsequently also website/hard copy
Presentations/visitor groups	Direct interaction
Information leaflets	Website/hard copy

The different communication instruments convey information about central bank actions and intentions to different audiences via various communication channels illustrated in above table. For instance, by means of press releases or press conferences, the major decisions taken by the central bank can be published on central bank's website or in a printed form, or the Board or committee members of the central bank can share their views on monetary policy decisions via interviews.

Challenges And Opportunities Of Central Bank Communication

Central banks are expected to provide the public with convincing and consistent information for their actions and measures. Central banks, therefore, communicate with their stakeholders to ensure transparency and accountability. While communicating, central banks desire to make the most of every opportunity but face some challenges. Central banks have to deal successfully with those challenges while taking advantage of communication opportunities. It is also possible to turn challenges into opportunities if central banks' policies and actions are very well designed.

As stated, there are many challenges in central bank communication and those challenges have to be handled properly and carefully. For instance, it is very challenging that central banks communicate with the public all information relevant to their decision-making process. While doing this, central banks can exhaust the potential audiences by not being clear, concise and comprehensible enough. For this reason, central banks' communication has the risk of not conveying the necessary information clearly and with the right emphasis. Another challenge is necessity to address various audiences that have heterogeneous nature, including policymakers, academics, market participants, and the general public. Such audiences may require different type and level of information provided from suitable communication channels. While trying to become more and more transparent, central banks can confuse and distract their audiences. Which information and decisions should be

presented by central banks is another difficulty encountered in central bank communication. Irrelevant, unclear, inconsistent and vague information can do more harm than good.

“A central bank that speaks with a cacophony of voices may, in effect, have no voice at all” is pointed out by Blinder (2006). This is especially true if central bank audiences come across conflicting explanations from the authorities of central bank instead of consistent ones. According to Ehrmann and Fratzscher (2005), communication that is dispersed and conveys a variety of committee views on monetary policy decisions reduces the predictability of decisions and decrease the ability of financial market participants to understand the future direction of monetary policy.

Financial crises are the most difficult and critical periods for central banks. They have to employ the best strategies possible to handle the crisis properly. In times of crisis, the power of communication becomes more important and has to be used in the right direction and proportionately since financial markets are easily affected by even the possibility or any sign of a crisis and the general public can become panic. Central bank communication in crisis times is very challenging in every aspect and has to be fine-tuned. Before, during and after the possible crisis periods, central banks should not use the policies and strategies they benefit in risk-free times. During these periods, central banks should adjust their communication activities to calm down market volatilities, to reduce and even eliminate uncertainties, to build trust, and to prevent panic. Central banks need to know when what to share with their shareholders. Belke (2017) points out that the benefits of better central bank communication are supported by empirical evidence in the context of the financial crisis and he presents the results a few studies to support his view in his work.

The main challenges and risks of communication that central banks may face in their activities were tried be explained above. Although central bank communication poses some challenges, it also creates some great opportunities. It should not be forgotten that challenges can also possibly be converted into opportunities if challenges can be handled appropriately. In the subsequent paragraphs, some important opportunities that can be caught by central banks in their communication with their target groups will be tried to be presented.

Financial markets are very sensitive to country's economic conditions and can be affected very easily, when uncertainty in markets exists, central bank communication can play a very effective role. During these sorts of periods, reliable and timely information transmitted to the related parties can build confidence and prevent markets from being panic and severely impaired. Particularly, financial markets closely monitor economic and financial indicators and try to take the best position possible according to developments. As an independent institution, central bank is much respected and its policies and decisions are taken into consideration, as a result, carefully crafted central bank communication generally has the potential to influence financial markets in the intended direction. For central bank transparency, policy-effectiveness can be achieved ultimately by making the markets to think like the central bank. If central bank can be successful in doing so, central bank can have the chance to manage expectations of future monetary policy better and, keep the markets in line with its own thinking (Blinder, 2006, p.16).

Dynamic and modern central bank communication with the general public can be very appealing, especially, Internet has given central banks new possibilities to address the public directly and deliver their messages effectively. This opportunity permits central banks to control messages transmitted to public in terms of content and timing. During especially crisis times, central banks can eliminate confusion, increase understanding, build trust, and ensure transparency by communicating to the public with carefully selected information and messages at the right time. This is very important for comforting, influencing, persuading, and winning the public. By taking the required actions and measures at the right time, and sharing them with the general public, central banks can prevent panic, minimize possible damages in the markets, and build trust with the public. It should not be noted that central banks have to select the right language, the right time and appropriate communication tools to address their audiences.

Central bank communication can occur in different ways and occasions. For instance, central bank communication often takes place through interviews with the Board members of the central bank or members of the monetary policy decision-making committee. This sort of direct interaction creates an opportunity for Board and committee members to explain the logical basis behind their decisions. Furthermore, immediately after the Monetary Policy Committee meetings, the Governor of the central bank often organizes a press conference, in which the decisions of the Committee and the reasons are delivered to the press. Press conference provides a suitable platform for a central bank to deliver the rationale behind its monetary policy decisions and clarify the questions directed from the members of the press. Subsequently, the monetary policy decision and a transcript of the press conference are immediately posted on the central bank website to lighten and de-stress the public. In addition, members of staff of central banks visit related institutions to give lectures that emphasize central bank

operations and policy decisions. These lectures create another good opportunity to present information about central bank operations and to show how these operations are in harmony with central bank's primary objectives (CBN, 2011, p. 13-16).

Conclusions

As central banks have become more and more independent from government influence, transparency and accountability have become their unavoidable concern. Due to transparency and accountability apprehensions, central banks have started to attach great importance to communication with their target groups. Central banks generally publish information about inflation, unemployment rate, financial stability, interest and exchange rates, but average people usually do not fully understand what is being said. Therefore, effective communication has become an important asset for central banks in the last few decades. Central bank communication can be seen as the presentation of understandable information to central bank's audiences regarding monetary policy objectives and strategy, general economic outlook, and possible future policy decisions. Due to technological advances and changing communication trends, central banks have also had the opportunity to make use of different communication methods and channels. While central banks have increased the quality and quantity of communication with their audiences, as a natural consequence, they have started to encounter both challenges and opportunities.

This study is designed to contribute to a deeper understanding of central bank communication challenges and opportunities. Within this context, the challenges and opportunities that central banks possibly encounter in their communication endeavor were tried to be presented after giving some background information about central bank communication activities. As tried to be explained in the study, an attempt was made to show that there was a sensible link between the challenges and opportunities of central bank communication. As a result of logical inference, it would not be wrong to state that any challenge handled very well can be turned into an opportunity by central bank.

As a future work, it is believed that it could be very beneficial to explore an appropriate balance between transparency and national security concerns. The globalization has made the countries more interdependent and countries economically and financially rely on each other. Knowing a country's economic and financial weaknesses may give another country an opportunity to carry out his malicious intentions. For accountability reasons, it is assessed that sharing too much central bank information without any distinction and elaboration for the sake of being transparent may have the potential to undermine the national security of a country. The balance should therefore be found between transparency and economy's vulnerability to possible external financial attacks.

Abstract

Education is one of the engines driving that drives the productive development of a nation, it is an obligation under the Mexican Constitution promotion by the government of the universal and free education for the population from Basic Education to Higher Secondary Education as a means of redistributing wealth, generating more equitable opportunities for all citizens. The aim of this paper was to analyze the proposals in education from the National Development Plan (NDP) 2013-2018 specifically on the following objectives: "Objective 1: To ensure the quality of learning in basic education...", "Goal 2: Strengthen the quality and relevance of higher secondary and job training..." and "Objective 3: to ensure greater coverage, inclusion and educational equity...". In the methodology, the descriptive analysis of educational indicators of the Educational Panorama of Mexico generated by the National Institute of Educational Evaluation in Mexico was considered. The results of the study showed a breach of the goals set, specifically in the aspects of agents and resources (net rate of coverage, approval rate, absorption rate) and educational results (employment rate). It concluded with a reflection about the challenges and needs in Higher Secondary Education in Aguascalientes and the pertinent actions to meet the proposed objectives.

Keywords: *Educational policy, agents and resources, educational results.*

Introduction

Countries population wellness is a responsibility for the presidents, because of this there is a big responsibility to promote the right conditions for people so that they can be able to increase their life level and participates in society as productive citizens that generate benefits to the companies and to the society. People must be the center of attention of the government, because of citizen's vote the governors are in those positions. Considering the third article of the Constitution of the United Mexican States is the obligation of the government to provide free and secular education to citizens. This education was obligatory up to the middle level but now high school was added.

It is a social benefit to have citizens with better educational levels because it is more convenient for employers to hire them, besides that salary is higher with people that have more studies, improving the opportunities of people in their environment.

Education must benefit citizens because it increases their competitiveness in the labor market, enabling them to get into large transnational companies that demand people with more academic training and greater ability to develop specific activities. This situation is extensive in local companies because they are in competition with foreign companies requesting equal or similar profiles to their competitors in order to remain in the market. The greater number of workers who are hired in the companies carry out technical activities in which a basic training of the position and studies at the high school level are needed, but these people with little training can acquire knowledge in the company by carrying out their activities or with short training courses. In this way, higher secondary education is now relevant because companies regularly require personnel with little training so that they can be trained in their plants, and since they lack higher education they must remain in their position. Therefore, higher secondary education cause them to stay in their work for many years, being attractive for companies to have citizens who perform technical activities available for hiring.

The objective of this document was to analyze the educational results of the National Development Plan 2013 - 2018 related to the proposal of Enrique Peña Nieto (EPN). The hypothesis of this document was the increase in public spending and if it could resolve the coverage of higher secondary education. Education was a substantial issue for the government, in the study conducted by Vargas (2012) entitled "Has public spending on education been progressive ?:

Mexico's experience in the 20 years of structural change", it aimed to evaluate public spending in education, relating it to its impact on families, the above was done with data from the Household Income Expenditure Survey for 1984, 1989, 1996 and 2002. Calculating the monetary transfers for each family, dividing them by decile and by type of education.

As a methodology to evaluate the progressivity of spending by educational level, the following indicators of inequality were integrated: Concentration index and Kakwani index. The results show that transfers in high school were mostly regressive, increasing the first decile by 455%. Regarding the concentration index, there was a decrease of 51% despite the fact that transfers continued to benefit people with higher incomes. In relation to the Kakwani Index, great progressivity was presented, presenting a percentage of 56% in 2002, while the high school result increased by 202% in that period. It was concluded by analyzing the progress in equity in the deciles of lower income that it was necessary to reduce the gap in then high school because there was a large bias in the deciles with higher income.

In relation to the Kakwani Index, great progressivity was presented, representing a percentage of 56% in 2002, while high schools results increased by 202% in that period. It was concluded by commenting on the progress in equity in the deciles of lower income that it was necessary to reduce the gap in the high school because there was a large bias in the deciles with higher income.

Through time public spending had been progressive, it benefited the highest incomes at the upper middle level, presenting a high value in the Gini coefficient, however, there was a redistribution of income in the population. Returning to the study by Ontiveros (2011) entitled "Educational spending and distributive policies of primary education in Mexico", it studied the link between education delivery and spending, recognizing the redistributive objective of educational spending. The methodology consisted in using a model of pressure groups with the purpose of identifying the factors that affect the allocation of public spending in basic education with the objective of evaluating their distributive objectives. The result of the research presented as a criterion for the allocation of education expenditure, the number of teachers hired, in such a way, the distribution of resources lacks criteria that benefited the poorest states or with lower educational levels to allocate greater resources.

It was concluded that there was an inverse relationship between the allocation of resources and educational level because the destination of resources for basic education was higher in the states with lower illiteracy rate and was lower in the states that had higher literacy rates.

According to the research of Gómez and Zárate (2011) entitled "Public spending on education against the behavior of the main economic aggregates in Latin America", considered education as the engine of the national growth and development because the investment in it increased GDP and employment although that relationship was regularly breached.

The objective of the study was to determine the relationship of the effect of public educational spending on the growth and development of nations, verifying its impact on variables such as employment. The study was carried out for a sample of eleven Latin American countries which correspond to: Argentina, Brazil, Chile, Colombia, Costa Rica, Cuba, El Salvador, Mexico, Panama, Peru and Uruguay, in which public expenditure values were used in education as a percentage of GDP, GDP per capita and the unemployment rate of a series of data corresponding to 10 years (1999-2008) these with information from the United Nations.

In the methodology, an analysis of correlations was carried out to determine the relationship of public educational spending with economic indexes, the program used was the SPSS. The results showed that Mexico had negative correlation coefficients that presented an inverse relationship, so this showed that by increasing educational investment, unemployment was reduced. It also showed that if investment in education increased, per capita GDP decreased, it was a contrary result to the theory. It was concluded by presenting the investment trends in education in Mexico related to the unemployment rate and GDP per capita. Regarding unemployment, it was shown that when educational investment was increased, it was reduced, while GDP per capita declined.

This document began by presenting in the theoretical framework the educational proposal of EPN to be a candidate which was reflected in the National Development Plan 2013-2018 adding an analytical discussion by several authors in relation to each of the elements of the proposal. Subsequently, the work methodology in which the indicators were published by the National Institute of Educational Evaluation (INEE), it was presented related with the elements of Enrique Peña Nieto's proposal.

Then it showed the results in which it was observed the educational backwardness that Aguascalientes had in higher secondary education by contrasting it with the objectives of the Education Sector Plan.

Continuing with the discussion that presented the challenges of the government in its commitment to citizenship. Then the irregularity of higher secondary education in the state was analyzed. It was finished with the conclusions that considered the search for alternatives that favor higher secondary education by detecting the precise needs to exercise public spending in higher secondary education based on the correct analysis of its indicators.

In the presidential campaign for the 2013-2018 period of President Enrique Peña Nieto, substantial changes were

proposed in education which were reflected in the National Development Plan, and then its substantial aspects were presented.

Literature Reviews

The educational proposal in the Enrique Peña Nieto campaign

Analyzing the educational proposal of Enrique Peña Nieto on his way to the Presidency of Mexico, it was observed that several educational issues were commented, however the large number of proposals were contemplated with a lack of care and programming. For this reason, it was necessary to reflect on the aspects of improvement in its proposal (CEE, 2012).

Quality

In relation to quality, EPN's speech commented about its importance without defining its concept. Analyzing the EPN's education proposal, it can be deduced that he considers educational quality as the coverage, infrastructure and technology provision (CEE, 2012). However, the quality of education referred to a discourse instead of a purpose, and its relation with education acquired different meanings (Martínez Boom, 2004), also, quality in education belittled pedagogical work and curricular research, privileging institutional management (Bruner, 2000).

However, the quality of education needed to be strengthened through the establishment of educational policies that improve the key elements to increase educational level, being necessary to use government resources in the school curriculum, teacher training and financing and institutional educational management (Elliott, 2000). Therefore, it was necessary to analyze what was expected from education, considering its trajectory and the way to provide education of quality in national schools. It was necessary to visualize the nation project according to the context and the opinion of a consensus with the purpose of defining the most appropriate path for the education, implementing relevant actions to achieve it (CEE, 2012).

Student learning

The main objective of EPN's proposal in relation to student learning had as the main purpose the student learning, that was why this concept had a close relationship with quality. This considered the school as the center of education, and it was important to have well-defined objectives for what and how students would learn (CEE, 2012). However, Ausubel, Novak and Hanesian (1997) referred to learning as the previous knowledge and the new knowledge of the students which showed through the organization and integration of information in the cognitive structures.

According to Ballester (2002), learning required to be significant by integrating previous knowledge with new knowledge, the student was the main actor as part of the strategies proposed so that they could assimilate new information through the processes of acquisition, transformation and evaluation (Bruner, 2004), therefore, learning implied reflected changes that enable the student to perform tasks, acquire experience or lasting knowledge (Puente, 1997).

Teachers and directors

EPN mentioned only a few actions for teachers and directors, he did not mention either its great importance related to the development of students (CEE, 2012). It was important to consider teachers and directors as essential actors of the discourse and purposes in education (CEE, 2012). It was important the commitment of the teacher in educational institutions because they are human resource trainers and promoters of innovation, so it was necessary the training of teachers to develop their role.

The training should be in teaching-learning, technical-methodological and scientific research skills, focusing on meeting the needs of the teacher (UNESCO, 1995). Being relevant to professionalize the teacher, according to UNESCO (1996) education was subject to the effectiveness of teachers referring to their teaching skills in the classroom. According to Luna (2002) the teaching skills of teachers and their mastery of the subject are necessary in education, therefore Zarzar (1988) believed that teaching was interrupted when teachers dominated the topics, but they had a lack of teaching techniques to transmit their knowledge in the classroom. On the other hand, managers needed to promote teacher training, however, managerial work is subordinated to the current educational model (Murillo, 2007).

School community

The importance of the school community, and its increasing related to the impact it produced on student learning. The school community was included superficially in the discourse of EPN, however, the school community needs to have spaces that increase social participation, strengthening the co-responsibility of families in education and allows the realization of educational activities (CEE, 2012). Claro (2011) considered the school community as the scenario for

the interaction of educational actors, so it needs to be studied in order to know the participant's opinions, because the space-time in the institution through a harmonious school climate is necessary for the formation of students (Morin, 2007).

School management and system administration

EPN considered that the design, implementation and development of educational policies should be directed by the education system, their work was essential to improve education. This needs to have an adequate planning, organization and management capacity in the relationships of educational actors (CEE, 2012). In addition, according to UNC (2007) the educational management demands an integral institutional strategic development because it directs the educational institution towards the improvement of the educational quality and the increase of the academic level, these activities must be based on policies and general strategies of the institution (PEA, 2007). It was necessary to define the educational administration as the review of the teaching-learning process in terms of ordering, systematizing, controlling and rationalizing (Lutz, 2007).

Plans and programs

EPN did not mention the plans and programs because he considered them as part of the administrative issues. However, this aspect should be mentioned, because of the need to articulate educational levels, in addition, the structure of the plans and programs should be reviewed because they are fundamental and relevant for students (CEE, 2012). The curriculum identified the current educational model; it was structured based on the teaching learning, proposed by the educational institution, allowing students to cover their learning needs (Nolla, 1998).

It was essential to review and reformulate educational programs and policies so that they consider local and regional conditions that promote social equity (Gutiérrez, 2009). Likewise, it required meeting the relevant objectives and contents in accordance with the national situation, integrating teachers and students (Díaz Barriga, 1989). The educational programs and teaching strategies must be linked vertically and horizontally between levels and modalities. Nowadays, there are still inconsistencies in these aspects due to the lack of coordination between the educational levels and the study plans (Gutiérrez, 2009).

According to Díaz Barriga (1989), the function of the educational plan guide institutions to fulfill educational objectives by contextualizing them with the necessary knowledge for students, leading them to fulfill their personal and professional goals, being difficult to design an educational plan that facilitates the learning process of students and the achievement of educational objectives (Zabaiza, 1987). The current educational plan should be designed based on the students and the competencies that must be developed in order to access greater opportunities in the current knowledge society (Gutiérrez, 2009).

Evaluation

In relation to the evaluation, EPN considered its importance to improve education, since this practice gathered useful information for the decision making of the educational trajectory, concluding that quality and evaluation should always be presented to generate positive results and relevant proposals. However, it was necessary to give greater value to the evaluation as a measurement parameter, leaving aside the criticism of the establishment of a ranking or a control or sanction instrument.

The evaluation must have a sense of continuous improvement and must be comprehensive (CEE, 2012). The evaluation requires a quantitative integration of the product and a causal analysis of the results (Duque, 1993), it also needs to align itself with the educational model generating an identity in the institution (Duque, 1993), it also acquires a transcendental role in teacher awareness and in the improvement of educational practices (González and Ayarza, 1996).

Attention to diversity and equity

In the EPN discourse, few equity aspects were mentioned. This issue must be integrated into the educational agenda, since the inequality gap must be reduced. Therefore, it was necessary to start developing it by studying the national situation and considering the actions and policies of positive discrimination, generating a benefit for schools and for disadvantaged actors (CEE, 2012).

According to Gutiérrez (2009: 22) "a large part of the student population of public high schools composed of young people between fifteen and eighteen years of age, lives in a situation of poverty, marginalization, therefore, exclusion". This student community did not have the same possibilities as other students to have access to different strategies of global interconnectivity, the management and mastery of ICT, and it is more difficult for them to adapt to the rhythm of a globalized and accelerated world (Gutiérrez, 2009).

School equity was a very marked aspect in education, since there have been considerable differences between people who study in private and public schools, urban and rural, indigenous and non-indigenous (Rodríguez, 2008). According

to the results obtained in the PISA test, private schools have better results than public schools (Patrinos, 2007). Rué (2000) considered that the attention to diversity and equity, generates different perspectives in which the special educational needs of some students were considered, they needed differentiated learning strategies with teachers trained in it, it was relevant the approach of a particular curriculum (Echeita, 2006). Giné (2001) considered that the general curriculum in each educational stage was object to discrimination for students who had special educational needs.

Research Objective

The main aim of this study was to analyze the proposal in education from the National Development Plan 2013 - 2018 specifically on the objectives 1, 2 and 3. More specifically, the study sought to analyze the objectives:

- a. Objective 1: To ensure the quality of learning in basic education and comprehensive training of all groups of the population.
- b. Objective 2: Strengthen the quality and relevance of higher secondary and higher education and job training to contribute to the development of Mexico
- c. Objective 3: to ensure greater coverage, inclusion and educational equity among all groups of the population for the construction of a fairer society

Method

The present study was quantitative of descriptive character using as methodology the formulas to analyze the educational results, it was calculated by using statistical data of the students, educational centers, among others. The statistics used in the formulas are found in the Administrative Registries at national and state level, representing a reliable database to know their values.

Each indicator had a formula that was internationally standardized to make comparisons between countries; it should be noted that the formulas used were published and used by UNESCO when carrying out educational studies. In this document, the following educational aspects were addressed:

1. Net coverage rate;
2. Approval rate at the end of courses;
3. Absorption rate;
4. Employment rate according to level of education for secondary education. Population of 25 to 64 years (%).

Materials

The data of the formulas presented in the document were taken from the INEE, which is the institution that publishes the results of the educational indicators in Mexico in its Internet portal. The document used information from the following categories:

1. Structure and dimension,
2. Social context,
3. Agents and resources,
4. Access and trajectory and
5. Educational results.

Results

Analysis of educational indicators of the Educational Panorama of Mexico generated by the National Institute of Education Evaluation (INEE)

In this section, the correspondence of the Education Sector Program 2013-2018 was analyzed in its objectives 1, 2 and 3 to the educational indicators of the Educational Panorama of Mexico generated by the National Institute of Education Evaluation. In relation to DOF (2013) there was a lack of compliance with "Objective 3: Ensure greater coverage, inclusion and educational equity among all population groups for the construction of a more just society", when considering the following indicators.

Structure and dimension

The number of students had increased, particularly in the 2014/2015 period it had the highest percentage increase with 15% compared to the 2012/2013 period (Table 1).

Table 1. Number of students.

	2012/2013	2013/2014	2014/2015	2015/2016

Aguascalientes	47,656	51,934	54,568	n.d.
National	4,443,792	4,682,336	4,813,165	9,985,080

Source: own elaboration with data of the INEE (2015).

n.d.: data not available.

The number of teachers had a reduction of 4% and 2% in the 2013/2014 and 2014/2015 periods compared to the 2012/2013 period (Table 2). However, the number of schools had grown scarcely, by 2% in the 2014/2015 period compared to the 2012/2013 period (Table 3).

Table 2. Number of teachers.

	2012/2013	2013/2014	2014/2015	2015/2016

National	288,464	273,939	286,955	292,484

Source: own elaboration with data of the INEE (2015).

n.d.: data not available.

This fact showed that the facilities were not enough to satisfy the growth of the student population, because there were young students who were left without a place or the classrooms were overcrowded with too many students.

Table 3. Number of schools.

n.d.: data not available.

According to DOF (2013) there were deficiencies in compliance with "Objective 2: Strengthen the quality and relevance of middle education, higher education and job training, in order to contribute to the development of Mexico", considering the next indicator:

Social context

The proportion of the population that was in the desirable age of attending basic education offered by the National Education System (SEN) had a reduction from 6.1 in the period 2012/2013 to 5.6 in the period 2014/2015 in Aguascalientes (Table 4). Showing that the transformation and evolution of the population over time must be studied more thoroughly, in this way generating prospective policies plans on demand response.

Table 4. Percentage of population according with basic scholar age and middle high scholar age.

	2012/2013	2013/2014	2014/2015
Aguascalientes	6.1	6.0	5.6
National	5.8	5.9	5.8

Source: own elaboration with data of the INEE (2015).

In relation to DOF (2013), there was a situation of non-compliance with "Objective 3: Ensure greater coverage, inclusion and educational equity among all population groups for the construction of a more just society", considering the following indicator:

Agents and resources

Expenditure on education showed that the distribution of federal contributions for entities and municipalities in education and its evolution had increased significantly in Aguascalientes with a 52% growth in the 2014/2015 period compared to the 2012/2013 period (Table 5). However, this resource was still insufficient, for state needs.

Table 5. How much does the State spend on basic and middle education? (Millions of pesos at 2012 prices).

	2012/2013	2013/2014	2014/2015
Aguascalientes	3,504.9	4,120.40	5,334.80
National	309,933.6	335,497.80	380,783.40

Source: own elaboration with data of the INEE (2015).

According to the DOF (2013) there were deficiencies in the fulfillment of the "Objective 1: Ensure the quality of learning in basic education and comprehensive training of all population groups" and "Objective 3: Ensure greater

coverage, inclusion and educational equity among all groups of the population for the construction of a more just society ", when considering the following indicators:

Access and Trajectory

The net coverage rate in Aguascalientes in middle education had very low educational coverage, with 51.4% in 2015/2016 (Table 6), it was lower than in the 2012/2013 period which was 55.6%. This shows the great need for educational spaces of this level in the state.

Table 6. Net Coverage Rate.

	2012/2013	2013/2014	2014/2015	2015/2016
Aguascalientes	52.7	55.60	57.80	51.40
National	52.9	54.80	57.00	50.40

Source: own elaboration with data of the INEE (2015).

The approval rate for courses in Aguascalientes was 70.3 in 2014/2016 (Table 7), increasing with respect to the 2012/2013 period which was 65.80 shows that there is a large number of students who were in the middle level and that did not approve it, staying without studying at that moment.

Table 7. Approval Rate.

	2012/2013	2013/2014	2014/2015	2015/2016
Aguascalientes	n.d.	65.80	70.30	n.d.
National	n.d.	68.50	71.70	71.50

Source: own elaboration with data of the INEE (2015).

n.d.: data not available.

The absorption rate in Aguascalientes showed the need for growth in the education system in terms of middle education. The indicator in 2015/2016 was 107.5 (Table 8), showing the capacity of the system to serve the population that has completed the previous educational level and that was incorporated into middle education, increasing its value with respect to the 2012/2013 period, which was 93.90.

This limits the graduates of the previous level to continue studying, it also affected the laggards because it reduced the spaces and there was a saturation of places. For this reason, actions must be taken in planning and making decisions that improve the flow of students at various levels.

Table 8. Absorption Rate.

	2012/2013	2013/2014	2014/2015	2015/2016
Aguascalientes	90.7	93.90	95.10	107.50
National	100.9	105.60	100.70	101.10

Source: own elaboration with data of the INEE (2015).

According to the DOF (2013) there were deficiencies in the fulfillment of the "Objective 2: Strengthen the quality and relevance of middle education, higher education and training for work, in order to contribute to the development of Mexico", considering the following indicators:

Educational results

The employment rate of the level of education for middle secondary education was 69.0 (Table 9) in 2015/2016 in Aguascalientes improving with respect to the 2012/2013 period which was 50.90, for which approximately one third of graduates of this educational level lack employment and lack of employment opportunities. Glimpsing the analysis of the relevance of the contents of educational programs.

Table 9. Employment rate of the level of education for higher secondary education. Young Population between 15 and 29 years old (%)

	2012/2013	2013/2014	2014/2015	2015/2016
Aguascalientes	71.2	50.9	52.0	69.0
National	71.7	52.1	50.8	70.6

Source: own elaboration with data of the INEE (2015).

Discussion

The state of Aguascalientes suffered from lag in higher secondary education due to multifactorial conditions that occur in the state such as the insufficient educational spaces existing to teach class. Higher education institutions were unable to meet the demand of the candidates of the previous educational level and the laggards. Despite the effort and the increase in public expenditure recorded in data, there were irregularities in increases and decreases in the number of teachers and schools, reflecting their need for growth in order to meet first the existing demand of applicants of the previous level.

Regarding the evolution of the population of desirable age to cover higher secondary education, there was a need to study in depth the transformation and evolution of the population of Aguascalientes. This because basic education had increased in the number of students, which later postulate for a space in middle education and when the current deficit of places was considered the problem will be aggravated more and more, being pertinent to discuss in the agenda the topic referring to the attention of the educational demand. On the other hand, there was an increase in spending on higher education with higher resources for Aguascalientes, however there was a constant growth of applicants in the middle level that diluted the positive effect of increased public resources in the creation of spaces to register all the applicants.

The above was verified by reviewing the coverage of middle education in Aguascalientes showing that it was limited, therefore, many candidates to this educational level truncated their studies by running out of place. In addition, the absorption rate showed insufficient spaces, leaving almost 10% of applicants for middle secondary education without a place, obstructing the continuity of the students of the previous level. Regarding the approval rate at the end of the courses, it was shown that students who enter middle education in Aguascalientes had great problems to pass the classes and to conclude the educational level, directly affecting the terminal efficiency.

In addition, when reviewing the approval rate to September 30 a drastic rate of failure was presented, generating an overwhelming loss of students in this educational level. On the other hand, the employment rate of the level of education for middle was low, it showed that a large number of graduates of this level of education were unemployed without job opportunities.

As a point of analysis regarding the educational indicators of the Educational Panorama of Mexico of the INEE (2015), it was considered necessary to establish actions for the compliance of the Education Sector Program 2013-2018 in objectives 1, 2 and 3 for the state of Aguascalientes. This was because the fundamental elements that were in these objectives present inefficient results leaving the objective unfulfilled, it was a fact that hindered the achievement of the expectations of the students and candidates of the high average level.

The previous situation was glimpsed from the analysis of the proposals the campaign of the EPN and was checked with the statistics presented by the INEE. The campaign proposals were the actions that were reflected in the Sectoral Education Program, it should be noted that ideally in the Education Sector Program there must meet its objectives in all entities in the country.

Conclusions

The best government mechanism to reduce inequality and to provide opportunities for a decent life for the population is the education, for this reason, it is important to analyze the educational results of the entity, particularly higher secondary education because the large number of jobs that are offered in the state request people with this level of education.

In addition, this level of education is the gateway to higher education, being a key factor to improve the economic situation of citizens. The responsibility of attending the candidates to the higher secondary level is of the government, as well as ensuring through the Sectoral Education Plan that the educational level of the students is improved so that they can find employment. However, in Aguascalientes, this relationship was breached generating a point of opportunity, therefore, the government should consider its intervention through the local educational authorities, being a key factor to correct the deficiency in this educational level.

It is necessary to link the Education Sector Plan with the needs found in the Mexican states, considering the particularities of Mexico because there is a great diversity of conditions in which it is difficult to implement some actions that at the same time they are inoperable due to the deficiencies that are experienced in some places. Some complications are the lack of light, the lack of internet, among others. These elements hinder the fulfillment of the objectives established in the Education Sector Plan which generate a leak or a waste of the resources destined to education, this situation can be revised by analyzing the educational indicators published by the INEE.

The campaign proposals of the candidates for President are key to glimpse the future of the nation, therefore, there must be well-founded actions in which candidates have knowledge and domain of the relevance of the elements that compose this topic, because they will be established in the country, supporting it with public expenditure. The government has responsibility for its good functioning throughout the national territory. The achievement of these

objectives is considered weak in Aguascalientes, although it is one of the states with the best educational level in the country and better conditions for the scholar community, questioning what will be the result of the Sectoral Education Program in states with lower education level?

As new lines of research in which it is important to glimpse the possibility of disaggregating them by gender, firstly, there is a need to analyze the educational quality especially in the students' results, linking them with the knowledge they have, and establishing their relationship with their employment situation. Another approach necessary to analyze is the relevance of the programs at the high school level and its correlation with the occupation of graduates, because it is a factor that has influence with employment, it also should be noted that graduates of higher secondary education must be prepared to cover the requirements of the companies.

Also, the proper exercise of public expenditure in higher secondary education should be analyzed, visualizing a new direction that generates greater benefits than those obtained. It is recommended to consider the importance of ICTs in education, by offering distance education, as in the case of "PREPA EN LINEA SEP". However, the model must be linked to the educational offer in each state so that it has greater diffusion and they can add more and more students, solving the problems of coverage and absorption, as well as making the use of resources more efficient.

By maturing the distance education project, it will be important to install a state office to attend particular situations in which students must be motivated to complete their educational level. Another recommendation is the teacher training and the analysis of the causes of the high failure rates, presented in higher secondary education, enabling managers to search for new teaching-learning strategies to reduce the disapproval and the negative derivations that are found around like the desertion.

Abstract

In a post-globalized world, mobiles and tablets are the most popular electronic devices among university students, since they are their first option to access the Internet, exchange messages, take pictures, record videos, play games, etc. Taking into account that they are part of their daily life, it is urgent to take advantage of them to explore learning experiences inside classrooms (Toledo, 2015), by involving students in interactive and gamified tasks (Osores, et al, 2013; Álvarez, 2016; Chou, 2016).

Under the scope of a case study related to the learning of linguistic and cultural varieties of Latin-American Spanish (Cruz, 2018; Moreno Fernández, 2010), we will present didactic experiences with digital tools, which were carried out with Spanish as Foreign Language students (A2/B1.2 levels) of the Graduation Degree in Foreign Languages and Cultures at a School of Education in Porto, Portugal. Following a qualitative methodological approach, we have collected and analyzed students' representations about the use of mobile devices (through questionnaires) and their project works related to the Latin-American Spanish varieties.

Results show that students have empowered themselves in the learning process, revealing that they have (re)constructed knowledge related to the topic through hyper sensory strategies and resources (Cruz & Orange, 2016).

Introduction

Present-day work environments require not only solid knowledge about specific topics, but also different skills, which include critical reflection, self-direction, cross cultural skills, etc. (Cruz & Orange, 2016). As we already know, mobile devices allow students to get an almost permanent presence in the virtual world, allowing them to participate, share, discuss and access information of any kind (Cruz, 2005). Both mobile phones and tablets have put our students into contact with language and cultural diversity.

Therefore, being exposed to a global Spanish which is present in and through the mass media (the Internet, the radio, the cinema, the TV channels, etc.), there is a need to rethink the way in which languages have been taught. In our opinion, one should be paying attention to new multimodal and hyper sensory settings which allow our students to be in contact with a lot of information through different sensorial channels.

Within this context, due to the economic and cultural dynamism of the region, a teacher of Spanish as a Foreign Language should be paying attention to the linguistic and cultural varieties of Latin America Spanish (Moreno Fernández, 2010), by implementing an holistic model of teaching and learning with pan-Hispanic uses (Anadón Pérez, 2003). In this way, we believe multimodal within the Spanish language learning and teaching should be valued, by developing aspiring students to be plurilingual within such an historical language.

In this article we will first of all explore how mobile devices have been revolutionizing our society and classrooms. Secondly, we will focus on Spanish linguistic and cultural varieties topic within the scope of Spanish as a Foreign Language (SFL) teaching and learning process. Thirdly, we will present, analyze and discuss our project, which deals with the use of mobile devices to study the linguistic and cultural varieties, in which students have been empowered and incited to be more active producers of knowledge, rather than passive consumers.

1. New Challenges In The Use Of Mobile Devices In The Transformative 21st Century Classroom

In present days, mostly digital and *glocal* (Cruz, 2005), we advocate the development of a teaching process that addresses the needs of students, demanding learning experiences which should be significant and overwhelming. Thus, we must develop an experiential communicative approach, which is a "philosophy and methodology in which educators purposefully engage with learners in direct experience and focused reflection in order to increase knowledge, develop skills and clarify values" (AEL, 2008, WEB).

In fact, a highly experiential teaching draws from the experience that must be relevant, authentic and always linked to our students' surrounding context. It is a multidimensional, holistic and multi-sensory approach that aims at developing students' skills, namely: communication, self-learning, cultural relativization and critical thinking. This, in turn, should be stimulated through a kind of exploratory teaching based on permanent questioning. In this process of seeking knowledge through experience(s), the creativity, cognitive flexibility and leadership skills are

particularly relevant.

Authors like Fernández-Corbacho (2014) list some characteristics of this type of approach, namely: a) each proposed task should pose challenges to the students, generating intrinsic interests; b) the variety of tasks should combine both a multimodal format and seek to meet different learning styles; c) the activities should include moments for the development of the learners' autonomy, while stimulating the development of cooperative strategies, instilling them responsibility in the decisions that have to be undertaken (individually and in group); d) the use of Web 2.0 and Web 3.0 tools, i.e., instant response systems such as *Plickers* or *Kahoot!*, or even the old WebQuests, can favor skills acquisition in hyper-sensory environments (Cruz, 2018).

These hyper sensorial environments transform the senses into channels of perception that activate, in turn, brain connections (Shams & Seitz, 2008), giving students the opportunity to experience something, by better retaining the information they receive, through the manipulation and simulation of tasks in the surrounding reality. By carrying out these tasks, students have the opportunity to develop reflective paths that stimulate their critical analysis of the experiences they have gone through, while enriching their *Weltwissen* with proactive knowledge, which allows them to recreate similar paths in other contexts (Fernández-Corbacho, 2014).

Since 1984, when the first video games appeared, we live with technologies that have finally redefined the way we contact and even face the *glocal* world, which we make part of. In this context, the gamification pedagogy and the use of mobile devices can enrich the teaching-learning process based on an experiential approach. According to Kapp (2012), gamification is no more than the use of game assumptions, such as its mechanics, motivation and problem solving characteristics, in the creation of didactic activities, in order to make them more attractive to the eyes of our learners. Thus, drawing techniques and elements of the game, such as narrative, points and challenges, we are able to motivate learners and condition their behavior so that they respond to the challenges they have to face (Duarte & Cruz, 2017).

As stated by Foncubierta & Rodríguez (2015), the gamification pedagogy can be defined as the use of technology which the teacher mobilizes in the design of learning activities, either analog or digital, introducing elements of the game (logos, time limits, punctuation, randomness, etc.) and critical thinking (challenges, competition, cooperation, etc.) in order to enrich the learning experience and to control the behavior of the class throughout the whole process. Within this context, it is of utmost importance the proper control of the emotions of the students in the process of undertaking gamified activities. According to Mora (2013), it is necessary to awaken in students the so-called "encendido emocional", i.e., the motivation for them to continue working in the task, by feeling involved in collaboration or competition, by stimulating their curiosity, and being moved by an almost instant recognition and feedback (cf. Hamari & Koivisto, 2013).

In order to develop a true gamified experience, one shall have the Octalysis Framework (Chou, 2016) into account. This is a tool which includes 8 core drives (see Figure 1) and must be tackled within the engineering and design for any gamified task, in order to transform activities into meaningful and enriching experiences (Duarte & Cruz, 2017). According to Chou (2016), if there are no core drives involved in a specific task, there is no motivation and therefore no behavioral changes will occur (cf. Chou, 2016).

Figure 1 - The Octalysis Framework (adapted from Chou, 2016)

Upon closer examination of these 8 core drives, the first core drive is known as *Core Drive 1: Epic Meaning & Calling*, and it is related to the calling and meaning a specific task offers our students, i.e., students feel somehow involved in a quest which is bigger than themselves. The second core drive, *Development & Accomplishment*, is related to progression, skills development and achievement. It usually takes the shape of points, badges and leaderboards. The third core drive is known as *Empowerment of Creativity & Feedback*, and it is felt within the

creative process students undertake in order to solve problems. It is related to hypermedia content and stimulus. The fourth core drive, *Ownership & Possession*, is felt when pupils are engaged in a group activity for the group success on a project work. In relation to the fifth core drive, entitled *Social Influence & Relatedness*, includes all the social elements which motivate people, namely social feedback, companionship and even fewer good feelings, such as competition and envy. In education, it can serve as one of the strongest and long-lasting motivations for pupils to become connected and engaged. As for core drive 6, *Scarcity & Impatience*, it is related to the longing for a rare and exquisite object, token or reward. The difficult in obtaining it is what moves students to continue on task. The seventh Core Drive, *Unpredictability & Curiosity*, is related to the infatuation with experiences that are quite uncertain and involve luck. The last core drive, known as *Loss & Avoidance*, is the motivation to avoid something negative from happening (Chou, 2016; Duarte & Cruz, 2017).

By applying this gamification framework in our practices, students will gain more opportunities for experiential, self-paced and life-long learning (Duarte & Cruz 2017). In this way, through the use of virtual environments and mobile applications, students may feel empowered and engaged in enjoyable activities and tasks, being therefore rewarded with knowledge and skills. As Prensky (2001) adds, the use of digital technologies stimulates multitasking skills, network learning and experimentation and simulation in so-called virtual realities. Taking all of this into account, we can say that learners will be more proactive and more critical if we provide them hypersensitive environments. Prensky (2001, p. 4) goes further on this topic and suggests the following:

“As educators, we need to be thinking about how to teach both Legacy and Future content in the language of the Digital Natives. The first involves a major translation and change of methodology; the second involves all that PLUS new content and thinking. Its not actually clear to me which is harder – “learning new stuff” or “learning new ways to do old stuff.” I suspect its the latter. So we have to invent, but not necessarily from scratch. Adapting materials to the language of Digital Natives has already been done successfully. My own preference for teaching Digital Natives is to invent computer games to do the job, even for the most serious content. After all, its an idiom with which most of them are totally familiar.”

Therefore, it is up to the teacher to stimulate the ability to use technologies, such as mobile phones or tablets, in a proactive way. In most contexts, students use these technologies more passively, limiting themselves to the basic functionalities that these tools offer them. After having implemented a study carried out with "Google Generation", Rowlands, Nicholas, Williams, Huntington, Fieldhouse, Gunter, Withey, Jamali, Dobrowolski & Tenopir (2008, p. 1) concluded that students are not able to develop skills such as critical thinking through devices they own:

“The study shows that much of the impact of ICTs on the young has been overestimated. The study claims that although young people demonstrate an apparent ease and familiarity with computers, they rely heavily on search engines, view rather than read and do not possess the critical and analytical skills to assess the information that they find on the web.”

In fact, as we can easily guess, the use of mobile phones or tablets by students does not allow them to directly improve their search and analysis of information skills. They need a mediator teacher and stimulator of proactive use of technology.

During the last decades we have been hearing voices stating that as soon as students enter the classroom they have to leave the mobile phone aside. When we inhibit their use, we are banishing a tool that is part of their daily lives, and in this way we are not allowing them, on the one hand, the development of skills which permit them to maximize the power of technology which mobile phones and tablets offer them; on the other hand, we believe that students are left unprepared to leave digital marks on the Internet and even to develop a truly proactive e-citizenship, based on the assumptions of Rosnay (2005), in order to improve the surrounding society which they are part of.

More and more educational institutions and teachers are taking advantage of the wave of innovative electronic devices that offer portability and instant use, such as mobile phones or tablets, including iPods, iPhones, iPads, e-readers, and more. These devices offer a great flexibility in the scope of communication strategies and collaborative work among teacher-students and student-students. Portability allows students to continue the learning they have experienced in the classroom on their own mobile phone or tablet. At the same time, they give students a sense of empowerment, as decision makers of learning pathways, while allowing a customization of it. In 21st century learning, we should be moving away from a Taylorist view of education that treats students equally. Mobile phones or tablets with touch technology, WIFI connection, P2P communication tools, web 2.0 and web 3.0 applications facilitate learning processes which promote the critical search for information, critical thinking, pedagogical differentiation and problem solving through collaboration strategies enriched by hyper sensorial environments.

In the language classroom mobile devices may cater for stimulating the development of communication skills in

a globalized world, in which linguistic and cultural diversity exists. In the next chapter we will tackle this issue in relation to SFL teaching, specifically.

2. From Peninsular Spanish To Latin-American Spanish Varieties In The Spanish As Foreign Language Classroom: The Power Of Mobile Phones And Tablets

Technology-driven globalization has been generating paradoxical effects because it contributed for both homogenization and heterogeneity in present-day society. On the one hand, the mass media and their rich and engaging messages have been contributing to the creation of a culture based on the market rules. On the other hand, we have been living a sort of adaptation of the contents of these messages to the context of a specific region, a phenomenon called *glocalization* (Regueiro Rodríguez, 2009).

The globalized market we are experiencing has generated a couple of consequences, namely: the disappearance of borders, the need for labor mobility and the development of plurilingual communication. Within this context, English is no longer enough as a lingua franca. Some of these needs towards other languages have been felt in relation to the Spanish language. In fact, the positioning of Spanish as an international language and the prominent role that Spanish-American peoples have in the vitality and projection of the language in the globalized world are the main reasons behind it (Mora-Figueroa, 1998). Therefore, one can say that the presence of linguistic diversity is increasingly being felt, both in terms of the existence of numerous languages in international communication, either in presence or virtually, and in terms of varieties within the same language (Cruz, 2011).

There are two main reasons for dealing with varieties within the language classroom. On the one hand, it increases the confidence of the speakers of a language leading them to the understanding that learning the language does not have to be totally based on a single variety but rather in real and useful situations, so that they may feel they are part of the (re)building of the language they speak. On the other hand, we should not forget that the greatest wealth of a language is precisely its diversity, and we should expect students to be prepared to deal with that diversity, i.e., the actual use of the language in concrete situations (cf. Del Rios and Aires, 2015).

In fact, within the Spanish classroom, students can get in touch with the language and cultures of the varieties of Latin American Spanish through physical or virtual environments of an intercultural and plurilingual nature. According to Bortoni-Ricardo (2014), the main aim of providing such teaching environment is to increase the effectiveness of pragmatic communication of students in specific contexts.

The study of the Latin America region is relevant, not only because of the cultural heritage of the region that *is Europe transferred and America transfused* (Alvar, 2002, p 251), but also due to the creation and implementation of market or cultural unions, such as the Common Market of the South (MERCOSUR) or the Latin American Integration Association (ALADI), and the tourist attraction it offers to the world. For these reasons, it is impossible to neglect the great dynamism of the region in the SFL class and therefore, it seems important to work with the linguistic varieties that foreigners who visit Latin America can find and the cultural references that will mark interpersonal relationships (Alvar, 2002).

Portuguese-speaking university students who study Spanish, as other European students, reveal interest in the Latin American varieties of Spanish due to: a) their linguistic richness, including their exoticism because of the region's own cultural miscegenation; b) professional needs in the future, as many want to work or look forward to work in the region; c) attraction for knowledge of geography, history, music, cinema, but above all, the boom and post-boom Latin American literature (Altmann & Vences, 2004).

In the teaching and learning process, the SFL teacher has to show respect towards the culture of the Spanish-speaking countries and the country of the society in which he/she lives and works, being aware of his/her role as an intercultural mediator and making the most of the technological and audiovisual resources while dealing with cultural topics in the classroom (Cruz, 2018).

A teacher should also be aware that the lack of knowledge about the diatopic differences between the Latin American Spanish and that of Peninsular Spain may cause some communicative misfortunes, especially if we think about lexicon and pragmatics (Regueiro Rodríguez, 2016). Moreover, there are main differences that can cause communicative misfortunes, and therefore one should not rely on the cohesion of the Spanish language as it offers a great diversity of linguistic uses and pragmatic communication patterns.

However, different linguists prefer to emphasize its homogeneity and accentuate its character of koiné, which allows a certain unity, homogeneity, and facilitates communication among all Spanish speakers (Moreno Fernández, 2000). The truth is that we can not forget that “la intercomprensión entre un mexicano y un santiagueño, un zaragozano y un limeño es mucho más sencilla e inmediata que la que se da entre un australiano y un escocés, un irlandés y un sudafricano (...)” (Marcos Marín, 2001, pp. 70-73) than that between speakers of different varieties of English, for example.

It is also known that Spanish is one of the languages “más conexas entre las grandes, sin variantes dialectales ininteligibles que apunten hacia la fragmentación, y fonéticamente muy clara, con diferencias dialectales mínimas en comparación con las que suelen ofrecer otros dominios lingüísticos y no impiden nunca ni siquiera dificultan la intercomprensión” (Salvador, 2001). Authors such as Lapesa (1980), Zamora Vicente (1967) or Roña (1965) agree to emphasize the existence of a continuum of understanding existing in the Spanish language, as they

consider that the differences within the extensive American territory are minimal within the structure of total speech. However, this variation is due to the linguistic differences that the settlers brought from the peninsula to miscegenation (Sueiro Justel, 2011) and later to the influence of the substratum (Amerindian languages) and also to the later superstrate (African slaves or migration and Italian in Argentina, for example) (Lapesa, 1980), which makes Spanish a *mestiza* language, a linguistic code that represents a synthesis of all these cultures and contacts between all languages (Torres Solórzano, 2010; Konieczna-Twardzikowa, 2002).

According to Moreno Fernández (2010), Lapesa (1980), Zamora Vicente (1967) and Roña (1965), the main differences of the Spanish language in Latin America are related to the lexicon (archaisms, Indigenisms, Anglicism, etc.), phonetics (*seseo*, pronunciation of *z* as *s*; *yeísmo*, pronunciation of *ll* as *y*; rotacism, confusion of *r*- and *l*; aspiration of initial *h*- from *f*- Latin and from Castilian *j*; relaxation or loss of implosive consonants (followed by another consonant, in the middle of a word); loss of intervocalic -d-); morphosyntax (*voseo*, i.e., the use of the pronoun *vos* for informal treatment instead of *tú*; use of *ustedes* with second-person plural value; post-positioning of possessives, as in *la hija mía*; great use of the diminutive appreciative suffix, as in *ahorita*, the use of suffixes -*ada* as in *muchadada*, *platicada*, etc.; absence of *leísmo*, *laísmo* or *loísmo*).

3. Our Project: A Tour Through Latin-American Spanish Varieties In The Spanish As Foreign Language Classroom

This project focuses on the Latin-American varieties of Spanish language (Liceras, Carballo & Droege, 1995; Beaven & Garrido, 2000) which reflect the binomial cohesion-diversity, which we have just analyzed in the previous chapter, resorting to literary and hypermedia discourses with contributions from historical sociolinguistics.

According to authors as Fernández-Corbacho (2014), Mora (2013) and Knutson (2003), due to the affective dimension it contains, the experience should function as a compass which allows students to guide their learning with a strong relationship with the real and virtual worlds. In fact, it seems to us that the experiential communicative approach is the most effective approach for the implementation of the study of linguistic and cultural varieties in the Spanish as Foreign Language classroom, because it implies the connection of the language contents with the student, their hobbies and interests and with his/her experience of the world (Fernández-Corbacho, 2014).

In this way, students participate in an interactive process of co-construction of cultural knowledge about the societies of the Spanish-speaking countries and theirs own, by analyzing their similarities and differences among them and acquiring skills that allow them to acquire knowledge by themselves and interact successfully with native speakers (Valls Campà, 2011). Let us now focus on our study, including its research design and didactic proposals.

3.1. Research Design: Methodologies, Aims And Questions

Our macro study was developed around the specific aims and research questions that one can find in Table 1. Taking our macro study into consideration, we have used the following research tools: a) questionnaires aimed at students, about both the use of mobile devices in the Spanish as Foreign Language Classroom (<https://goo.gl/forms/OGIj3yZ4sWlc8wGc2>) and their representations and knowledge of Latin-American linguistic and cultural varieties of Spanish language (<https://goo.gl/forms/m00rxsA3I0B7XIEg2>); b) questionnaires aimed at teachers about their representations on the teaching of linguistic and cultural varieties of Spanish language (<https://goo.gl/forms/m00rxsA3I0B7XIEg2>); c) analysis grid of course books on the presence of Spanish linguistic and cultural varieties; d) analysis grids of graduation degrees of Portuguese higher education institutions in relation to the presence of linguistic and cultural varieties of the Spanish language; e) project works, developed by students within the nature of our study; f) self-assessment questionnaires which were implemented in the end of each didactic unit.

Table 1: Aims and research questions

Aims	Research Questions
<p>A. Describe the sociolinguistic and sociocultural representations and knowledge that teachers and students have about the linguistic and sociocultural varieties of Latin America, regarding the process of teaching Spanish as a Foreign Language in higher education institutions.</p> <p>B. Analyse y the representations that teachers of higher education institutions have of teaching practices that favor the (re) construction of knowledge related to Spanish and its varieties.</p> <p>C. Analyse the degrees that offer content about Latin America in Portuguese higher education institutions, regarding teacher training.</p> <p>D. Analyze Spanish as Foreign Language teaching course books regarding the approach of content related to the linguistic and sociocultural varieties of Latin America Spanish.</p> <p>E. Create didactic proposals based on literary and hypermedia discourses that capture the linguistic and cultural varieties of Latin America, considering an experiential communicative approach.</p> <p>F. Demonstrate the creation of new sociolinguistic and sociocultural representations and knowledge by students, when they are stimulated through practices based on an experiential communicative approach.</p>	<p>1. Which representations have students and teachers got of the linguistic and cultural varieties of Latin American Spanish in higher education in Portugal?</p> <p>2. How are the linguistic and cultural varieties of Latin-American Spanish taught in teacher training degrees in Portugal?</p> <p>3. Which literary and hypermedia discourses and their phonetic, morphosyntactic and lexical features can facilitate work with the linguistic and cultural varieties of Latin American Spanish?</p> <p>4. Which practices can be mobilized in educational contexts that may contribute to the reconstruction of the sociocultural and sociolinguistic knowledge of Spanish and its Latin-American varieties?</p>

As we have already mentioned, the main and only aims of this article are both to analyze the students' representations on the use of mobile devices in the teaching and learning process of Spanish as a Foreign Language, and at the same time present didactic proposals which entail the development of skills related to the linguistic and cultural varieties of the Spanish language, and finally analyze students' projects which were developed within this project. Therefore, taking Table 1 into account, in the scope of our micro study, we will focus on research question number 4 only.

In relation to our micro study, we would like to mention that this is an empirical research of exploratory and descriptive nature because it is our aim to describe the collected data results (Yin, 2005). According to Coutinho & Chaves (2002), this kind of research aims at transforming a certain educational reality, allowing for knowledge of great value and precious insights.

Focusing on the questionnaires related to the use of mobile devices in students' daily lives and learning process, which were created and applied, include Likert-type scales (see Figure 2) and can be accessed here: <https://goo.gl/forms/OGIj3yZ4sWlc8wGc2>. They were built according to categories which emanated from scientific literature we analyzed (Tuckman, 2000), including Carrega's study (2011). This questionnaire is based on a study carried out by Carrega (idem), in which the researcher figures out that the mobile phone became an almost mandatory accessory used by younger generations in everyday situations, from classes to free time activities. Let us know analyze the data we collected during our research.

Figure 2 - Sample of the questionnaire on the use of mobile devices in students' daily lives and learning process

3.2. Analysis Of Students' Representations On The Use Of Mobile Devices In The Learning Process

After having presented the design of both our macro study and micro study, we will now analyze the collected data within the application of questionnaires related to the use of mobile devices in students' daily lives and learning process.

In relation to the sample, we would like to start by mentioning that 82 students answered the questionnaire. 75% of the students are female and 25% male. 90% of the students are less than 25 years old and all of them are studying Spanish as a Foreign Language (either A2 level or B1.2 level) and other curricular units in the Graduation Degree in Foreign Languages and Cultures at a School of Education in Porto, Portugal.

Taking the answers to the question "Which mobile devices do you own?" into consideration, most students have got mobile phones (46%) and some of them own laptops (34%). As we can see in Graph 1, tablets are still owned by few (20%), perhaps due to the fact that they are still rather expensive.

If we focus on Graph 2 and analyze their answers regarding the types of use they make of these devices in their daily lives, we can see that students are used to access social networks (90%), making calls (80%), send SMS (70%), take pictures (75%), listen to music (80%), watch videos (70%), etc. on a daily basis.

Some of the activities are undertaken on a weekly basis by a great group of students, namely video calling (60%) and video recording (50%). One of the things which is really impressive is the fact most of them do not write or read in their mobile devices. We were expecting this to be quite different, as tablets made this more practical and quite easier. This must be related to the fact that most students do not own a tablet.

Graph 1 - Mobile devices students own

Graph 2 - How many times students use their mobile devices in their daily life to...

In Graph 3, and taking their answers in relation to the types of use they make of these devices for learning purposes into account, we can see a lot of differences. In fact, we can easily notice that most activities they undertake outside the classroom walls and learning environment on a daily basis are sort of forgotten. This is the case of pro-active tasks one can perform with the mobile phone, namely take pictures, listen to music, play games, record videos and record audios.

Graph 3 - How many times students use their mobile devices to learn...

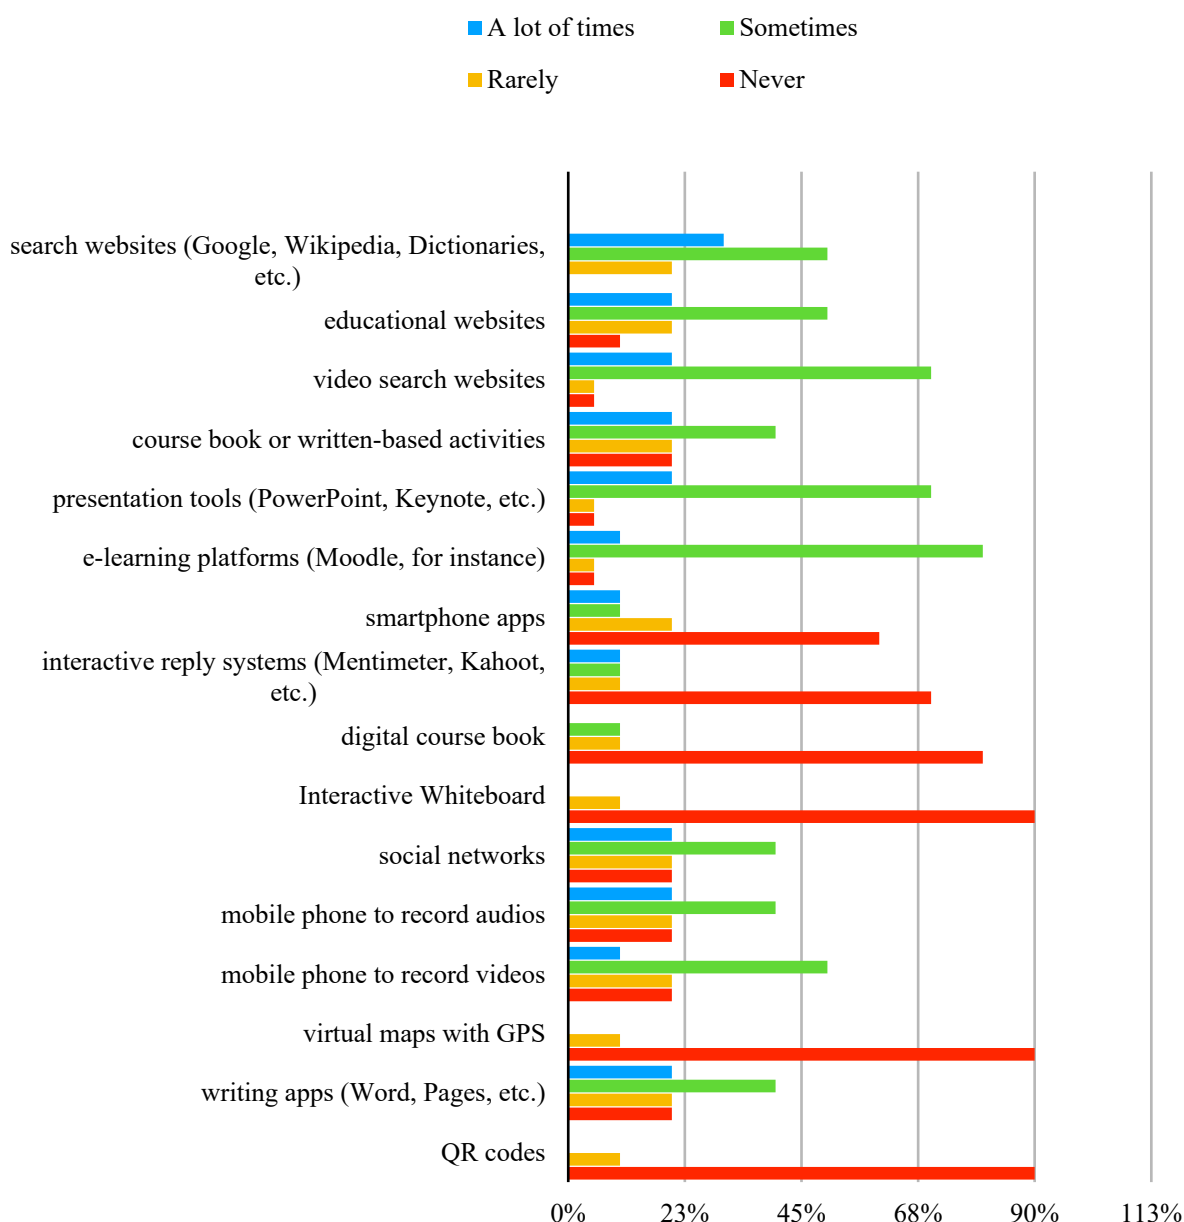

In relation to the question “Do lecturers let you use mobile devices within the classroom?” (see Graph 4), most students answer “Never” (40%) or “Sometimes” (40%). The students who answered both “Usually” or “Sometimes” mentioned some of the tasks they undertake with their mobile devices, by replying as follows: “search for answers and online dictionaries”, “interactive games”, “they always let us use whenever it is necessary, for example for a class search or for taking notes”, “only for searching the web”, “search for information on an online dictionary”, among others.

Graph 4 - Do lecturers let you use mobile devices within the classroom?

Going further on the analysis, if we ask them to assess how many times they undertake different activities, we can

easily find out that some of the resources/activities may be considered as almost forbidden within the classroom walls due to the fact that they are scarcely used or almost not used at all, namely: interactive reply systems, virtual maps or QR codes. However, video websites search, presentation tools, e-learning platforms and course-book and written-based activities strike as the most popular tasks undertaken in educational contexts (see Graph 5, for further details).

Graph 5 - What do students use their mobile devices in classroom for

Summing up the results we obtained with the applied questionnaires, we may say that students are not taking the most out of their mobile devices within classroom walls and learning environments. On the one hand, as we have seen before, mobile devices should be used continually, i.e., if students use their mobile phones or tablets to explore the world outside the university, they should be using these devices within the university to explore learning experiences and get involved in interactive, engaging and gasified tasks, as much as possible (Toledo, 2015; Osóres, et al, 2013; Álvarez, 2016). Even though they are using technology in classroom, most of the times they are using it as passive consumers, rather than avid and active producers of knowledge. In Spanish A2 and Spanish B1.2 curricular units we implemented some activities which catered for an active posture of students towards learning, which we will analyze in the following subchapter.

3.3. Analysis Of Students' Project Works Related To Latin-American Spanish Varieties

In this subchapter present and analyze activities and student's project works, in which they were engaged and involved in an active manner, bearing in mind that these proposals are related to Latin-American Spanish language and cultures. By being in contact with living samples of Latin-American countries, students were able to develop skills, such as: critical thinking, communication and critical cultural awareness. After the presentation of the activities, a brief analysis of self-assessment questionnaires' replies completed by the students, will be made.

We organized his chapter in two sections: section A) related to students and their gamified experiences in the SFL classroom; section B) related to activities in which students engaged as try producers of knowledge. Let us start with section A.

A) Gamified experiences in class

One of the activities which make part of most motivational steps is brainstorming. Nowadays we may use digital platforms, such as *Mentimeter* (<https://www.mentimeter.com>), *Kahoot!* (<https://kahoot.com>) or even *Plickers* (<https://www.plickers.com>), in order to perform this type of motivational tasks.

Mentimeter is a free website which allows for the creation of fun and interactive questionnaires for the classroom. By inserting a code within the application on their mobile devices, students have the chance to participate by creating tag clouds (see Figure 3), answering small questions with shot texts (see Figure 4) or even giving their opinion on specific topics, contributing for the instantaneous creation of classroom charts.

In Figures 3 and 4 we can see examples of activities developed by students, in which they focus on both linguistic and cultural content of Spanish-speaking countries, namely cultural items from the target-cultures and the history related to the Inca people.

Figure 3 - *Mentimeter* “What is the first thing that comes to your mind when you think of Spanish language”

The gamified experience within this platform can be felt through the setting up of a timer for each task, which students have to undertake. In fact, the design of a gamified activity within this platform takes the following core drives into account: a) core drive 1, as students are called to give their opinion; and, b) core drive 3, as they can get creative in the answers they give. If we compare it with other platforms, such as *Kahoot!* or *Plickers*, it offers a little less quality gamified experience, as not all of Chou's Octalysis core drives are tackled.

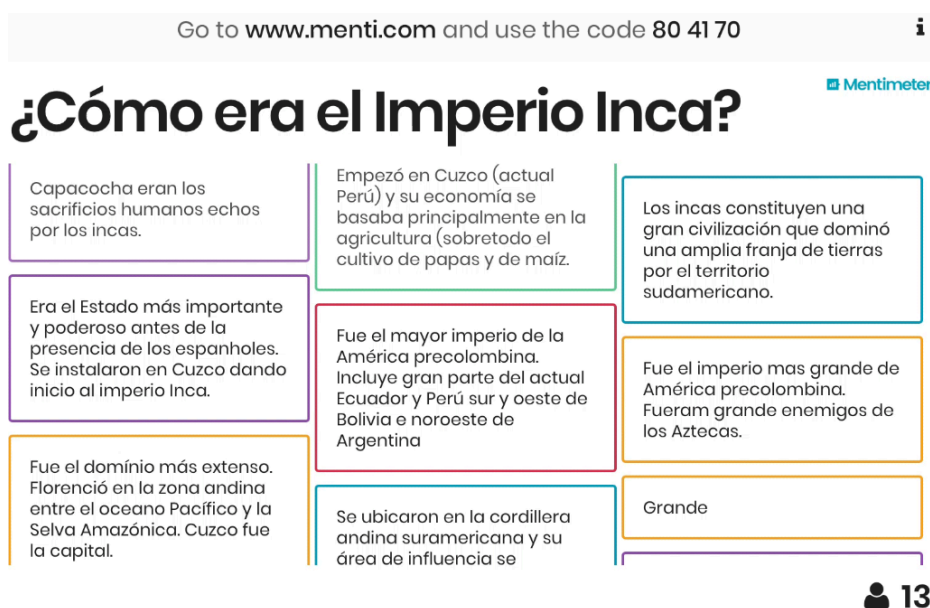

Figure 4 - Mentimeter “How was Inca empire?”

The *Kahoot!*'s experience tackles all of the Octalysis core drives and for this reason is considered to be a true gamified application. Within the scope of our project we implemented the *Kahoot!* questionnaire entitled “How much do you know about Latin America?”, which can be accessed here: <https://play.kahoot.it/#/?quizId=468cbd0c-9da9-4fa9-a546-9cc3a51624d2>. Throughout this game, students have the chance to answer questions related to topics such as history, geography, culture and language varieties of Spanish-speaking Latin American countries, including vocabulary, expressions and accent of Spanish language in the region (see Figure 5, for more details).

Figure 5 - Kahoot! “How much do you know about Latin America?”

Taking the Octalysis framework (Chou, 2016) into account, we considered the following while designing this activity: a) core drive 1, as students are called to solve problems in the form of short but difficult questions; b) core drive 2, because there is a points and leaderboard system, which gives them the sense of progression or not; c) core drive 3, as they have to tackle some issues, by analyzing pictures and videos, and feel important by giving them such power; d) core drive 4, as they participated in the activity in small groups and groups have to “fight

against” other groups during the questionnaire application; e) core drive 5, competition drives them to try to defeat other groups in the following rounds in the game; f) core drive 6, as winners would win a prize which was a CD from a famous Latin American music band, which acted as a kind of token; g) core drive 7, as uncertainty and curiosity upon what comes next move them within the game; h) core drive 8, as they tend to avoid bad things from happening, such as their group losing one of the rounds.

Concerning other gamified platforms, our students had the chance to develop other warming up activities, as the one related to the use of *Heads Up!* (<https://itunes.apple.com/pt/app/heads-up/id623592465?mt=8>) and the revision/activation of vocabulary on the topic “clothes”. Some of the vocabulary was of Latin American origin, namely *pollera*, *remera*, *musculosa*, etc. As we can see in figure 6, students were divided in groups of two members. One of the students has to perform some gestures and sounds, giving some clues, and the other one has to guess the words on the card present on the tablet on his/her head, before the timer runs out. They may flip the tablet down if they guessed the word correctly and up if they did not guess it properly or simply want to pass to another word, avoiding the loss of time.

Due to its nature, the platform allows for repetition of some of the words which allows students to find new strategies to make their partners guess them. At the same time, it permits recording their partner’s performance while giving gestures and uttering sounds, so that it can be analyzed in a critical manner.

In relation to the Octalysis framework (Chou, 2016), we designed the activity taking the following core drives into account: a) core drive 1, as students feel this is a meaningful activity for them; b) core drive 2, as progression is also stimulated and encouraged by the repetition capabilities which the application offers and the instantaneous feedback which *Heads Up!* system gives in the end of each game; c) core drive 3, because students have to be creative so that their partners guess the words through their gestures and sounds; d) core drive 4, as they are involved in a true group activity which is bigger than themselves; e) core drive 5, as there is a lot of competition involved, in relation to the number of words guessed per group.

Figure 6 - Students playing *Heads Up!* game on vocabulary related to clothes

B) Students as producers of hypermedia content

One of the things we figured out in the answers students gave in the questionnaires we implemented is that students do not quite have the chance to get involved in the creation of content through mobile devices. In this section we will give examples of activities which can foster students’ involvement and engagement in the analysis of topics,

creation of news reports or even instructional dialogues.

One of the applications which contribute for the development of oral production skills is *Flipgrid* website (<https://flipgrid.com>). In this platform, students get the chance to share ideas and learn together while recording small videos about topics you want them to discuss. All of their videos appear in a grid, as one can see in Figure 6. One of the activities which students participated in is “Which animals of the Spanish-speaking world are in danger of extinction?”. First students had to search for information on one of the animals of a specific or group of specific Spanish-speaking countries. Second, they created their text on the topic and had the opportunity to train their performance before recording a definite version. Third, they had to record their video directly from the *Flipgrid* app within their mobile devices.

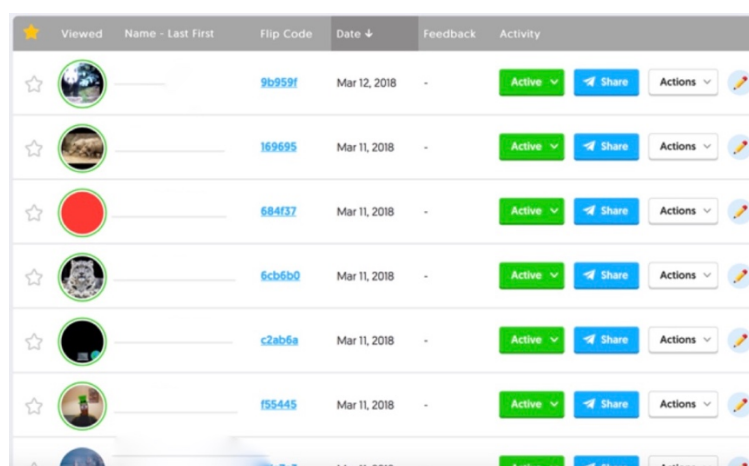

Figure 7 - *Flipgrid* on the topic “Animals from Spanish-speaking countries in extinction”

What is special about this platform is its interface (Figure 8), which allows for instantaneous feedback both on other students’ and teacher’s counterparts in a *Facebookian* style. Students get assessed by the teacher in relation to their performance (from 1 to 5 points) and ideas (also from 1 to 5 points). Students get ranked according to their points. Other students may also assess their fellow mates’ performances, selecting smileys and emoticons (hearts, rockets, etc.), which makes the activity quite funnier.

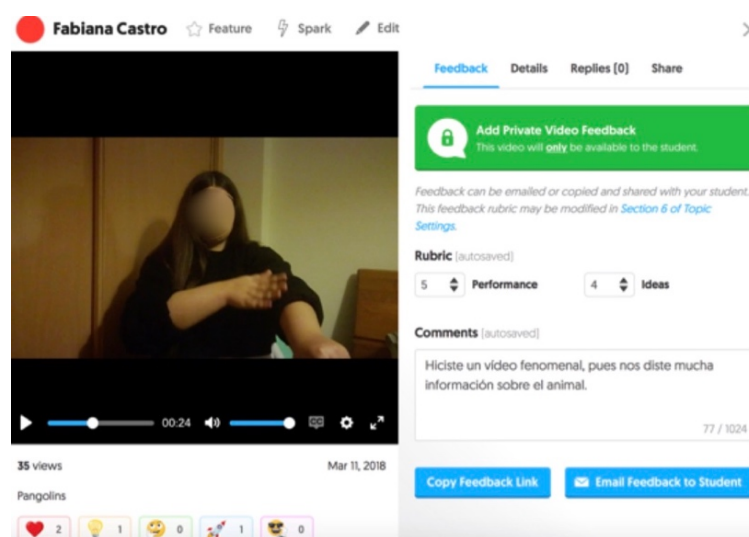

Figure 8 - Example of a *Flipgrid* video on the topic “Animals from Spanish-speaking countries in extinction”

Bearing in mind that a lot of students are nowadays true videobloggers, a lot of them felt really engaged and empowered during this kind of tasks, in which teachers tend to discover new talents or that some of the timid students are not really that timid as they usually show in traditional class environment. Students of Spanish A2 curricular unit also had the chance of using *Flipgrid* to present their parts of the house and the objects they entailed.

A sample of this activity can be found here: <https://www.youtube.com/watch?v=IQZUZwADL0Y>.

Another interesting activity, which was developed within the scope of our project, is the one related to news reports. First, students had the opportunity to analyze multiple types of news on multiple platforms from the Spanish-speaking diaspora, focusing on newspapers, websites and TV channels from Spanish-speaking countries. Second, they had to create a written report on one of present-day topics, which would be corrected by the teacher. Finally, they had to convert it on both a studio and street report, recording a video and formatting it using video editing software. Students had the chance to experiment on the job of a journalist, as some of the students choose this type of career as their master's degree.

In Figure 9, we can see one of the project works created by a group of two students of Spanish B1.2 curricular unit. By watching it, we easily find out that these students mastered both their written and oral production skills, but also skills related to video production, including the work with technological means, by using a mobile phone or a tablet.

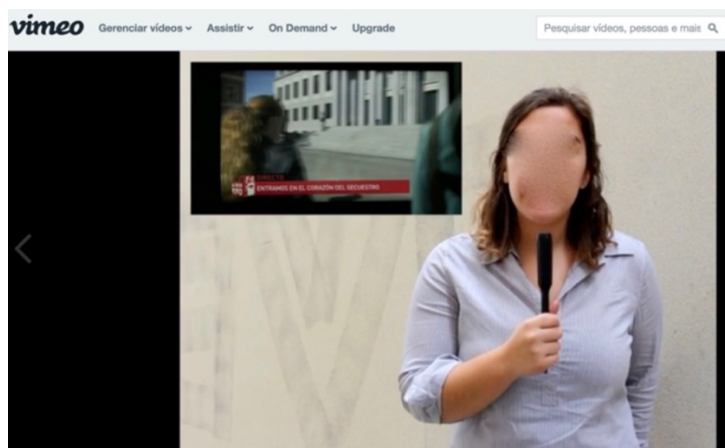

Figure 9 - Example of a News Report created by a group of students (<https://vimeo.com/279823407>)

The same occurred with another task developed by students of Spanish A2 curricular unit. A lot of our students tend to become air hostesses once they finish their graduation degree studies. Therefore, it is of utmost importance to give them contexts in which they can train skills they are going to need in their future jobs. That is why we asked our students to create an instructional video on the topic “airplane security before and during flights”. At first, students watched different videos from diverse Spanish-speaking flight companies, such as *Iberia* or *Volaris*. Then, they prepared their own videos (plot, setting and text). Last, they had to record it using their mobile phones. Students got quite involved during the task, by showing a very professional attitude and very rigorous oral performance regarding the use of the Spanish language (see Figure 10, for an example and a link to the video).

Figure 10 - Example of an Instructional Video about Airplane Security (<https://youtu.be/wmfhK372rjw>)

As we can see, creativity can also be stimulated. The screening of short films from Spanish-speaking countries, especially from Mexico and Argentina, induced us to foster the creation of this type of videos within the community of our students in the Spanish A2 curricular unit. In fact, one of the tasks they liked the most was the creation of a short film, in which they would be using verbs in present tense. These short films can be watched on Vimeo platform here: <https://vimeo.com/251930220>, <https://vimeo.com/251944241> and <https://vimeo.com/251931271>.

After having carried out all these activities, students were asked the following “Taking the Spanish classes you attended into account, mention resources and educational strategies used by the teacher which you consider as the most effective ones. Give examples of things you learned and experiences you had based on the use of digital resources in the classroom.” Most students enjoyed the lessons, especially because of their dynamic and interactivity (“I really enjoyed classes with Internet access and Kahoot!, as they turn out to be more dynamic.”). Some other students understood the power of mobile devices in their learning process, as tools which can empower them (“The use of mobile phones to create small videos like a YouTuber was really inspiring and stimulating”). Others uttered some words on either the applications and developed activities (“I really loved creating short films and developing micro-tasks in Moodle platform, and at the same time I enjoyed writing small stories or inventing comics”) or the contents related to linguistic and cultural varieties (“I find it defying to get to know words as “Vaina” which is used in specific contexts in Latin America, especially in Venezuela”; “Up until now I did not know that Spanish had such a diversity in its linguistic component. Now I know words such as petaca, valija, boleto”; “I loved to learn new things on my own related to Quiroga or even the Inca empire. It was really inspiring. Latin American countries are really exotic and overwhelming!”).

Conclusions

Some of our present-day education systems are still tied to a Taylorist model of staff preparation for a full-employment economy, being not capable of creating citizens for the 21st century. Within this context, teachers tend to rely on course books to offer adapted activities to their students. However, some researchers feel that these: lack in variety of strategies, offer a poor response to the true needs of students, diminish opportunity for spontaneity and curricular flexibility, and also do not stimulate creativity in the use of the language itself (Cunningsworth, 1995). As Allwright (1981, p. 8) mentions, “content (potential intake) is not predictable. It is, rather, something that emerges because of the interactive nature of classroom events.”

Language learning is about dealing with specific contexts, spontaneous and vivid ones, which entail diversity that our *glocal* society offers. If one thinks about foreign language teaching, and specifically in Spanish as foreign language learning process, one should be offering students opportunities to contact with that diversity, in order to make them become as plurilingual as pluricultural as possible, as learning speakers of the target language.

As we have seen in this article, we believe in a pedagogy which uses technologies, especially mobile devices, the Internet and the apps it offers, to aim at the constant transformation of the conditions in which one learns. Moreover, it implies the development of a social responsibility, a critical awareness of the state of the society and a proactive role by the learners in the whole process.

Therefore, through some mobile technology-driven and gamified activities, prepared within the Octalysis framework (Chou, 2016), students felt empowered within the learning process. In this way, we may conclude that:

- a) Mobile phones and tablets allow for the empowerment of students and convert them in pro-active producers;
- b) Technology-driven methodologies may allow us for the creation of a society of multilingual, multiliterate, multicultural and critical thinkers who possess both linguistic and technological knowledge, rather than monolingual, mono literate and monocultural test-takers only.;
- c) the gamified materials seem to be suitable instruments to be used in the SFL class, since the students learn the varieties of Spanish language in an interactive and pro-active manner, either re(building) their views on language or cultures or even creating new knowledge.

Child Maltreatment A Challenge For Teachers

Isabel BICA*, José COSTA, Aparício GRAÇA, Ernestina SILVA, Madalena CUNHA & Carlos ALBUQUERQUE

*Escola Superior de Saúde de Viseu - Instituto Politécnico de Viseu,
NURSID: CINTESIS. CI&DETS Portugal
isabelbica@gmail.com

Abstract

Introduction: Today, worldwide, ill-treatment in children and young people is understood as a true scourge of public health. Teachers, acting as agents for detecting situations of abuse and with specific responsibilities, have a privileged position on child protection. Urging, in a pressing and permanent way, the combination of efforts and fruitful articulation between the various sectors of society, namely health and education, in order to reduce this scourge.

Objective: Identify what teachers know about child maltreatment

Method: This is a quantitative, descriptive, non-experimental, cross-sectional study, conducted on a sample of 310 teachers in the 1st cycle and pre-school of schools of the central region of Portugal, mostly women (84.9%), with ages comprehended between 31-51 years old and with a average professional experience of 25.76 ± 6.916 standard deviation. Data collection was conducted through a questionnaire of sociodemographic and formative characterization and two scales developed by Cunha (2014, DGS, 2011) "Risk Factors/Aggravation" and "Bad Indicators Tracts." **Results:** This study revealed that 31.2% of the teachers have basic training, with only 21.3% claiming to have continued training in the subject. 59.4% consider important in their education, and only 14.8% have knowledge of the "Guidance for Education Professionals in Bad Situations Approach treatment or other hazard situations." With regard to knowledge of risk factors/protection/worsening, 10% had a low knowledge about them, 17.4% moderate knowledge and 72.6% high knowledge.

Conclusion: In view of the results is considered essential to focus on training, integrating it into the teachers of basic training and encouraging the in-service training. The subject areas to focus should include characterization of mistreatment, response protocols, legal aspects of intervention, coordination mechanisms between the intervention partners, domestic violence, parenting skills, conflict management and communication skills and family mediation.

Keywords: *Child abuse; Teachers; Child; Health education; School*

Introduction

Child maltreatment is currently a worrisome problem throughout the world, presenting itself as a multifaceted phenomenon, susceptible of different dimensions of analysis. With the passage of time, the phenomenon has assumed progressive gravity, requiring, therefore, early identification and immediate intervention, and it is essential to prevent its occurrence in children/families at risk.

The concept of child maltreatment of the World Health Organization (WHO) has a consensus within the scientific community. Thus, this is defined as "...all forms of physical and/or emotional maltreatment, sexual abuse, neglect or negligent treatment or trade or other exploitation, resulting in actual or potential offense to health, survival, development or dignity of the child, in the context of a relationship of responsibility, trust or power" (WHO, 2002, 59). In a broader sense, according to the Direção-Geral da Saúde (2011, p.7), "child maltreatment refers to any non-accidental act or omission perpetrated by parents, caregivers or others that threatens the victim's safety, dignity and biopsychosocial and effective development". From the earliest times, in the twilight, a reality that has accompanied human existence!

However, in everyday life, child maltreatment is being increasingly intensified. This is due to the number of cases of abused children, the greater acuity and sensitivity of the professionals/population for the detection of situations of risk and a better social response of the community structures.

The WHO estimated that in 2002 about 31 thousand deaths were the result of homicide in children under 15 years of age. The complexity of the phenomenon, coupled with the inexistence or insipidity of registration systems, contributes to the difficulty in establishing, with some reliability, the size of it. There are numerous social, ethical and methodological constraints; in addition to being a problem, as a general rule, restricted to the private sphere, and as such difficult to diagnose, there are still some social and cultural values that tolerate (and accept) forms of violence as educational strategies (Magalhães, 2005).

The numbers, according to Martins (2008), are truly alarming. It is therefore important to reflect on the physical and psychological sequelae that these children will hold for life, and to be aware that there will probably be other dimensions of child maltreatment still unknown.

It is imperative, therefore, the articulation between the sectors of society, being examples health and education.

Early detection and appropriate intervention will contribute to the reduction of cases and consequences of childhood maltreatment, and the communication quality between nurses and teachers is of particular importance here, so that the former can fully exercise the functions of health promoter.

According to data provided by the Health Action for Children and Young People at Risk (ASCJR) report of October 2012, were reported in Portugal: 68% cases of neglect, 13% cases of psychological maltreatment, 9% cases of physical maltreatment, 7% cases of sexual maltreatment and 3% other forms of maltreatment (Direção-Geral da Saúde, 2012).

The Annual Report on the Evaluation of the Activity of Committees for the Protection of Children and Young People reveals that in 2010 the Commission for the Protection of Children and Young People (CPCJ) monitored 68,300 cases (+ 2% compared to 2009), of which 32,799 had no resolution at the end of 2010 having moved to 2011. There is a downward trend for opening new cases (-1.05%) but an annual increase in the number of cases reopened (+ 33.5%). Of the total cases that were filed in only 4% the danger situation was not confirmed (Carvalho, 2011).

In 2014, according to data from the Annual Activity Assessment Report, the Commissions for the Protection of Children and Young People (CPCJ) monitored 73019 cases of promotion and protection, of which 35,597 cases were carried over to 2015, that year the data show that an average of eight children a day were mistreated.

In the year 2017, in Portugal, preliminary data from the annual report of the National Commission for the Promotion of the Rights and Protection of Children and Young People (CNPDPJ) show that on average seven children a day were victims of mistreatment, that is, 2719 signs were made to the commissions of minors of physical and psychological abuse to children.

Epidemiological monitoring emphasizes violence against children and young people as a universal and endemic phenomenon, despite the problems of reporting and the omission demonstrated by the silence of many, statistics begin to highlight violence against children and adolescents as a universal phenomenon and endemic. Failure to prevent and report these cases prevents children, as well as their families, from receiving protection and treatment and minimizing the consequences thereof. Thus, it is of the utmost importance that the knowledge and attitudes of educators be assertive to promote early detection and immediate intervention as advocated by the World Health Organization and International Society for Child Abuse and Neglect Prevention (WHO and ISPCAN, 2006).

Of course, the intervention of the competent bodies in this field of Children and Youth, which includes teachers, occurs when parents or caregivers do not fulfill their role. Pre-school educators and 1st cycle teachers are key elements in the early detection of these cases since, due to the monodocence existing in these cycles, they have greater access to certain aspects of children's lives than other teachers, that is, access privileged to the daily learning of children, to various forms of their individual, family and social behavior, to their school performance and to their inclusion process (Cunha, 2014). On 3 June 2006 a cooperation protocol was signed between the Ministry of Labor and Social Solidarity and the Ministry of Education, which establishes in the teacher's role defined functions with regard to intervention in situations of risk and child danger.

Adequate knowledge of indicators of child maltreatment is necessary to ensure that appropriate intervention is possible with competent authorities. However, knowing the indicators of maltreatment and the risk / aggravating factors is not enough to detect possible situations of mistreatment or other situations of danger. It is also important to consider the child's age and stage of development, depending on these, the existing warning signs of danger may be different (Cunha, 2014).

In this context, there is a clear interest and need to investigate this problem, since in Portugal there are still few studies in this thematic area. Thus, we sought to identify the sociodemographic variables that relate to the knowledge of pre-school teachers and the 1st cycle in the face of maltreatment in the child.

The Study

The quantitative, cross-sectional and descriptive study. It was carried out in a non-probabilistic sample for convenience, consisting of 310 pre-school teachers and first cycle teachers working in public schools in the central region of Portugal, in the 2015/2016 academic year. The data collection was authorized by the Ministry of Education and was carried out through the Assessment of Knowledge Rating Scale (EACI) of Cunha (2014). The EACI aims to perceive the knowledge that teachers have about the factors of protection and risk against child abuse. This scale is a Likert type with 6 categories: totally disagree, disagree, do not disagree or agree, agree, totally agree and have no opinion scored from 1 to 5, consisting of 50 items.

"I do not disagree or agree" and "have no opinion" gave a score 1. Score 2 and 3 were assigned to "totally disagree" and "disagree" and scores 4 and 5 responses to the "agree" and "agree" totally "for the true statements and the inverse for the items with false statements.

After data collection, the questionnaires were debugged in order to eliminate all those that were incompletely or incompletely completed. The data were then entered into a computerized database and processed in the statistical treatment program Statistical Package for Social Science 24.0 (SPSS) in order to treat them.

Findings

Aiming to chart the profile of respondents, it was observed that the majority are between 41-50 years or more than 50 years old, with similar percentages (43.2% and 43.6%), living with a partner (76.8%) and have children (86.5%). The statistics on the professional experience reveal that respondents had a minimum of five years professional practice and a maximum of 39 years, it corresponds to an average experience of 25.76 years with a standard deviation of 6.92 years.

For males, who represent only 15.2% (47) of the total sample, the mean service time (mean = 26.26 years \pm 6.36 SD) is higher than the female (25.66 years \pm 7.02 SD), which represents 84.8% (263) of the sample.

Formative characterization and signaling

Concerning training and signaling, and with regard to male respondents, the majority have no basic training on child maltreatment (80.9%); nor did they receive further training (78.7%); however, attach great importance to this continuous training (57.4%); (83.0%) are not aware of the existence of the "Guide". Mostly, they have never reported students to maltreatment (92.6%) but are aware of the existence of institutions for this purpose (88.9%). On the other hand, the majority of women do not have basic training on child abuse (68.8%); nor did they receive further training (78.7%); however, they also attach great importance to this continuous training (59.7%); with the majority (85.6%) not aware of the existence of the "Guide". Mostly, they never reported students on maltreatment (78.6%) but are aware of the existence of institutions for this purpose (93.7%).

The Chi-Square values (X^2) showed that there were no statistically significant differences ($p > 0.05$) between sex and the different variables. (see Table 1).

Table 1 - Characterization of training and signaling of the sample according to sex

What socio-demographic variables are related to the knowledge of pre-school and elementary school teachers (1st cycle) in the face of maltreatment in children?

Para saber a influência da idade no conhecimento dos professores sobre os maus tratos na criança efetuou-se o teste de Kruskal-Wallis. The Kruskal-Wallis test was used to know the influence of age on teachers' knowledge about child maltreatment. It should be noted that the respondents aged 41-50 dominate in most dimensions, except for the "Physical" (31-40 years), "Behavioral parents" and "Academics" (> 50 years). There were no statistically significant differences in any of the dimensions or overall scale ($p > 0.05$).

The Mann-Whitney U test was used between sex and the dimensions of abuse. It should be noted that the domain of female respondents in all dimensions, except for "False maltreatment" and "Social", dominated by elements of the opposite gender, however, with no significant statistical differences ($p > 0.05$).

Regarding the influence of marital status on the knowledge of teachers about child abuse, the Mann-Whitney U test was used, highlighting the mastery of the elements without companion in all dimensions and overall, except for "False maltreatment", dominated by those who have a partner, and with very significant statistical differences ($p = 0.003$) for the "Physical" dimension.

Regarding the influence of the existence of children on the teachers' knowledge of child maltreatment, a Mann-Whitney U test was performed. It is highlighted the dominance of the elements with children in all dimensions and

global, except for "Physical", dominated by those who do not have children, however, with absence of significant statistical differences ($p > 0.05$).

Finally, for the influence of professional experience on teachers' knowledge of child maltreatment, the Kruskal-Wallis test was performed. It should be noted that respondents with > 32 years of service dominate in most dimensions, with the exception of "False maltreatment" (20-25 years) and "Physical" (< 20 years) and with statistically significant differences ($p = 0.007$) for the dimension "Academics".

Conclusions

The results of this study made it possible to perceive and acquire more information about the knowledge of teachers of pre-school and basic education of the 1st cycle on child maltreatment in the Central region, as well as the deficits that these present at the level of training. Thus, 68.8% of the teachers did not present basic training on child abuse, 78.7% said they did not have continuous training in the subject area and only 14.8% had knowledge about the "Guidelines for Education Professionals in Approach to Situations of Ill-treatment or other Situations of Danger". Regarding the knowledge of risk / protection / aggravation factors, 10% had low knowledge about them, 17.4% had moderate knowledge and 72.6% had high knowledge. However, it was also possible to infer that teachers are more likely to recognize characteristics related to deficits in parental capacities than to indicators of abuse observed in children. In view of all the above mentioned data, we can conclude that it is undeniable, as Cunha (2014) points out, citing Lombo (2000), that teachers occupy a privileged position to signal the phenomena of maltreatment in children and practice preventive measures. However, they have no notion of their actual obligations and potentialities in the face of a case of mistreatment as Mendonça (2008) observes. This study revealed, above all, that there is a huge discrepancy between teachers with basic training (31.2%) and those who consider it important in their training (59.4%). In this sense it is considered essential to invest in training, integrating it in the basic training of teachers and encouraging it in continuing training. Thematic areas to be addressed should include characterization of child abuse, action protocols, legal aspects of intervention, mechanisms for articulation between intervention partners, gender equality, domestic violence, parental competencies, conflict management and communication techniques, and family mediation. These trainings should include teachers but also be extended to the whole school community in order to foster the empowerment of teachers in particular and the school community in general on this theme. It is also recommended that the effectiveness of the training activity be evaluated.

Abstract

The purpose of this study is to analyze fourth year classroom teaching pre-service teachers' views about content organization skills. This study utilized phenomenological design, which is one of the qualitative research methods. Pre-service teachers participating in this study were given training about using content organization strategies in concept and generalization instruction within the teaching practice course. After the training, the pre-service teachers were asked to prepare a teaching plan every week and use the information given in the training in these plans. The pre-service teachers were given the chance to use content organization strategies through the micro teaching practices. At the end of the process, semi-structured interviews were conducted with pre-service teachers in order to find out how they perceived the process and how they construed it. The participants in this study were selected using easily accessible sampling. One of the researchers in this study was the instructor who was responsible for the participants' teaching practice; this sampling type was utilized because the study, by its nature, required constant communication with the participants and the schools they visited for practice. The study involved volunteer participants who were enrolled in the fourth year classroom teaching department of the Education Faculty in a state university and who gave informed consent to participate in the study. The study firstly involved the "Content organization skills in Concept and Generalization Instruction" training given to the fourth year classroom teaching department students within the teaching practice course; the training was given through a four-week program that took 12 hours. Following this training, pre-service teachers were asked to practice the information given in the training in the teaching plans they prepared throughout six weeks. In line with the training given, pre-service teachers were given feedback about their teaching plans each week on regular basis. At the end of the term, pre-service teachers' views about the process were collected using a semi-structured interview form. In line with the data obtained from the expert views and the pilot study, the interview form was revised and the final form was administered to the participants. Both researchers were present in all interviews. Data will be analyzed using content analysis methods. Content analysis of the data is still continuing.

Comparative Study Of Competences 2.0 Between Young And Senior People. Present Time And Challenges For Their Inclusion

Abstract

Nowadays, Information and Communication Technologies (ICT) have taken a leading role in virtuality, interactivity and information flow at all educational levels and ages in employment and interpersonal skills. In this context of technological boom, it is important to study the skills of young and senior university students. The main objective of this research is to compare the digital skills in knowledge and use of ICT in social communication and collaborative learning, skills useful for searching and treating information, as well as interpersonal competence among young and older students from the University of Granada (Spain). A descriptive study with a quantitative methodology using the questionnaire as an information tool has been made. The sample consists of 200 subjects, 100 with ages between 18 and 22 years of age, and another 100 between 80 and 85 years of age. There is a great difference in their competences, illustrating the current unequal situation and the need to include older people in technology as it is important to create learning and communication contact between both generations.

Key Words: *Young people, seniors, Digital Literacy, ICT, Inclusion.*

Introduction

One of the characteristics of today's society is that now, unlike previously, information and knowledge are available to any individual, who has certain skills and the necessary technological resources can search for information, so that everyone can inform themselves and has access to any medium at any time and from any place. Through the Internet a large part of the activities provided by other technologies can be carried out (Heredia and García, 2017, Domínguez, 2009, Álvarez, 2011, Martínez, Cabecinhas and Loscertales, 2011, Daghan, 2017). In this sense, for Castells (2000), the Information Society represents a new industrial revolution. In this panorama of virtual connections / disconnections, two generations coexist, the "before computer" generation (Freixa, 2006) and the one that was born and grew up interacting with various technological devices, the so-called "digital natives".

1. Internet Uses

The population accesses technological equipment in a dizzying way and uses it with an increasingly higher frequency, for purposes as diverse as training, communicating, enjoying themselves and working. In addition, Internet is not limited to the mere transmission of information, but becomes a powerful mechanism of socialization, transmitter of ideas and values (Fainhole, 2006, Xavier and Cabecinhas, 2000). Although its original purpose was to reach safe, fast and economic information to facilitate communication, today it has become a means that can cause significant changes in people and society (Şahin, 2018).

Recent studies provide evident data about the crucial role that technologies have as emotional mediators that lay the strategic and structural foundations of significant relationships, enriching the emerging lines of debate around the application of ICT Information and Communication Technologies in socio-affective development (Colás-Bravo, González-Ramírez and de Pablos-Pons, 2013, Espinoza, 2015, Calvo and San Fabián, 2018).

In 2016, worldwide, 3.500 million people were using the Internet, of whom 2.5 million were from developing countries (ITU, 2017). Consequently, we consider that all our activity is linked in one way or another to the digital world, to such an extent that it becomes unthinkable to face life without these new tools. This technological wave is not exempt from weaknesses and risks, manifested in a world where there is a large gap between different parts of the planet, inequality in terms of sex, age, culture, etc. According to this premise, numerous studies have been carried out in order to analyse the influence of Internet on the youngest, considering them a priority and more vulnerable sector. In this way, we have tried to know both the positive and negative effects that Internet may have, and the uses that are made of it (Livingstone and Helsper, 2010, Yang and Tung, 2007, Ruíz-Corbella and De Juanas, 2013, Ballesteros and Megías, 2015).

In the Spanish panorama and according to the source of the Instituto Nacional de Estadística (National Institute of Statistics) (2017), 84.6% of the population aged 16 to 74 has used Internet in the last three months. 69.0% do so on a daily basis, a percentage that is slightly higher (1.3 points) than last year. 46.5%, of people between 65 and 74 years old use Internet compared to 98.0% of young people between 16 and 24 years old who use it, that is, more than twice the number of older people. Despite these results, as shown by the study conducted by Linne (2015), it is clear that Spanish university students are not addicted to Internet and more specifically to social networks. Other recent research (Martínez, Cabecinhas and Loscertales, 2011) shows that university senior students connect to Internet frequently, daily or between two or three times a week. These seniors emphasize the importance of Internet to be updated, to contact family and friends, for academic use and to consult the press. They consider the network to be easy but they could live without it. That is, it is not essential in their lives as it is for young university student. While young people are the main drivers of the society of the future, no less attention should be paid to the group of older people and therefore, older university seniors have been included in this research as interest in them worldwide is increasing. In the particular case of Spain, their evolution represents an important percentage not only of the current population but also that of the future.

The proportion of the population aged 65 and over has gone from representing 11.2% in 1981 to being 17.3% twenty years later and to 18.7% in 2015. But, if it is translated into figures, it means that between 1981 and 2015 the elderly population doubled to a little over 200,000 individuals. Between 2050 and 2060, the total population will fall by just over two million inhabitants and the group of people over 65 will only shrink by only 0.1%. In the year 2060 there will be something less than 15 million more, less than double the present, and will represent more than a third of the total Spanish population (35.6%). (Institute for the Elderly and Social Services (IMSERSO, 2017, p.36).

There are many benefits that Internet and the use of ICT can bring to the elderly. The activities that can be carried out are multiple and useful to encourage creativity, practice writing, improve sociability, exercise memory and mind, learn things they have not been able to do before due to lack of time, their profession, etc. (Pavon, 2000). A recent study (Martínez, Cabecinhas, and Loscertales, 2011), has revealed the main uses and motivations of active seniors to use Internet, as well as the main barriers for those who do not use it. Among the uses that are highlighted is the search for information, academic activity, reading the press and also navigation without any specific purpose. For those who do not use it, it is mainly due to the lack of good reason to do so and it is not because they do not see a limitation in their age or consider it a waste of time among other factors.

2. Digital Skill. Conceptualization

The European Parliament and the Council on 18 December 2006 put forward a set of recommendations on key competences for lifelong learning at the European level. It seeks to define the new basic qualifications that permanent learning should provide as an essential measure of Europe's response to globalization and the shift towards knowledge-based economies, with people as Europe's main asset.

The concept of competences was decided on linked to the work environment, and refers to all those aspects (capacities, skills, attitudes, etc) that a professional must have to develop their work in an effective way. As a result of this, in 2006, the European Parliament and the Council (2006) published a recommendation identifying eight Key Competences for Lifelong Learning. The development of key skills enables people to develop their innate potentialities and abilities to the fullest in order to be able to function in different contexts throughout their lives. Among them digital competence is highlighted as the basis of the research report that we present which implies the safe and critical use of Information Society Technology (IST) for work, leisure and communication. It is based on the basic principles and skills of ICT: the use of computers to retrieve, evaluate, store, produce, present and exchange information, and communicate and participate in networks through Internet (Ferrari, 2012, Bennett and Maton, 2010).

According to Lankshear and Knobel (2008) what we now understand as digital literacy or competence has evolved over the last decades, from more focused aspects with access to technology, visual or multimedia information. The transformation that has occurred in recent years with regard to literacy or digital competence and access to technology is very important. Digital literacy is the awareness, attitude and ability of people to use digital tools properly to identify, access, manage, integrate, evaluate, analyse and synthesize digital resources, build new knowledge, express themselves through multimedia resources and communicate with others in any specific context of life (Esteve, 2013, Gisbert, Espuny and González, 2011).

At present the vertiginous changes that are happening make an improvement in training necessary with access to it throughout life so that a series of abilities and skills that enable the individual to adapt to a society of changes; the relationship of the individual to information has changed, so the education sector proposes new ways of fostering a good development for students within the Knowledge Society (Chávez, Cantú and Rodríguez, 2016, González, Espuny and Gisbert, 2012).

Digital competence is understood as the conjunction of what many authors consider ICT competence and informational competence. In the knowledge society it does not make sense to speak only of tools for the storage,

access and retrieval of information, but we must also work with the necessary skills and abilities to properly use this information and then transform it into knowledge, with the objective of sharing it. That ultimately is what will help young and old to be skillful and socially competent at any time and in any environment.

2.1. Digital Competence In Young And Old

Changes in society have forced people to carry out a compulsory and necessary process of lifelong learning, as stated in the document on Recommendations of the European Parliament. There is therefore a real need to train both young and old in digital competence throughout life and work. According to Gisbert, Espuny y González (2011, p.76)

digital competence, we say that involves the acquisition of knowledge, skills and attitudes that have to do with the elementary use of computer hardware, their operating systems as hardware managers, software as a work tool, off-line communication and of online communication.

At this moment everything is changing, digital competence has become something indispensable to face the challenges of the citizens' daily life, *competence management or treatment of information* (Jaramillo, Hennig and Rincón 2011) is fundamental to advance in today's society as well as being fundamental for the academic and professional development of any student (Gisbert, 2011). The idea of 'digital natives', a generation of young tech-savvy users immersed in digital technologies who have spent their entire lives surrounded by and using video games, digital music players, video cameras, telephones, i-pods, Internet, instant messaging, text messages, multimedia and other tools of the digital era that are an integral part of their lives has gained widespread popularity (Bennett and Maton, 2010; Gallardo, 2012). Recent research has shown flaws in the argument that there is an identifiable generation, or even a single type of highly skilled technology user. Bullen, Morgan and Qayyum (2011) suggest the term digital learners should not be used because today's students do not conform to the stereotype represented in the discourse on digital natives. For the authors it is a social and not a generational issue, and its implications for education still need further in-depth study.

It is necessary to train university students to prepare them for an increasingly complex and globalized world, where the amount of information they will have to manage each day is ever greater and where they must use technological tools that advance and change at a dizzying pace (Gisbert, Espuny and González 2012).

As reported by Abad (2014), the data included in the Indicators of the Digital Agenda 2011 dedicated to digital competence show that while 90% of people between 16 and 24 years old are habitual users of Internet, only 46% of people between 55 and 64 years old are and this proportion decreases to 25% among people between 65 and 74 years old. This segment falls to 20% when it comes to people between 55 and 74 years old with low levels of education. (p.175). This verifies the existence of a generational digital divide, understood as the differences in access and use of ICT in different social environments.

Currently, how this 'digital divide' affects older people in their day to day life has not been analysed in depth. Digital competence 'is not acquired by technological immersion', and it is necessary to learn to learn, but this capacity is socially unequal and, among other aspects, is linked to age. The 'digital divide' in addition to being related to socioeconomic differences is also and considerably linked to age, especially in age groups far removed from digital generations such as people over 60.' (Hernand and Phillippi, 2013, p.14). Therefore, working with older people on digital competences must be a priority and an objective to achieve as a fundamental axis in life-long education.

In order to shed light on the situation described and to provide some suggestions on the need to include older people in technology, this study has marked out as its main objective to compare digital competence in knowledge and use of ICT in communication; social and collaborative learning, useful skills for the search and treatment of information, as well as interpersonal skills among university students and active seniors enrolled in university programmes for the elderly of the Open Classroom of Open Training of the University of Granada.

Method

The main objective of this research is to compare descriptively the digital competence in knowledge and use of ICT in social communication and collaborative learning, for the search and treatment of information, as well as useful interpersonal competences among young and seniors of the University of Granada.

To achieve the proposed objectives, a quantitative methodology was used to quantify and analyse the information to establish later comparisons among students aged between 18-22 years and those between 80-85 years (hereinafter senior students). Through quantitative research, fundamental knowledge is acquired, collecting, analysing and describing the data or phenomena studied through variables and concepts (López-Roldán and Fachelli, 2015).

The research was developed in the 2017-2018 academic year. The participating samples of our study were formed by students of the third year of the Degree in Social Education of the Faculty of Education Sciences of the University of Granada and senior students of the Open Classroom of Open Learning also belonging to the University of Granada. A random and stratified sampling was followed. The total population was composed of

200 people, 100 of the third year of Social Education and 100 of the Open Classroom. In this way, a final sample of $n = 200$ subjects was obtained (119 women and 81 men in total), of whom 61 are women and 39 men of the third year of the Degree in Social Education and 58 women and 42 men of the Open Classroom of Open Learning. We worked with a significant sample exceeding the necessary subjects of the sample calculated through a confidence interval of 95% and whose results required the participation of at least 81 Students. The choice of this population was mainly because we wanted experienced younger students who after completing three years in the Faculty of Educational Sciences possessed a terminological maturity and a critical attitude to help us solve our research problem. This was the knowledge of the existing differences before digital competence in knowledge and use of ITC in social communication and collaborative learning, competence in using it for the search and treatment of information, as well as the interpersonal competences among young and older people in the University in order to be able to reduce the existing digital gap in senior students. For the collection of information we used a questionnaire of basic digital competences adapting the questionnaire "Digital 2.0 core competencies of university students" COBADI 2013 (Registered trademark: 2970648) on a Likert scale (1 completely ineffective, 2 ineffective, 3 effective, and 4 completely effective) validated by means of expert opinions, where the students and senior students will value, on the one hand, the digital competence in knowledge and use of ICT in social communication and collaborative learning, the use of competences for the search and treatment of information, as well as interpersonal skills.

The validation of the questionnaire was carried out based on the following guidelines:

1. Definition of the objective of the experts' opinions to validate the "Basic Digital Competences" questionnaire.
2. Selection of five relevant experts taking into account the criteria defined above, considering their academic training and professional experience.
3. Evaluation of the experts attending to the relevance, clarity and adequacy of the questionnaire indicators using a spreadsheet.
4. Once the results were obtained, the concordance between judges was calculated and finally some conclusions were drawn up according to the psychometric description of the test.

Once the expert judgment had been made, the questionnaire collected corresponding aspects of the digital basic competences. In a more detailed way, we collected this information in the following table, showing the items that correspond to each sector of ICT knowledge.

Table 1: Digital Basic Competency Questionnaire

	ITEMS
Consumption of technology	1-5
Digital competence in Knowledge and use of ICT in social communication and collaborative learning	6-17
Competences for the search and treatment of information	18-29
Interpersonal Competences	30-35

Subsequently, a reliability test was carried out using Cronbach's alpha, obtaining an index of $\alpha = 0.986$, which gives it a high degree of coherence (98.6%) due to its proximity to the unit (Rodríguez and Valldeoriola, 2009).

Results

Next we present the results obtained according to each of the dimensions of the questionnaire, taking into account the distinction between students and senior students. First, referring to the consumption of technology, young people obtained a total consumption of 100%, so that young Student have a computer and tablet and have internet both at home and in the faculty, usually connecting both at home and in the university. However, the same thing does not happen with senior students, 30% have technological means and the internet mostly at home, leaving 70% without regular Internet connection and without having a tablet or computer. In Figure 1 we can see the distinction between young and old.

Figure 1: Consumption of technology in young Student-teachers vs. Consumption of technology in senior Student-teachers.

Secondly, in response to digital competence in knowledge and use of ICT in social communication and collaborative learning we have found a total average of 3.66 out of 4 in primary school student and 1.50 out of 4 in senior students, being item 7 (use of instant messaging as the main communication tool with other people) to which a high score is awarded in both studies. However, young people gave a lower score to item 16, referring to the use of social markers while senior students gave a lower score to item 8 (I can communicate through social networks) and to 17 (ability to use education platforms). So we can say that young people have a quite high digital competence in the use and knowledge of ICT, and senior students have it to a lesser extent.

Figure 2: Digital competence in knowledge and use of ICT in social communication and collaborative learning. Senior students compared with Younger students.

In third place, referring to the competences for the search and treatment of the information, there is a total average of 3.52 out of 4 for the Students of Primary Education and 2.66 out of 4 for older senior students. In both groups, item 18 (surfing the internet with different navigators) is the one that scored the most points. However, they give a lower score to item 22 referring to the use of images through social software applications. So we can say that both groups have an adequate competence, although in the case of senior students they should work harder.

Figure 3: Competence in the search and treatment of information. Seniors compared to young

Fourth, based on interpersonal competences, we obtained a total average of 3.64 out of 4 for Primary Education Students and 2.62 out of 4 for senior students, we obtained a total average of 3.64 out of 4 for Primary Education Students and 2.62 out of 4 for senior students, In young Students, item 31 (talking with a partner to solve the problem together) is the one that scored the most points, the lowest score being given to item 27 (exposing doubts in different platforms). On the other hand, senior students gave their highest score to item 29, which refers to reflecting on the doubts they have before discussing them with others. However, they give their lowest score to item 26, consulting about their doubts through institutional mail. So while both young and seniors have adequate interpersonal competence, seniors need to work even harder. These statistics are shown in Figure 4.

Figure 4: Interpersonal competences. Seniors compared to Young.

Discussion And Conclusions

The development of this work shows the importance of knowing the differences between digital competence in knowledge and use of ICT in social communication and collaborative learning, skills useful for the search and treatment of information, as well as interpersonal competences among young and old at the University of Granada. Digital literacy in senior students enables them to be included in today's society and should be promoted to improve their quality of life during the aging process, helping them to have a more active and participative social life (Culver and Jacobson, 2012).

The preceding pages show how essential it is to reduce the digital divide for senior students, being the essence that has characterized this research. In this sense we will proceed to draw some conclusions, which follow the lines of this study.

Referring to the use of technology, young people have a total consumption of 100%, so young students have internet both at home and in the faculty, usually connecting in both spaces. However, senior students do not do the same with only 30% availability and with much less habitual use of the Internet connection.

Digital competence in knowledge and use of ICT in social communication and collaborative learning obtains a total average of 3.66 out of 4 in primary school student-teachers and 1.50 out of 4 in seniors; thus young people have quite a high digital competence in the use and knowledge of ICT, while seniors possess it to a much lesser extent.

Regarding the competences for the search and treatment of information, there was a total average of 3.52 out of 4 in Primary Education Student-teachers and 2.66 out of 4 in seniors. Both groups have adequate skills, although, again, seniors should work even harder.

Finally, considering interpersonal competences, primary school students have a total average of 3.64 out of 4 and senior students 2.62 out of 4, so both younger and older people have adequate interpersonal skills, although in the case of older people, more work must be done.

In response to the four broad categories of analysis, in general we perceive greater digital competence in young people than in older ones, so we must still work for the inclusion of older people in the use of Information and Communication Technologies within and outside the university. To do this, we can implement intergenerational educational projects, so that young people can transmit this knowledge to senior students, creating an educational link between different generations. Ferrés, Aguaded and García (2012) state that the divide between young and old in university studies is extreme, so it seems that neither the level of education nor age guarantees digital competence.

As members of society, we have a shared responsibility to promote senior students to use the Internet, making the most of the network and extending the functions and areas for those who use it. For those who do not use it yet, society should provide them with the necessary training and enough motivation to start using it (Martínez, Cabecinhas, and Loscertales, 2011).

The current education system should contribute to the elimination of the generational level between young and old in terms of digital competence. Promoting lifelong learning and facilitating access to technology for the elderly to be able to use it better and to give them greater access should be the goal.

Abstract

Health is one of the most frequently cited concepts to prolong the life of humanity and to live a better life. Determining the life style behaviors of individuals is important for enabling individuals to gain healthy lifestyle behaviors. Thus, the existing lifestyle behaviors of the individuals can be determined. More rational solutions to reach a healthy life can be created.

The aim of the study is to compare the undergraduate and the associate students in terms of healthy lifestyle behaviors and to examine whether there is a difference. In addition, the trends towards healthy life of these students are determined.

Health Promoting Life Style Profile II was applied to 100 female undergraduate students (mean of ages: 20.8 ± 3.07) and 100 female associate students (mean of ages: 20.6 ± 1.26).

There was no significant difference between total scores of undergraduate and associate students ($p > 0.05$). When examined questions one-by-one, on "Eat 6-11 servings of bread, cereal, rice and pasta each day" ($p < 0.05$), "Pace myself to prevent tiredness" ($p < 0.05$), "Eat 2-3 servings of milk, yogurt or cheese each day" ($p < 0.05$) questions, associate students answered more positively. On "Get support from people with same problems" ($p < 0.05$), "Effort to get close friends" ($p < 0.05$), "Eat 2-4 servings of fruit each day." ($P < 0.05$) questions undergraduate students answered more positively. As for these results, it can be said that undergraduate students prefer fruits and they are more sociable than the associate students. It can be stated that associate students prefer dairy products and carbohydrate-rich foods such as rice, cereals more than undergraduate students.

Adequate and balanced nutrition, stress management, regular exercise, spiritual development, interpersonal relationships and taking responsibility for health promotion and development are issues that are considered as healthy lifestyle behaviors. All individuals in society need to prolong their life and develop their own healthy lifestyles by

gaining the necessary health behaviors to live a better life. In this context, it will be useful to acknowledge the healthy lifestyle behaviors of people at every level of education.

Keywords: *Health promoting lifestyle, undergraduate, associate, student.*

Introduction

The World Health Organization (WHO) has defined the concept of health as "a state of total well-being, not only in the absence of illness or disability, but also in physical, mental and social aspects" (World Health Organization, 1985). Health is one of the most frequently cited concepts to prolong the life of humanity and to live a better life.

Healthy individuals are needed for a healthy society. Therefore, today's understanding of health aims to protect, sustain and improve the health of the community. In order to achieve this goal, it is necessary to help individuals to acquire positive behaviors in protecting, managing and developing their own health and well-being and to take the right decisions about their own health (Oyur Çelik et al., 2009, Ayaz et al., 2005, Karadeniz et al., 2008, Şen et al., 2017). Determining the life style behaviors of individuals is important for enabling individuals to gain healthy lifestyle behaviors. Thus, more rational solutions can be created to achieve healthy life.

Infectious diseases causing mass mortality in the past have left their place to diseases such as coronary heart diseases, hypertension, type 2 diabetes and obesity. To contribute to community health by reducing the incidence of these diseases, healthy lifestyle behaviors should be acquired. (Ilhan et al., 2007)

Having a healthy body, soul and psychology is the right of every individual. The maintenance of this kind of well being is not only the purpose of the health staff but also the responsibility of the person ownself. For this, acquiring the healthy lifestyle behaviors and desiring to gain these behaviors are required. Healthy lifestyle behaviors must be acquired and maintained to protect and improve health. Therefore, examining the healthy lifestyle behaviors of college youth and increasing their awareness in this regard is very important for the general health of the society. (Ilhan et al., 2010)

The youth period is a period in which both the spiritual and the physical changes occur. This period has also specific problems and forms of behavior. (Aykut et al. 1995, Ünalán 2007) While trying to adapt to the changes in social environment on the one hand, young people are trying to perceive health related concepts (Dirican & Bilgen 1993, Ünalán 2007). University years are important for the youngs' life. Because both healthy life behavior changes and personal life changes occur in these years (Tambağ & Turan 2012). Change and awareness in the health field has a very important place in terms of both current and future life effects. In addition, health-related behaviors may affect the family and society as well as ownself. The level of health in the community is measured by the number of healthy people. (Ayaz et al. 2005; Batı et al. 2003; İlhan et al. 2010) It is estimated that more than 15% of all deaths are caused by environmental risks, 22% by dietary risks, 3% by low physical activity levels (WHO 2017 report). These percentages may change by lifestyle changes.

The aim of the study is to compare the undergraduate and the associate students in terms of healthy lifestyle behaviors. In addition, the trends towards healthy life of these students are determined.

Material-Method

Health Promoting Lifestyle Profile II:

In 1989, Walker et al. (1987) created the HPLP scale firstly. Then it was updated by Walker & Hill-Polerecky (1996) Bahar et al. (2008) performed validity and reliability study of this scale which was translated into Turkish. HPLP-II is a 52-item and likert type survey. The scale consists of six subscales under the headings of "health responsibility", "physical activity", "nutrition", "spiritual development", "interpersonal relationships" and "stress management.". "Routinely", "often", "sometimes", "never" answers are equal to 4,3,2,1 points respectively. The lowest total score of the scale is 52 and the highest total score is 208. As the total score increases, it is assumed that the person has more healthy lifestyle behaviors (Bahar et al., 2008).

The ethical approval for the study was obtained from Regional Ethics Committee at Medical Sciences in Karabuk University in 04/07/2018 with number 7/14.

Health Promoting Lifestyle Profile II questionnaire was applied to 100 girl undergraduate students and 100 female associate students. Descriptive statistics, Chi-square analysis and Mann-Whitney U test were used in the study. SPSS software package (SPSS for Windows v20.0, Chicago, IL, USA) was used for all of the statistical analyses.

Results

	Associate Students	Undergraduate Students
Age	20.6 ± 1.26	20.8 ± 3.07
N	100 female	100 female

Table – 1 Descriptive Statistics of the participants

	Question Number
Health Responsibility	3, 9, 15, 21, 27, 33, 39, 45, 51
Physical Activity	4, 10, 16, 22, 28, 34, 40, 46
Nutrition	2, 8, 14, 20, 26, 32, 38, 44, 50
Spiritual Growth	6, 12, 18, 24, 30, 36, 42, 48, 52
Interpersonal Relations	1, 7, 13, 19, 25, 31, 37, 43, 49
Stress Management	5, 11, 17, 23, 29, 35, 41, 47
Total	1 to 52

Table – 2 Distribution of the questions in the survey

There was no significant difference between total scores and subgroup scores of undergraduate and associate students ($p > 0.05$) (Table – 3). When examined questions one-by-one, on "Eat 6-11 servings of bread, cereal, rice and pasta each day" ($p < 0.05$), "Pace myself to prevent tiredness" ($p < 0.05$), "Eat 2-3 servings of milk, yogurt or cheese each day" ($p < 0.05$) questions, associate students answered more positively. On "Get support from people with same problems" ($p < 0.05$), "Effort to get close friends" ($p < 0.05$), "Eat only 2-3 servings from the meat, poultry, fish, dried beans, eggs, and nuts group each day." ($p < 0.05$), " Eat 2-4 servings of fruit each day." ($P < 0.05$) questions undergraduate students answered more positively. As for these results, it can be said that undergraduate students prefer protein-rich foods and they are more sociable than the associate students. It can be stated that associate students prefer dairy products and carbohydrate-rich foods such as rice, cereals more than undergraduate students.

Health-Promoting Lifestyle Profile II	Associate Students Mean ± Sd	Undergraduate Students Mean ± Sd	p value
Health Responsibility	21.49 ± 3.31	22.42 ± 4.2	$p > 0.05$
Physical Activity	16.91 ± 3.9	17.19 ± 4.81	$p > 0.05$
Nutrition	19.25 ± 3.25	18.67 ± 4.13	$p > 0.05$

Spiritual Growth	27.04 ± 3.09	26.96 ± 3.94	p>0.05
Interpersonal Relations	26.64 ± 3.97	27.19 ± 3.74	p>0.05
Stress Management	19.79 ± 3.42	19.5 ± 3.86	p>0.05
Total Score	131.12 ± 13.704	131.93 ± 18.70	p>0.05

Table – 3 Total Scores and Subgroup scores of associate and undergraduate students

Question	Associate Students		Undergraduate Students		p value
	Never	Other Options	Never	Other Options	
Eat 6-11 servings of bread, cereal, rice and pasta each day.	33 (%33)	67 (%67)	54(%54)	46 (%46)	p<0.001
Eat 2-4 servings of fruit each day.	26 (%26)	74 (%74)	11 (%11)	89 (%89)	p<0.05
Eat 2-3 servings of milk, yogurt or cheese each day	5 (%5)	95 (%95)	17 (%17)	83(%83)	p<0.05
Effort to get close friends	34 (%34)	66 (%66)	14 (%14)	86 (%86)	p<0.05
Get support from people with same problems	16 (%16)	84 (%84)	4 (%4)	96 (%96)	p<0.05

Table – 4 Comparison of some responses to the questions of students by education level

Discussion

Health Promoting Life Profile (HPLP) II scores and subgroups of HPLP scores can be effected by many factors such as age, gender, location, socioeconomic level, educational level. For example, stress management and physical activity scores of visually impaired or blind massage therapists had significant difference as for gender. (Hung et al., 2007) İlhan et al. (2010) found the health responsibility scores of nursing students were significantly higher than that of the other students who are in different departments such as computer engineering, architecture, faculty of science and letters. In this study, effects of education level on HPLP-II score have been expressed.

Firstly, when total scores of 200 students are examined we found 131,53 ± 16,56 averagely. There isn't any difference in total scores between undergraduate and associate students. Soylar et al. (2017) performed a study on 134 pregnant women whose scores were found averagely 130.0±20.9. Şen et al. (2017) found 118,01 ± 21.0 on 251 students. Erzincanlı et al. (2015) found 129.61 ± 18.04 on 501 nursing faculty students, İlhan et al. (2010) found 126.44 ± 18.49 on 268 students. Our total score is a bit higher than other studies. This difference may occur from gender, location, income level, socio-economic and cultural differences etc.

There isn't significant difference in any subgroup scores between the two groups. In addition, the highest means of scores in both groups are in spiritual growth subgroup. The lowest means of scores of both groups are in physical activity subgroup. (Table – 3) Şen et al. (2017) made a study on 251 students who are the 1st year students in Vocational School of Health Services. Erzincanlı et al. (2015) performed a study on 501 nursing faculty students. Soylar et al. (2017) also performed a study on 134 pregnant women. They all found physical activity as the lowest subgroup. These results are parallel to our results. The fact that majority of young people do not have serious health problems may have caused them to not start physical activities yet.

Spiritual growth and interpersonal relations subgroup scores are the first and the second highest scores in other studies. (Şen et.al., 2017; Erzincanlı et al.,2015) The reason why university students have high scores in spiritual growth and

interpersonal relations may be that life of university brings new experiences, new friendships, new freedoms and enthusiasm and hopes in professional terms.

Conclusion

Adequate and balanced nutrition, stress management, regular exercise, spiritual development, interpersonal relationships and taking responsibility for health promotion and development are issues that are considered as healthy lifestyle behaviors. All individuals in society need to prolong their life and develop their own healthy lifestyles by gaining the necessary health behaviors to live a better life. In this context, it will be useful to acknowledge the healthy lifestyle behaviors of people at every level of education.

Comparison Of Two Different Tests Used In Determining Aerobic Capacity In Young Athletes

Selma CİVAR YAVUZ, Meryem ÇOBAN

Akdeniz University, Faculty of Sport Sciences, Sport Sciences Research and Application Center, TURKEY
scivar@akdeniz.edu.tr

Abstract

The aim of this study is to compare two different test methods used to determine aerobic capacity, in other words, maximal oxygen consumption in young athletes.

A total of 69 athletes consisting of 33 young boys with an average of age of 13.75 ± 0.20 years, an average height of 155.99 ± 08.66 cm, an average weight of 51.45 ± 11.88 kg and a body mass index (BMI) of 20.98 ± 03.57 kg/cm², and 36 young girls with an average of age of 13.70 ± 00.36 years, an average height of 154.78 ± 05.81 cm, an average weight of 52.64 ± 11.86 kg, and a body mass index (BMI) of 21.88 ± 04.26 kg/cm² participated in the study.

The anthropometric measurements applied for determining body fat percentage were performed according to the Anthropometric Standardization Reference Manual. Height measurements were performed with stadiometer and recorded in cm. Weight measurements were recorded in kg using a weighing machine with 0.01 kg precision. Skinfold measurements were performed with Holtain brand caliper as recommended by Lohman. Circumference measurements were performed using a measuring tape as recommended by Behnke and Wilmore. The shuttle run test, one of field methods, and the Bruce test, one of laboratory measurements, were used to determine maximal oxygen. The same test protocols were applied to all subjects. As a result of the measurements performed, estimated oxygen consumption and measured oxygen consumption values were compared. As a result of the statistics, in was seen in gender-specific comparison that the difference between the oxygen consumptions obtained with the shuttle run test result was significant ($p < 0.05$) but the difference between direct measurement values performed in the laboratory environment was not significant ($p > 0.05$). In the comparison of oxygen consumption values obtained from two separate tests both in girls and boys, the difference between them was found to be statistically significant ($p < 0.05$). In conclusion, different results can be obtained in the determination of aerobic capacity by direct and indirect methods. However, more different results can be obtained in the studies to be carried out by using a mobile oxygen analyzer during the measurement of field tests.

Keywords: *Anthropometric, maxvo2, 20 meter shuttle run*

Introduction

Aerobic power is the ability to produce aerobic energy in high intensity exercise and is defined by maximum oxygen consumption (VO_2max). Aerobic capacity is used synonymously with durability and is defined as the ability to sustain an exercise for a long time (Reilly et al., 2000). There are many studies using both laboratory and field tests to determine VO_2max in elite and young athletes. (Reily et al., 2000; Köklü, Y., 2012; Bekic et al. 2017; Drust et al., 2000; Hoff et al., 2002). The most accurate way for the assessment of aerobic capacity is the determination of maximal oxygen consumption with gas analyzers, which can measure respiratory gases during incremental loading and multi-stage maximal exercise (Wilmore and Costill, 2012). 20 meter shuttle run endurance test is one of the most popular field tests used in determining the cardiorespiratory endurance in the young and children (Olds et al. 2006). Although laboratory tests give real values, there is a need for trained staff in the implementation phase, and the cost is quite high. At the same time, it is not preferred by practitioners because of the long test period allocated for an individual. For this reason, field tests, which are indirect measurement methods, are preferred to determine maximum oxygen consumption.

In our study carried out to compare laboratory and field tests which are used to determine the measured and estimated maximal oxygen consumption, in other words, aerobic capacity in young athletes, Bruce test, one of the most common tests used to determine maximum oxygen consumption, and 20 meter shuttle test were used.

The Study

Participants

A total of 69 athletes consisting of 33 young boys with an average of age of 13.75 ± 0.20 years, an average height of 155.99 ± 08.66 cm, an average weight of 51.45 ± 11.88 kg and a body mass index (BMI) of 20.98 ± 03.57 kg/cm², and 36 young girls with an average of age of 13.70 ± 00.36 years, an average height of 154.78 ± 05.81 cm, an average weight of 52.64 ± 11.86 kg, and a body mass index (BMI) of 21.88 ± 04.26 kg/cm² participated in the study. All participants are the athletes playing in team sports in the school team and also in sports clubs.

Measuring Instruments

All anthropometric measurements were performed according to the Anthropometric Standardization Reference Manual (Lohman et al., 1988). Height measurements were performed using a digital height measuring device (heels together, in upright position and barefoot) and were recorded in cm. Weight measurements were performed (barefoot, t-shirt and shorts) using a weighing machine with 0.01 kg precision (TANITA TBF-300), and the results were recorded in kg. Skinfold measurements (skinfold thickness) were performed by measuring twice on the right side of the body with Holtain brand caliper (Holtain United, Dyfed, UK) as recommended by Lohman, and a third measurement was performed when the difference between the two measurements was greater than 0.4. The obtained values were recorded in millimeter by taking the average of the two closest measurements. Measurements were taken from 5 regions including biceps, triceps, subscapular, suprailiac and calf. Circumference measurements were taken from a total of 4 regions including thigh, knee, calf and forearm as recommended by Behnke and Wilmore. In diameter measurements, humerus and femur diameters were measured with anthropometric caliper. 20 meter shuttle run test was applied for the estimated oxygen consumption. The test consists of 23 sections in total, in an increasing intensity with an average speed increase of 0.5 km/h per minute, in the area designated with 20-meter lines and with signs. The test is applied with continuous running between 20 meters. For speed control, the subject is allowed to run at the right speed with audio signals from tempo generator or shuttle tape. Participants should have covered 20 meters in each signal tone and should step on the 20 meter line. If the participant has completed the 20-meter distance before the signal, he should continue to run by waiting for the signal tone. If the 20-meter distance cannot be completed in three consecutive signal tones, the test is terminated and the level and the number of shuttles are recorded (Leger et al., 1982; Leger et al., 1988;). The test protocol was applied in the same way for all participants. Maximal oxygen consumption was estimated by equation (Leger et al., 1988). For the measured oxygen consumption, the Bruce protocol was applied on the treadmill in the laboratory environment. This test was performed using an oxygen analyzer in the laboratory environment (Vmax SPECTRA 229LV, Sensormedics Corporations 22705 Savi Ranch Parkway, Yorba Linda, California 92687). The application of this test consists of 7 stages, each of which lasts for 3 minutes. The test starts at a speed of 1.7 mil/second (2.74km/h) and at a slope of 10% and continues until the individual gets tired by increasing both the slope and speed at 3 minute intervals. It is a commonly used treadmill-based protocol which is routinely used in both athletic and clinical populations (Bruce et al., 1973; Bruce 1971). All participants were asked not to perform intense physical activity, change their dietary habits and consume alcohol and caffeine 48 hours before measurements and between the measurements.

Findings

The mean, standard deviation, minimum and maximum values of physical characteristics of the participants of age, height, weight, body mass index (BMI) and body fat percentage values, and their gender-specific comparison are presented in table 1.

Table 1. Physical Characteristics of Participants and Gender-Specific Comparison

Young Girls (n=36)		Young Boys (n=33)		p Value
Mean ± S.D.		Mean ± S.D.	t Value	
13.70±00.36	Age (years)	13.75±00.20	0.639	0.525
154.78±05.81	Height (cm)	155.99±08.66	0.618	0.539
52.64±11.86	Weight (kg)	51.45±11.88	-0.382	0.704
21.88±04.26	BMI (kg/cm ²)	20.98±03.57	-0.879	0.383
23.65±01.59	Body Fat (%)	21.23±02.61	-4.293	0.017*

*p<0.05

According to calculations, the average age of the young boy athletes participating in the study was 13.75±00.20 years, their height average was 155.99±08.66 cm, weight average was 51.45±11.88 kg, body mass index (BMI) was 20.98±03.57 kg/cm², and body fat percentage was 21.23±02.61 percent.

The average age of the young girl athletes was 13.70±00.36 years, their height average was 154.78±05.81 cm, weight average was 52.64±11.86 kg, body mass index (BMI) was 21.88±04.26 kg/cm², and body fat percentage was 23.65±01.59 percent.

As a result of the statistics, it was seen that the difference between age, height, weight and body mass index values of young girls and boys participating in the study was not statistically significant (p>0.05), but in terms of body fat percentages, girl athletes had more body fat percentage than boys. The difference was found to be statistically significant (p<0.05).

The comparison of the values obtained by the Bruce test and 20-meter shuttle run tests of young boy athletes participating in the study is presented in table 2.

Table 2. Comparison of the Measured and Estimated maxVO₂ Values of Boy Participants

Shuttle Run-maxVO ₂ (ml.kg ⁻¹ .min ⁻¹)	Bruce Test- maxVO ₂ (ml.kg ⁻¹ .min ⁻¹)	Mean ± S.D.	t Value	p Value
37.18±0.36	49.613±2.42	-12.430±5.605	-12.146	0.000*

*p<0.001

In the comparison of the values obtained by the Bruce test and 20-meter shuttle run tests of young boy athletes, the difference was found to be statistically significant (p<0.001).

The comparison of the values obtained by the Bruce test and 20-meter shuttle run tests of young girl athletes participating in the study is presented in table 2.

Table 3. Comparison of the Measured and Estimated maxVO₂ Values of Young Girl Participants

Shuttle Run-maxVO ₂ (ml.kg ⁻¹ .min ⁻¹)	Bruce Test- maxVO ₂ (ml.kg ⁻¹ .min ⁻¹)	Mean ± S.D.	t Value	p Value
37.086±2.42	49.489±03.32	-12.402±3.911	-16.778	0.000*

*p<0.05

In the comparison of the values obtained by the Bruce test and 20-meter shuttle run tests of young girl athletes, the difference was found to be statistically significant (p<0.001).

The gender-specific comparison of the values obtained by the Bruce test and 20-meter shuttle run tests of all participants is presented in table 4.

Table 4. Gender-Specific Comparison of the Measured and Estimated maxVO₂ Values of Young Girl and Boy Participants

Young Girls (n=36)		Boys (n=33)		t Value	p Value
Mean ± S.D.		Mean ± S.D.			
37.09±02.43	Shuttle Run-maxVO ₂ (ml.kg ⁻¹ .min ⁻¹)	37.18±0.36		0.215	0.830
49.48±03.32	Bruce Test- maxVO ₂ (ml.kg ⁻¹ .min ⁻¹)	49.61±2.42		0.103	0.918

p>0.05

In gender-specific comparison of the values obtained by the Bruce test and 20-meter shuttle run tests of all participants, it was seen that the difference was not statistically significant (p>0.05).

Conclusions

In our study carried out to compare laboratory and field (area) tests which are used to determine the measured and estimated maximal oxygen consumption, in other words, aerobic capacity in young athletes, participants' age, height, weight, body mass index (BMI), 20-meter shuttle run for estimated maximal oxygen consumption, and Bruce test results for measured maximal oxygen consumption were examined, and the following results were obtained.

It was seen that the difference between age, height, weight and BMI values between the groups was not statistically significant (p<0.05). This also removes the idea that chronological age or a physical characteristic with height and weight values could be effective, in the evaluation of both genders in the same age group in our study. However, in terms of body fat percentage values, it was seen that young girl athletes had a higher body fat percentage and that the difference was significant.

It was determined that young girl athletes' average age was 13.70±00.36 years, height average was 154.78±05.81 cm, weight average was 52.64±11.86 kg, body mass index (BMI) was 21.88±04.26 kg/cm², and body fat percentage was 23.65±01.59 percent while young boy athletes' average age was 13.75±00.20 years, height average was 155.99±08.66 cm, weight average was 51.45±11.88 kg, body mass index (BMI) was 20.98±03.57 kg/cm², and body fat percentage was 21.23±02.61 percent. In gender-specific comparison, it was seen that the difference between age, height, weight and body mass indexes was not significant (p>0.05), but young girl athletes had a

higher value than boys in terms of body fat percentage, and the difference between the averages was statistically significant ($p < 0.05$).

As a result of the study, in the comparison of maximal oxygen consumption measured by Bruce test and the estimated maximal oxygen consumption values as a result of a 20-meter shuttle run test of both young girl and boy athletes, the difference was found to be statistically significant ($p < 0.001$). However, in gender-specific comparison, it was seen that the difference between the estimated and measured VO_{2max} values was not significant ($p > 0.05$). Stickland et al. (Stickland et al., 2003) reported that the VO_{2max} value obtained through estimation was lower than the value they obtained through measurement. In their study carried out with 60 male participants with an average age of 25.1 years and 62 female participants with an average age of 25.1 years, Stickland et al. (Stickland et al., 2003) used the equation which was developed by Leger et al. (Leger et al., 1988) and also developed by Leger and Gadoury (Leger and Gadoury, 1989) to determine the estimated VO_{2max} values. In the comparison of the estimated VO_{2max} values they obtained from equations and the measured VO_{2max} value, they reported that the difference between the averages in both males and females was significant ($p < 0.05$). In their study carried out with individuals aged between 18 and 50 years, Leger et al. (Leger et al., 1988) found a high correlation of $r = 0.90$ between the two values. In their study, Svensson and Drust (Svensson and Drust, 2005) reported that the estimated VO_{2max} value in shuttle test was averagely 3.5 ml/kg/min higher or lower than the measured VO_{2max} value. It is remarkable that the difference between the estimated and measured VO_{2max} values of both young girl and boy athletes significant in our study, and that there are studies in which similar results were obtained. On the other hand, in the study carried out with college students whose average age was 21.09 ± 2.52 years, Spackman et al. (Spackman et al., 2001) reported that the difference between the VO_{2max} value measured by Bruce test and the estimated VO_{2max} values was not significant.

There are many studies in which the field and area tests which are used to determine aerobic capacity are compared with each other. Furthermore, in the literature, there are also studies in which these tests are compared with the estimated VO_{2max} values obtained by equations and the measured VO_{2max} values. In this study, in the comparison of the measured VO_{2max} values obtained from the 20-meter shuttle run test, which is one of the most common tests used to determine aerobic capacity through equation, and the Bruce test which is performed using an oxygen analyzer; in the comparison of maximal oxygen consumption measured by Bruce test and the estimated maximal oxygen consumption values as a result of a 20-meter shuttle run test of both young girl and boy athletes, the difference was found to be statistically significant. In conclusion, different results can be obtained in the determination of aerobic capacity by direct and indirect methods. The reason is that it should be taken into consideration that the intra-group dynamics during collective field measurements may affect the environmental conditions (air, temperature, humidity, etc.). Nevertheless, in the tests in which indirect method is used, the equations used while estimating may not comply with the feature of the group. However, more different results can be obtained in the studies to be carried out by using the direct measurement method with a mobile oxygen analyzer during the measurement of field tests.

Completion Rate In Informatics – Czech Republic

Lea NEDOMOVA

Faculty of Informatics and Statistics University of Economics, Prague Czech Republic
nedomova@vse.cz

Abstract

The demographic trend in Czech society, which results in a decrease in the number of applicants for a university education, makes it important to analyze the completion rate of students. In this article, we analyzed the data of full-time students of informatics at the Faculty of Informatics and Statistics of the University of Economics in Prague (UEP) from 2010 to 2012, using MS Excel, SPSS statistics software and R software. The results of our analysis show that the overall completion rate of the analyzed students is over 80%. The completion rate considerably differs depending on the study program (e.g. the study program “Knowledge and Web Technologies” has a completion rate of between 50 % - 100 %). Smaller study programs have an uneven completion rate because of the small number of students and thus a higher predisposition to a significant impact of incidental factors.

Keywords: *Ordinary study, Higher education, completion rate, ICT study programmes, distance study.*

Introduction

The drop in the number of teenagers in the Czech population during the past years became evident first in the secondary education and then in the university education (Doucek & Maryska, 2016). This drop is typical mainly for the past seven years; the number of Czech applicants is expected to slowly go up starting in 2020. The decrease in applicants is currently compensated by students from Slovakia and the states of the former Soviet Union. This fact allows more than 70 Higher Education Institutions (HEIs) to exist in the Czech Republic that has ten million inhabitants (Maryska & Doucek, 2011). The European Union’s strategy is aimed at a considerable increase in the number of people with a university education.

In the perspective of the Europe 2020 Strategy, including the ambition to have at least 40% of the 30-34 years olds holding a tertiary education qualification by 2020, the issue of increasing education attainment is gaining importance in the national and international debates in higher education. Reducing dropout and increasing completion are regarded prime strategies to achieve higher attainment levels. A key concern is that too many students in Europe drop out before obtaining a higher education diploma or degree (Quinn, 2013).

In consideration of this strategy as well as purposeful investments into public education, it is important to motivate students who have already started their university studies (Doucek, Maryska & Novotny, 2013 & 2014). With regards to the completion rate, it is important to monitor certain select indicators at a microeconomic and macroeconomic level. National governments and HEIs use different orientations to guide their policy-making with respect to study success:

- **Completion:** to have students successfully complete their study programme with a degree.
- **Time to Degree:** to have students complete their study programme within a reasonable time period.
- **Retention or Dropout:** the aim to have students re-enroll in a study programme until they complete their degree and to reduce the likelihood they drop out before completing their programme.

The 2011 Modernization Agenda rightfully states that it takes a joint effort of all member states, HISS (Higher Education Institutions) and the European Commission to take a pro-active approach in working towards the objectives and increasing participation and attainment in higher education (Vossenteyn, 2015).

Problem Formulation

This article analyzes the trend in the completion rate of full-time students in informatics study programs at the Faculty of Informatics and Statistics of the University of Economics in Prague taught in the Czech language during the years of 2010 – 2012. Our article compares the completion rate of full-time students in different informatics study programs as well as the completion rate of full-time students with that of students in distance learning programs taught in the Czech language (Maryska et al, 2013). For the purpose of our research, we formulated the following research question.

RQ: What is the completion rate of full-time students in informatics graduate programs taught in the Czech language?

Material And Methods (Data Collection)

The central data systems of the UEP are our basic source of data. These systems contain data about all applicants as well as about the study results of all accepted students.

In this article, we analyze in detail only a data group showing information about students of Applied Informatics specialization.

Methodology

The key data source for our article was the UEP Information System that was put into a productive environment during 2009. Due to this fact, we could not use data prior to the year 2010 since they would not be complete.

In this context, complete data mean data about entrance exam results, including all relevant attributes concerning the characteristics of both the applicant and the study program to which the applicant applied.

The data are updated in our data warehouse once a year, always at the beginning of November when we already have information about all entrance exam results, the study results of already studying students as well as the very important information about whether or not the students who were accepted actually entered the university.

In view of the aforesaid, we eliminate the results of the applicants who entered the university in the academic year 2017/2018, as well as the results of the applicants who were accepted but did not enter the university or entered the university but did not receive any grade before the data file was processed. Currently, we have data about 169,911 applications to the UEP, which include full-time and distance learning programs at all levels (bachelor, master, and doctorate). Lately, between 13,000 and 15,000 applicants have applied, but their number keeps dropping (in 2011, there were over 23,000 applicants).

We have over 1,485,000 study results that we can link to the individual applicants who were accepted. We should point out that all data in our data warehouse are anonymized in compliance with Act No. 101/2000 of Coll., on the protection of personal data.

The processing is as follows:

- The data are exported from the UEP Information System into differential text files (files that only contain so-far non-exported data) once a year.
- The data is downloaded to the data warehouse, using big data processing tools. In our case, the data warehouse is built on Microsoft SQL Server 2008 and we use native ETL (Extract, Transform, and Load) tools of the system MS SQL Server 2008.
- The data are processed using such analytical tools as Microsoft Analysis Services, Microsoft Excel, and SPSS statistics software and, in some cases, R statistics software.

GENERAL DATA CHARACTERISTICS

The data file with entrance exams currently includes approximately 1.500.000 records that we have been collecting since the year 2010. Each record provides information about the admission procedure result of one student. If an applicant took the entrance exam in several years or full filled several applications for the UEP study, she/he is then included in the data files several times. The most key attributes in the data file include gender, field of study, faculty, and type of study, entrance exam result and information about whether or not a student passed the entrance procedure and if she/he was accepted. Files also content information about each examination and the result of it.

RESULTS AND DISCUSSION

RQ: What is the completion rate of full-time students in informatics graduate programs taught in the Czech language?

The completion rate shows the overall completion rate of students in informatics graduate programs at the Faculty of Informatics and Statistics that are taught in the Czech language. The completion rate for all informatics study programs is shown in [Table 1].

Table 1: “Completion Rate” for ICT Oriented Master Studies Programmes at FIS UEP

Year	Failed	Completion Rate	Still Study	Sum
2010	16.38%	82.18%	1.44%	100.00%
2011	13.66%	82.38%	3.96%	100.00%
2012	10.69%	87.42%	1.89%	100.00%
2013	9.41%	73.33%	17.25%	100.00%
2014	10.44%	26.27%	63.29%	100.00%

Year	Failed	Completion Rate	Still Study	Sum
2015	6.14%	9.65%	84.21%	100.00%
2016	2.74%	0.00%	97.26%	100.00%

[Table 1] clearly shows that the completion rate of students in all informatics graduate programs taught in the Czech language during the years 2010 - 2012 was between 82.18 % and 87.42 %. The completion rate increased over time. The data after 2013 are not yet fully relevant since more than 10.00% of accepted students are still studying. Partial views of individual study programs are provided in the following tables. The study program “Information Technology and Information Systems” is the biggest informatics program at the Faculty of Informatics and Statistics. The trend in the completion rate for this study program is provided in [Table 2].

Table 2: Completion Rate for Master Study Programme “Information Technology and Information Systems”

Year	Failed	Completion Rate	Still Study	Sum
2010	13.22%	85.12%	1.65%	100.00%
2011	9.60%	88.00%	2.40%	100.00%
2012	8.42%	89.47%	2.11%	100.00%
2013	9.03%	73.55%	17.42%	100.00%
2014	10.36%	26.42%	63.21%	100.00%
2015	5.88%	9.80%	84.31%	100.00%
2016	1.23%	0.00%	98.77%	100.00%

When analyzing [Table 2], we can see a considerably better completion rate in this study program during the years of 2010 – 2012. The completion rate was between 85.12 % and 89.47 %. In this case, the statistical sample is not very sensitive to incidental fluctuations since there are approximately 200 students per academic year. “Information Management” is the second biggest graduate program. The trend in the completion rate is provided in [Table 3].

Table 3: Completion Rate for Master Study Programme “Information Management”

Year	Failed	Completion Rate	Still Study	Sum
2010	22.22%	76.39%	1.39%	100.00%
2011	4.92%	88.52%	6.56%	100.00%
2012	12.82%	84.62%	2.56%	100.00%
2013	8.22%	76.71%	15.07%	100.00%
2014	9.68%	29.03%	61.29%	100.00%
2015	6.25%	9.82%	83.93%	100.00%
2016	6.52%	0.00%	93.48%	100.00%

We can see that the completion rate during the researched time period oscillates. It was the highest in 2011 (88.52%) and the lowest in the first year of available time series (76.39%). These conclusions are somewhat limited since the number of accepted students for this study program is between 40 and 75 per academic year. Therefore, this result is already slightly sensitive to incidental factors.

“Knowledge and Web Technologies” is another analyzed study program. The completion rate for this study program is provided in [Table 4].

Table 4: Completion Rate for Master Study Programme “Knowledge and Web Technologies”

Year	Failed	Completion Rate	Still Study	Sum
2010	42.86%	57.14%	0.00%	100.00%
2011	43.48%	52.17%	4.35%	100.00%

Year	Failed	Completion Rate	Still Study	Sum
2012	0.00%	100.00%	0.00%	100.00%
2013	18.18%	63.64%	18.18%	100.00%
2014	14.29%	7.14%	78.57%	100.00%
2015	0.00%	25.00%	75.00%	100.00%
2016	0.00%	0.00%	100.00%	100.00%

This study program is very sensitive to incidental fluctuations since the number of accepted students is even lower - about 20 students per academic year. However, the completion rate kept going up, all the way to 100.00% of accepted students in 2012. On the other hand, the lowest completion rate was in 2010 - only 52.17% of accepted students.

“Cognitive Informatics” is another small study program. Approximately 20 students are accepted in each academic year. The completion rate for this study program is provided in [Table 5].

Table 5: Completion Rate for Master Study Programme “Cognitive Informatics”

Year	Failed	Completion Rate	Still Study	Sum
2010	15.00%	85.00%	0.00%	100.00%
2011	33.33%	61.11%	5.56%	100.00%
2012	25.00%	75.00%	0.00%	100.00%
2013	12.50%	62.50%	25.00%	100.00%
2014	12.50%	25.00%	62.50%	100.00%
2015	18.18%	0.00%	81.82%	100.00%
2016	0.00%	0.00%	100.00%	100.00%

Since the number of students is small, incidental factors (illness, family or work reasons, etc.) are very significant and have a considerable impact on the completion rate variability. The completion rate during the years of 2010 - 2012 fluctuated from 85.00% in 2010 to 75.0 % in 2012. There was a fluctuation in 2011 and the „Completion Rate“ was only 61.11%. Regardless of what the completion rate is for full-time study programs, we can say that it is considerably higher than that for the distance learning program “Business Informatics.” The completion rate for this study program was 58.2% in 2011 and only 52.1% in 2012. This is a very bad completion rate in comparison with the completion rate for full-time study programs. However, it is still acceptable if we compare it with the completion rate for the same type of study program e.g. Parr (2013) or Simpson (2010) in the United Kingdom – 22%.

Conclusion

We analyzed the data series of the completion rate of UEP students in the full-time graduate study program “Applied Informatics.” Overall, we can say that the average completion rate for all analyzed study programs during the years of 2010 - 2012 was between 82.18 % and 87.42 % and going up. A detailed trend in the completion rate is provided in [Table 6].

Table 6: Completion Rate for Individual Master Study Programmes

Study program	Completion Rate in %
Information Technology and Information Systems	85.12 – 87.42
Information Management	76.39 – 88.89
Knowledge and Web Technologies	52.14 – 100.00
Cognitive Informatics	61.11 – 85.00

The completion rate for the two biggest study programs is very similar; their highest completion rate is over 85% of accepted applicants. The other two study programs are very small (approximately 20 students per academic year) and thus their completion rate is very sensitive to incidental fluctuations and it is hard to identify trends.

Acknowledgements

Paper was processed with contribution of long term institutional support of research activities by Faculty of Informatics and Statistics, University of Economics, Prague (IP400040).

Connecting with the Digital Gens via Multimodality and the Mosaic Mapping Method for Research Writing

Siti Zuraini Yassin

Englisih for Specific Academic Purposes (ESAP)

Centre for English Language Studies (CELS)

sitizurainiy@sunway.edu.my

Abstract

Producing a writing piece can be both rigorous and tedious. The writer's block is not only a condition experienced by great authors, but it is also a common and serious challenge faced by our millennials in higher institutions. When given a task that requires any form of drafting, digital gens often contemplate on how to start, continue and end their writing piece. Thus, this paper shares the implementation of two solutions applied on undergraduate students in an English for Academic Writing course in Malaysia to produce a research paper. The research exploits Multimodal Communication (MC) approaches by taking advantage of various eLearning platforms to capture a learner's interest towards writing and it also implements the Mosaic Mapping Method (MMM) which is a strategy to accelerate the process of writing. Results of this study demonstrate that throughout the research writing process, a more positive learning experience and performance can be observed through: (1) learner's motivation, (2) group collaboration, (3) time management, and (4) quality of the end product.

Constructing The Measurement Of Efl Students' Core Competencies Practices In Learning Activities

Hadiyanto¹, Syahrial², Nunung Fajaryani³, Masbirorotni⁴, Mariza Juwita⁵

English Education Deptrent, Faculty of Teacher Training and Education, Universitas Jambi.

Hadiyanto.efl@unja.ac.id

Abstract

The study aims to develop an instrument of English students' core competencies practices in learning process. The development used qualitative and quantitative method in deferent steps and analysis. Sixth steps were applied in the instrument constructions; they were literature studies; defining constructs and sub-constructs; constructing indicators; assessing and judging indicators; defining face validity, confirming content validity, consistency testing and confirming constructs validity. The result came out with three main constructs; soft skills, hard skills and academic character. Soft skills classified into six sub-constructs with 45 indicators. Hard skill was classified into 10 indicators with no classification into sub-construct. While academic character classified into seven sub-constructs with 41 indicators. The instrument suggested to be used to monitor students' practices of Core Competencies in learning activities at Universities. Furthermore, the instrument were developed by refereeing to current literature from local and others countries, it is expected that the instruments and the method of its' development contribute to area of students' and graduates' core competencies studies.

Key Words: *21st century skills, soft skills, hard skills, academic character, KKNi, skills measurement, learning strategy.*

Introduction

Indonesian Qualification Framework (KKNi) emphasized on core competencies Outcomes of graduate. Thought the Indonesian HE curriculum based on KKNi had been established since 2013, however the implementation of core competencies development in teaching and learning process at English Department of University of Jambi, has not been observed and evaluated. This caused by there is no yet instrument of how the core competencies be practiced in the classroom. Ristekdikti (2015; 2016) suggested core competencies development must be embedded in the teaching and learning process in undergraduate program. Every program needs to design and formulate how to embed core competencies development in the teaching and learning process as well as the instrument for evaluating the development of core competencies itself (Tim Kurikulum dan Pembelajaran Direktorat Pembelajaran dan Kemahasiswaan, 2014).

Helena & Thomas (2016) argue that those developing students' hard skills (technical skills) and soft skills should be blended in teaching and learning process. The strategies of learning should able to provide the students to acquire core competencies. Dikti (2011) stated that students' center Learning (SCL) should be applied in teaching and learning process at University. Some strategies of SCL such as group work, ICT usage, PBL, exploratory learning, e.tc are supposed to engage students to practice their core competencies through learning process. Furthermore, the students' practices of core competencies through their learning activities should be observed, measured and evaluated in order that to come to better quality output of students' core competencies.

Much research on students' core competencies including generic skills, life skills or interpersonal skills at university had been done and discussed broadly and hugely published since 1990 until today. Most of the research was conducted in field settings where the most commonly used method of data collection is the survey questionnaire. Unfortunately, the instrument developed and used often has lacked reliability and Validity which has led to difficulties in interpreting research results. This is because of the procedure and the process of the instrument development was unexplained and unjustifiable (Esposito, 2002).

In relation to the issue, this study had developed instrument to describe the implementation of students' core competencies development in the teaching and learning process at English Department of University of Jambi. The instruments practices of core competencies will be used to search the implementation of core competencies in the classroom practices based on English Education lecturers and students' self-evaluation. This article reports and discusses the development process and outcomes of self-evaluation questionnaire of core competencies in each dimension and its indicators. Validity and reliability of the instruments are also reported in detail and clear. It is expected that the study contribute to the practices of core competencies, key skills or others equivalence and related area of research.

Defining Core Competencies

Core Competencies are generally defined the set of skills or abilities essential to fulfilling the three potential outcomes of higher education, namely, the needs and requirements of employers in the marketplace, lifelong learning, and good citizenship. It consists of seven skills: communication, numeracy, IT, learning how to learn, problem solving, working with others, and subject-specific competencies (Hadiyanto & Mohammed Sani, 2013; Hadiyanto, 2010; and Zalizan., et. al 2006). In this study, the definition of core competencies update and redefine as skills developed during teaching and learning process at University in order to provide students with three major competencies; Soft Skills, English Hard Skills and Academic Character. The update definition and dimensions of core competencies were extracted and synthesised from following resources; Hadiyanto, et. al (2017a), Hadiyanto, et. al (2017b), Ristekdikti (2016), Laura., et. al. (2016), The Ontario Public Services, (2016), Hadiyanto & Suratno, (2015), Bialik, et., al. (2015), Hassan., et. al. (2013), Hadiyanto & Mohammed Sani (2013), Person, Ann., et. al. (2009) and Washer (2007), Farkas (2007), Zalizan., et. al. (2006) and Vezzuto (2004).

Soft Skills

Commonly Soft skills are referred to interpersonal skills, leadership, communication, working in team, critical thinking problem-solving, decision-making etc. Hadiyanto, (2017a), ILO, 2014; Partnership for 21st century skills. (2008). redefined soft skills as the ability of generating communication skills, IT Skills, numeracy skills, learning how to learn skills, problem solving skills and working with others in completing task and work (Hadiyanto, 2017a). Each soft skill is defined in the following.

Communication skills are defined as the ability of using English to express and exchange ideas by using feelings of thought a variety of verbal and non-verbal media, including speech and written text as also to synthesise information gained from relevant resources (Hadiyanto, 2017b).

IT Skills, that is the competence of using technology of computers as well as its' device and programme which is integrated with the computer itself, such as using Microsoft office, internet, website, email, messenger, downloading and uploading, applications, online conference etc. to access, gain, create, manage and expose information (Hadiyanto, 2017b).

Numeracy skills refer to the ability of using basic mathematic calculation, interpreting graphical information, timing, prioritizing tasks and sequencing of job or activities (Hadiyanto, 2017b).

Learning skills is defined as the ability of using strategies as well as doing evaluation on self-learning strategy, seeking for the weakness and coming to better way and output of learning goal, it includes gaining general and detailed information, knowledge, and skills in order to achieve the goal of learning (Hadiyanto, 2017b).

Problem solving skills, which is the ability to tackle problem systematically in appropriate manner and situation in order come out with an appropriate solution (Hadiyanto, 2017b).

Working with others refer to a capacity to interact effectively with other people both on a one to one basis and in groups, including understanding and responding to the needs of a client and working effectively as a member of a team to achieve a goal. (Hadiyanto, 2017b).

Hard skills

Hard skills relate to major and minor knowledge skills. Specifically in this study, it is defined the ability of students using and generating four major English skills and specific English skills in real context as blended with soft skills (Hadiyanto, 2017b; Dikti 2011).

Academic Character

Academic Character is defined as the practical values which are automatically embed in the students learning activities to support their soft and hard skills performance. Academic character consists of honesty, appreciation, tolerance, disciplines, patience, confidence, and responsibility (Ristekdikti, 2016; Ristekdikti, 2015; Smith, 2103; Bialik, et. al 2015; Kamarudin, 2012; Dikti, 2011; Vezzuto, 2004). Each component of academic character is defined as follows;

Honesty refers to student's automatic action and expression in confessing and reporting a truth, facts, his/her shortcomings, friends' strengths as well as learning from authentic resources (Ristekdikti, 2016; Person, et. al 2009; Vezzuto, 2004).

Appreciation is about how the students show their positive attitudes, words and actions in appreciating their friends' ideas, contributions and works, and do not condescend or blame their friend (Bialik, et.al 2015; Dikti, 2011; Person, et.al 2009).

Tolerance refer to students' reflection and action to accept the differences of personality, abilities, attitudes, gender, social status and change the differences to be more useful for achieving maximum learning objectives (Ristekdikti, 2015; Person, et.al 2009).

Discipline is students' consistency in a good time and work management, following the rules of academics, class attendance, completing and submitting task on time, and achieving learning goals and assignment standard output (Person, et.al 2009; Vezzuto, 2004).

Patience is about maintaining spirit of learning, and emotions sustainability in doing assignment and tasks, exchanging ideas in a discussion, facing and resolving learning problems until learning goals achieved. (Person, et.al 2009; Vezzuto, 2004).

Confidence is the student's ability to present him-self such as ability, ideas, skills, etc., and ability to relieve nervous, anxious, depressed and tense in learning activities, it includes giving writing and oral presentation (Ristekdikti, 2016, 2015; Person, et.al 2009).

Responsibility is defined as the action of students in completing assignments, tasks and learning outcomes by his own effort as well as taking and completing a part and as a group member, a group leader and a moderator in a discussion (Kamaruddin, 2012; Person, et.al 2009; Vezzuto, 2004).

Core Competencies Practices In Teaching And Learning

The literature stresses the importance of both theory and practice as necessary elements in the process of learning (and the development of core competencies through real practice, yet many writers assert that students have to learn transferring knowledge acquired in the classroom to practical applications in the workplace in areas as varied as aviation, all disciplines knowledge. For answering the issues some expert suggested that important opportunities for the development of core competencies must occur in the selection of delivery methods. Teaching contexts can provide an explicit focus on the development of core competencies, thus providing students with opportunities to develop them. The students' core competencies will be highly promoted if the large opportunity given to the students to practice these attributes within learning activities and otherwise (Hadiyanto & Suratno, 2015, Hassan., et. al. 2013, Hadiyanto, 2010).

Students learn most effectively when they have the opportunity to interact with other students. Interaction among students typically leads to group problem solving. When students are unable to meet together, appropriate interactive technology for learning such as E-mail, E-learning, Online learning, Online course some current ICT application, should be provided to encourage their IT skills as well encourage their small group and individual communication. Assignments in which students work together and then report back or present to the class as a whole, encourage student-to-student interaction. Ensure clear directions and realistic goals for group assignments. Distant students need to reflect on what they are learning. They need to examine the existing knowledge frameworks in their heads and how these are being added to or changed by incoming information (Hadiyanto, 2010).

In short there are many ways of achieving the goals and learning outcomes or program objectives that have been set by each institution. Nevertheless the approaches used in designing the curriculum and the selection of the teaching-learning activities must be based on sound learning principles. Students learning activities should be designed with a view of encouraging students to actively participate in their process of learning. Priority is placed on lecturer setting goals and objectives for the students' engagement and activities related to the promotion of core competencies (Hadiyanto, 2013; Washer 2007; .Zalizan Mohammad Jelas & NorzainiAzman 2005)

Self-Assessment Of Core Competencies Practices

In relation to measuring instrument of core competencies practices in the process of learning was discussed in literature study at previous stage. Some theories were retrieved and characterized into practical statements of core competencies. In daily teaching, hard skills are typically easy to observe, quantify and measure. The evaluation formally designs for this type of skills for every subject. However the hard skills in term practices in real contact were rarely measured by educator. Soft skills are typically hard to observe, quantify and measure by a test. Self-evaluation questionnaire model were developed to measure students' experience, learning activities, learning strategies and how they cope with E-learning, online learning and ICT based learning. Academic Character qualities are defined as distinct from soft skills, which represent the ability to feel, know, express and practice of humanism values in learning activities context. As elaborated and stated above, academic character encompasses into seven characters, honesty, appreciating, tolerance, discipline, patient, confidence and responsible (Ristekdikti, 2015; Bialik, et., al 2015; British Council, 2015; Tim Kurikulum dan Pembelajaran Direktorat Pembelajaran dan Kemahasiswaan, 2014; Lowden, et. al. 2011; Hadiyanto, 2010; Hadiyanto, 2011; Hadiyanto, 2013; Zalizan 2006; and Vezzuto, 2004)

Students' capacity to assess themselves on practices of core competencies through learning activities must be measured with specific indicators. Individual students can monitor the relationship between the learning activities with core competencies achievement and goal of learning as whole. That is why that self-assessment of core competencies practices through learning activities is become an important part of evaluation toward learning goal, quality and process (Cajender, et al. 2011; Office of educational technology, 2014; Ramaligela 2013). Students will be able to judge the learning activities through specific core competencies indicators stated in the constructed questionnaire. Model self-assessment questionnaire help the students to assess their self and learning goal, how and what are the goal had been practiced and achieved.

Furthermore in line with Office of Educational Technology (2014) the students' self-assessment on practices core competencies enabling the teachers to:

- Align professional teaching and learning strategies to student learning and improvement core competencies.
- Use the evidence-based characteristics, described through core competencies components in the instrument, to determine the degree to which your current professional teaching and learning strategy or set of strategies is of high quality and aligned with standards of core competencies acquiring.
- Determine how teacher might refine and better integrate strategy or set of strategies to achieve your goal.
- Use the students' Self-Assessment core competencies practices again to rate how well teachers' refined strategy or set of strategies, connected between strategies and blended learning strategies

The students' Self-Assessment core competencies practices is not only use to assess the student practices of core competencies but also useful to assess students' learning strategies, teachers' current professional teaching learning strategies and refine them. Keep in mind that, even if a strategy or set of strategies does not address every indicator of core competencies, the use of strategy can be worth pursuing and refining over time.

Method

The development used qualitative and quantitative method and analysis was used in the construction of the instrument. Qualitative method was used at first step until the fourth steps of instrument construction. While quantitative method applied at fifth step and sixth steps of the construction or in try-out for consistency testing and confirmatory factor analysis (CFA) for testing constructs validity (Pallant, 2011 and Hair, et. al 2005). The study was conducted at English education department, Universitas Jambi with total students' population 488. Out of 488, 50 third year students were selected for pilot study, and 208 students were randomly selected as the samples of the research.

The procedures of instrument development as follows; first were analysis of HE curriculum, literature, and previous existing instrument. The second step was defining construct and sub-constructs based on literature review analysis. The third step was indicators development, assessment and judgment of researchers to see the appropriateness of each item under the belonging construct. The fourth step was holding a workshop to reach face validity and confirm content validity as well as check the language of the instrument. Twelve lecturers and 20 alumnus of English education participated in the workshop.

The fifth step was trying out the questionnaires and consistency testing with 50 respondents. Pallant (2011) and Hair, et. al (2009) suggested that Cronbach alpha coefficient .60 for a construct consists of 10 items and below, while coefficient .70 is recommended for a construct that consists of more than 10 items. And corrected item-total correlation at 0.30 is acceptable. And last step was investigating construct validity through confirmatory factor analysis (CFA). . Pallant, (2011) states that sample size at 150 and above are sufficient to conduct confirmatory analysis, while Myers at, al. (2011) suggests that sample size at 200 and above. The CFA in this study was conducted at sample size 206 and above.

Result Of Students' Core Competencies Practices Instrument

The six steps of self-evaluation questionnaire development had been conducted successfully and the questionnaire come out with three main construct measuring instrument of core competencies practices, they are soft skills, hard skills and academic character. In the reliability process and validating of the instrument, some indicators had been revised by considering participants' suggestion, and as the result all indicators toward each sub-construct can be understood and agreed by the seminar participants. The number of indicator had been deleted based on sub-construct were one indicator of communication skills, four indicators of numeracy, three indicators of problem solving skills, and one indicator of working in team. While there was no indicator of hard skills deleted. In term of academic character, two indicators of honesty, three indicators of patient, three indicators of confidence and three indicators responsible were deleted. Total indicators of core competencies reduced from 103 to 96 indicators after the whole process. The result is reported specifically as follow.

First Round: Reliability and Validity Result

The result of consistency analysis found that 10 indicators of Core Competencies yielded corrected item total correlation below recommended values .30 (Pallant, 2011, Hair, et. al 2009). However, seven of the 10 indicators obtained close to corrected item correlation value at .30, the indicators were not deleted but they had been revised in term of content and phrases. Three other indicators were deleted, one indicator of communication and two indicators of numeracy due to very low the Corrected Item-Total Correlation obtained. Then the content and indicators of questionnaire had been revised.

Revised questionnaire were distributed to 250 respondents and 206 returned. As Pallant, (2011) and Hair, et. al (2009) suggested that sample size at 200 and bigger is good to run CFA in order to confirm construct validity. The criterion for the construct validity was considered as acceptable if the items in each construct yielded loading factor at 0.50 or higher, in others way to say the statement used in the construct is measured what supposed to measure (Hair et al. 2009 & Pallant 2011). The first round of CFA conducted and found that three indicators did not meet loading factors at .500, one indicator of learning, one indicator of PBL and one indicator of honesty. The three indicators were deleted, the second round of reliability and CFA conducted.

Second Round: Reliability and Validity Result (Final)

Second round of reliability analysis was conducted to the revised questionnaire with 206 samples. Overall core competencies Cronbach's alpha is .962>.70. Overall soft skills yielded $\alpha = .928 > .70$, hard skills $\alpha = .845 > .70$ and academic character $\alpha = .942 > .70$. And all sub construct of soft skills and academic character obtained α more than .60 (Pallant, 2011). All indicators of hard skills, sub-contracts of soft skills and academic character obtained higher item corrected total correlation value .30 as suggested by As Pallant, (2011) and Hair, et. al (2009). This findings imply that high reliability and consistency were obtained by the instrument. The instrument is reliable to be used for measuring students' core competencies practices in the classroom. Table 3 shows the result of the reliability analysis:

Table 1. Corrected Item-Total Correlation and Cronbach's Alpha if Item Deleted

Construct	Number of Indicator	Corrected Item-Total Correlation	Cronbach's Alpha if Item Deleted
CORE COMPETENCIES	96	-	.962
I. Soft Skill	45	-	.928
a. Communication	8	.362 - .458	.738
b. It Skills	6	.325 - .524	.678
c. Numeracy	6	.501 - .661	.774
d. Learning	10	.355 -.608	.838
e. Prob. Solving Skills	7	.530 - .672	.830
f. Working with others	8	.386 - .573	.797
II. Hard Skill	10	.367 - .612	.845
III. Academic Character	41	-	.942
a. Honesty	7	.305 - .498	.704
b. Appreciating	7	.401 - .610	.753
c. Tolerance	5	.543 - .631	.797
d. Discipline	8	.371 - .607	.793
e. Patient	8	.441 - .637	.842
f. Confidence	6	.487 - .645	.778
g. Responsible	7	.410 - .555	.761

Result of Validity

Face and content validity had been discussed above. Face validity and content validity obtained through workshop among English education lecturers and face validity obtained by workshop among alumni of English education. To obtain construct validity, second round of CFA had been conducted. Pallant (2011) that assumption prior to rotated component matrix value of KMO smaller then .05 should be obtained. In this study all of tested constructs yielded KMO and Bartlett's Test at sig. $0.000 < .05$.

Table 3 confirms that all of the items were related strongly with its construct. All indicators yielded loading factor more than .500. The indicators in communication skills yielded loading factor in the range .516 to .638, IT in the range .503 to .747, numeracy in the range .580 to .719, learning how to learn in the range .521 to .691, and problem

solving in the range .640 to .794 and working with others within .504 to .700. Hard skills yielded loading factor .588 to .724. The loading factor of each indicator in its construct confirms that the indicators explain and measure what supposed to measure.

Table 2. Loading factor (L.F) of item upon component of core competencies

Soft Skills												Hard Skills	
Com.		IT		Num.		LHTL		PBS		WT			
No.	L.F	No.	L.F	No.	L.F	No.	L.F	No.	L.F	No.	L.F	No.	L.F
A1	,569	B1	,503	C1	,653	D1	,614	E1	,673	F1	,693	G1	,702
A2	,516	B2	,607	C2	,668	D2	,718	E2	,766	F2	,504	G2	,699

Final result of Core Competencies Components and Indicators

Indicators of Softs Skills

In this study soft skills were classified into communication, IT Skills, numeracy, learning how to learn, problem solving skills, and working with others. As shown in Table 4 soft skills were coming with 49 indicators and categorized into six sub-soft skills. Eight indicators indicate communication skills, six indicators refer to IT skills, eight indicators are for numeracy, eleven indicators indicate learning how to learn, six indicators are for problem solving skills and eight indicators refer to working with others.

Table 4. Results of Sub-constructs and Indicators Development of Core Competencies

Soft Skills	Indicators
A. Communication	1. Doing presentation, 2. Using Different formats, 3. Using Vocabularies, expressions and body language, 4. Summarizing key issues (Oral), 5. Giving feedback, 6. Communicating some ideas in writing, 7. Writing a report, 8. Summarizing key issues.
B. It Skills	1. Selecting relevant information, 2. Sharing references, resources and information, 3. Developing assignment in the form of text, image, chart, etc, 4. Presenting using some illustrations in power point, 5. Using software or application features, 6. Developing the structure of presentation.
C. Numeracy	1. Reading tables, charts, graphs and numbers, 2. Measuring learning activities and outcome, 3. Presenting based on points but calculable, 4. Labeling tables, charts and graphs, 5. Managing time for working on assignment, 6. Identifying the relevant information sources.
D. Learning how to learn	1. Improving academic performance, 2. Assessing the effectiveness and efficiency, 3. Identifying factors impacted on learning outcomes, 4. Setting realistic targets and plan, 5. Learning independently and be responsible, 6. Identifying ways my work best, 7. Reviewing what and how to learn, 8. Consulting with lecturers, 9. Adapting learning strategy, 10. Comparing information from various resources.
E. Problem Solving Skills	1. Identifying a problem, 2. Solving problems with several ways, 3. Using different methods to analyses a problem, 4. Accommodating diverse perspectives, 5. Solving problems by resources provided 6. Presenting an approach to solve a problem.
F. Working with others	1. Learning activities in a group, 2. Having conversations with different races in learning, 3. Working in team, 4. Resolving conflicts in team work, 5. Giving feedback to improve team work, 6. Keeping yourself and others motivated, 7. Respecting diverse perspectives, 8. Thinking and offering ideas to a group work.

Indicators of Hard Skills

Core competencies in term of hard skills are indicated by 10 indicators. Hard Skill was not divided into sub-construct or sub-skills, due to hard skills practices had been embedded into soft skills practices. Moreover based on Indonesian Qualification Framework-KKNI (Dikti 2011) states that hard skills only 20% of total skills needed. In this case hard skills cover the general content subject practices. The indicators were presented in in Table 5.

Table 5. Result of Indicators of Hard Skills

Hard Skills	1. Applying specific knowledge and skills, 2. Discussing ideas specific knowledge of a course, 3. Connecting prior knowledge with topic of discussion, 4. Transferring knowledge based on into practices, 5. Interpreting subject-content into technical practices, 6. Practicing your subject-content knowledge, 7. Answering technical questions proposed, 8. Enhancing your technical skills, 9. Developing specific competence, 10. Representing specific competencies.
-------------	---

Indicators of Academic Character

The academic character comes out with seventh sub constructs and 49 indicators. The seventh academic character sub-construct is honesty, appreciating, tolerance, discipline, patient, confidence and responsible. As presented in Table 6, Honesty have eight indicators, appreciating seventh indicators, tolerance five indicators, discipline eight indicators, patient five indicators, confidence six indicators and responsible seventh indicators.

Table 6. Results of Sub-construct and Indicators Academic Character

Academic Character	
A. Honesty	1. Telling what I can do and cannot, 2. Admit friends' strength, 3. Confessing my weakness, 4. Telling true resources, 5. Not to present and report a fictive data, 6. Not copying and pasting for assignment, 7. Not pretending to understand, 8. Giving a lie appraisal.
B. Appreciating	1. Honoring friends' improvement, 2. Listening to friend, 3. Paying attention to a friends' presentation, 4. Respecting friends equally, 5. Encouraging less active friend, 6. Prioritizing harmony in giving different ideas, 7. Giving appraisal to friends' effort and work .
C. Tolerance	1. Appreciating differences of ideas, 2. Appreciating the attitude of others, 3. Accepting the ways offriends in presenting, 4. Appreciating ways of a friend in completing assignment, 5. Accepting diversity in a group.
D. Discipline	1. Following academic rules, 2. Coming to a class earlier, 3. Submitting assignment by the deadline, 4. Organizing learning activities daily, 5. Scheduling, timing and prioritizing activities, 6. Targeting learning output to be obtained, 7. Following rules set by classroom agreement, 8. Following a style in completing assignment.
E. Patient	1. Self-Devoting, 2. Hearing long explanation, 3. Accepting the result, 4. Controlling emotion, 5. Staying motivated, 6. Working on assignment even under pressure
F. Confidence	1. Pushing downnervousness, 2. Encouraging to present, 3. Being confident, 4. Encouraging to participate, 5. Encouraging to be more confident to perform, 6. Assuring own ability.
G. Responsible	1. Completing my own part as group, 2. Own involving in group discussion, 3. Taking a part as moderator, 4. Own Checking for some errors and mistakes, 5. Own revising of report, 6. Taking a role of group leader, 7. Completing assignment.

Discussion

A set of questionnaire was developed to acquire information of the practices of core competencies through the students' engagement and activities. Questionnaire academically is able to measure the students' core competencies practices in teaching and learning process. The instrument core competencies consist of three main scales soft skills and, hard skills and academic character. Soft skills and academic character was developed in multiple measures each of which consists of multiple items, while hard skills were developed on a single scale which consists of multiple items. The instrument was design in questionnaire form with 5 likert scale alternative answers. The number 1 to 5 was used to describe respondent core competencies practices. We should note that there are many different types of measures, but the vast majority of scales used by behavioral scientists in survey questionnaires are Likert scales that utilize an interval level of measurement.

It might be there is some similar instrument in measuring soft skills, generics skills, interpersonal professional skills, and character however it is not found yet the instrumentations developed in measuring core competencies practices in the process of teaching in learning. While many researchers may not be interested in measurement development per se, they just looking at and use an existing Instrument without knowing how the instrumentation developed as the result they often used inadequate, inappropriate or unreliable and could not measure what expected to measure. Some available questionnaire developed aims to measure graduates' soft skills, generic skills or interpersonal skills performance at work place, however this instrument developed to investigate the development of core competencies applied in the classroom setting, embedded between soft skills, hard skills and academic character.

The instrument development are following research ethic, logic, scientific and using both qualitative and quantitative data, in term of theory and practice. The procedure and steps applied in the development processed are very clear, academically responsibility and normally used and accepted and commonly understood by social scientist. In addition, it is true that this instrument developed to measure core competencies practices teaching and learning process for EFL students at English Department of Jambi University, however it is academically adaptable and usable for any field of courses in term of investigating core competencies practices in teaching and learning activities.

Conclusion

Sixth steps of developmental process had been applied in the instrument constructions; they were literature studies; defining constructs and sub-constructs; constructing indicators; assessing and judging indicators; defining face validity, confirming content validity, consistency testing; and confirming constructs validity. The result of the development comes out with three main components of core competencies practices instrument, they are soft skills, hard skills and academic character. Soft skills is coming with 45 indicators and categorized into six sub-constructs; hard skills coming with 10 indicators, while Academic Character was coming with seventh sub-constructs with 41 indicators. Totally, core competencies practices have 96 indicators. It is concluded that the process of the instrument development had produced valid and reliable measurement of the students' practices of core competencies during their study at Universities. It is also expected that the instruments and the method of its' development contribute to area of students' and graduates' core competencies.

Contribution Of Translation Courses To Cultural Awareness, Cognitive Skills And Text Knowledge

Esra Saka
Bülent Ecevit University
Esra.Saka@Hotmail.Com

Abstract

This Study Attempts To Find Out The Contribution Of The Translation Courses The Students Of Fourth Grade English Literature Department At Bülent Ecevit University Took During Their Education On Their Academic Studies And Their Attitudes Towards These Translation Courses. The Research Especially Focuses On Their Cognitive Skills, Cultural Awareness And Text Knowledge By Giving Samples Of Related Studies. Throughout The Study It Was Hypothesized That The Translation Courses Offered At The English Language And Literature Department May Provide Students With Useful Insights On The Differences Between Cultures, And Gain Cognitive Competence On The Use Of Language, And Become Aware Of Language Variety Of Various Genres And Text Types. A Quantitative Research Was Carried Out To Confirm Or Reject This Hypothesis. A Student Perception Questionnaire Consisting 25 Items With Five Point Likert Scale Answers Varying From “Completely Agree” To Completely Disagree Was Used To Gather The Necessary Data. However, The Questionnaire Was Piloted With Third Year English Language And Literature Students To Check Its Validity And Reliability In The Spring Term Of 2016-2017 Academic Year. The Real Questionnaire Was Performed With The Fourth Grade Students Three Weeks After The Piloting. The Results Obtained From And The Students' Answers To The Questionnaires Indicated That The Fourth Grade Literature Students' At Bülent Ecevit University Have A Positive Attitude Towards The Translation Courses Offered In Their University And That They Believe These Courses Contribute To Their Academic Studies And Success.

Key Words: *Translation, Translation Studies, Literature, Cultural Awareness, Cognitive Skills, Text Knowledge.*

Introduction

Language Is The Source Of The Disciplines; Literature And Translation. In The First Of These Fields; Literature, Through The Characters Of A Literary Work, The Reader Can Understand How People In The Other Countries Live. They Can Discover Their Thoughts, Feelings, Beliefs And Customs Overall A Different Culture.

Translation Is A Way Of Transmitting Messages In One Language By Rendering Them In Another Language. Thus, Translation Courses Take Place In Disciplines Of Studies Such As English Language Teaching Or English Language And Literature.

Hence Translation In Foreign Language Classes Is A Form Of “Pedagogical Translation” That Enriches Learners' Competence. Likewise, Translation Can Be Successfully Utilized At Any Level Of Proficiency. Therefore, It Can Be A Valuable And Creative Teaching Aid To Strengthen The Four Traditional Language Skills Of The Literature Students.

While Students Are Contrasting Languages They Discuss And Correct Common Mistakes. By Working On These Difficulties Students Are Able To See The Link Between The Language Usage. Besides The Structural Differences, They Also May Spot The Cultural Components Like Idioms By Cognitive Processes Which In Turn Led Them Improve Not Only Their Cognitive Competence But Also Cultural Awareness Including The Acquisition Of Being Able To Differentiate Various Genres, Literary And Nonliterary Texts Which Is An Asset For Literature Students.

The First Of These Assets Cultural Awareness Includes Two Important Features; The Significant Influence Of Culture On Human Behavior And The Importance Of Recognizing Differences Among Them. It Denotes To An Increase In Understanding Of Our Own And Other People's Cultures In Our Brain. As Students Compare And Contrast The Cultures, They May Acquire Some Knowledge Out Of Similarities And Differences Among Those Cultures. Thus Courses With Syllabus That Include Cultural Features In The Curriculum Of Literature Courses Give A General Understanding Of Cultural Awareness. One Way Of Raising Awareness In Learners Might Be Using Literary Texts As They Are The Products Of Both Language And The Culture. As Literature Includes Information About The History, Customs, Values, And Language Of A Particular Cultural Group; Students, Especially Literature Students, When Exposed To The Differences And Similarities Among Cultures Extend Their Knowledge By Comparing And

Contrasting Them. By Details Of Their Own Culture They May Also Learn More. They Might Also Notice How Their Culture And Other Cultures Interact And Gain Cultural Insight.

Besides Literature, Translation Is Also Regarded As An Intercultural Activity As To Do Translation One Has To Master Both The Language, And The Rich And Generous Knowledge Of Different Cultural Background. Therefore, There Is A Great Deal That Literature Language And Translation Can Teach When Blended Together. Literature Students When Given The Opportunity To Study And Translate In Two Different Languages May Find Similarities And Differences Between Two Different Cultures And Gain Intercultural Awareness. They Gain Cultural Awareness Especially While They Are Dealing With Cultural Expressions They Were Not Familiar With These Cultural Based Expressions Which Are Not Easy To Translate.

Indeed, Cultural Untranslatability Is One Of The Problems Of Doing Translation. Cultural Untranslatability Occurs When A Certain Feature In The Source Language Does Not Exist In The Target Language Culture Where, Such Features May Include Religion And Social Background Elements.

Another Group Of Cultural Components That Causes Cultural Untranslatability Are Metaphors Cultural Metaphors Enable Students To Understand The Second Language As It Creates New Meanings. Therefore, It Is Very Beneficial For Language Learners To Know Cultural Metaphors Which, In Turn, Help Them To Know The Deep Meaning Of Expressions.

Like In Metaphors, The Interference Of The Translator's Native Language Can Lead To Misinterpretation Of A Collocation. Baker (1998) States The Same Collocations Are Direct Reflections Of The Society In Which They Occur Hatim And Mason (1987) Defines Another Problematic Cultural Element; Irony As "Saying One Thing Literally And Meaning The Opposite Figuratively". The Translation Of Irony Depends On The Way In Which The Target Language Reader Perceives The Irony. The Problem Occurs When The Irony Is Translated Literally.

As It Can Be Understood From Above; Cultural Terms Cause Many Difficulties In Translation But This Does Not Mean That They Cannot Be Translated. Despite The Difficulties, The Learners Dealing With Translation Like Literature Students May Translate These Cultural Elements Easily If They May Become Aware Of The Cultural Differences And Learn Various Procedures, Techniques Or Strategies To Deal With Such Cultural Problems In Their Translation Courses.

Dealing With Such Cultural Components Require Not Only Cultural Knowledge But Also Cognitive Skills Which Includes Basic Language Skills Like Writing And Reading. During The Process Of First Of These Skills Namely Writing, The Writer Tries To Fit Language Into His Or Her Own Thoughts And Feelings. Therefore, The Process Of Writing Becomes More Complex Which Requires Implementation Of Some Strategies. Indeed, A Skillful Writer Is The One Who Can Solve Problems That Occur During These Stages Like How To Organize Ideas; Make Grammatically Correct Sentences Or Use Correct Punctuation And Spelling.

Hayes And Flower (1980), In The Writing Model They Developed, Have Attempted To Classify The Various Activities That Occur During The Process. According To Their Model, The Learners Start The Writing Process By Generating Ideas. Then They Make Up The Plan For The Document By Organizing These Ideas. After This Organization, They Produce The Text As The Output. The Process Proceeds With Monitoring In Which The Students Read And Check What They Have Written And Then Revise It.

Planning, Revising, Editing And Revising Need Significant Cognitive Effort Hence They May Improve The Ability Of Problem Solving. However, To Be Able To Conduct These Processes Effectively, The Learners Should Do Critical Reading. Indeed, Reading Narratives Impact Students' Cognitive Development And Critical Thinking, Both Of Which Are Vital For Academic Success. Stories, For Example; Help The Students Develop Their Analysis Skills Since Reading Narratives Requires A Different Mode Of Thinking From What May Be Called As Reasoning.

The Study Of Cognitive Development Namely; Cognitive Science Regards Translation As A Problem-Solving And A Decision Making Activity Which Are Complicated Mental Processes. In The Light Of This Field, Theorists Of Translation Such As Bell (1991), Kiraly (1995) Have Studied Translation From The Cognitive Perspective And Tried To Figure Out The Processing Of Information Which Consists Of Three Important Steps. First One Is The Input Of

Information Which Makes Up The Beginning Of The Process; The Second One Is The Processing Of The Information In The Brain Which Is Building Up The Mental Presentation. The Final Step On The Other Hand Is Changing The Input Into Output Which Results In The Product. These Stages Do Not Happen Step By Step But Occur Simultaneously During The Process Of Translation.

Cognitive Approaches Focus On Different Processes Involved In Translation, So Different Cognitive Scientific Approaches Propose Different Answers To The Question Of How The Brain Works During Translation. Moreover, Several Researches Have Proposed Several Theoretical Models On The Mental Processes That Occur During This Cognitive Process.

The Common Issue The Literature Students Deal With During The Cognitive Phase Of Translation Is The Figurative Language Which Strengthens Or Makes What Is Being Described More Compelling And Effective. Among These Figurative Language Devices Metaphor Is Especially Important For Literature Students As Metaphors Allow The Reader Greater Understanding Of The Concept, Object, Or Character Being Described Which Can Be Done Either By Comparing It To An Item That May Be More Familiar To The Reader Or To Give Them A Picture In Their Minds Of What Is Being Discussed. Metaphors Can Also Be Used To Simply Make The Writing More Interesting. Coming Up With Original Metaphors May Turn Boring And Dry Texts Into More Interesting And Aesthetic Ones. Literature Students Specifically While Doing Translation May Make Use Of Metaphors Which Is Quite A Cognitive Process.

The Cognitive Theories Of Metaphor Have Shown That Metaphors Are Not Only Cultural Symbols But Also A Cognitive Phenomenon. Thus, This Linguistic, Cultural And Cognitive Phenomenon Should Be Understood, Interpreted And Translated Adequately To Be Understood In The Target Language. Therefore, To Translate A Metaphor It Is Necessary To Understand The Function And The Meaning Of The Metaphor In The Source Language To Find The Equivalent And Be Able To Convey It In The Target Language.

In General, Cognitive Theorists Identify Metaphor As A Process Of Mapping Between Two Different Conceptual Domains: The Target Domain (The Concept To Be Described By The Metaphor), And The Source Domain (The Concept Drawn Upon, Or Used To Create The Metaphorical Construction). In Metaphors Having Similar Mapping Conditions The Metaphorical Phrase Appearing With The Same Meaning Become The Substitute. On The Other Hand, Metaphors With Different Mapping Condition With Culture-Bound SI Metaphors Are Translated Into Sense.

Having Studied Metaphor Translation From The Cognitive Linguistics Aspect, The Literature Students May Also Study The Issue From The Perspective Of Modern Translation Studies. Such A Study Would Aim To Describe Translations (Both As Products And Processes), Explain Why Translators Act In Certain Ways And Produce Target Texts And To Assess Effects Of Translations. By Describing The Strategies Chosen To Deal With Metaphors, And Offering Specific Solutions, The Discipline Of Translation Studies Together With The Practice Of Translation May Provide A Valuable Contribution To The Academic Studies Of Literature Students.

Literature Students Who Are The Main Concern Of This Study Also To Hold The Knowledge About Genre And Different Types Of Texts. Thus, There Are Researches And Approaches On How Students Learn A Genre And They Have Focused On The Effect Of Instruction On The Genre.

Genre Awareness Is An Approach Proposed By Devitt (2004; 2009). This Approach Highlights The Process Of Learning New Genres Rather Than The Acquisition Of Particular Features Of Genres. It Aims To Make Students “Apply Strategies To “Contexts In Which They Encounter Genres-In Other Words, In Any Context In Which They Encounter Language” (2004; P. 198). In Other Words, The Process Of Revising Genres Which Is Usually Performed After Drafting The Texts Involves Detecting The Problems And Fixes Them In Accordance With The Genre Knowledge They Learnt. Finally, They Produce Their Final Text To Present It. As It Can Be Gathered From The Processes Above When Students Learn About New Genres Those Can Help As Resources To Make Up A Link Between Genre Knowledge And Genre Performance. Therefore, The Framework Of The Genre Of A Story Or A Narrative May Be A Good Guide For Literature Students As They Become The Familiar With Various Structures Of Narrative The Students May Reflect What They Read Into Their Writing.

Translation May Also Have Pedagogical Effect On Students In Acquiring Text Knowledge As Genres, Literary And Nonliterary Texts Bear Important Differences And Literature Students Can Figure Them Out While Doing Translation. The First Of These Differences Is That Vocabulary Of Non-Literary Texts Is Standardized Making The Language

Formal Whereas Literary Texts Have Aesthetic Language Embroidered With Metaphors, Similes, Personifications And Other Poetic Devices Which In A Way Make The Language Of Literature Special.

Moving Onwards, Contrasting Non-Literary And Literary Texts From A Translational Point Of View, Another Difference Is That Rendering Non-Literary Text Requires Complete Faithfulness To The St As Its Language Is Governed By Norms. The Terminology Is Precise Therefore It Does Not Allow Any Creativity Which Makes It More Scientific. On The Other Hand, Translation Of Literary Text Is Freer And More Creative That Changes It Into Art (Bednárová-Gibová, K. (2012; Pp.100).

To Sum Up, Gaining The Competence And Being Aware Of The Differences Through Translation Could Help The Literature Students Apply The Knowledge And Produce Similar Texts Which In Turn Lead Them To Success In Their Academic Life.

Since The Aim Of The Study Is To Find Out The Attitudes Of Fourth Grade Students In English Language And Literature Department Towards The Translation Courses They Receive During Their Four-Year- University Education At Bulent Ecevit University. Hence, English Language And Literature Department At Bülent Ecevit University Was Chosen As The Setting. Another Reason For Choosing Bülent Ecevit University As The Setting Is That The Researcher Has Been Working At This University And Giving Translation Courses In The English Language And Literature Department.

The Participants Are The Fourth Grade Students In English Language And Literature Department Since These Students Have Taken All The Translation Courses Offered Hence; They Have Acquired Enough Ideas About Translation Studies To Establish An Attitude. A Questionnaire Including Twenty-Five Questions In Total Was Conducted In Order To Find Out The Thoughts And Attitudes Of These Students Towards The Translation Courses.

The Questionnaire Was Designed In A Likert Scale Method Which Has A Five Level Format As In *Strongly Agree, Agree, Neutral, Disagree, And Strongly Disagree*. The Scoring Format Of The Scale Is In Strongly Agree = 5, Agree = 4, Neutral = 3, Disagree = 2 And Strongly Disagree = 1. The Participants Of The Questionnaire Were Given Statements That Reveal Their Attitudes Towards Translation And Its Effect On Their Academic Studies Considering The Following Aspects; Language Awareness, Reading Skills, Writing Skills, Vocabulary Acquisition.

It Was First Piloted With Third Grade Students At Bülent Ecevit University To Check Its Validity And The Reliability. Then The Final Questionnaire Was Conducted To Fourth Grade Students Three Weeks After The Piloting. The Questionnaires Were Analyzed The Answers Given By The Participants Were Compared And The Results Were Obtained In Alpha Values And Percentages Through Graphics Using Spss, Frequency Tests. On The Other Hand, The Cronbach Alpha Coefficient Of The Questionnaire Was Administered To 4th Year Students, And Is .499.

When The Results Of This Questionnaire Is Observed, It Can Be Seen That In Terms Of Cultural Awareness % 79 Of The Learners At Bulent Ecevit University Believes That Translation Helps Them Improve Their Cultural Knowledge. Likewise, 89% Of Them Agree That Translation Is An Important Factor In Understanding Cultural Elements Like Idioms And Metaphors. Supporting These Numbers 76% Of The Participants Disagree That Translation Doesn't Help Them Learn Cultural Elements Like Idioms And Metaphors.

Acquiring Critical Thinking Skills Are Especially Important For Literature Students, Who Have To Read Different Kinds Of Texts And Literary Genres, Analyze, Compare, Contrast, Criticize And Discuss Them All Of Which Are Cognitive Processes. Cognitive Models Made Up Of Such Cognitive Processes Have Effect On Not Only Literature But Also Translation. This Scientific Field Analyzes Translation As An Information Processing, A Problem-Solving And A Decision Making Activity Which Are All Complex Mental Processes.

The Common Issue The Literature Students Deal With During Translation Is The Figurative Language Which Strengthens Or Makes What Is Being Described More Compelling And Effective. Among These Figurative Language Devices Metaphor Is Especially Important For Literature Students As Metaphors Help Them Comprehend The Concept, Object, Or Character Being Described. The Learners Compare The Metaphor To A More Familiar Item Or Picture The Item In The Metaphor Before Their Eyes. Metaphors Can Also Be Used To Simply Make The Writing More Interesting. Coming Up With Original Metaphors May Turn Boring And Dry Texts Into More Interesting And Aesthetic Ones. Literature Students Specifically While Doing Translation May Make Use Of Metaphors Which Is

Quite A Cognitive Process. Since Translation, As A Process Includes Analysis Of Texts And Sentences In These Texts And Rendering Them From One Language Into Another Like Solving A Problem. Hence 58% Of The Literature Students Who Received The Translation Courses In Their Departments At Bulent Ecevit University Feel The Effect Of Translation On Their Cognitive Development. 48% Of Them Disagree With The Idea That Translation Does Not Help Them Develop Their Critical Thinking, Analysis And Problem Solving Skills.

Genre Learning Activities Are Also Important For Literature Students As The Identification Of Recursive Features In Such Genres Help Students Acquire Awareness Which In Turn Make Them Able To Produce Their Own Examples Of The Same Genre. Research Into How Literature Students Learn A Genre Have Focused On The Effect Of Instruction On Their Genre. These Studies Have Shown That Detailed Analysis Of Prototypical Texts Of A Target Genre Have Extensively Contributed To Raising Students' Consciousness Which In Turn Develops Their Ability To Contextualize The Genre Of Their Own Writing Better.

In Translation, The Genre Knowledge Helps Students Find The Purpose Of Interaction Between The Reader And The Writer. Moreover, It Assists Them In Making Up The Relation Between The Source And The Target Text Which In Turn Leads To The Thorough Understanding Of The Context. Going Into Depths Of Text, The Learner Recognizes The Cultural And Intercultural Values Of The Other Culture.

Hence The Students Who Received The Translation Courses In Their Departments At Bulent Ecevit University Being Literature Majors Acquire Deep Knowledge About Different Genres And Literary Texts And Being Aware Of Differences Between Literary And Nonliterary Texts. To The Item Referring To The Contribution Of Translation On Differentiating Between The Literary Texts And Genres, Nearly Almost All Of The Participants (96 %) Give Positive Response. Likewise, % 84 States That Translation Aids Them In Comprehending Literary Texts And 86% Of Them Disagree With The Belief Stating Translation Does Not Enhance Their Knowledge About Literary Texts And Genres. Moreover % 45 Rejects That Translation Does Not Help Them Improve Their Text Knowledge (Coherence, Cohesion And Different Genres.) Hence, 80 % Of These Literature Students Think Translation Helps Them Understand The Relationship Between Form And Content.

Consequently, The Starting Point Of This Study Was The Hypothesis That The Translation Courses Offered To The Literature Students In The English Language And Literature Department At Bulent Ecevit University Could Provide Students With Useful Insights On The Differences Between Cultures, And Gain Cognitive Skills On The Use Of Language, And Become Aware Of Language Variety Of Various Genres And Text Types. The Results Of The Questionnaire Conducted And The Research Reviewed Throughout This Study Demonstrate That Translation Does Help Acquire And Enhance The Knowledge And The Skills Discussed In The Research. Hence, The Findings Of The Study Reveal That The Fourth Grade Literature Students' At Bülent Ecevit University Has A Positive Attitude Towards The Translation Courses Their University Offered And That These Courses Play A Constructive Role In Their Academic Studies And Success.

“Corripto Optimi Pessima Est”^{*} Unpredictable Consequences Of Severe Secularism

Doç. Dr. Osman Zahid ÇİFCİ
Selçuk Üniversitesi İslami İlimler Fakültesi
Felsefe ve Din Bilimleri Bölümü
zahid.cifci@selcuk.edu.tr

Abstract

This paper, is an introductory study that suggests a contrasting perspective for social scientists who study the sociology of religion - particularly for those who engage in the study of secularisation. In regards to this topic, most evidently in our country, we may notice two different opinions emerging. One of these two standpoints suggests that by using examples from social life, we may say that our country is rapidly secularising. Despite using similar illustrations from social life however, the second viewpoint claims the opposite, saying that our country is growing in piety than secularity. When these discussions are taking place, a valid point may be overlooked. The main purpose of this paper is to bring light to this detail in order for it be argued too. For every social event that takes place, the idea that every effect causes a reaction is an undisputed truth. It raises the question, is there a reaction against secularism in the society? If there is, is this reaction going to be able to cause a social change and transformation? Or is it just a minority reaction? These are the kind of questions that should be answered. It is highly important for universalized secularisation theory defendants to study about anti-secularist groups and test the theory. It is essential to look at the propositions we will make in the final part of our paper from this perspective.

Keywords: *Severe Secularism, Ertit, secularization, universalizing classical secularization theory, religion.*

This study aims to draw attention to a point where the universalized secularization theory (Ertit, 2014; Ertit, 2016, p. 42) overlooks. Volkan Ertit, who is in the claim of universalizing classical secularization theory and tests his universalized theory on the samples from Turkey (Ertit, 2016), expresses that secularization concept has two different definitions (religion-based, and metaphysic-based) (Ertit, 2017) and argues that metaphysic-based definition is applicable to sociology by saying "Secularization is not atheism or un-islamic, secularization does not mean laicisation, secularization requires comparison with the past" (Ertit, 2017, p.300).

In our study, we aim to question why it has not been discussed whether it is an anti-thesis to the severe secularization, and why any research has not been conducted in this direction. Whether the modernization, which is seen as the trigger of secularization, constitutes its opponents as in the case of Afghanistan (Arslan, 2015, p. 309), whether the secularization that emerged with the modernization constitutes an opponent desecular group, and whether that desecular attitude affects the constitution of the organizations such as Taliban are among the realities of the universalized secular paradigm that should be investigated. We suggest that it has to be investigated whether the fact that an establishment such as ISIS suddenly found basis in many Muslim countries including European countries is a reaction to the severe secularization or not, while saying in our study that many studies to be conducted with new and different methods will give different results and by accepting the presence of many political factors in the constitution.

Likewise, the presence of various groups (Furkan Foundation, Cubbeli Ahmet Community, IFAM, etc.) that react to severe secularization in our country is an undeniable fact. By making comparisons, it is possible to say that these exist in the past, however there is no scientific data on how these groups have a potential compared to the past. When we use the method of comparison with the past, which is the greatest research argument of the universalized secular theory, has it been investigated whether the young people in these groups, especially those who are popular among the university students stay away from many behaviors that their father could not do due to impossibility (financial possibilities, distance from social pressure etc.) due to religious reasons? These examples are remarkable since they are from civil society, unlike the applications such as the opening of religious institutions or multiplication of numbers of them by the government, which are shown as desecular examples in other studies (Karaslan, 2015; Sagir, 2015). At the same time, the applications by the government as examples of desecularization have been criticized by aforementioned groups (especially the Faculties of Theology and the Directorate of Religious Affairs have been severely criticized by these groups). These groups see themselves as empowered to speak in the name of religion and do not hesitate from using an exclusionary style.

What we offer here can be summarized as follows:

- It should be argued whether severe secularism has constituted opponent groups.

^{*} The corruption of what is the best into the worst of all.

- It is an important requirement to conduct field research on the mentioned example and groups by especially religious sociologists.
- It should be investigated whether these groups carry marginalization risk or, more clearly, the risk of Talibanization. Whether this case is an example of "corruptio optimi pessima est" may arise as a result of this research.
- The question of "Is it an exception that the participation to these groups has been increased with severe secularization?", as Bruce says (Bruce 2002, p. 40-41), is another issue that must be discussed. Because, the reason for these groups to look like exceptions may be the fact that they keep themselves away from social places where sociological observations will be conducted (cafes, cinemas, university canteens, etc.) for religious reasons.
- The answer to be sought for the question of "Is there any shift in society towards deism due to the words and actions of these groups (such as child marriage, discourses about young mother-in-law, shrouds which do not burn and prayer book sales etc.), who believe that they have the authority to speak on behalf of religion?" is particularly important to lighten up the recent discussions on deism.

Abstract

Many architectural drawings are drawn everyday around the world. How many design alternatives are actually built to buildings? At the end, one alternative is finally chosen for real construction. However, can we be sure that one which is chosen among many alternatives is the best one? How much can we actually trust that the final alternative selected by only a few specialists fulfills everyone's favorite?

At the college, student in architecture study hard to design buildings which realize their ideals. Most students' designs are evaluated by a few professors around. Sometimes students are even forced to follow professor's design preferences. Inevitably architectural design evaluation tends to be driven by such a subjective method. Therefore, sometimes the evaluation results are not understood or cannot be agreed with student. Particularly in the case of competition, a small number of experts assess a lot of works. No matter how expert they are, they could make minority's mistake. In addition, it might be difficult to trust if transparency of assessment is not ensured.

To solve these problems, we propose a design evaluation methodology using crowdsourcing in the architectural education process.

Usually a few experts have participated in the assessment because the lack of systems and conditions. But the assessment using crowdsourcing is network-based, eliminating the time and space constraints and providing a system that anytime, anywhere multiple experts can participate in the evaluation. It is a new attempt to break the stereotype that either a few specialists or many laymen apply to the existing multiple evaluation system. The advantage of these assessments is that top experts in the field can create more specialized and more objective assessments than any other system. If a design evaluation system using crowdsourcing is well established and used, it is expected that a new design assessment paradigm will be created by changing the existing closed evaluation system.

The design evaluation using crowdsourcing allows the client to objectively predict which design becomes most potential building in the future. In addition, it is possible to prevent potential drawings are left out due to unreasonable work during the design review process. It is a great opportunity for students to get evaluations their designs by a number of professionals.

Curriculum Development Competencies of Form Teacher Candidates

Hasan Eriş
Uluslararası Kıbrıs Üniversitesi
heris@ciu.edu.tr

Alçın Kılıçoğlu
Uluslararası Kıbrıs Üniversitesi
akilicoglu@ciu.edu.tr

Abstract

It can be stated that education plays a critical role at shaping the future of the nation. Designed curriculum and teachers as a developers and practitioners of the curriculum are accepted as a major drivers to increase the quality of the education. From this perspective, classroom teachers should have necessary competencies to develop curriculum. The current study aims to examine 222 participants in context of curriculum development competencies in the third and fourth forms who are studying in form teacher program at Cyprus International University (CIU), Near East University (NEU), European University of Lefke (EUL) and lastly Eastern Mediterranean University (EMU). The current study employed the scale which proposed by Duman (2006) to investigate curriculum development skills of the participants. The data which collected from participants was analyzed through SPSS. Moreover, it could be expressed that curriculum development competencies of the participants was tested by appointing arithmetic mean analysis and Independent Samples T test and One Way Anova Analysis were employed to investigate statistical differences among participants in context of curriculum development competencies with the light of ($p < 0,05$). Study revealed that gender, class and university in which participants are studying were found statistically significant in context of curriculum development competencies. Moreover study recommended to revize the related courses which would increase the competencies of participants thus would be helpful to overcome their incompetencies particularly on preparing the course plans with the light of multi-course theory, capability to use different methods and techniques to increase the capacities of the students at the highest level, diversifying the teaching-learning process by considering individual differences of the students, capability of organizing learning sphere by considering different preliminary experiences. Study also advised to increase sample size and conduct TUKEY analysis for obtaining more accurate results.

Key Words: *Education, form teacher candidates, curriculum development competencies*

Introduction

Nowadays, educational institutions are considered as one of the key ingredients of education process. However, it could be stressed that education does not only existing in educational institutions. To be more precise, In addition to educational institutions, there are also various institutions that transmit vocational knowledge to the learners.

No doubt that, education might take place within the family, workplace and in social groups. It could be stated that education is one of the vital tools used to perform “enculturation” within the community. It can be argued that enculturation is shaped through the characteristics of the individuals and the culture in which they are born and grown. Moreover, communities convey the culture in which they possess to the new generations. In that sense, community influences individuals with cultural values which is called as enculturation. Therefore, it could be indicated that education is the deliberate way of enculturation (Fidan, 2012).

The term of education is identified by various authors in different ways. Tyler, who is considered as one of the pioneers of educational scholars, described education as a process of changing the behaviors of the individuals (Senemoğlu, 2012). Moreover, Çilenti, (1984) defined the term of education as a process of shaping behaviors of individuals which is desired by society. Education in a broader sense; is described as a process that boosts self-development by improving skills, knowledge, moral values, decision making of the individuals (Öztürk, 2005). Furthermore, Tezcan (1985) expressed the term of education as a process which prepares individuals to adult life and injects them necessary talents and perspectives for the future life.

Besides of these, educators have stressed that education takes place through formal and informal education. Formal education could be indicated that providing education to the learners with the light of the education plan which shaped by the certain purpose. In formal education system, teaching and learning facilities are designed by the teachers from the beginning to the end of the education. It can be mentioned that education which provided to the learners through educational institutions is named as formal education. Informal education, could be indicated as the education which shaped by daily routines. Moreover, in contrast to formal education, informal education is not planned. In informal education context learners learn from their experiences (Fidan, 2012).

Şişman (2007) discussed that education is consisting from various disciplines. These disciplines can be stated as social theories, social strata, ranks, roles and responsibilities, culture and law. Malthus (1820) mentioned that education is one the vital elements for the individuals to live well. Furthermore, Kruguer and Lindahl (2001) have stated that education has a prominent role at declining crime rate and maintaining stability both in political and economic fields.

Baykul (1992) had stressed that education is a system which shaped by certain elements. These elements could be indicated as input, process, output and lastly evaluation. To be more exact, financial resources, educational tools and equipment, qualifications of the learners, educational programs which are designed to inject desired behaviors to the learners, laws and procedures which are appointed for educational purposes, social values and structure of culture which are related with education are constituting the inputs of education whereas; courses which are formed to inject desired behaviors to the learners and educational activities which planned for the learners are constituting process of education. Output consists from the outcomes of the process. Lastly, decisions about students and activities to explore deficiencies and root of these deficiencies could be referred as evaluation.

It could be emphasized that transmitting necessary knowledge and skills to the individuals are considered as one of the key ingredients to form qualified community which in turn would trigger social development. Moreover, it might be argued that one of the prerequisites of formulating qualified community is to plan an education system which is favoring creative and competitive motives and injecting the importance continuous life learning to the individuals. No doubt that, teachers are one of the most crucial elements of the education. From this framework, degree of success of educations system is closely associated with the skills and competencies of the teachers (Gül, 2004). Moreover, it is believed that skills and competencies of the teachers play important role for achieving educational goals. To be more precise, teachers should have adequate knowledge at designing learning sphere, planning teaching and learning activities to inject desired behaviors to the learners and lastly evaluating the impact of all these facilities on learners (Kuzgun, 1991). Schreglmann (2016) also dictated that form teachers competencies on curriculum development are critical for stimulating the effectiveness of education.

Aim of the Study

It could be lamented that primary education is considered as one of the cornerstones of life and education as it plays a prominent role at shaping the character of the individuals. In that sense, form teachers should have necessary skills and competencies. In other words, the inadequacy of form teachers in educational sphere will negatively influence students which in turn it would be quite difficult to compensate this negativity during the ongoing education process. Moreover, it could be stressed that curriculum development is one of the vital mechanisms for building effective education. Therefore, to trigger influential education for the students, form teacher candidates and form teachers should be trained through pre-service and in-service training programs to advance their competencies towards to the curriculum development. The main objective of the current study is to explore curriculum development competencies of form teacher candidates who will serve as form teachers in the Turkish Republic of Northern Cyprus (TRNC)

Significance of the Study

The current study can be considered significant in several ways. First, since the present literature fails to provide sufficient research on the curriculum development competencies of form teacher candidates, the findings of the study are expected to help to recognize the level of curriculum development skills of form teacher candidates in the third and fourth forms who are studying in form teacher program at Cyprus International University (CIU), Near East University (NEU), European University of Lefke (EUL) and lastly Eastern Mediterranean University (EMU). Secondly, it may be considered as one of the initial research regarding in North Cyprus in this context. Therefore, the current study is expected to add to the scholarly research and literature about curriculum development competencies of form teacher candidates as well as deepen understanding towards to the efficiency of pre-service training programs.

Methodology

Research Model

Descriptive scanning method was employed for the current study. Descriptive scanning is the preferred method for determining the current situation. However, quantitative data collection tools are appointed in descriptive scanning methods. In this context, the descriptive screening method was accepted as the most appropriate research method for the current study as it aimed to discover the curriculum development competencies of the form teacher candidates in the 3rd and 4th grade during the 2017-2018 education periods

Research Questions of the Study

The research questions of the current study could be expressed as follows;

- What is the level of curriculum development competency of form teacher candidates?
- Is there any statistical significance among gender of form teacher candidates and their curriculum development competencies?
- Is there any statistical significance among the grade of form teacher candidates (3rd and 4th form) and their curriculum development competencies?
- Is there any statistical significance among university which of form teachers are educated and their curriculum development competencies?

Sample of the Study

The sample of the study was constituted from 222 form teacher candidates who are educated in the 3rd and 4th classes of the form teacher department in CIU, NEU, EMU and EUL during 2017-2018 education year. Moreover, sampling method of the study could be stressed as convenience sampling.

Data Collection Tools

It can be discussed that data which is associated with the study would be gathered by executing the Personal Information Form and Curriculum Development Competency Scale

Personal Information Form: The form attempts to collect information about the socio-demographic profile of the participants such as gender, grade and lastly university which form teacher candidates are educated.

Curriculum Development Competency Scale: The current study employed the scale which proposed by Duman (2006) to investigate curriculum development skills of the participants.

It could be mentioned that while Duman (2006) was proposing the scale, expert opinions were obtained from the academicians working in the faculty of education. Furthermore, reliability analysis of the developed scale relies within accepted limits ($\alpha = 0,91$). In that sense, it could be stressed that there is no obstacle for the use of the scale used in the study in academic researches

In addition to that, sample statements which the curriculum development scale outlines could be stated as "knowledge and the skill required for the curriculum development", "understanding the importance knowledge and skill which are required for developing a curriculum, "ability to determine content of the courses by considering the competencies and learning styles of the students" "having a knowledge on the basic characteristics of teaching methods", "having a knowledge to perform assessment and evaluation for the education" etc

Moreover, it could be mentioned that 4-point scale was appointed for the current study. 1 = "Weak"; 2 = "Medium", 3 = "Good", 4 = "Very Good". The weight range which appointed for the present study was computed as 0.75. The Rating scale and their expressions could be indicated by the following table.

Table 1. Ranges and competency of curriculum development

Ranges	Competency of Curriculum Development
1.00-1.74	Poor
1.75-2.49	Moderate
2.50-3.24	Good
3.24-4.00	Very Good

Data Analysis

SPSS (Statistical Package for Social Sciences 24,0 software program was used to analyze the data. Moreover, frequency, cornbach alpha, descriptive, Independent Samples t test, and lastly One-Way Anova analysis were conducted to interpret findings of the study.

Conclusion and Discussion

It could be mentioned that education is one of the most critical driving force to accelerate economic growth. Therefore, education plays an important role to inject qualified individuals to the workforce. In that sense, it is believed that teachers have a great responsibility at creating qualified communities.

Furthermore, it might be stressed that from their birth to a certain age individuals are educated by their parents then they attend to the educational institutions to learn social values. Form teachers could be identified as an educators who are inoculating the basis of teaching and learning to the students. Therefore, their competency to transmit information to their students plays critical role at educational context.

In addition to these, form teachers should have competency to develop a curriculum for effective education. In other words, form teachers should have necessary skills to formulate curriculum by considering the needs and area of interests of their students while shaping the contents and assessing the curriculum. Besides of these, form teachers are expected to have competency to evaluate and revise the curriculum in case of necessity.

As previously indicated, the current research has been conducted with 222 form teacher candidates. The most remarkable findings of the research are listed below

- Findings of the study revealed that curriculum development competency of form teacher candidates were poor at "preparing course plans which are parallel to the multi-course theory", "determining course contents by considering the students", "special education needs", "using various approaches to accelerate capacities of the students", "diversifying the teaching and learning process by considering individual differences", "being able to arrange learning sphere by considering various previous experiences".
- Apart from these, result of the study also showed that form teacher candidates had a moderate competency on "having a knowledge to develop a curriculum", "having a knowledge of measurement and evaluation in educational context", "having a knowledge on social-historical-philosophical foundations of curriculum development for education", "having a knowledge to evaluate curriculum development process", "having a knowledge on learning and teaching by considering - collaborative learning and constructivist learning philosophies etc.) and lastly "preparing a unitized annual plan". From this framework, it could be mentioned that the findings of the study was partially compatible with the findings of Duman (2006). Duman (2006) found that form teacher candidates determined the having a knowledge to develop curriculum is weak.
- Beside of these current study also signified that, participants were good at "determining the content of the courses by considering the skills and learning styles of the students", "formulating a measurement tool by relying contemporary approaches", "Adapting teaching strategies for the students with specific learning difficulties", "having a knowledge on the basic features of teaching methods" "to be able to identify appropriate measuring instruments for purpose"; "designing the course contents by relying readiness of the students"; "having a knowledge on instructional strategies", "arranging the course objectives with the light of the level of students.", "rearranging teaching-learning process by considering the outcomes of measurement and evaluation", "determining the limits of content of courses by considering regional characteristics", "preparing learning centered course plans", "formulating goals for the educational program", "matching the content of the courses with the features of the course, "content order, analysis knowledge" "can match the level of the education program with the needs of the students; "critically evaluating educational programs"; "Having an adequate knowledge and skill to develop curriculum" and lastly "having an ability to prepare table of specifications". They were found to be at a good level in curriculum development issues such as "preparing table of specifications". This finding of the current study was partially parallel with the study of Duman (2006). In other words, Duman (2006) also found particularly on methodological issues, competency of form teacher candidates were at good level.
- Results of the study also signaled that participants' curriculum development competencies were very good on "establishing relationship among educational program items (purpose, content, teaching process, evaluation)", "formulating goals at different levels during curriculum development process" (Cognitive, Affective, Psychomotor), "understanding of the importance of knowledge and skill which required for curriculum development", "using technology (overhead, data show etc.) which is necessary for learning-teaching process".
- Independent samples T test were employed to discover statistical significances among curriculum development competencies of form teacher candidates and their gender. Gender and curriculum development competencies were found statistically significant on "understanding the importance of skills and knowledge which is required curriculum development", "matching the level of the curriculum with the needs of the students", "determining the contents of the curriculum by relying the talents and learning styles of the student", "capability of organizing learning sphere by considering different preliminary experiences". To create better understanding, results revealed curriculum development competencies of male form teacher candidates were very good at "understanding the importance of skills and knowledge which is required curriculum development", "matching the level of the curriculum with the needs of the students" whereas female form teachers candidates' curriculum development competencies were found

moderate at “capability of organizing learning sphere by considering different preliminary experiences” This finding of the current study is parallel with the findings of several scholarly researches on relevant field (Yıldız and Baycan, 2012; Baş, 2016).

- As previously mentioned independent samples t test was employed to determine statistical significance among grade of form teacher candidate and their curriculum development competencies. Results revealed that statistical significance was existed on “having knowledge on social-historical-philosophical foundations of curriculum development in educational context”, “having knowledge on teaching-learning approaches”, “identifying the most appropriate measurement tools for objectives”, “re-arranging teaching and learning process with the light of the outcomes of measurement and evaluation”. To be more precise, it was found that form teacher candidates in the last grade had a good level of competence, whereas grade 3 form teacher candidates had moderate competency. This finding of the current study is consistent with the Duman (2006) study. One of the reasons for this result may be indicated as that form teacher candidates who are studying in the 4th grade are having chance to deepen their understanding about curriculum development through courses and have opportunities to have internship.
- One Way Anova test was conducted to investigate statistical significances among university of participants’ and their curriculum development competency. It was found that participants were statistically significant particularly on “having knowledge and skill which are required for curriculum development”, “understanding the importance of knowledge and skill which are required for curriculum development”, “knowledge on the main philosophies which are closely related with curriculum development”, “having a knowledge on social-historical-philosophical foundations of curriculum development in educational context”, “having ability to match the level of curriculum with the needs of the students”, “establishing relationship among educational program items (purpose, content, teaching process, evaluation”, “organizing learning sphere by considering different preliminary experiences”, “having sufficient information on the features of teaching approaches”, preparing learning centered course plans”, “having a knowledge to evaluate critically the education programs”. The findings of the present study are consistent with the findings of Duman (2006). One of the reasons behind of this finding could be signified as a depth of knowledge and experience that academicians obtained through attending various symposiums / seminars or having publications on the related field effects the way of transmitting necessary information to the form teacher candidates to promote their curriculum development competencies.

Recommendations

The fundamental aim of this part of the study is to provide recommendations with the light of the findings.

Recommendations To Departments Of Participants

With the light of the findings it could be stressed that participants of the study are poor below-mentioned curriculum development competencies;

- Preparing course plans which are parallel to the multi-course theory,
- Determining course contents by considering the students’ special education needs,
- Using various approaches to accelerate capacities of the students,
- Diversifying the teaching and learning process by considering individual differences.
- Being able to arrange learning sphere by considering various previous experiences

Therefore, courses that related with curriculum development should be revised in a way to mitigate with the shortcomings which were mentioned above.

Moreover, it is necessary to diversify curriculum development sources that are taught so that the form teacher candidates could be equipped on the following competencies

- Knowledge of measuring and evaluating the quality of education
- Knowledge of social-historical and philosophical foundations of curriculum development in educational context.
- Knowledge to evaluate curriculum which had been developed.
- Knowledge to prepare united annual plan
- Knowledge to design learning and teaching approaches by considering collaborative learning and constructivist philosophies.

Recommendations For The Future- Related Studies

Future related studies could be designed as comparative basis to create better understanding in terms of similarities and differences among curriculum development competencies of form teacher candidates in different nations. Moreover, comparative studies could also generate opportunities to present different perspectives on curriculum development courses and activities thus will add the different insights to the relevant literature besides of these, increasing the sample size and employing post hoc. tests such as TUKEY could generate chances to obtain more reliable findings.

Özet

Bu araştırmanın amacı çeşitli değişkenlere göre bireyin öz-etkililik-yeterlik algısında farklılıkların bulunup bulunmadığını belirlemektir. Araştırmada öğrencilerin genl öz-etkililik-yeterlik düzeylerinin yanısıra cinsiyet, öğrenim durumu, yaş ve çocuk sayısına göre öz-etkililik-yeterliliğe ilişkin farklılıkların bulunup bulunmadığı araştırılmıştır. Bireyin iş hayatında da sosyal hayatta da başarılı ve mutlu olması için önemli olan pek çok etkenden biri de öz-etkililik-yeterliliklerdir. Bu nedenle öz-etkililik-yeterlilik araştırılması ve incelenmesi gereken bir konudur. Araştırma da Sherer ve arkadaşları tarafından geliştirilen Gözüm ve Aksayan tarafından Türkçeye uyarlanan öz-yeterlilik ve etkililik ölçeği kullanılmıştır. Araştırma kapsamında 2018 yılında lise ve üniversitede öğrenim gören toplan 308 öğrenciye uygulanan ölçekten elde edilen veriler bilgisayar ortamına aktarılmıştır. Veriler bilgisayar ortamına aktarıldıktan sonra betimsel istatistiksel işlemlere tabi tutulmuş, iki bağımsız değişkenli gruplar için bağımsız gruplar için t-testi, üç ve daha yüksek değişkenli gruplar için tek yönlü varyans analizi istatistiksel işlemi uygulanmıştır. Yapılan analizler sonucunda, öğrencilerin öz-etkililik-yeterlik düzeylerinin yüksek olduğu ve cinsiyet, çocuk sayısı, yaş ve eğitim durumuna göre öz-etkililik-yeterlik algısında anlamlı bir farklılık olmadığı belirlenmiştir.

Anahtar Sözcükler: *Öz yeterlik, Öz etkililik, etkililik-yeterlik*

Giriş

Bireyin bir işi yapmak için gerekli becerilere sahip olduğu konusundaki inancı (Bandura, 1994:71) olarak ifade edilen öz-yeterlik algısı, insan davranışları üzerinde etkilidir. Magill'e göre (1993) öz-etkililik-yeterlik, bireyin belli bir eylemi başarıyla yapma veya olayları kontrol edebilme algısı veya yargısıdır. Başka bir ifade ile "bireyin belirli bir performans düzeyini başarma kapasitesine ilişkin yargısı" (Bandura 1982) olarak da ifade edilmektedir. Öz yeterlik inancı (self-efficacy belief) kavramı Türkçe'ye "yetkinlik beklentisi", "öz-yeterlik beklentisi", "öz-yeterlik inancı", "öz-yeterlik algısı" gibi çeşitli şekillerde ifade edilmektedir (Azar, 2010). Akbaş ve Çelikkaleli (2006) tarafından ise "öz yeterlik algısı" veya "öz yeterlik yargısı" olarak ifade edilmektedir.

Bireyler kendilerini yeterli gördükleri işleri yapma, yeterli görmedikleri işlerden kaçma eğilimi gösterirler. Öz-yeterlik inançları da bireylerin o işi yapma veya yapmama tercihlerinde etkilidir (Bandura, 1986). Öz-etkililik-yeterlik algıları yüksek olanların zorlu işlere girişmekte ve başarılı olmakta daha hırslı davrandıkları, bunu başarma konusunda hem düşüncelerinde hemde eylemlerini sürdürmede daha çok çaba gösterdikleri görülmektedir (Dikmen, Denat, Başaran ve Filiz, 2016). Öz-etkililik-yeterlik inancı, kişilerin ne kadar çaba harcayacaklarını ve güçlükler karşısında ne kadar süre dayanabilecekleri ve zor durumlarla karşılaştıklarında nasıl kendilerini toparlayabileceklerini belirlemelerine yardımcı olmaktadır (Bandura, 1977).

Öz-etkililik-yeterlik inancı, Bandura tarafından geliştirilen Sosyal Öğrenme Kuramı'nın (Social Learning Theory) en temel kavramıdır. Bireylerin becerilerini etkin şekilde kullanabilmeleri için, öncelikle ilgili alanda özgüven duymaları gerektiğini ileri sürer (Azar, 2010) Bandura, öz-etkinlik-yeterlik inancının birbiri ile ilişkili dört kaynağa

bağlı olduğunu ve bu inancının insan yaşamında önemli bir yere sahip olduğunu vurgulamaktadır. Bunlar (Bandura, 1997):

1. Performans deneyimleri: Bireyin doğrudan kendi deneyimleri ile ilişkili olup, bireyin yaptığı işlerde gösterdiği başarı, ödül etkisi oluşturmakta ve bireyin ileride yaptığı işleri de etkilemektedir.
2. Duygusal durum: Bireyin davranışı yapacağı anda ruhsal ve bedensel yönden sağlıklı olması, onun davranışa girişimde bulunma olasılığını artırır.
3. Dolaylı yaşantılar: Başka bireylerin başarılarını görmek, kişinin kendisinin de başarılı olabileceği üzerinde olumlu bir etkisi vardır.
4. Sözel ikna (Dıştan destek): Bir davranışın başarılı bir şekilde ortaya koyabileceğine ilişkin başkaları tarafından yapılan söz ve öğütler bireyi cesaretlendirir ve öz yeterliğin değişmesine katkı sağlayabilir.

Öz-etkililik-yeterlilik algısı yüksek olan bireyler bir eyleme başladıklarında hedefe ulaşmada algısı düşük olan bireylerden çok daha fazla mücadelecilik davranmakta, olumsuz bir durumla karşılaştıklarında bunu atlatmada daha hızlı ve kararlı davranmaktadırlar (Zengin,2007). Bandura'ya göre (1997) öz-etkililiği-yeterliliği düşük ve yüksek olanları ayırtan en önemli özellik, öz-etkililiği-yeterliliği yüksek olanların başarısızlıkları karşısında çabuk toparlanıp eylemlerinde ısrarcı olmalarıdır. Başka bir ifade ile zorluklar karşısında yılmamalarıdır. Bir eylem başarısızlıkla sonuçlandığında, öz-etkililiği-yeterliliği yüksek olan bir birey, bu başarısızlığı kendi eksikliği olarak görmez. Başarısızlığın nedenlerini kullanılan yöntem ve stratejilerin yanlışlığına bağlar (İlhan ve Yıldırım, 2010). Öz-etkililik-yeterlilik düzeyi yüksek olan bireyler başarısızlık karşısında farklı yöntem ve stratejiler geliştirerek başarıyı yakalama çabası içerisine girebilenlerdir. Öz-etkililik-yeterlilik algısının davranış üzerinde etkili olması, bu algının çeşitli değişkenlere göre nasıl değişeceğinin araştırılmasını beraberinde getirmektedir.

Problem Cümlesi

“Öz-etkililik-yeterlilik algısının çeşitli değişkenlere göre farklılık göstermekte midir? Bu problem cümlesi kapsamında aşağıdaki alt problemlere cevap aranacaktır:

1. Öğrencilerin öz-etkililik-yeterlilik algı düzeyleri nedir?
2. Öğrencilerin, öz-etkililik-yeterlilik algısı:
 - a. Cinsiyete göre
 - b. Eğitim durumuna göre,
 - c. Yaşa göre
 - d. Çocuk sayısına göre farklılık göstermekte midir?

Araştırmanın Önemi

Öz-etkililik-yeterlilik düzeyi yüksek olan bireyler, bir davranışı sergilmede daha isteklidir ve karşılaştıkları zorluklar karşısında yılmadan eylemlerine devam edebilmektedirler. Eğitimciler olarak öğrencilerin bu özelliklerini arttırmamız gelecekte birer yetişkin olarak hayata atılacak olan öğrencilerin hayatta daha başarılı olmaları ve karşılaştıkları en ufak problemler karşısında yılmamaları için onlara büyük bir güç katacaktır. Ancak öncelikle onların öz-etkililik-yeterlilik düzeyinin nasıl olduğunu belirlemek ve bu özelliklerinin hangi değişkenlerden etkilendiğini ortaya koymak gerekmektedir. Ancak bunlar belirlendikten sonra eğitim programlarında bu konuda yer verilebilecek içerik ve çalışmalar ortaya konabilir. Bu nedenle araştırma önemli görülmektedir.

Sınırlılıklar

Bu araştırma 2017-2018 eğitim-öğretim yılında lise veya üniversitelerde öğrenim gören 16-25 yaş aralığındaki bireyler ile sınırlıdır.

Yöntem

Araştırmanın Modeli

Bu araştırma nicel araştırma modellerinden genel tarama modeline göre gerçekleştirilmiştir.

Evren ve Örneklem

Araştırmanın evreni 15-25 yaş aralığındaki lise ve üniversite öğrencileridir. Çalışılabilir evren 2018 yılında lise ve üniversitede öğrenim gören öğrencilerdir. Örneklem kolay örnekleme yöntemine göre belirlenmiştir. Örneklem, İstanbul, Adana, İzmir, Karabük, Antalya, Bursa, Kastamonu illerinden 308 kişiden oluşmaktadır.

Veri Toplama Araçları

Araştırmada Sherer ve arkadaşları (1982) tarafından geliştirilen “Öz-yeterlilik-etkililik Ölçeği” kullanılmıştır. Ölçek beşli Likert'e göre hazırlanmış 23 maddeden oluşmaktadır. Ölçekte her bir maddeye verilen cevaplar “1. Beni hiç tanımlamıyor”, “2. Beni biraz tanımlıyor”, “3. Karasızım”, “4. Beni iyi tanımlıyor” ve “5. Beni çok iyi tanımlıyor” şeklinde tanımlanmaktadır. Ölçekteki, 2, 4, 5, 6, 7, 10, 12, 14, 16, 17, 18, 20 ve 22. Maddeler ters

olarak puanlanmaktadır. Orjinali iki alt boyuttan oluşan ölçeğin Gözüm ve Aksayan (1999) tarafından Türkçeye uyarlanan şekli ile dört alt boyutta sahiptir. Birinci alt boyut “davranışa başlama” ikinci alt boyut “davranış sürdürme” üçüncü alt boyut “davranış tanımlama” dördüncü alt boyut “engellerle mücadele” olarak adlandırılmıştır. Davranışa başlama boyutunu sekiz (alınabilecek en düşük-en yüksek puan, 8-40) madde, davranış sürdürme boyutunu yedi (alınabilecek en düşük-en yüksek puan, 7-35), davranış tamamlama boyutu beş (alınabilecek en düşük-en yüksek puan, 5-25), engellerle mücadele boyutu üç (alınabilecek en düşük-en yüksek puan, 3-15) madde ile ölçülmektedir. Ölçeğin geneline ilişkin alınabilecek en düşük puan 23, en yüksek puan ise 115’dir. Güvenirlilik çalışmasına göre elde edilen cronbach alfa değerleri ise boyutlara göre sırası ile “0,82”, “0,77”, “0,79” ve “0,64” olarak, ölçeğin geneline ilişkin ise “0,81” olarak belirlenmiştir (Gözüm ve Aksayan 1999).

Verilerin Toplanması

Verilerin toplanmasında iki farklı yol izlenmiştir. İlk olarak veri toplama araçları araştırmacılar tarafından ölçeğin nasıl doldurulacağı anlatılarak anketörlere elden ulaştırılmıştır. Bu kişiler bulundukları illerde istekli olan kişilerden ölçeği doldurulmasını istemiş ve araştırmacılara geri dönüşünü sağlamıştır. İkinci veri toplama şekli ise internet ortamında form oluşturularak gerçekleştirilmiştir. Veriler bu iki yolla toplandıktan sonra incelenmiş ve bazı ölçekler kapsam dışına çıkartılmıştır. Yanlış, eksik doldurulduğu tespit edilen 30 ölçek değerlendirilmeye alınmamıştır.

Verilerin Analizi

Toplanan ve incelenen veri toplama araçları elektronik ortamda SPSS programına aktarılmıştır. Öncelikle örneklemin demografik özelliklerini ortaya koymak için bilgi formunda yer alan ifadelerin frekans ve yüzdeleri alınmıştır. Ardından öğrencilerin öz-etkililik-yeterlik algı düzeylerini belirlemek için betimsel istatistikler gerçekleştirilmiştir. İki bağımsız grubun ortalamalarını karşılaştırmak için “t-testi” üç ve daha fazla grubun ortalamalarını karşılaştırmak için ise tek yönlü varyans analizi yapılmıştır.

Bulgular

Bu bölümde, araştırmada elde edilen veriler ile gerçekleştirilen analizlere göre bulgulara yer verilmiştir. Tablo 1’de araştırmanın örneklemini oluşturan lise ve üniversite öğrencilerine ait bazı istatistikler bulunmaktadır.

Tablo 1. Öğrencilerin Demografik Özelliklerine Ait Bulgular

Özellikler		N	%	Özellikler		N	%
Cinsiyet	Kadın	206	69,9	Eğitim Durumu	Lise	101	32,8
	Erkek	102	31,1		Üniversite	207	67,2
	Toplam	308	100		Toplam	308	100
Yaş	18 yaş	93	37,69	Ailedeki Çocuk Sayısı	Tek çocuk	46	14,9
	19 yaş	73	29,84		2 kardeş	138	44,8
	20 yaş	81	14,65		3 kardeş	85	27,6
	21+ yaş	61	17,82		4+ kardeş	39	12,7
	Toplam	308	100		Toplam	308	100

Tablo 1’de görüldüğü üzere örnekleme yer alan 308 öğrencinin 206’sı (%69,9) kadın, 102’si (%31,1) erkektir. Öğrencilerin 101’i (%32,8) lisede, 207’si (%67,2) de üniversitede öğrenim görmektedir. Yaşlara göre incelendiğinde ise 18 yaş ve altından “93” (%37,69), 19 yaşından “73” (%29,84), 20 yaşından “81” (%14,65), 21 yaş ve üzerinden “61” (17,82) öğrenci bulunmaktadır. Öğrencilerin ailelerindeki çocuk sayısına bakıldığında ise 46 (%14,9) tek çocuk, 138 (%44,8) iki çocuk, 85 (%27,6) üç çocuk, 39 (%12,7) dört ve daha fazla sayıda çocuk bulunmaktadır.

1. Birinci Alt Probleme Ait Bulgular

Tablo 2. Betimsel İstatistikler

Değişkenler	N	\bar{X}	sd	V%
Davranışa Başlama	308	29,990	6,096	20
Davranış Sürdürme	308	25,954	5,448	21
Davranış Tamamlama	308	19,020	3,786	20
Engellerle Mücadele	308	9,000	2,450	27
Genel	308	83,974	14,434	17

Birinci alt problem “Öğrencilerin öz-etkililik-yeterlik algı düzeyleri nedir?” şeklindedir. Tablo 2’de öğrencilerin öz-etkililik-yeterlik düzeylerine ilişkin betimsel istatistikler verilmiştir. Tabloya göre davranışa başlama boyutunda öğrencilerin vermiş oldukları cevapların ortalaması “29,990”dır. Bu boyutta alınabilecek en düşük ve en yüksek puanlar (8-40) düşünüldüğünde yüksek bir değer olduğu düşünülebilir. Davranışı sürdürme boyutunda ise ($\bar{X}=25,954$) alınabilecek en düşük en yük puanlar dikkate alındığında davranışa başlama boyutuna benzer durumun söz konusu olduğu söylenebilir. Davranışı tamamlama boyutunda da ($\bar{X}=19,020$) benzer bir bulgu elde edilmiştir. Ancak engellerle mücadele boyutunda ise ($\bar{X}=9,000$) ortanın biraz üzerinde bir düzeye sahip oldukları belirlenmiştir. Ölçeğin geneline ilişkin alına bilecek en yüksek puan “115” olmasından dolayı elde edilmiş “83,974” gibi bir ortalama öğrencilerin öz-etkililik-yeterlik düzeylerinin çok yüksek olmasa da yüksek olduğunu ortaya koyan bir bulgudur.

2. İkinci Alt Probleme Ait Bulgular

Araştırmanın ikinci alt problemi “Öğrencilerin, öz-etkililik-yeterlik algısı, (a) Cinsiyet, (b) Eğitim Durumu, (c) Yaş ve (d) Çocuk sayısına göre farklılık göstermekte midir?” şeklindedir. Bu bölümde bu alt probleme ilişkin elde edilen bulgulara yer verilmiştir.

a. Cinsiyete Göre

Tablo 3. Cinsiyete göre t-testi sonuçları

Değişkenler		N	\bar{X}	ss.	t	df	P
Davranışa Başlama	Kadın	206	29,952	6,093	-,159	306	,874
	Erkek	102	30,069	6,131			
Davranışı sürdürme	Kadın	206	26,243	5,468	1,276	306	,203
	Erkek	102	25,402	5,390			
Davranışı Tamamlama	Kadın	206	18,942	3,767	-,511	306	,609
	Erkek	102	19,177	3,839			
Engellerle Mücadele	Kadın	206	8,966	2,424	-,345	306	,730
	Erkek	102	9,069	2,510			
Toplam	Kadın	206	84,102	14,397	,221	306	,825
	Erkek	102	83,716	14,578			

Araştırmanın ikinci alt probleminde ele alınan ilk soru “öğrencilerin, öz-etkililik-yeterlik algısı cinsiyete göre farklılık göstermekte midir?” şeklindedir. Bu alt probleme ilişkin gerçekleştirilen “t-testi” sonuçları Tablo 3’den incelendiğinde hiç bir boyutta ve ölçeğin geneline ilişkin “ $p<0,05$ ” düzeyinde öğrencilerin cinsiyetlerine göre anlamlı bir fark bulunmamıştır.

b. Eğitim Durumuna Göre

Tablo 4. Eğitim Durumuna göre t-testi sonuçları

Değişkenler		N	\bar{X}	ss.	t	df	P
Davranışa Başlama	Lise	101	30,614	5,274	1,255	306	,210
	Üniversite	207	29,686	6,449			
Davranışı sürdürme	Lise	101	26,564	5,980	1,352	306	,177
	Üniversite	207	25,672	5,600			
Davranışı Tamamlama	Lise	101	19,317	3,784	,963	306	,337
	Üniversite	207	18,874	3,789			
Engellerle Mücadele	Lise	101	9,020	2,458	,099	306	,921
	Üniversite	207	8,990	2,451			
Toplam	Lise	101	85,515	13,557	1,310	306	,191
	Üniversite	207	83,222	14,817			

Araştırmanın ikinci alt probleminde ele alınan ikinci soru “öğrencilerin, öz-etkililik-yeterlik algısı eğitim

durumlarına göre farklılık göstermekte midir?” şeklindedir. Bu alt probleme ilişkin gerçekleştirilen “t-testi” sonuçları Tablo 4’den incelendiğinde hiç bir boyutta ve ölçeğin geneline ilişkin “ $p<0,05$ ” düzeyinde öğrencilerin halen öğrenim gördükleri okullara göre anlamlı bir fark bulunmamıştır. Başka bir ifade ile lise ve üniversite öğrencileri arasında öz-etkililik-yeterlik algı düzeyleri arasında anlamlı bir fark yoktur.

c. Yaşa Göre

Tablo 5. Yaşa göre gerçekleştirilen Tek Yönlü Varyans Analizi Sonuçları

Değişkenler		Kareler	Sd	Kareler	F	P
Davranışa Başlama	Gruplar arası	112,858	3	37,619	1,012	,387
	Grup içi	11296,11	304	37,158		
	Toplam	11408,97	307

	Grup içi	63253,52	304	208,071		
	Toplam	63961,79	307			

Araştırmanın ikinci alt probleminde ele alınan ikinci soru “öğrencilerin, öz-etkililik-yeterlik algısı yaşa göre farklılık göstermekte midir?” şeklindedir. Bu alt probleme ilişkin gerçekleştirilen tek yönlü varyans analizi sonuçları Tablo 5’den incelendiğinde hiç bir boyutta ve ölçeğin geneline ilişkin “ $p<0,05$ ” düzeyinde öğrencilerin yaşlarına göre anlamlı bir fark bulunmamıştır.

d. Çocuk Sayısına Göre

Tablo 6. Çocuk Sayısına Göre Gerçekleştirilen Tek Yönlü Varyans Analizi Sonuçları

Değişkenler		Kareler	Sd	Kareler	F	P
Davranışa Başlama	Gruplar arası	5,643	3	1,881	,050	,985
	Grup içi	11403,32	304	37,511		
	Toplam	11408,97	307			
Davranışı Sürdürme	Gruplar arası	125,803	3	41,934	1,419	,237
	Grup içi	8986,804	304	29,562		
	Toplam	9112,607	307			
Davranışı Tamamlama	Gruplar arası	52,577	3	17,526	1,225	,301
	Grup içi	4349,306	304	14,307		
	Toplam	4401,883	307			
Engellerle Mücadele	Gruplar arası	37,474	3	12,491	2,104	,100
	Grup içi	1804,526	304	5,936		
	Toplam	1842,000	307			
Genel	Gruplar arası	572,965	3	190,988	,916	,433
	Grup içi	63388,82	304	208,516		
	Toplam	63961,79	307			

İkinci alt problemin son değişkeni olan çocuk sayısı ile öz-etkililik-yeterlik algı düzeyine ilişkin fark bulunup bulunmadığını belirlemek için gerçekleştirilen tek yönlü varyans analizi sonuçları Tablo 6’da verilmiştir.

Ailedeki çocuk sayısının öz-etkililik-yeterliğe olan etkisine ilişkin çoklu karşılaştırma testi sonuçları Tablo 5'ten incelendiğinde ailedeki çocuk sayılarının tekliği veya çokluğu ile öz-etkililik-yeterlik arasında bir fark bulunmamıştır.

Tartışma, Sonuç ve öneriler

Lise ve üniversitede öğrenim gören 308 öğrenci ile öz-etkililik-yeterlik algısı üzerine gerçekleştirilen araştırmaya ilişkin aşağıdaki sonuçlara ulaşılmıştır.

Öğrencilerin öz-etkililik-yeterlik algı düzeylerinin genel anlamda yüksek olduğu söylenebilir. Bu durum davranışa başlama, davranışı sürdürme ve davranışı tamamlama boyutlarında da aynı şekilde yüksektir. Ancak engellerle mücadele boyutunda ise neredeyse orta düzeyde olduğu söylenebilir. Bu durum da öğrencilerin davranışa başlama, sürdürme ve tamamlama boyutlarında çok fazla sorun yaşamamalarına rağmen, karşılaşmış oldukları sorunlar ile mücadelede öz-etkililik-yeterlik algı düzeylerinin biraz daha düşük olduğu söylenebilir. Güzel (2017) ise araştırmasında öğrencilerin öz yeterlik düzeylerinin düşük seviyede olduğunu belirlemiştir. Ancak onun araştırması sadece lise öğrencileri üzerinde gerçekleştirilmiştir. Öğrencilerin öz-etkililik-yeterlik düzeylerinin artırılması son derece önemlidir. Diamond ve Aspinwall (2003)'a göre olumlu duygular bireylerin karşılaşmış oldukları olumsuzluklar ile mücadelede son derece etkilidir. Olumlu duyguların bireylerin öz-etkililik-yeterliklerini artırması da doğal bir durumdur. Bu nedenle bireylerin bir problem ile karşılaştıklarında onun üstesinden gelebileceklerine olan inançları engeller ile karşılaştıklarında da o engelleri aşabileceğine olan inancını olumlu bir şekilde etkilemektedir.

Cinsiyet, eğitim durumu, yaş ve ailedeki çocuk sayısına göre öğrencilerin öz-etkililik-yeterlik düzeyi ve bu düzeyi oluşturan alt boyutlarda anlamlı fark söz konusu değildir. Güzel (2017), Yalman ve Aydın (2014), Oğuz (2012), Ekici (2008), Akbaş ve Çelikkaleli'nin (2006) cinsiyet değişkeni ile ilgili ulaştıkları sonuçlar bu araştırma da elde edilen sonuçlar ile paralellik göstermektedir. Başka bir ifade ile onların araştırmalarında da cinsiyet değişkenine göre bir farklılık söz konusu değildir. Ancak cinsiyet değişkenine göre elde edilen sonuç Kılıççı ve diğerleri (2015) tarafından yapılan çalışmada elde edilen sonuçlar ile farklılık göstermektedir. Kılıççı ve diğerlerinin hemşirelik bölümü öğrencileri ile gerçekleştirdikleri çalışmada kız öğrencilerin davranışa tamamlama ve engeller ile mücadele boyutunda erkek öğrencilere göre daha yüksek öz-etkililik-yeterlik düzeyine sahip olduklarını belirlenmişlerdir. Koç ve Aslan'a göre de (2017) cinsiyete göre öğrencilerin öz yeterlilik düzeyleri arasında anlamlı bir fark vardır. Durdukoca (2010) ise aynı konuda erkek öğrencilerin lehine bir farkın bulunduğunu belirlemiştir. Güzel (2017) çalışmasını lise düzeyinde gerçekleştirmiştir ve ona göre lisedeki öğrencilerin öz yeterlik düzeyleri düşüktür. Bu çalışmada ise öğrencilerin gerek lise gerekse üniversite düzeyinde öz-etkililik-yeterlik düzeyleri yüksek olarak belirlenmiş ve ayrıca lisede ve üniversite öğrenim gören öğrenciler arasında anlamlı bir farkın bulunmadığı sonucuna ulaşılmıştır.

Öğrencilerin öz-etkililik-yeterlik algı düzeyleri genelinde ve davranışa başlama, sürdürme ile bitirme boyutlarında iyi olmasına rağmen, engeller ile mücadele boyutunda diğerlerine göre biraz daha düşüktür. Bunun için öğrencilerin yapmış oldukları her hangi bir etkinlik, davranış ve benzeri çalışmalarda karşı karşıya kaldıkları engelleri veya sorunları aşmak için öz-etkililik-yeterlik düzeylerini arttıracak etkinlik veya rehberlik çalışmaları yapılabilir.

Öğrencilerin öz-etkililik-yeterlik düzeylerinin artırılması, onların akademik başarılarını da arttıracığından öğretmenlerin özellikle derslerini işlerken öğrencileri umutsuzluğa düşürecek ağırlıkta planlamalarda bulunmamaları, onlara aşamalılık ilkesine uygun olarak bildiklerinden, yakından, kolaydan, basitten başlayarak öğrenme öğretme etkinlikleri düzenlemeleri gerektiği söylenebilir.

Bu çalışmada ele alınan değişkenlerden farklı değişkenler de dikkate alarak yeni araştırmalar yapılabilir. Her bir eğitim kademesi için benzer araştırmalar ayrı ayrı gerçekleştirilebilir. Bu konuda farklı araştırma (özellikle karma) modellerinin kullanıldığı çalışmalar gerçekleştirilebilir.

Çocuk Cinsel İstismar Olaylarının Medyada Ele Alınış Biçimi

Dr. Mustafa ÖZTUNÇ
Sakarya Üniversitesi, İletişim Fakültesi
oztunc@sakarya.edu.tr

Özet

İstismar vakalarının sayısının gün geçtikçe artması, bu konuda başta aile, toplum ve eğitim gibi kurumların rollerinin yeterliliği ve yetersizliğini sorgulatırken bu durumda önemli bir kurum olan medyanın da rolünün sorgulanması kaçınılmazdır. Ülkemizde meydana gelen cinsel istismar olaylarının dile getirilmesi anlamındaki çalışmaların sayısının azlığı da dikkat çekmektedir. Bu çalışmada yazılı ve görsel medyanın cinsel istismar olaylarını haber yapma biçimi farklı boyutları ele alınarak değerlendirilmiştir. Araştırma sonuçlarına bakıldığında kız çocuklarının erkek çocuklardan daha çok istismar edildiği, aile içi istismarın da en az yabancılar tarafından yapıldığını görülmektedir. Medyanın bu türde haberleri yaparken zaman zaman etik kuralları hiçe sayarak gerek mağdur gerekse zanlının aleyhinde olabilecek davranışlar sergilediği görülmektedir.

Anahtar Kelimeler: Çocuk, Cinsel İstismar, İhmal, Enstest, Pedofili, Medya, Sosyal Medya, Etik

1.Giriş

Çocuklar yaşamlarının ilk evrelerini bir yetişkinin desteği olmadan sürdüremezler. Çocuklar sürekli gelişim ve değişim içerisindeyler. Çocukların gelişimleri aile ve çevreleri tarafından olumlu yönde desteklenmedikçe ileriki yaşamlarında başa çıkılamayacak sorunların doğması kaçınılmazdır. Bu gelişimi desteklemek hem ailenin hem de çocuğun içinde yaşadığı sosyal çevrenin en önemli görevleri arasındadır. Bu desteğin çocuklara sağlanması için bilinçli anne-babalar ve sağlıklı bir topluma ihtiyaç duyulmaktadır. Maalesef geleceğimizi oluşturacak çocuklarımızın gelişimleri her zaman olumlu desteklerle sürdürülememektedir. Çocukların da bazı temel hakları çoğu zaman aileler ve toplum tarafından ihlal edilmektedir. Temel hakların ihlaline örnek oluşturacak durumlardan biri de çocuğa yönelik ihlal ve istismar vakalarıdır.

Polat'a göre "Çocuk ve erişkin arasındaki temas ve ilişki, o erişkinin veya başka birinin seksüel uyarılması için kullanılmışsa, çocuk cinsel olarak istismar ediliyor demektir. Cinsel istismar diğer bir çocuk tarafından eğer bu çocuğun diğeri üzerinde belirgin bir gücü veya kontrolü söz konusuysa veya bariz bir yaş farkı varsa da gerçekleştirilebilir" (Polat, 2004). Çocukların birçoğu hayatının bazı evrelerinde yetişkinler tarafından, yetişkinin tatmini için çeşitli şekillerde istismar edilmektedir. İstismar olayları karşımıza bazen tek bir türde çıkarken bazen de birden fazla türde çıkmaktadır.

İstismar çeşitleri birey üzerinde farklı etkilere neden olmaktadır. Birey üzerinde yaşamın tümü boyunca etkisi en yüksek olanı ise cinsel istismardır. Verilere göre cinsel istismarı yapanların genellikle kişinin yakın çevresinden olması ve istismara uğrayan çocukların ailesinin ona inanmayacağını düşünerek yaşadıklarını saklaması gibi davranışlara neden olduğu tartışılmaktadır. Bu yüzden cinsel istismarın tekrarlanma olasılığı artmakta ve istismarcı istismarını sürdürmektedir.

Cinsel istismar rıza olmadan herhangi bir cinsel yaklaşımı, kabul edilmeyen tüm cinsel eylemleri içerir; çocuğun cinsel amaçlı zorla ya da ikna edilerek cinsel etkileşime maruz bırakılmasıdır (Aryal,2010:13). Cinsel istismar ile ilgili literatürde çeşitli tanımlara yer verilmektedir. Koşar'a göre Yetişkinlerin cinsel doyum için çocukları kullanması ilişki kurması, fuhuş ve pornografiye yönelmesidir.(Koşar,1989:48; Kozen,1991:382). Bir başka tanıma göre; Vajinal temas, oral ve anal ilişkiler, ırza geçme, enstest ve fuhuş, bedensel temas içeren istismar kapsamına girmektedir. Cinsel istismarın tecavüz niteliğinde olanı belli bir hasar yaratarak travmalara yol açabileceği gibi tecavüz niteliği taşımayanlar da hafif fiziksel hasar ve hafif duygusal stres yaratabilirler (Bilir, Dönmez,Arı,Güneysu,1991:45-53).

Cinsel istismar, çocuk istismarı tipleri içerisinde saptanması en zor olanıdır. Dünyadaki cinsel istismar vakalarının büyük bir kısmı çeşitli nedenlerle istismar mağdurunun olayı gizli tutması, toplumsal baskılar, çocuğun yasal haklarını bilmemesi ve toplum tarafından dışlanma korkusu vb. bildirilmektedir. Aile içi cinsel istismar vakalarının tespit ve teşhisi ise daha da güç olmaktadır.

Cinsel istismar; ırza geçme, ırza geçmeye kalkışma, sarkıntılık, teşhircilik, laf atma ve enstest eylemlerini içerir (Baysal, 2003; Akdoğan, 2005: 4). Cinsel istismar ile ilgili tanımlardan da anlaşılacağı gibi cinsel istismar aslında çocuğun yetişkin kişi veya kişilerce cinsel doyum amacıyla istismar edilmesini içermektedir. Ancak buna rağmen toplumsal olarak bu istismar türü çoğu zaman yok sayılmakta ve göz ardı edilmektedir. Ancak çocuğun cinsel istismarı çocuğun hayatı boyunca etkilerini taşıdığı ve yaşama tam olarak katılımını sağlamasına engel olan çok ciddi hasarlarla kendini gösteren travmatik bir olaydır. Çocuk pornografisi, enstest, çocuğa tecavüz, en yaygın çocuk istismarlarıdır (Akdoğan, 2005: 3). Çocuğa yönelik cinsel istismarın, çocuk üzerinde en fazla etki bırakanı hiç şüphesiz istismarın aile bireyleri tarafından yapılmasıdır (Akdoğan, 2005: 7). Enstest; evlenmeleri hukuksal, ahlaki ve dini açılarından yasaklanmış yakın akraba olan kadın ile erkeğin cinsel ilişkide bulunmaları anlamında

kullanılmaktadır. Cinsel sapkınlık olan ensest “akraba aşkı” olarak da tanımlanmaktadır (Ekşi, 1999; Akduman ve ark., 2005; Owayolu ve ark., 2007: 15).

“Çocuk istismarı; çocukların kendilerinden en az 6 yaş büyük bir yetişkin tarafından, beden ve ruh sağlıklarına zarar veren ya da fiziksel, zihinsel, duygusal, sosyal ve ahlaki gelişimlerini engelleyen ve kaza sonucu olmayan, toplumsal kurallar ve profesyonel kişilerce uygunsuz ya da hasar verici olarak nitelendirilen eylemlere maruz kalmaları olarak ifade edilmektedir” (Gürkaynak ve Gözütok, 1998; Lynch, 1991; Kozcu, 1991; Taner ve Gökler, 2004; Polat, 2007; Şahin, 2001; Yılmaz, 2009: 64). Benzer şekilde Dünya Sağlık Örgütü de çocuk istismarını "Bir yetişkin tarafından bilerek ya da bilmeyerek yapılan ve çocuğun sağlığını, fiziksel gelişimini, psiko-sosyal gelişimini olumsuz yönde etkileyen davranışlar" olarak tanımlamaktadır.

Görüldüğü gibi çocuk istismarı çocuğun yaşam bütünlüğüne karşı oluşmuş hasar verici eylemleri içeren davranışlar bütünü olarak da kabul edilebilir.

(Polat,2004) “Çocuk ve erişkin arasındaki temas ve ilişki, o erişkinin veya başka birinin seksüel uyarılması için kullanılmışsa, çocuk cinsel olarak istismar ediliyor demektir. Cinsel istismar diğer bir çocuk tarafından eğer bu çocuğun diğeri üzerinde belirgin bir gücü veya kontrolü söz konusuysa veya bariz bir yaş farkı varsa da gerçekleştirilebilir”

Bizim kültürümüzde ve daha birçok kültürde ailenin kutsallığı gibi durumlar nedeniyle ensest olgusunun saklanması ve görmezden gelinmesi çok sık yaşanmaktadır. Bir diğer önemli nokta ise ensest mağduru çocukların bu durumu aile içinde bile dile getirememeleridir. Çünkü genellikle istismarcı aile yakını olduğu ve ailede söz sahibi olduğu için çocuk yaşadıklarını aile içinde dile getirebilse dahi karşısındaki diğer aile üyelerini ikna edememe durumu ile karşı karşıya gelebilmektedir. Bu tür durumlarda çocuk evden kaçma ya da intihara varan türde davranışlar sergileyebilmektedir. Bundan dolayı ensest gibi olguların fark edilmesi ve mağdur çocukların bu durumdan en az zararla kurtulmaları sağlanmalıdır. Bu da ancak toplumun her kesimindeki insanların bu konuda belirli bir hassasiyetinin oluşturulmasına bağlıdır. Bu hassasiyeti oluşturmak için öncelikle toplumun gelecek kuşaklarını oluşturan gençlere ensest gibi önemli bir olgu hakkında doğru bilgilendirme yapılması gerekmektedir. Doğru bilgilendirmenin en önemli kısmı hiç kuşkusuz durumu doğru bir şekilde analiz etme ve ortaya koyabilmekle mümkündür. Bu açıdan çocuk ihmal ve istismarı hakkında bazı istatistiki verileri incelemek faydalı olacaktır.

Bu konu ile ilgili olarak yapılan araştırmalara baktığımızda ise ortaya çıkan tablonun ne yazık ki çok da olumlu olmadığını görmekteyiz.

Kız ve erkek çocuklarına karşı cinsel şiddetin gerçek boyutları, ancak buzdağının görünen yüzü kadar bilinmektedir. Çocuk cinsel istismarıyla ilgili güvenilir verilerin toplanması, istismarın farklı yasal tanımları ve belgeleme sorunları nedeniyle oldukça güçtür. Neredeyse her dört çocuktan biri cinsel istismar yaşamaktadır. Olguların yalnızca onda birinin bildirildiği tahmin edilmektedir. 2002’de Dünya Sağlık Örgütü, küresel olarak en az 150 milyon kız ve 73 milyon erkek çocuğun 18 yaşın altında zorla cinsel ilişki ya da fiziksel temas içeren diğer cinsel şiddet türlerini yaşamış olduğunu bildirmiştir. UNICEF’in (United Nations International Children’s Emergency Fund) farklı ülkelerden örneklerle bildirdiği çalışmalara göre, bazı ülkelerde genç kızların yaklaşık yarısında ilk cinsel deneyim zorla olmaktadır. Türkiye’de her üç kadından birinin, bazı kaynaklarda her on kadından üçünün çocuk yaşta evlilik yaptığı bildirilmektedir. Dünyada çocuk cinsel istismarının yaygınlığıyla ilgili çalışmalarda cinsel istismara maruz kalan çocuk ve ergenlerin %71’i kız, %29’u erkektir. Olguların yaklaşık yarısında yineleyici cinsel istismar vardır. Yaşamları boyunca en az bir kez cinsel saldırıya maruz kalan ergenlerin oranını %21 olarak bildirilmiştir. Cinsel istismarın yaklaşık % 20-25’ini ensest olguları oluşturmaktadır. Araştırmalara göre çocukluk cinsel istismarında %51 dokunmadan istismar varken, sadece %5’inde anal ya da vajinal ilişki vardır. Erkeklerin %42’si anal ilişki ya da ilişki girişimiyle karşılaşırken, kızlarda bu oran %72’dir. Erkek çocuk ve ergenlerin cinsel istismarı daha seyrek açıkladığı, kızların açıklama yapmaya erkeklerden daha meyilli olduğu bilinmektedir.

Cinsel istismar bebeklikten itibaren başlayabilirse de ortalama başlama yaşı dokuzdur. Erkek çocukların ortalama mağduriyet yaşı, kız çocuklara oranla daha büyüktür. Erkek çocukların daha çok aile dışından, başka çocukları da istismar ettiği bilinen kişiler tarafından istismara uğradığı bildirilmektedir. Cinsel istismarın sıklığı, kullanılan tanımlara ve bilgi edinme yöntemlerine göre değişmektedir. Kendi çocukluklarında cinsel istismar yaşamış erkek erişkinlerde yapılmış çalışmalarda sıklık oranı; cinsel ilişkide baskı ve zorlama tanımı daha dar tutulduğunda %1 iken, daha geniş bir tanımlama benimsendiğinde %19’a kadar değişmektedir. Çocuk cinsel istismarına akran istismarının dahil edilmesi, sıklık oranını %9 arttırabilir; fiziksel temasın olmadığı olguların dahil edilmesi de oranı %16’ya kadar yükseltebilir. Erişkin kadınlarda yaşam boyu çocukluk çağı cinsel istismarı yaşama sıklığı incelendiğinde; tecavüz sıklığı %0,9 iken, cinsel istismar tanımlaması tecavüzle sınırlı tutulduğunda %45’e yükselmektedir. Yaklaşık 40 yıldır yayınlanan uluslararası çalışmalarda, ortalama yaşam boyu çocukluk çağı cinsel istismar sıklığı olarak kadınlarda %20, erkeklerde %5-10 oranlarını göstermektedir. Sıklık tahminlerindeki bu büyük değişkenlik, farklı kültürlerde egemen olan gerçek risk farklılıklarından, açıklama zorluklarından veya çalışmaların yürütülme yöntemlerindeki farklılıklardan kaynaklanıyor olabilir.

Türkiye İstatistik Kurumu (TÜİK) 2015 verilerinde suç mağduru çocuk sayısının yılda 122 bini geçtiği, bunların %10 oranında cinsel suçlar olduğu bildirilmektedir. Adalet Bakanlığı’nın 2015 verilerine göre ise yılda ortalama

17 bin dava açılmakta, bu davalar %55 oranında mahkumiyetle sonuçlanmakta; sonuçta yılda ortalama 8 bin çocuğun cinsel olarak istismar edildiği belirtilmektedir. Türkiye’de çocuk cinsel istismarı ve ihmali konusunda bilimsel yayın oldukça azdır. Çocuğa yönelik cinsel sömürü (fuhuş, pornografi, cinsel amaçlı çocuk ticareti) konuları ise neredeyse hiç araştırılmamaktadır.

Sosyal Hizmetler ve Çocuk Esirgeme Kurumu (SHÇEK) ve UNICEF’in 2010’da Türkiye’de 6 ilde yaptıkları çalışmada; 1328 hanede, 7-18 yaş arası toplam 1886 çocukla yüzyüze görüşülmüştür. Çocuk katılımcılar, yaş, cinsiyet ve bölge farkı olmaksızın istismarın sırasıyla ev, okul ve sokakta gerçekleştiğini; istismar eden kişilerin de sırasıyla baba, öğretmen, anne, arkadaş ve komşu olduğunu anlatmışlardır. Çocukların son bir yıl içinde maruz kaldığı cinsel istismar sıklığı %3, cinsel istismara tanıklık ise %10 olarak, en çok okul ve mahalle ortamında, bir çocuktan başka bir çocuğa yönelik olarak bildirilmiştir. Cinsel istismarın grup çalışmalarında paylaşımının çok zor olduğu, çocuk dostu ortamda terapi planlanarak sorgulanmasının doğru olacağı düşüncesiyle bu çalışmada doğrudan irdelenmediği bildirilmiştir.

Türkiye genelinde kadınların %26’sı 18 yaşından önce evlenmiştir. Türkiye’de kadınların %9’u 15 yaşından önce cinsel istismara maruz kalmıştır. Çocukluk çağı cinsel istismarı kentsel yerleşim alanlarında kırsal bölgelere göre üç kat daha siktir. Bölge düzeyinde; en sık İstanbul (%9) ve Akdeniz (%8,5) bölgelerinde bildirilmiştir. Saldırganların %60’ı tanıdık biridir. 18 yaşından önce evlenen kadınların %19’u, 18 yaşından sonra evlenen kadınların %10’u cinsel şiddete maruz kalmıştır. İki şiddet türü bir arada değerlendirildiğinde, erken evlenen kadınların yarısı fiziksel ve/veya cinsel şiddete maruz kalırken, 18 yaşından sonra evlenen kadınların ise üçte birinin şiddete maruz kaldığı görülmektedir.

Başka bir çalışmada, Güneydoğu Anadolu’da istismar veya ihmal nedeniyle yasal işlem yapılan 103 çocuk ve ergenin yarısından fazlasının küçük yaşta evlenen kızlar olduğu bildirilmiştir. Batı Karadeniz, Doğu Anadolu, Marmara ve Akdeniz bölgesindeki belli hastanelere gönderilen mağdurların değerlendirilerek, cinsel istismarcıların sosyokültürel özelliklerinin incelendiği bir çalışmada; tüm istismarcıların erkek olduğu, çoğunun aile üyelerinden, akraba veya tanıdık kimselerden oluştuğu saptanmıştır. En sık kız çocuklarının istismara maruz kaldığı, artan yaşla birlikte istismara uğrayan kızların oranının arttığı bildirilmiştir. İstismarcıların eğitim düzeyinin düşük olduğu, evli olmama ve madde ve/veya alkol kullanım öyküsü oranının yüksek olduğu izlenmiştir (Action for Children, UNICEF and University of Huddersfield. Child Sexual Abuse in the Eastern Caribbean. Study carried out: October 2008 to June 2009) , (Türkiye’de Çocuk İstismarı ve Aile İçi Şiddet Araştırması, SHÇEK ve UNICEF Türkiye özet raporu, 2010).

“Cinsel istismarda suçlular ve mağdurlar erkek ya da kadın olabilirler, ancak suçlunun erkek, mağdurun kadın olduğu en sık rastlanan durumdur. İstismarcı genellikle çocuğun güvendiği ve düzenli görüştüğü tanıdık, bildik bir kişilerdir. Cinsel saldırıya uğrayan çocukların yaş ortalaması 11-12 olup; on kıza karşı bir erkek çocuk istismar edilmektedir. Her üç-dört kızdan biri ve altı erkekten biri, 18 yaşından önce cinsel istismara maruz kalmaktadır. Ülkemizde ise kız/erkek oranı birbirine yakındır.”(Taner ve Gökler, 2004; İnan, 2010: 4). Oranlarda da görüldüğü gibi cinsel istismar sanıldığı gibi düşük değildir. Tam aksine her geçen gün artan oranlarda yaşanmakta olup elde edilen veriler gerçekte olan vakaların çok düşük bir kısmıdır. Bunun en önemli nedeni toplumsal olarak bu tür durumların aile içinde çözölmeye çalışılması ve mecbur kalınmayana kadar yasal süreçlere başvurulmamasıdır.

Halk arasında “sübyancılık” olarak bilinen pedofili (Pedophilia) bir hastalık türüdür. Bu hastalık tanı ölçütlerine göre şu şekilde tanımlanmaktadır. Pedofili, en az 6 aylık bir süre boyunca, kişide ergenlik dönemine girmemiş bir çocukla ya da çocuklarla cinsel etkinlikte bulunma ile ilgili yoğun, cinsel yönden uyarıcı fantezilerinin, cinsel dürtülerinin ya da davranışlarının yineleyici bir biçimde ortaya çıkması olarak tanımlanmıştır.

DSM-IV-TR tanı ölçütlerine göre pedofili tanısı konabilmesi için kişinin en az 16 yaşında olması ve cinsel etkinlikte bulunduğu çocuklardan en az beş yaş daha büyük olması gerekmektedir. Kişinin, bu cinsel dürtülere göre davranmakta olması ya da bu kişinin cinsel dürtüleri ya da düşlemlerinin (fantezileri) belirgin bir sıkıntıya ya da kişilerarası sorunlara neden olması tanı için gereklidir (akt. Erdoğan, 2010).

Temas içermeyen (seksi konuşma, teşhircilik, röntgencilik), Cinsel dokunma (cinsel organlara dokunma), Oral seks (oral-vajinal, oral-penil, oral-anal), İnterfemoral ilişki (çocuk bacakları arasına penisin yerleştirilmesi), Cinsel penetrasyon (anal, genital, parmak, cisim), Cinsel sömürü (pornografi ve çocuk fuhuşu) ve Psikopatolojik rahatsızlıklar cinsel istismar türleri içerisinde yer almaktadır.

Cinsel istismar olgusu ile ilgili olarak Glaser’a (1991) göre en sık kullanılan tanım: “Gelişimsel olarak olgunlaşmamış çocuk ve erişkinin tam olarak anlayamadıkları, bilgilendirilerek rıza gösterme yetisine sahip olmadıkları veya sosyal tabu ve aile rollerini çiğneyen cinsel aktivitelerde yer almalarıdır” (Taneli ve ark, 1999; Doğan, 2009: 4). Diğer bir tanım ise, çocuğun cinsel istismarı; “yetişkinlerin cinsel doyum için çocukla ilişki kurması, para için fuhuş ve pornografiye yöneltmesi” şeklinde (Akyüz, 2000: 557; Akdoğan, 2005: 4)’dir.

Cinsel istismar olaylarının gündeme gelmesi, konuşulması ve kamuoyunda tartışılmasında medyanın payı çok büyüktür. Gelişen bu teknoloji sayesinde sosyal medya aracılığı ile daha hızlı bir şekilde dünyada olup bitenlerden haberdar olabiliyor, anlık tepkiler ortaya koyabiliyor hatta bu tür olaylara karşı farkındalık yaratacak ve kamuoyu oluşturacak kampanyalar bile başlatabiliyoruz. Ancak yazılı ve görsel medya zaman zaman yasaları ihlal ederek, çocuğun özel hayatının gizliliği ve çocuğun yararı temel ilkelerini zedeleyerek, kar amacını öncelikli tutarak

çocuğun sağlığını, fiziksel, zihinsel ve ahlaki gelişimini olumsuz yönde etkileyecek şekilde çocuğun gerek izleyici olduğu gerekse haber kaynağı olarak kullanılması sureti ile yapmış olduğu yayınlarla olumsuz etkiler de yaratmaktadır.

Medyada Çocuk İstismarı

Kitle iletişim araçları vasıtasıyla günümüzde bir çok insana ulaşmak hiçte zor değildir. Durum böyle olunca durum medyanın sorumluluğu daha da önem kazanmaktadır. Bazı medya kuruluşları toplumsal değerlerin dışına çıkıp kendi sanal dünyasını oluşturması ve etik anlayışını sarsıcı yayınlar yaparken , bazıları da uygun yayınlar yaparak sağlıklı bir toplum oluşturmaya katkı sağlamaktadır.

“Her yıl Amerika’da on binlerce çocuk ciddi ve kalıcı etkileri olan cinsel istismarla karşılaşmaktadır. Bu kadar yaygın olan bu sorun karşısında halkın çoğu bilgi sahibi değildir. Hatta politikacılar da dahil olmak üzere insanların çoğu çocuk cinsel istismarını haberlerden anlamaya çalışmaktadır.”(Mejia, Cheyne ve Dorfman, 2012). 9-16 yaş arasındaki çocukların %12’si İnternet’te karşılaştığı bir durumun onları üzdüğünü veya rahatsız ettiğini belirtmiştir. %14’ü geçen 12 ay içinde “açıkça cinsel içerikli” çevrimiçi görüntüler gördüğünü, tüm medya türlerine bakıldığında, İnternet aracılığı ile çocukların %23’ü cinsel veya pornografik içerik gördüğünü bildirmiştir. 11-16 yaşındaki çocukların %15’i arkadaşlarından “cinsel içerikli mesajlar veya fotoğraflar” aldığını ve %3’ü de buna benzer mesajları gönderdiklerini ifade etmiştir. 11-16 yaşındakilerin %21’i kullanıcı tarafından oluşturulmuş potansiyel zararlı bir veya daha fazla türdeki içeriğe maruz kalmıştır: nefret söylemi (%12), anoreksiya (%10), kendine zarar verme (%7), ilaç kullanımı (%7), intihar (%5)... 9-16 yaş arası çocukların %30’u yüz yüze daha önce tanışmadıkları kişilerle iletişimde bulunduğunu ve bunu riskli ama eğlenceli bir aktivite olarak gördüğünü belirtmiştir (AÇÇP, 2010). Medya çocukların bilgi edinme ve ifade hakları açısından oldukça önemlidir. Fakat medyanın çocuğun yararını gözeterek yaşama, gelişme, korunma ve katılım haklarını gözetmesi gerekir. “Teknolojik gelişmeler sonucunda ulaşılması ve kullanımı kolaylaşmış olan medya araçları artık neredeyse her eve girmiştir. Özellikle internet Özellikle internet kullanımı çocuk ve ergenlerde oldukça yaygındır. Bu denli yaygınlık kazanmış olması ve her tür içeriğine isteyen herkesin sansürsüz ulaşabileceği yapısıyla medya çocuğun veya gencin psikolojik, fiziksel, sosyal vb. hazırlıkları olmadan birtakım bilgilere muhatap olmasına, uyum ve hazmetme problemleri yaşamasına neden olabilmektedir. Deneysel araştırmalar medyada cinsel içeriğe maruz kalmanın cinsel davranışların erken başlamasına (Brown ve ark, 2006) ve cinsel açıdan riskli davranışlara neden olabileceği bildirilmektedir”(Peter ve Valkenburg, 2011). “ABD’de yapılan bir araştırmada, spor, haber ve çocuk programları hariç televizyondaki diğer üç programdan ikisinin cinsel içerikli olduğu ve bu programlardan sadece % 1’inin cinsel sorumlu davranış ve riskler konusunu vurguladığı bulunmuştur” (Kunkel ve ark., 2007). “İnterneti aşırı kullanan gençlerin eğitim, aile, uyku bozukluğu, depresyon, fazla internet harcamalarından dolayı ekonomik sorunlar, madde kullanımı ve sanal zorbalık gibi alanlarda sorunlar yaşadıkları bulunmuştur”(Subrahmanyam ve Smahal, 2011).

Çocuk İstismarı ve Cinsel İstismarın Önlenmesinde Medyanın Rolü

Son yıllarda çocuklara yönelik artan cinsel istismar konusu yazılı ve görsel basında sıkça gündeme gelen konular arasındadır. Günümüzde bilgilendirme, haber verme, eğitime, etkileme ve kamuoyu oluşturma gücüne sahip olan medyanın da bu konuya bakışı önem arz etmektedir. ‘Medya, sözlük anlamı olarak, “İletişim ortamı, iletişim araçları, kitle iletişim araçlarının tümü” (TDK Türkçe Sözlük) şeklinde ifade edilmektedir. Medyanın haber ve bilgi üreten tüm araçları ve kurumları (gazete, dergi, radyo, tv, internet vs.) kapsadığı, başka bir ifadeyle, medya denildiğinde tüm kitle iletişim araçlarının kastedildiği anlaşılmaktadır’ (Aktan, 2004:59). Yaşadığımız çağda edindiğimiz görsel ve işitsel verilerin büyük oranı “medya” kaynaklıdır. Pek çok çocuk ailesi dışındaki dünyayı, kavramları, varlıkları medya aracılığı ile öğrenmektedir. Çocuğun yaşantısına medya, neredeyse doğar doğmaz girmektedir. ‘Dünyada çocuğun değerinin artması başta anne-baba olmak üzere tüm yetişkinlerin ilgisinin daha fazla çocuk üzerine yoğunlaşmasına neden olmuştur. Buna paralel olarak medyada yer alan çocuk programları ve reklamları da giderek artış göstermiştir. Bebeklikten itibaren tüm çocuklara yönelik birçok TV programları, DVD seçenekleri ve video oyunları vardır.Son yıllarda çocuklarının yaşamlarının doğdukları andan itibaren ekran önüne geçtiği söylenebilir.’ (Wartella ve Robb 2011).

Sosyal Medya ve İstismar

İletişim araçlarının çeşitlilik gösterdiği günümüzde; kişiler birebir iletişime geçmek amacıyla sosyal medyayı etkin bir şekilde kullanmaktadırlar. Özellikle fotoğraf, video ve fikirlerin paylaşımı açısından son derece basit kullanımlara sahip olan sosyal medya araçları, erişilebilirliğin de kolay olması nedeniyle, çok küçük yaşlardan büyük yaşlara kadar çeşitli yaş grubuna mensup kişilerce kullanılabilir. Kullanıcıların birbirleriyle iletişime geçebilmelerinin kolay olduğu bu tür platformlarda kişiler, çeşitli suçlar işleyebilmekte veya bu suçlardan dolayı mağdur olabilmektedir. Bu suçlardan en sık rastlanana ise cinsel dokunulmazlığa karşı suçlardır. 5237 sayılı Türk Ceza Kanunu’nun İkinci Kısımında yer alan “Kişilere Karşı Suçlar”ın Altıncı Bölümünde “Cinsel Dokunulmazlığa Karşı Suçlar” düzenlenmiştir. Özellikle 103. maddede yer alan “Çocukların Cinsel İstismarı” ile 105. maddede yer alan “Cinsel Taciz” suçları sosyal medya aracılığıyla işlenebilecek suçların başında gelmektedir. Zira bu suçların

basit hallerinin işlenebilmesi için fiziksel bir temas gerekmemekte; uzak mesafelerden de bu suçların işlenebilmesi mümkün olmaktadır.

Sosyal medya, iletişim maliyetlerinin düşük olması, aynı zamanda kolay organize olabilmek imkânı sunması, gibi olanakları nedeniyle seslerini duyurma ihtiyacı duyan bireylerin ve sivil toplum örgütlerinin çalışmalarına önemli derecede katkı sağlamaktadır. Sosyal medya üzerinde kullanıcılar tarafından oluşturulan gündemin, internet üzerinde coğrafi sınır tanımaksızın küresel bir harekete dönüşme potansiyeli taşıdığını söylemek mümkündür.

Günümüzde sosyal medya gündemin oluşturulmasında ve nasıl şekilleneceği üzerinde etkili konumdadır. Sosyal medyanın doğuşuyla birlikte insanlar internet üzerinden haberler ve içerikler hakkında yorumlarını paylaşabilmekte ve böylece gündem oluşturabilmektedir. Sosyal medya gündemi ve geleneksel medya gündemi çoğu zaman aynı konu etrafında şekillense de kullanıcılara özgür bir ortam sunması nedeniyle sosyal medya farklı bir yapıya sahiptir. Günümüzde sosyal ağlar sayesinde kullanıcılar hangi konuların konuşulacağına, neyin gündemi meşgul edip neyin etmeyeceğine kendileri karar vermekte ve medya içeriklerinin üreticisi olmaktadır.

“Sosyal medya çeşitli konulara ilişkin toplumsal bilincin oluşmasında ve gelişmesinde büyük bir rol oynamaktadır. Bunun başlıca sebebi, bilginin hızlı, ucuz ve nispeten özgürce hareketinin geleneksel medyaya göre daha etkili şekilde yapılabilmesidir” (Arslan, 2016: 127). Sosyal ağlar bireyler arasında etkileşimli iletişim ve örgütlenme sağladığı için politik katılım, ortak bilinç oluşturma gibi konularda önemli rollere sahip olmuşlardır. Twitter 2006 yılında Evan Williams, Jack Dorsey ve Biz Stone tarafından kurulduğundan beri dünyanın çoğu yerinde önde gelen mikrobloglama ortamı olarak adlandırılmaktadır. Twitter, sunduğu dijital iletişimle kullanıcıların düşüncelerinin hızlı ve filtresiz olarak yayılmasını sağlamaktadır. “Twitter, sahip olduğu anımsalılık ve etkileşim sayesinde kullanıcılarına, kendi oluşturdukları içerikleri aktarabilme ya da diğer kaynaklardan gelen iletileri yeniden paylaşma sokabilme, yorumlayabilme ve onlara hızlı biçimde cevap verebilme imkânı tanımaktadır. Böylece Twitter, kendi gündemini kendi kullanıcılarıyla oluşturabilen bir mecra konumundadır”(Kürkçü, 2017: 317-318).

2. Yöntem

2.1.Araştırmanın Modeli

Araştırma, tarama modeli esas alınarak gerçekleştirilmiştir. Tarama modeli, geçmişte ya da günümüzde yaşanmış bir olayı kendi koşulları içerisinde, olduğu gibi tanımlamayı amaç edinen bir modeldir. Araştırmada, 2018 yılı Nisan ayına kadar medyada yer alan 12 vaka bazı boyutlarıyla incelenmiş edinilen bilgilere sadık kalınarak, gerçeği olduğu gibi yansıtmak amaç edinilmiştir.

2.2. Evren ve Örneklem

Araştırma sanal medyadaki (internet haberciliği) haberlerin derlenmesi yoluyla yapılmıştır. Aynı zamanda basılı medya (gazete) ile de desteklenmiştir. 12 tane haber incelenmiştir.

3.3. Veri Toplama Aracı

Derlenen haberlerin yorumlanabilmesi, araştırma adına anlamlılık kazanabilmesi için oluşturulan veri toplama aracı, her şeyden önce araştırmanın amacına rahat ulaşabilmesini hedeflemektedir.

2.3. Veri Toplama Aracının Uygulanması

Her haber için veriler tek tek yazılmış ve kodlanmıştır.

2.4. Verilerin Çözümü

Elde edilen veriler tablo şekline dönüştürülmüştür. Tablolar yansıtılırken frekans ve yüzdelere kullanılmıştır. Bu tablolar, araştırmanın bulgular ve yorum kısmında çözümlenmiştir.

HABERLER

1) ‘Cinsel İstismara Uğrayan Çocukların Ailelerine ‘Konuşmayın’ Baskısı’

Televizyon Kanalı: Siyasi Haber İnternet Sitesi

Yayınlanma Tarihi: 7.01.2018

Yayınlanma Süresi: -

Haber Metni: Dikili’de Süleymancı tarikatının yurdunda kalan 7 erkek öğrenci, yurt görevlisi Ö.F.E.’nin kendilerine cinsel istismarda bulunduğu gerekçesiyle şikâyetçi olmuştu. Süleymancı tarikatı avukatları, ailelere konuşmamaları için baskı yapıyor. Dikili Cumhuriyet Başsavcılığının başlattığı soruşturma sonrası 7 erkek öğrenciye cinsel istismarda bulunduğu iddia edilen Ö.F.E gözaltına alınmış, şüpheli, çıkarıldığı mahkemece tutuklanarak cezaevine gönderilmişti.

Gazeteci Mustafa Hoş, Süleymancılara ait olan Dikili’deki o yurda gitti. Hoş, kişisel Twitter hesabından, “Çocuklara tecavüz rezaletinin yaşandığı Dikili’deki Süleymancı tarikat yurdunda araştırma yaptım... Birçok görüşme yaptım.. Şimdi onları paylaşıyorum” diye yazarak, birtakım bilgiler paylaştı.

‘Baskı var, tarikat ailelere avukatlık teklif ediyor’

Hoş, ailelere “konuşmayın” baskısı yapıldığını ifade ederken, tarikatın, ailelere avukatlık teklifinde de bulunduğunu belirtti. Hoş, “Tecavüz rezaleti ortaya çıktıktan sonra ailelere konuşmayın baskısı yapılıyor. Karaman/Gerger/Kilis’te olduğu gibi... Tarikattan ailelere avukatlık teklifi de yapılıyor... Aynı zamanda tecavüz zanlısını da aynı kişiler savunacak... Bir aile bunu çok sert reddediyor” dedi.

Milli Eğitim Bakanlığı’nın 2017 yılında değiştirdiği yönetmeliğe de değinen Hoş, bu yönetmeliğin tarikatlar için değiştirildiğini belirtti.

Yurt müdürü ve Milli Eğitim Müdürü’ne işlem yok

Hoş, yurt müdürü ve Milli Eğitim müdürü hakkında hiçbir işlem yapılmadığını da ifade ederken, tecavüz zanlısı dışında tutuklananın olmadığını söyledi.

Hoş, aynı zamanda tutuklu Ö.F.E’nin sosyal medya paylaşımlarının da ekran görüntüsünü paylaştı.

Görsel İçerik: Haberle ilgili fotoğraf yoktur.

2) ‘9 Yıl Boyunca Babası Cinsel İstismarda Bulundu; Kadına Kimse İnanmadı’

Televizyon Kanalı: Siyasi Haber İnternet Sitesi

Yayınlanma Tarihi: 14.01.2018

Yayınlanma Süresi: -

Haber Metni: 8 yaşından 17 yaşına kadar babasının cinsel istismarına uğrayan 28 yaşındaki A.A., yaşadıklarını anlatmasına karşın kimseyi inandıramadı. Uşak’ta yaşayan A.A., annesine anlattığı, annesinin “O senin baban. Öyle şey mi olur?” dediğini, babasının ise “İftira atıyor” diye tepki aldığını söyledi. Uşak’ta 8 yaşından 17 yaşına kadar babasının cinsel istismarına uğrayan 28 yaşındaki A.A., yaşadıklarını anlatmasına karşın kimseyi inandıramadı.

Hürriyet yazarı Melis Alphan, dünkü yazısında, A.A.’nın hikâyesini yazdı. Alphan, 1990 yılında Uşak’ta doğan A.A.’nın 11 yaşında olan biteni annesine anlattığı, annesinin “O senin baban. Öyle şey mi olur?” dediğini, babasının ise “İftira atıyor” yanıtını verdiğini yazdı.

Hürriyet yazarı şöyle devam etti: “Polise gidersen ‘Başkasıyla halt yemiş, babasına iftira atıyor’ derim.’ Öğretmenleri, ‘Dava açarsak yetiştirme yurduna gidersin. 18 yaşında yurttan çıkınca gidecek yerin mi var? diyerek çocuğu korumadı. Adam üç ay mahcup gezdi, herkesi pişman olduğuna inandırdı. İki ay namaz kılınca babaanne de inandı.”

2016’nın Mayıs ayında A.A.’nın savcılığa suç duyurusunda bulunduğunu, iki lise öğretmeni ve erkek kardeşinin şahitlik yaptığını ancak babaannesinin yalan ifade verdiğini aktaran Alphan, babanın önce tutuklandığını 6.5 ayın sonunda da serbest bırakıldığını belirtti. Alphan, CİMER’e başvurunun ardından Aile Bakanlığı’nın da davaya müdahil olmayı talep ettiği, ancak davanın halen açılmadığını ifade etti.

3) ‘12 Yaşındaki Çocuğa Cinsel İstismara 22 Yıl’

Televizyon Kanalı: CNNTÜRK İnternet Sitesi

Yayınlanma Tarihi: 23.02.2018 11:35

Yayınlanma Süresi: -

Haber Metni: Aksaray’da sosyal medya üzerinden tanıştığı ortaokul öğrencisi B.Ç.’yi (12) Diyarbakır’a kaçırıp, cinsel istismarda bulunduğu iddiasıyla başka bir suçtan tutuklu yargılanan A.O. (23), 22 yıl hapis cezasına çarptırıldı. Mahkeme, suç işlemeyi alışkanlık haline getiren kişiliği nedeniyle sanığın cezasında indirim yapılmadığını açıkladı.

Diyarbakır’da esnaf olan A.O., Aksaray’da ortaokul öğrencisi B.Ç. adlı kız çocuğuyla sosyal paylaşım sitesi Facebook üzerinden iletişim kurdu. A.O. ile arkadaşlığını ileten B.Ç., 20 Şubat 2016 gecesi evi terk etti. Anne H.Ç., polise haber verdi. H.Ç., kızının Facebook üzerinden A.O. ile mesajlaşmalarına da polise teslim etti. Mesajları inceleyen polis, A.O.’nun, B.Ç.’yi iki kez kaçırmaya teşebbüs ettiğini belirledi. Yapılan araştırmada, A.O.’nun bir gün önce Aksaray’a geldiği, ancak küçük kızı kaçmaya ikna edemediği ortaya çıktı. Şüphelinin evden çıkarmaya zorladığı B.Ç.’nin "Annem perişan olur" dediğini belirleyen polis, A.O.’nun ise, "Silahla evini mi basayım?" diye tehdit ettiğini saptadı.

Polis ekiplerinin yaptığı araştırmayla B.Ç., Diyarbakır’da A.O.’nun evine düzenlenen operasyonla bulunarak ailesine tespit edildi. Evde bulunamayan A.O. ise, daha sonra başka suçtan tutuklanarak, cezaevine konuldu.

Küçük kız ve ailesi şikâyetçi olmadı

Savcılık, şüpheli A.O. hakkında ‘çocuğun nitelikli cinsel istismarı’ ve ‘cinsel amaçla çocuğu hürriyetinden yoksun kılma’ suçlarından 38 yıla kadar hapis istemiyle iddianame hazırladı. B.Ç.’nin, şüphelinin tehdit ve zorlamalarına karşı koyamayarak, evden kaçtığı belirtilen iddianamede, A.O.’nun küçük çocuğu Diyarbakır’a götürerek cinsel istismarda bulunduğu ifade edildi. İddianamedeki ifadesinde rızası ile kaçtığını belirten B.Ç., şüphelinin evinde

cinsel ilişkiye girdiklerini ve kimseden şikayetçi olmadığını söyledi. B.Ç.'nin anne ve babası da savcılığa dilekçe verip, şikayetçi olmadıklarını bildirdi.

Savcı: 12 yaşındaki çocuğun rızasından söz edilemez

İddianamede, şikâyetten vazgeçmenin, tehdite uğramış olması ve yaşı itibarıyla mağdurun serbest iradesine dayanmadığı belirtildi. A.O.'nun B.Ç.'yi tehdit edip, evden çıkmasını sağladığı ve Diyarbakır'a götürdüğü belirtilen iddianamede, şüpheliye alt sınırdan uzaklaştırılarak ceza verilmesi istendi. Savcı, mağdurenin yaşı itibarıyla istismar eylemine hukuken geçerli bir rıza göstermesinin mümkün olmadığını vurguladı.

'İlişkiye girip girmediğimizi hatırlamıyorum'

İddianamenin kabul edilmesinin ardından, başka suçtan tutuklu sanık A.O.'nun yargılamasına 6 Şubat günü Diyarbakır 3'üncü Ağır Ceza Mahkemesi'nde başlandı. Aile ve Sosyal Politikalar Bakanlığı'nın müdahil olduğu davada ifadesi alınan A.O., "Yaşının büyük olduğunu söyledi. Daha sonra Diyarbakır'a geldi. Ben gidip, onu almadım. Kendisi Diyarbakır'a geldi. Mağdurla ilişkiye girmedik, uzun zaman geçtiğinden cinsel ilişkiye girip girmedikimizi tam olarak hatırlamıyorum" dedi.

Esas hakkındaki görüşünü açıklayan savcı, B.Ç.'nin savcılık ifadesinin aksine, duruşmada verdiği ifadesinde sanığı kurtarmaya yönelik beyanlarda bulunduğunu belirterek, buna itibar edilmemesi gerektiğini söyledi. Cinsel istismarın tıbbi raporlarla tespit edildiğini belirten savcı, sanığın cezalandırılmasını istedi.

Yargılama 15 gün sürdü

Davanın 20 Şubat günü görülen 2'nci duruşmasında kararını açıklayan mahkeme, sanık A.O.'yu 'çocuğun nitelikli cinsel istismarı' ve 'cinsel amaçla çocuğu hürriyetinden yoksun kılma' suçlarından 22 yıl hapis cezasına çarptırdı. Sanığın cezasında 2 kez artırım yapan mahkeme, A.O.'nun suç işlemeyi alışkanlık haline getiren kişiliği, geçmiş, ve pişmanlığa ilişkin bir tutum göstermemesi nedeniyle cezasında indirim yapmadı. Mahkeme, sanığın kaçma olasılığı nedeniyle bu suçtan da tutuklanmasına karar verdi.

4)'Tacize Uğrayan Öğrencilere 'Siz De O Kadar Dar Pantolon Giymeyin' Diyen Müdüre Protesto

Televizyon Kanalı: Star Tv / Anahaber Bülteni

Yayınlanma Tarihi: 26.02.2018

Yayınlanma Süresi: 3 Dakika 57 saniye

Haber Metni: İstanbul Bahçeşehir'deki lisede, kız öğrencileri taciz eden hademeyi okul müdürünün 'Siz de o kadar dar pantolon giymeyin' diyerek savunması öğrenci ve velileri ayağa kaldırdı. Görevli ve müdür, görevden alındı.

İstanbul Bahçeşehir'de bulunan bir lisede temizlik görevlisinin kız öğrencilere cinsel istismarda bulunduğu iddia edildi. Şikâyet edilen görevlinin "Kız öğrenciler çok dar giyiniyor" diyerek kendisini savunduğu, müdürün ise öğrencilere "Siz de o kadar dar pantolon giymeyin" dediği ileri sürüldü. İddialar öğrencileri ayaklandırdı. Velilerin de katıldığı protesto sonucu okul müdürü ve temizlik işçisi görevden alındı.

Sohbet Eden İki Kız Öğrenciyi Taciz Etti

İstanbul Bahçeşehir 'de bulunan bir Anadolu lisesinde yaşanan olay öğrencilerin iddialarına göre daha önce bir kaç kez taciz girişiminde bulunan görevli, geçtiğimiz günlerde koridorda sohbet eden iki kız öğrenciyi taciz etti. Durumu ailelerine haber veren öğrenciler, velileriyle birlikte temizlik görevlisini okul müdürüne şikayet etti.

Müdür Ve Temizlik Görevlisinin Görevden Alınmasını İstediler

Taciz iddialarının geçtiğimiz Cuma günü sosyal medyada paylaşılmasının ardından bugün sabah saatlerinde okul bahçesinde toplanan öğrenciler, okul müdürü ve temizlik görevlisinin görevden alınmasını istediler. Öğrenciler, "Üstünü örtme yargıla hesap sor", "Ay sonuna kadar değil gün sonuna kadar bile kalamaz" yazılı dövizler taşıyarak sık sık "Okulda sokakta istismara hayır", "Susmuyoruz, korkmuyoruz, idare etmiyoruz" sloganları attılar. Bazı veliler de okula gelerek öğrencilerin eylemine destek verdiler.

İlk İki Derse Girmeyip Eylem Yaptılar

İlk iki derse girmeyen öğrencilerin yanına gelen okul öğretmenlerinden biri "Amacınız hasıl oldu. Zaten size açıklama yapacağız. Lütfen sınıflarımıza geçelim. Bu olayı detaylı içeride konuşalım. Hocanıza güveniyorsanız beni dinleyin. Çocuklar, sınıflarınıza geçin biz sizi çağıracağız. Slogan atmıyorsunuz. Kendi aranızda konuşun. Hava soğuk içeri geçin, biz size gerekli olan her türlü detayı vereceğiz. Sanal ortamda gözüktüğü gibi değil bu olay" diye konuştu. Bunun üzerine öğrenciler bahçede bir süre slogan attıktan sonra sınıflarına girdiler. Çok sayıda polis ekibinin önlem aldığı okul bahçesinde öğrenciler ve bazı veliler basın mensuplarına açıklamalarda bulundular.

"Birkaç Arkadaşımız Fiziksel Olarak Temasa Uğradı"

Okul öğrencilerinde biri, temizlik görevlisinin yaklaşık bir yıldır okulda görev yaptığını belirterek, "Görsel olarak tacizlere uğradık birçoğumuz ama dikkate almadık. Daha sonra birkaç arkadaşımızın fiziksel olarak temasa uğradığını öğrendik. Bunun üzerine müdüre gitti bir grup arkadaşımız. Müdür bu tacize inanmadı, odadan çıkartmaya çalıştı. Cuma günü twetter adresimizden bir duyuru yaptık. Dernekler olsun, gazete basını olsun herkes bize yardım etti." diye konuştu.

Okul Müdürü Görevden Alındı

Bir başka öğrenci ise, "Bir gün soyunma odasında kızlar üstlerini değiştiriyorlar. Kapıda erkekler bekliyor. Ondan sonra adam geliyor. 'İçeri gireceğim' diyor. Çocuklar diyor ki 'Hayır içeride kızlar soyunuyor' diyor. Zorla içeri giriyor. Kızlar soyunurken sonra 'Yanlışlıkla girdim' diyor. Bir gün çöpü yerden alırken uyuyan kız öğrencimize arkadan tacizde bulunuyor. Daha sonraları bir sürü olaylar yaşanıyor. Spor salonumuzun soyunma odasına sürekli girip çıkıyor. Adam birinci katta görevli ama sürekli spor salonunda voleybol maçında kızları izliyor. Okul müdürünü şikayette bulunduk başta ciddiye alınmadı. İlçe Müdür tarafından okul müdürü görevden alındı. Hademe de şu an da açığa alındı. Biz hukuki olarak ceza istiyoruz" dedi.

Dar Pantolon İddiası

Öğrenci velilerinden Gülbahar Çakmak da, " Öğrencilerin, müdüre gidip şikayet ettiğinde 'canım bu çocuklar da çok dar giyiniyorlar' demesini kınıyorum. Çocuklar tacize uğruyor. Sadece burada değil her yerde. Bu okulda değil okullarda, otobüslerde olsun. Bunun bir önlemini alsınlar artık yeter. Biz çocuklarımızı buraya güvenip de gönderiyoruz, eğitim alsın diye gönderiyoruz. Bir çocuk okulda tacize uğruyorsa artık neresi güvenilir" diye konuştu.

Bu Defalarca Olmuş

Bahçeşehirli Derneği Başkanı Uğur Barış Karabulut da yaptığı açıklamada, "Genç bir arkadaşımız bu konuda bir mağduriyetini dile getiriyor. Sosyal medyada arkadaşlarımız bu haberi paylaşıyorlar. Olay veliler ve bizlere kadar geliyor. İlçe mille eğitim müdürümüzle burada bir araya geldik. Müdür ve hademenin görevden alınacağını ve haklarında soruşturma açılacağını söyledi. Burada en acısı ilgili müdürün burada daha öncesinde öğrencilere yönelik konuşmalarında kılık kıyafetlerini 'şöyle giyinin, böyle giyinin, okul müsamerelerine katılımda bu şekilde katılın' diye uyarıları olmuş. Bu defalarca olmuş. Böyle bir okul müdürünün, bu zihniyetteki okul müdürünün, milli eğitimimizin bu seviyede olması bizi ürkütüyor" dedi.

Görsel İçerik: Star Tv de muhabirlere konuşan kızın yüzü buzlanmış ancak birkaç yerde yüzü gözükmektedir.. Aynı zamanda fotoğraf da çekilmiştir bu fotoğraflarda açıklamayı ve protestoyu yapan öğrenci ve veliler net bir şekilde görülmektedir.

5) '8 Yaşındaki Kuzene Cinsel İstismar Davasında İyi Hal İndirimi'

Televizyon Kanalı: Habertürk İnternet Sitesi

Yayınlanma Tarihi: 28.02.2018

Yayınlanma Süresi: -

Haber Metni: Konya'da uyurgezer olması nedeniyle yatağından kalkıp, kendi yanına gelen halasının kızı H.B.'ye (8) cinsel istismarda bulunmakla suçlanan A.Y. (17), 5'inci Ağır Ceza Mahkemesi'nde görülen davada 'çocuğun cinsel istismarı' suçundan 8 yıl hapis cezasına çarptırıldı. Heyet, A.Y.'nin olay tarihinde 18 yaşından küçük olması ve mahkemedeki iyi halinden dolayı cezayı 4 yıl 5 aya indirdi.

DHA'nın haberine göre; olay 2016 yılında yaşandı. 8 yaşındaki H.B., dayısının evinde kaldı. Uyurgezer olması nedeniyle gece yarısı yataktan kalkan H.B, kuzeninin yanına gitti. 17 yaşındaki A.Y'nin bu sırada küçük kıza cinsel istismarda bulunduğu iddia ediliyor.

Öğretmenleri Ortaya Çıkardı

Olaydan 6 ay sonra ilkokuldaki sınıf öğretmeni H.B.'nin devamsızlığının artması üzerine H.B.'nin annesini aradı. Anne S.B., kızının, yeğeni tarafından cinsel istismara uğradığını ve psikolojisinin iyi olmadığı söyledi. Bunun üzerine okul yönetimi, durumu polise bildirdi. Gözaltına alınan A.Y., tutuksuz yargılanmak üzere serbest bırakıldı.

Anne Şikâyetçi Olmadı

Yeğeni A.Y.'den şikâyetçi olmayan S.B. mahkemedeki ifadesinde, "Biz olay gecesi misafirlikteydik. Geç olduğu için kızım orada kaldı. Hiçbir şeyden şüphelenmedik. Olaydan 6 ay kadar sonra kızım uykusundan aniden fırlayınca yanına gittim. Yanına gittiğimde bu olaydan bahsetti. A.Y.'nin kendisine istismarda bulunduğunu söyledi. Bu durumu öğretmenine de anlatınca olay karakola intikal etti. Olaydan tam olarak bilgim yok. A.Y.'den şikâyetçi değilim." dedi.

8 Yaşındaki Kızın İfadesi Pedagog Eşliğinde Alındı

Konya 5'inci Ağır Ceza Mahkemesinde görülen davada H.B.'nin pedagog eşliğinde ifadesi alındı. H.B. ifadesinde, olay gecesi dayısında kaldığını, yengesiyle uyurken uyurgezerlik hali yaşadığını belirtti. Olayı annesine ve öğretmenine 6 ay sonra anlattığını söyleyen H.B., "Neden 6 ay sonra anlattım, bilmiyorum." dedi.

Suçlamaları Kabul Etmedi

Suçlamaları kabul etmeyen A.Y. de savunmasında, "Kendisine herhangi bir şekilde cinsel istismar içeren bir eylemde bulunmadım. Suçsuzum" dedi.

Mahkemeden İyi Hal İndirimi

Mahkeme heyeti, geçen 22 Şubat günü görülen karar duruşmasında, tutuksuz yargılanan A.Y.'ye 'çocuğun cinsel istismarı' suçundan 8 yıl hapis cezası verdi. Heyet, A.Y.'nin olay tarihinde 18 yaşından küçük olduğu ve mahkemede iyi halinden dolayı cezayı 4 yıl 5 aya indirdi. A.Y., yerel mahkemenin verdiği karar, Yargıtay tarafından onanırsa tutuklanacak.

6) '70 Yaşındaki İstismarcının Cezası Belli Oldu.'

Televizyon Kanalı: Odatv İnternet Sitesi

Yayınlanma Tarihi: 20.03.2018 17:01

Yayınlanma Süresi: -

Haber Metni: Edirne'nin Keşan ilçesinin Akhoca Köyü'nde çiftçilik yapan, evli ve 2 çocuk babası Hikmet Pamuk, 2010 yılında 10 yaşında olan baldızının kızı olan E.E.'ye tacizde bulunmaya başladı.

Edirne'nin Keşan ilçesinin Akhoca Köyü'nde çiftçilik yapan, evli ve 2 çocuk babası Hikmet Pamuk, 2010 yılında 10 yaşında olan baldızının kızı olan E.E.'ye tacizde bulunmaya başladı. Hikmet Pamuk, ilerleyen süreçte de E.E. ile tehdit ve cep telefonu ile çektiği görüntülerle şantajda bulunarak köydeki evin yanı sıra Keşan'daki bir evde zorla istismarda bulunmaya devam etti.

E.E., 2016 yılında yaşadıklarına dayanamayarak durumu ailesine anlattı. Bunun üzerine aile, Keşan Cumhuriyet Başsavcılığı ve İlçe Jandarma Komutanlığı'na giderek Hikmet Pamuk'tan şikayetçi oldu.

Yakalanarak, gözaltına alınan Pamuk, küçük kızla para karşılığı ilişkiye girdiğini savunarak, tehdit ve şantaj suçlamalarını kabul etmedi. Pamuk, çıkarıldığı mahkemece tutuklanarak, cezaevine konuldu.

İstismarı Kayda Almış

Edirne 1'inci Ağır Ceza Mahkemesi'ndeki karar duruşmasına tutuklu sanık Hikmet Pamuk ve avukatı katıldı. Duruşmada gelen yazı cevaplarının okunmasının ardından duruşma savcısı, önceki celse verdiği mütalaasını tekrarladı. Mütalaada mağdurun eniştesi olan sanığın, torunlarıyla arkadaş olması nedeniyle evine gelip bazen yatıya kalan E.E.'ye, 2010 ve 2011 yılları içerisinde cinsel davranışlarda bulunmaya başladığı belirtildi. Mütalaada ayrıca sanığın yaşı küçük mağduru babasına şikâyet edeceği şeklinde tehditlerde bulunduğu, 2011'den 2016'ya kadar mağdurla zorla birlikte olduğu hususlarına yer verildi.

37,5 Yıl Hapis Cezası Verildi

Mütalaada son olarak, sanığın kastının yoğunluğu, suçu işleme biçimi, mağdur üzerindeki etkileri ve meydana getirdiği zarar göz önüne alınarak sanığa verilecek cezada alt sıradan uzaklaştırılması talep edildi. Hikmet Pamuk'un avukatı savunmasında E.E.'nin soruşturma ve yargılama aşamasındaki beyanlarının çelişkili olduğunu ileri sürerek, dosyada baştan beri mağdurun beyanları doğrultusunda müvekkilinin aleyhine olabilecek delillerin toplandığını ifade etti.

Sanık Hikmet Pamuk ise sağlık sorunları yaşadığını belirterek tahliyesinin talep etti.

Mahkeme heyeti, sanık Hikmet Pamuk'un tahliye talebini reddederek, 'çocuğun cinsel istismarı' ve 'kişiyi hürriyetinden yoksun kılma' suçlarından toplam 37, 5 yıl hapis cezasına çarptırarak, tutukluluk halinin devamına karar verdi.

Haber Metni: (DHA)- Tekirdağ'ın Çorlu ilçesinde yaşayan Erol K. (40), 12 yaşındaki kız çocuğuna cinsel istismarda bulunduğu iddiasıyla tutuklandı.

Çorlu'da ortaokul öğrencisi N.N., okuldan çıkıp eve gittiği sırada iddiaya göre, yanına gelen bir kişi cep telefonunda bulunan cinsel içerikli görüntüleri izletmeye başladı. N.N.'nin bağırması üzerine şüpheli olay yerinden hızla kaçtı. Evine giden N.N., olayı ailesine anlattı. Bunun üzerine aile, Emniyet Müdürlüğüne giderek şikâyet

bulundu. Kızın verdiği eşkâl üzerinde ve güvenlik kameraları kayıtlarında inceleme yapan polis, şüphelinin Erol K. olduğunu belirledi. Polis, Erol K.'yi evinde yakalayarak gözaltına aldı. Emniyetteki soruşturmasının ardından adliye sevk edilen Erol K., 'çocuğa cinsel istismar' suçundan tutuklandı.

Şüphelinin 2011 yılında da bir kadına cinsel tacizde bulunduğu ve bir süre cezaevinde kaldığı öğrenildi.

Görsel İçerik: Tutuklanan şahsın fotoğrafı mozaikleştirilmiş bir şekilde verilmiştir.

8) 'Kızı İstismara Uğrayan Baba Başka Kızı İstismar Etti.'

Televizyon Kanalı: Odatv İnternet Sitesi

Yayınlanma Tarihi: 02.04.2018 14:15

Yayınlanma Süresi: -

Haber Metni: Antalya'nın Manavgat ilçesinde kendi kızı 2009 yılında cinsel istismara uğrayan Remzi Erdem (54), kapı komşusunun 14 yaşındaki kızına cinsel istismardan 10 yıl hapis cezasına çarptırıldı.

Antalya, Manavgat'ta esnaflık yapan Remzi Erdem, 2015 yılının haziran ayında kapı komşusunun kızı, o dönem 14 yaşındaki S.Ç.'yi, iddiaya göre evde kimsenin olmadığı sırada kendi evine çağırarak 40 lira verdi ve sırtını çiğneyip, kasıklarına masaj yapmasını istedi. Bu sırada kendisine sarılarak, bacaklarına dokunup öpmek isteyen Remzi Erdem'in elinden kurtulup kaçmayı başaran S.Ç., durumu babasından ayrı birlikte yaşadıkları annesine anlattı. Annenin şikayeti üzerine Remzi Erdem hakkında 'cinsel istismar' ve 'kişiyi hürriyetinden yoksun kılma' suçlamalarıyla dava açıldı. Davaya, Aile ve Sosyal Politikalar Bakanlığı da müdahil oldu.

'Üzerimde Şort Vardı Ve Bacaklarıma Dokundu'

Manavgat 2'nci Ağır Ceza Mahkemesi'nde görülen duruşmalarda kız çocuğu S.Ç., psikolog bilirkişi eşliğinde ifade verdi. Evde yalnız olduğu bir gün kapının çaldığını ve gelenin Remzi Erdem olduğunu söyleyen S.Ç., "Evde kimse olup olmadığını sordu, ben de 'kimse yok, arkadaşına gideceğim' dedim. Kendi evinin kapısını açarak bana, 'Sırtımı çiğner misin' dedi. Ben o an bir şey diyemedim, içeri girdim. Bana arkamdan sarıldı ve elime 20 lira verdi. Yatak odasına gidip sırtüstü yatarak, 'Kasıklarına masaj yapar mısın?' dedi. Sadece dizlerine yaptım. O sırada saçlarım öne dökülünce, 'Saçların ipek gibi' dedi. Beni öpmeye çalıştı. Üzerimde şort vardı ve bacaklarıma dokundu. Bu sırada bana, 'Benden korkuyorsun, korkma' deyince ben de 'korkmuyorum Remzi amca' diye cevap verdim. Elime 20 lira daha verdi, işimin olduğunu söyleyip koşarak çıktım. Akşam annem işten gelince olanları anlattım" dedi.

'Bir Daha Manavgat'a Gelemez'

S.Ç.'nin annesi N.G.O., olay günü işyerinden eve geldiğinde, kızının yaşadıklarını kendisine ağlayarak anlattığını belirterek, Remzi Erdem'in verdiği 40 lirayı kapılarının önüne koyduğunu söyledi. O sırada evde olmayan sanığın eşine telefonla mesaj atarak görüşmek istediğini söylediğini belirten N.G.O., "Sanığın eşi gelince olayı anlattım. Tepki göstererek, eşinin işyerinde olduğunu ve kendileriyle yüzleştirmek istediğini söyledi. Daha sonra da eşinin evin ve arabanın anahtarlarını bırakarak kaçmış olduğunu ve bir daha Manavgat'a gelemeyeceğini söyledi" diye konuştu.

'Benim Kızım Da Mağdur Oldu'

Sanık Remzi Erdem ise hakkındaki suçlamaları hiçbir şekilde kabul etmediğini belirterek, "Ben de 2 kız evladı babasıyım. Büyük kızım engellidir. Şimdi 23 yaşında olan küçük kızım, cinsel istismara maruz kaldı ve sanık halen tutukludur. Böyle bir olayın sonuçlarını öngörebilecek durumdayım. O gün S.Ç.'ye harçlık verdiğim doğrudur ki önceden de harçlık veriyordum ben S.Ç.'nin annesini ve sülalesini tanırım. Suçsuzum, beraatımı talep ediyorum. Hükmün açıklanmasının geri bırakılmasını kabul etmiyorum" dedi.

Savcı: Bacaklarını Okşadı, Para Verdi

Duruşmalarda tanıkların verdiği ifadelerin ardından esas hakkındaki görüşünü açıklayan savcı, davada sanık ve şikayetçilerin aynı apartmanda kapı komşusu olduklarını, sanığın S.Ç.'nin evde yalnız olup olmadığını kontrol ettikten sonra belini çiğnemesi için kendi evine çağırdığını, S.Ç.'nin eve girmesinin ardından ona sarıldığını ve kasıklarına masaj yapmasını istediğini, bacaklarını okşadığını, S.Ç.'ye eve girerken ve çıkarken para verdiğini aktardı. Sanığın savcılık ifadesinde de benzer beyanlarda bulunduğunu aktaran savcı, esas hakkındaki görüşünde şu ifadelerle yer verdi:

"Sanığın evde tek başına olarak bildiği 14 yaşındaki mağdureyi, eve masaj yapması için çağırmasının cinsel istismar kastını gösterdiği, mağdur 14 yaşında olup hukuken, fiilen ve ahlaken ayırt etme yetisine sahip olamayacağı, bu yaştaki mağdura karşı sanığın kendi ikrarıyla mağduru masaj yaptırmaya çalışmasının bile istismar suçunu oluşturacağı, eylemin önce masaj yaptırılma şeklinde istendiği, daha sonra sarılma ve bacak okşama şeklinde gerçekleşen eylem olduğu mağdurun beyanı, sanığın kısmi ikrarıyla anlaşılmaktadır."

10 Yıl Ceza Aldı, İndirim Yapılmadı

Mahkeme, sanık Remzi Erdem'in 'sarkıntılık suretiyle cinsel istismar' suçundan 4, 'cinsel amaçlı olarak çocuğun hürriyetinden yoksun kılınması' suçundan da 6 olmak üzere 10 yıl hapisle cezalandırılmasına, sanığın duruşmalarda pişman olduğuna dair emare göstermemesi nedeniyle cezasında herhangi bir indirim yapılmamasına karar verdi.

Karar Onandı

Karara karşı hem savcı, hem sanık, hem de şikâyetçi S.Ç. ve ailesi itiraz etti. Antalya Bölge Adliye Mahkemesi'nde görülen istinaf duruşmasında, sanığın suçunun 'sarkıntılık' düzeyinde kaldığı yönündeki mahkeme kararında usul ve yasaya aykırı bir durum olmadığı belirtilerek, istinaf başvurularının esastan reddine karar verildi.

Polis Tarafından Yakalanıp Tutuklandı

Kararın kesinleşmesinin ardından hakkında yakalama kararı çıkarılan Remzi Erdem, pazartesi günü İlçe Emniyet Müdürlüğü İnfaz Büro Amirliği ekipleri tarafından yakalandı. Adliye sevk edilen Remzi Erdem, tutuklanarak cezaevine gönderildi.

Kendi Kızı Da Cinsel İstismara Uğramış

Remzi Erdem'in mahkeme ifadesinde bahsettiği 'Benim kızıma da cinsel istismarda bulunuldu' sözleriyle bahsettiği olayın 2009 Mart ayında yaşandığı belirtildi. Manavgat'ta emekli beden eğitimi öğretmeni ve karate antrenörü S.Ç.'nin, o tarihte lise 2'nci sınıf öğrencisi ve Türkiye Yıldızlar Karate Şampiyonası'nda Türkiye 5'incisi olan Remzi Erdem'in kızı M.'yi evine davet ederek cinsel taciz ve fiili livatada bulunduğu iddiasıyla hakkında açılan davada 25 yıl hapse mahkûm edildiği öğrenildi.

Görsel İçerik: İstismar eden kişinin fotoğrafı açık bir şekilde verilmiştir.

9) 'Küçük Kızdan Kan Donduran İtiraf: Ağabeyim Ve Eniştem...'

Televizyon Kanalı: Mynet İnternet Sitesi

Yayınlanma Tarihi: 9.04.2018

Yayınlanma süresi: -

Haber Metni: Merkez Yenışehir ilçesinde yaşayan kız çocuğu F.M., 2017 yılında ailesi ile anlaşamadığını söyleyerek, evini terk edip, eşiyle imam nikâhıyla yaşayan ablasının yanına yerleşti. İddiaya göre; 20 Kasım 2017'de eniştesinin cinsel istismarda bulunduğu F.M., olayı anlattığı ablası tarafından evden kovuldu. Gece yarısı sokakta kalan mağdur, babasını arayıp, başından geçenleri anlattı. Saat 05.00'e kadar bir parkta bekleyen F.M., daha sonra polis merkezine giderek, eniştesinin kendisine cinsel istismarda bulunduğunu söyledi. F.M., ayrıca, eniştesinin kendisini başka erkeklerle para karşılığı cinsel birlikteliğe zorladığını, dövüp parasını aldığını ve olayı anlattığı ablası tarafından evden kovulduğunu söyledi. Olaydan bir gün sonra yeniden ifadesi alınan F.M., 2 yıldan bu yana öz ağabeyinin de kendisine cinsel istismarda bulunduğunu ve dayanamayıp evden kaçtığını, gittiği ablasının evinde de eniştesinin cinsel istismarda bulunduğunu söyledi. F.M., ilk ifadesi sırasında anne ve babası yanında olduğu için ağabeyinden söz etmediğini anlattı. Aile ve Sosyal Politikalar Bakanlığı'nca koruma altına alınan mağdurun ifadesi üzerine olayla ilgili soruşturma başlatılırken, kızın ağabeyi K.M. ve eniştesi E.U. gözaltına alındı. İfadelerinde suçlamaları reddeden şüphelilerden enişte E.U. serbest bırakılırken, ağabey K.M. ise tutuklanarak cezaevine gönderildi.

Soruşturmaları yürüten savcılık tarafından ilk olarak mağdurun eniştesi E.U. hakkında 'Çocuğun cinsel istismarı' suçundan 8 yıla kadar hapis istemiyle iddianame hazırlandı. Mağdurun eniştesini suçlaması için bir neden bulunmadığı ve tarafların arasında istismar iddiası dışında mağdurun sabaha karşı tek başına evi terk etmesini gerektirecek bir anlaşmazlık bulunmadığı belirtilen iddianamede, şüpheli hakkında zincirleme suç hükümlerinin uygulanması istendi.

Kadın Hâkimlerin Kararı İle Tutuklandı

İddianamenin kabulünün ardından tutuksuz sanık E.U.'nun yargılanmasına 20 Şubat günü Diyarbakır 1'inci Ağır Ceza Mahkemesi'nde başlandı. Aile ve Sosyal Politikalar Bakanlığı avukatı Remzi Atalay'ın da müdahil olduğu davanın ilk celsesinde mağduru dinleyen mahkeme heyeti, genel ahlak ve mağdurun menfaati gözetilerek yargılamanın kapalı yapılmasına karar verdi. Duruşmanın sonunda E.U. hakkında kuvvetli suç şüphesinin varlığını gösteren somut delillerin bulunduğunu belirten mahkeme heyeti, sanığın tutuklanmasına karar verdi. İki kadın hâkimin tutuklama yönündeki kararına muhalefet şerhi koyan mahkeme başkanı, sanığın davete icabet ederek duruşmaya katılması, karartılması ihtimali bulunan bir delil bulunmaması nedeniyle tutuklanmaya ilişkin görüşe katılmadığını bildirdi. Sanık E.U., avukatının üst mahkemeye yaptığı itiraz üzerine 28 Şubat günü adli kontrol şartıyla serbest bırakıldı. Davanın 15 Mart günü görülen 2'nci celsesinde esas hakkındaki görüşünü açıklayan savcı, sanığın, evinde misafir olarak kalan mağdura sarkıntılık düzeyinde cinsel saldırıda bulunduğunu belirterek, E.U.'nun cezalandırılmasını istedi. Mahkeme heyeti ise E.U.'nun beraatine hükmetti.

Anne Ve Babasına Da Anlatmış

Mağdurun ağabeyi K.M. hakkındaki soruşturmayı 25 Aralık 2017 günü tamamlayan savcılık, şüphelinin 'Çocuğun nitelikli cinsel istismarı' ve 'Kasten yaralama' suçlarından 27 yıla kadar hapisle cezalandırılmasını istedi. Mağdur F.M., iddianameye yansıyan ifadesinde, şüphelinin 2 yıldır kendisine cinsel istismarda bulunduğunu ve durumu anne ve babasına da anlattığını söyledi. Adli Tıp raporuna göre mağdurun vücudunda, iddialarıyla uyumlu çok sayıda yaraya rastlandığı belirtilen iddianamede, "Tarafların çok kalabalık bir aile olması (12 kardeş) dolayısıyla mağdure ve şüphelinin evde yalnız kalma ihtimallerinin düşük olması, mağdurenin olayları anlattığını beyan ettiği kendi ve anne babasının olayları doğrulamaması ve şüphelinin eylemlerini şikâyet etmek için birçok fırsatı olmasına rağmen şikâyetini darp edildikten sonra dile getirmesi, şüpheli lehine deliller olarak değerlendirilse de kamu davası açmak için yeterli şüpheyi ulaşılmıştır" denildi.

Babası Üzüldüğü İçin Şikâyetten Vazgeçti

İddianamenin kabul edilmesinin ardından tutuklu sanık K.M.'nin yargılanmasına da 20 Şubat günü Diyarbakır 3'üncü Ağır Ceza Mahkemesi'nde başlandı. Duruşmada ifadesi alınan sanık K.M., suçlamaları kabul etmediğini belirterek, beraatını talep etti. Yargılama öncesinde mahkemeye dilekçe vererek, anlattıklarının doğru olduğunu, ancak kalp rahatsızlığı olan babasının üzülmemesi için şikâyetinden vazgeçtiğini belirten mağdur F.M.'nin de duruşmada ifadesi alındı. Mağdurun ifadesinin alınması sırasında avukatının talebi ile duruşma kapalı celse olarak yapıldı. Mağdurun ifadesinin alınmasının ardından açık yargılamaya devam edilen duruşmada görüşünü açıklayan savcı, sanığın tutukluluk halinin devamını talep etti.

Savcı: Ailesine Anlatmasına Rağmen Kimse İnanmadı

Davanın son celsesinde esas hakkındaki görüşünü açıklayan savcı, mağdurun 13 yaşından 16 yaşında kadar ağabeyinin cinsel istismarına maruz kaldığını belirterek, F.M.'nin bu durumu anne ve babasına anlatmasına rağmen, kimsenin kendisine inanmadığını söylediğini kaydetti. F.M.'nin ağabeyine iftira atmasını gerektirecek bir durumun olmadığını belirten savcı, mağdurun samimi ifadeleri ve şikâyetinden vazgeçmesine rağmen sanığın eylemlerini gerçekleştirdiği iddiasında ısrarlı oluşuna dikkat çekerek, sanığın cezalandırılmasını istedi.

Sanık avukatına savunma hazırlamak üzere süre veren mahkeme heyeti, duruşmayı erteledi.

Haber Metni: Van'da, 2017 yılında, sevgilisinin 38 günlük erkek bebeğine cinsel istismarda bulunup öldüren Ferdi Arat'ı ağırlatılmış ömür boyu ve 15 yıl, bebeğin annesi Pınar Tatar'ı ağırlatılmış ömür boyu ve arkadaşları Yılmaz Güzel'i de 15 yıl hapis cezalarına çarptıran mahkeme, gerekçeli kararını açıkladı.

Mahkeme, Tatar'ın bebeğin annesi olmasına rağmen, olayın adli makamlara yansımaya ve delillerin ortaya çıkarılmasına engel olup, delilleri ortadan kaldırmaya çalıştığını belirtti. Mahkeme, davayı takip etmeyen Aile ve Sosyal Politikalar Bakanlığı Van İl Müdürlüğü görevlileri hakkında suç duyurusunda bulunulmasına da karar verdi. Avukat Mahmut Çiftçi, kararın tarihi olduğunu söyledi.

Van 1'inci Ağır Ceza Mahkemesi, geçen yıl, 38 günlük erkek bebeğin istismar edilip öldürülmesiyle ilgili davada, bebeğin annesi Pınar Tatar'ı ağırlatılmış ömür boyu, sevgilisi Ferdi Arat'ı ağırlatılmış ömür boyu ve 15 yıl, arkadaşları Yılmaz Güzel ise bebeği öldürmeye yardım ettiği gerekçesiyle 15 yıl hapis cezasına çarptırdı. Mahkeme gerekçeli kararını açıkladı. 39 sayfalık kararda, bebeğin annesi Pınar Tatar ve sevgilisi Ferdi Arat'ın

birlikte yaşadıkları, sanık Yılmaz Güzel'in tahsis ettiği dairede kaldıkları, olayların da bu evde yaşandığı ifade edildi.

Çocuğunu Öldüren Sevgilisini Korumaya Çalıştı

Sanıkların birbirlerini korumak için gerçeğe aykırı ifadeler verdiği belirtilen kararda, bebekte meydana gelen kafa travmasına bağlı yaralanmanın, sert cisimle vurmak veya sert bir cisme çarpmayla oluşabileceğinin tartışmasız olduğu vurgulandı. Pınar Tatar'ın çocuğunu öldüren Ferdi Arat'ı korumaya ve olayı gizlemeye çalıştığı ifade edilen kararda, annenin kendi çocuğunun ölümü ile ilgili delillerin ortaya çıkarılmasını eylemli olarak engellemeye çalıştığı ve sanıkların birbirlerini korumak için verdikleri ifadelere itibar edilmediği kaydedildi.

Delilleri Karartmak İçin Önemli Çabalar Gösterdiler

Ferdi Arat'ın maktul bebeği darp ederek, kafa travmasına bağlı beyin kanamasına neden olduğunu kaydeden mahkeme, sanıkların olaydan sonra delilleri karartmaya yönelik önemli çabalar gösterdiğine dikkat çekti. Bebeğin kafatasındaki parçalı kemik kırığının ağırlığı dikkate alındığında Ferdi Arat'ın katil kastıyla hareket ettiğini belirten mahkeme, sanığın bebeğe cinsel istismarda bulunduğunun da bilimsel raporlarla kanıtlandığını kaydetti. Mahkeme, birbirlerini koruyan sanıkların, olayın adli makamlara intikali anına kadar, suçun ortaya çıkmasını engelleyecek ifade ve davranışlarda bulunduklarını vurguladı. Kararda, Pınar Tatar'ın cinsel istismara ilişkin çelişkili ifadelerinde de sevgilisi olan Ferdi Arat'ı korumaya ve suçun açığa çıkmasını engellemeye çalıştığı ifade edildi.

Canavarca Hisle İşlendi

Bebeğin cinsel istismar ve öldürme eylemlerine maruz kaldığını kaydeden mahkeme, bebeğe karşı sanığı öldürme eylemine yöneltecek herhangi bir nedenden söz etmenin mümkün olmadığını vurguladı. Ferdi Arat'ın eylemini canavarca hisle işlediğini belirten mahkeme, üst sınırdan ceza verildiğini kaydetti. Pınar Tatar'ın delillerin ortaya çıkarılmasını eylemli olarak engellemeye çalıştığı ve Ferdi Arat ile birlikte delilleri ortadan kaldırmaya çalıştığı belirtilen kararda, "Pınar Tatar, henüz 40 gününü doldurmayan bebeğin annesi olmasına rağmen, suçun adli makamlara yansması ve delillerin ortaya çıkarılmasına eylemli olarak engel oldu" denildi.

Bakanlık Görevlileri Hakkında Suç Duyurusu

Ankara, Bursa, Diyarbakır, İstanbul, Trabzon, Van ve İzmir Barolarının davaya katılma talebinde bulundukları belirtilen kararda, suçun failleri arasında bebeğin annesinin de bulunduğu belirtildi. Kararda, en temel insan haklarından olan hayat hakkı ve vücut bütünlüğünün korunması değerleri saldırıya uğrayan maktul bebeğin haklarının korunması, insan haklarını savunmak, korumak ve işlerliğini sağlamak bağlamında, baroların davaya kabullerine karar verildiği kaydedildi. Aile ve Sosyal Politikalar Bakanlığı'na davetiye çıkarıldığı ve davaya katılmalarına karar verildiği belirtilen kararda, şu ifadelere yer verildi:

"Eylemin mahiyeti ve toplumda yaratacağı infial nazara alındığında, Aile ve Sosyal Politikalar Bakanlığı Van İl Müdürlüğü görevlilerinin yargılamayı takip etmemesi nedeniyle haklarında suç duyurusunda bulunulmasına karar verilmiştir. Cezaevinden doğum yapmak üzere izin alan sanık Pınar Tatar'ı izleme, gözetleme ve maktul bebeği korumakla görevlendirilen kamu görevlilerinin bulunup bulunmadığı, varsa görevlerini ihmal edip etmediği konusunda suç duyurusunda bulunulmasına karar verilmiştir."

'Tarihi Ve Emsal Nitelikte Karar'

Davayı takip eden ve katılma talepleri kabul edilen Diyarbakır Barosu Çocuk Hakları Merkezi'nden Avukat Mahmut Çiftçi, olayın çok vahim olduğunu belirterek, şunları söyledi:

"Bu dosyalarda baroların katılımının önemli olduğunu düşünüyoruz. Zaten mahkeme, gerekçesinde bunu özellikle belirtmiş. Bizim açımızdan çok olumlu bir gerekçeydi. Çocuğun 38 günlük oluşu, annenin sanık oluşu ve çocuğun haklarını savunacak kimsenin olmayışı, bizim de ısrarla belirttiğimiz avukatlık kanunundan kaynaklanan görevlerimiz ve uluslararası sözleşmelerden kaynaklanan sorumluluklarımız nedeniyle katılma talebimiz kabul edildi. Çok olumlu bir karardı. Aile ve Sosyal Politikalar Bakanlığı'ndaki sorumlular hakkında suç duyurusunda bulunuldu. Talebimiz, sanıkların sadece cezalandırılması değil, devletin koruma yükümlülüğünü yerine getirmesi konusundaki eksikliğin de giderilmesiydi. Bu konuda da mahkeme olumlu bir karar verdi. Anne uyuşturucu kullandığı için cezaevine giriyor ve doğum yapmak için cezaevinden çıkıyor. Uyuşturucu bağımlısı annenin çocuğunu takip etmesi gereken görevliler var. Mahkeme bu konuda Aile ve Sosyal Politikalar Bakanlığı hakkında suç duyurusunda bulundu. Bakanlık, müdahil olmasına rağmen davayı takip etmedi. Bu nedenle sorumlular hakkında ikinci bir suç duyurusunda bulunuldu. Bu dosya bizim için çok önemli, tarihi bir dosyaydı. Mahkemeye heyetine teşekkür etmek isteriz. Emsal nitelikte bir karar oldu. Mahkemeler katılma talebimizi dar yorumluyordu. Van 1'inci Ağır Ceza Mahkemesi, hakikaten bunu olması gerektiği gibi yorumlayıp, katılma talebimizi kabul etti."

12) ‘ Küçük Kızın Komşuları Korkunç Tacizi Ortaya Çıkardı’**Televizyon Kanalı:** Mynet İnternet Sitesi**Yayınlanma Tarihi:** 30.04.2018**Yayınlanma Süresi:** -

Haber Metni: Adana'da yalnız yaşayan 59 yaşındaki Feyzullah Y., bir kız çocuğunu taciz etti. Durumu fark eden kadınlar, çocuğu dinleyince durumu polise bildirdi. Bunun üzerine Feyzullah Y., polis tarafından gözaltına alındı. Emniyetteki işlemlerinin ardından adliyeye sevk edilen zanlı, "çocuğa cinsel istismar" suçundan nöbetçi mahkeme tarafından tutuklandı.

Korkunç olay, Seyhan ilçesine bağlı Emek Mahallesinde meydana geldi. İddiaya göre, tek başına yaşayan Feyzullah Y.'nin (59) bir kız çocuğu ile bakkala gitmesi ve onu eve getirdiğini görmesi üzerine kız çocuğu ve adamı takip etmeye başladı. Vatandaşlar önce torunu olabileceğini ona bakkaldan yiyecek alabileceğini düşündü. Ancak kız çocuğunun sürekli geldiğini görmeleri üzerine, 3. sınıf öğrencisi 9 yaşındaki H.K. bir gün yine evden çıktığında komşular kız çocuğunu yanlarına alıp neden bu adamın evine geldiğini sordu.

"Annem Babam Duyarsa Beni Gebertir"

Bunun üzerine ağlamaya başlayan kız çocuğu şahsın, dedesinin arkadaşı olduğunu bu nedenle 5 ile 10 lira arasında kendisine para verdiğini söyledi. Ancak kadınlara bu inandırıcı gelmeyince kız çocuğuna sormaya devam ettiklerinde H.K. ağlayarak "Ne olduğunu anlatırsam polisler beni de götürür, annem babam duyarsa beni gebertir" diye gözyaşlarına boğuldu.

"Bana Para Verip Taciz Ediyordu"

Kadınlar korkmaması gerektiğini söyleyince kız çocuğu "Yaşlı adam bana para verip beni taciz ediyordu" diye ağladı. Bunun üzerine kadınlar kız çocuğunu ve aldıkları bu ses kaydını polise götürdü.

Görsel İçerik: Herhangi bir fotoğraf bulunamamıştır.

3.Bulgular Ve Yorum

Araştırılan haberlere göre bazı bulgulara ulaşılmıştır. Haber taramaları sonucunda 12 vakaya ulaşılrken, bu vakalarda istismara maruz kalan çocuk sayısı 18 dir.

Taranan vakalara uygulanması ile elde edilen sonuçlar tablolar halinde aşağıda sunulmuştur. İstatistik verileri, rakamların yanı sıra yüzde değerlerle de tamamlanarak, genelleme yapılmasını kolaylaştırmak adına sunulmuştur. Araştırmanın yapılma amaçlarından biri olan ülkemizdeki durumun yansıtılmasına açıklık getirmesi adına yüzde değerlerin bildirimi gerekli görülmüştür. Ancak sadece bu 12 haber için geçerlidir.

Tablo 1. Cinsel İstismar Mağduru Çocukların Yaş Dağılımlarını Gösteren Frekans ve Yüzde Tablosu

YAŞ ARALIĞI	SAYI	YÜZDELİK
0-5	1	5,6
6-10	4	22,2
11-15	4	22,2
Belirtilmemiş	9	50,0
TOPLAM	18	100

İstismara uğrama yaşı konusunda risk faktörü olarak belirlenen yaş grupları araştırmalarda farklı aralıklarda yer alsa da doğduğu günden itibaren her çocuğun potansiyel mağdur olabileceği gerçeği göz ardı edilmemelidir. Araştırma sonucunda istismara maruz kaldığı tespit edilen çocukların yaşları şu şekildedir; ‘0-5’ yaşına kadar olan çocuk oranı %5,6, (1), bu çocuk 38 aylıktır. ‘6-10’ yaşına kadar olan çocuk oranı %22,2 (4), ‘11-15’ yaşına kadar olan çocuk oranı %22,2 (4) ve yaşı belirtilmemiş olan çocuk oranı %50,0 (9) dir

Tablo 2. Cinsel İstismar Mağduru Çocukların Cinsiyet Dağılımlarını Gösteren Frekans ve Yüzde Tablosu

CİNSİYET	SAYI	YÜZDELİK
Kız	11	61,2
Erkek	7	38,8
Belirtilmemiş	0	0,0
TOPLAM	18	100

Ulaşılan vakalarda istismara maruz kalmış 18 çocuğun cinsiyet bilgileri derlendiğinde bu çocuklardan %61,2’sinin, (16) kız çocukları, erkek çocukları ise %38,8’inin (7) oluştuğu saptanmıştır

Tablo 3. Cinsel İstismar Mağduru Çocukların Aile Durumunu Gösteren Frekans ve Yüzde Tablosu

AİLE DURUMU	SAYI	YÜZDELİK
Anne- Baba Birlikte	7	38,8
Boşanmış	0	-
Belirtilmemiş	11	61,2
TOPLAM	18	100

Aile, evlilik ve kan bağına dayanan; anne, baba, çocuklardan oluşan en küçük sosyal gruptur. Toplum, ailelerden oluşur. Bu nedenle, aile toplumun temeli olarak kabul edilir. Sevgi, saygı, gelenek ve görenek gibi değerler öncelikle ailede kazanılır. Aile; inançların, ahlaki davranışların, yardımlaşma, dayanışma ve paylaşma gibi değerlerin öğrenildiği yerdir. Aile kurumunun en önemli niteliği, sevgi odaklı bir ilişkiler dünyası olmasıdır. Bu yönüyle aile, bireyleri sevgi ve şefkatle toplumsal hayata hazırlayan bir okuldur.

Aile bireylerinin huzurlu bir ortamda iyi yetişmesi, toplum için de hayati önem taşır. Çünkü ailenin huzuru ve mutluluğu, toplumun huzur ve mutluluğu demektir. Aile yapısının sağlıklı bir şekilde devam etmesi için aile bireylerinin davranışları çok önemlidir. Öncelikle ailede huzur, mutluluk ve güven ortamının oluşması gerekir. Bu da ancak aile bireylerinin büyüklerine karşı saygı, küçüklerine karşı ise sevgiyle davrandıkları bir ortamda gerçekleşir. Fakat ne kadar sevgi ve saygı da olsa yabancılar tarafından ailedeki çocuklar her zaman risk altındadır ve istismara uğramayacak diye bir şey yoktur.

Tablo verilerine göre Anne – Baba birlikte %38,8 , (7) ve belirtilmemiş aile durumu ise %61,2 (11) dir.

Tablo 4. Cinsel İstismar Mağduru Çocukların Aile Yapılarını Gösteren Frekans ve Yüzde Tablosu

AİLE YAPISI	SAYI	YÜZDELİK
Çekirdek aile	5	27,7
Geniş aile	0	-
Anne İle	0	-
Kurumda	0	-
Belirtilmemiş	13	72,3
Toplam	18	100

Çekirdek aile denince genellikle bir evde oturan anne ve baba ile, varsa onların evlenmemiş çocukları anlaşılır. Tabloda çekirdek aile %27,7 (5), Anne, baba, kızlar, damatlar, oğullar, gelinler ve torunların aynı çatı altında yaşadığı ailelere geniş aile denir. Tablomuzda göre geniş aile, yalnızca annesi ile ve çocuk yetiştirme kurumlarında yaşayan çocuk yoktur. Belirtilmeyen aileler ise %72,3 (13) olarak belirlenmiştir.

Tablo 7. Yaşanmış Cinsel İstismarın Eylem Biçiminden Türünü Gösteren Frekans ve Yüzde Tablosu

CİNSEL İSTİSMAR TÜRÜ	SAYI	YÜZDELİK
Sürtünme	0	-
Genital penetrasyon	13	75,4
Anal penetrasyon	0	-
Çocuk Pornosu	1	5,5
Fiziksel	0	-
Ellemek	3	13,6
Öpmek	1	5,5
Toplam	18	100

Tüm vakalar incelendiğinde, eylem türüne göre sınıflamalar yapılmıştır. Bu sınıflandırmaya göre; en çok %75,4 (13) oranı ile genital penetrasyondur. Mağduru ellemek yani dokunmak ile olan istismar türü ise % 13,6 (3) oranı ile ikinci sırada yer alırken, mağdura porno izletme yoluyla istismar ve mağduru öpmek yoluyla istismar ise oranı %5,5 (2) olarak haberlerde yer almıştır.

Tablo 8. İstismarcının Kurbana Olan Yakınlık Derecesini Gösteren Frekans ve Yüzde Tablosu

YAKINLIĞI	SAYI	YÜZDELİK
Baba	1	5,5
Abi	1	5,5
Akraba	2	11,0
Akraba dışında tanıdık	1	5,5
Arkadaş	1	5,5
Yabancı	12	67,0
Toplam	18	100

Çocuğun cinsel istismara maruz kalma olasılığı düşünüldüğünde, öncelikle akla gelen şey çocuğun dışarıdan bir yabancı tarafından istismar edilmesi iken, bulgular incelendiğinde olayın hiç de zannedildiği gibi olmadığı, çocuğun aile içinde de istismara maruz kalabileceği gerçeği karşımıza çıkmaktadır. İstismar vakaları, çocuğun insanlara karşı güveninin zedelenmesine yol açan durumlardır. Eğer bir de çocuğu istismar eden birey aile içinden sevdiği, güvendiği biri ise bu zedelenmişliğin düzeyi daha da aratacaktır. Eldeki veriler incelendiğinde, biyolojik (öz) babaları tarafından istismar edilen çocukların %5,5 (1), abisi tarafından %5,5 (1), akraba istismarı %11 (2), mağdura akraba dışında tanıdık yani komşu ve yakın çevresi %5,5 (1) ve arkadaşı tarafından istismar edilme oranı ise %5,5 (1), dir. Yabancılar tarafından olan istismar %67 (12) olarak belirlenmiştir. Özellikle küçük toplumlar başta olmak üzere aile içi cinsel istismar vakalarının duyurulmadığı, gizlendiği gerçeğini de hesaba katarsak, vakaların ulaşabildiğimizden çok daha fazla olabileceği görüşü doğmaktadır.

Tablo 10. İstismar Yaşandıktan Sonra Kurbanın Bu Durum Karşında Nasıl Bir Davranış Sergilediğini Gösteren Frekans ve Yüzde Tablosu

DAVRANIŞ TARZI	SAYI	YÜZDELİK
Gizleme	4	22,3
Aileden yardım isteme	2	11,1
Emniyet birimlerinden yardım isteme	10	55,5
Belirtilmemiş	2	11,1
Toplam	18	100

Çocuklar, istismara maruz kaldıkları zaman bunu kimseye söyleyemezler. Bunun altında yatan gerekçe ise istismarcının çocuğu tehdit etmesi, onu korkutması, çocuğun kendini ifade edemeyişi ve ailesinin ona inanmayacağını düşünmesidir. Cinsel istismar vakaları genelde ıssız ve تنها yerlerde gerçekleşmekte, görgü tanığının olmayışı da bu tür vakaların ortaya çıkmasına engel olmaktadır. Ancak her zaman bu durum elbette ki geçerli değildir. Vakalarımızda parkta, sokakta istismar altında kalan çocuklar da vardır. Çocukların bu konuda bilinçlenmesi onları yardım arama konusunda cesaretlendirecektir. Bu yüzden çocukları olabildiğince bilinçlendirmeliyiz. İncelenen vakalarımıza göre ise tablo biraz da olsa iç açıcıdır. Emniyet birimlerinden yardım isteme toplam yüzdeye göre çok anlamlıdır. Tabloda emniyet birimlerinden yardım isteme gerek çocuk gerek ailesi tarafından olmuştur. %5,5 (10) ile emniyet birimlerinden yardım istenmiştir. İstismar yaşandıktan sonra nasıl davranış sergiledikleri bazı vakalarda bilinmemektedir, bunun yüzdesi ise %11,1 (2) 'dir. İstismarı gizleme oranı % 22,3 oranındayken aileden yardım isteme ise %11,1 (2) olarak belirlenmiştir.

Tablo 12. Haberlerde görüntü olup olmadığını Gösteren Frekans ve Yüzde Tablosu

Değişken	N	%
Kullanılmış	3	16,6
Kullanılmış-Buzlanmış	2	11,1
Kullanılmamış	13	72,3
Toplam	18	100

İncelenen 12 haberde istismara uğrayan çocukları veya istismarı gerçekleştirenlerin görüntülerine yer verilip verilmediğine bakıldığında % 72,3 (13) oranında hiçbir görüntüye yer verilmediği, % 11,1 (2) oranında görüntünün buzlanarak verildiği ve % 16,6 (3) oranının da ise cinsel istismarı yapanların görüntülerine yer verildiği görülmektedir. Tablodan da anlaşılacağı üzere medya bu tür haberleri sunarken görüntü kullanmamaya özen göstermektedir.

Tablo 12. Haber Türünü Gösteren Frekans ve Yüzde Tablosu

HABER TÜRÜ	SAYI	YÜZDELİK
Güncel	12	100
Röportaj	0	-
Magazin	0	-
Toplam	12	100

Çocuklara yönelik cinsel istismar haberlerinin türü incelendiğinde haberlerin tamamı güncel haber türünden oluşmaktadır.

4. Sonuç Ve Öneriler

Türkiye' de 2018 yılının Ocak- Nisan ayları arasında yaşanan cinsel istismar vakaları haberin içeriği bazı boyutlarıyla tablolar yardımıyla, sayılara ve yüzdelere dökülmüştür. Cinsel istismar vakalarının hiç de az olmadığı,

sadece 0-15 yaş arası çocuklardan, sesini duyurabilen 18 çocuğun cinsel istismara maruz kaldığı, mağduriyet yaşının giderek düştüğü belirlenmiştir. Ulaşılan vakalarda 38 aylık bebeğe kadar cinsel istismarın uygulandığı görülmektedir.

Kız çocuklarının erkek çocuklara oranla daha fazla cinsel istismara maruz kaldığı görülmüştür. Cinsel istismar haberlerini veren medya araçlarının istismara uğrayan mağdurların görüntülerine çoğu zaman yer vermediği, faillerin görüntülerine yer verdiği görülmektedir. Araştırmada dikkati çeken önemli bir bulgu da bu tür olaylarda artık adli ve emniyet makamlarına başvurarak suçluların cezalandırılmasının istenmesi farkındalığının oluştuğunun görülmesidir. Medya kuruluşları bu tür haberleri okurlarıyla paylaşırken eğitici, farkındalık oluşturuca boyutlara daha fazla yer vermelidirler. Bunun yanı sıra çocuklara yönelik cinsel istismar olaylarının önlenmesi için aşağıdaki öneriler sunulmuştur.

Öneriler

- 1- Gerek Milli Eğitim, gerekse gönüllü kuruluşlar tarafından istismarı tanıma adına öğretmenleri ve aileleri bilgilendirici seminerler düzenlenebilir.
- 2- Aileler çocuklarının denetimlerini sağlamalı, özellikle yabancı bir yere gidildiğinde çocuğun nerede olduğunu kontrollü olarak gözlemlemelidir.
- 3- Aile, çocuklarına özel yaşam alanlarını ve mahremiyet duygularını küçük yaşlardan itibaren kazandırmalı, sağlıklı bir cinsel kimlik geliştirmeleri adına çocuklarının cinsel içerikli sorularına, onların anlayabileceği uygun dille cevap vermelidir.
- 4-Aileler, çevrelerinde bulunan yetişkinlerden çocuklarına karşı yaklaşımlarından rahatsız oldukları kişiler varsa o kişilerle görüşme sıklıklarını düşürmelidirler.
- 5- Çocuklara rahatsız oldukları durumlarda, yetişkinlerin kendilerine dokunması veya öpmesinin engellenmesi öğretilmelidir.
- 6-Eğer istismar yaşanmışsa çocuğa yardımcı olabilmek için geçeceği anlatması yönünde çocuk yüreklendirilmelidir. Çocuğa yaşadığı durumun kendi suçu olmadığı öğretilmelidir.
- 7- Medya ve basın-yayın organları daha özenli davranarak, konunun hassasiyeti yönünde haberler yapmalı, toplumu bilinçlendirmelidir.
- 8- Medya sermaye eksenli etkilerin odağı olmadan, kendi görevi olan halkın sesi olma özelliğini yerine getirmelidir.
- 9- Medya, çıkar ve kar amacından vazgeçip etik sınırlar çerçevesinde davranmalıdır. Medya kuruluşu, medya ahlakı konusunda “ahlak standartları” tespit etmeli ve bu standartlara uygun hareket edilmelidir.
- 10-Medya toplumun genel ahlak anlayışını, dini ve toplumsal değerlerini göz önünde bulundurarak yayınlar yapmalıdır.
- 11-Medyanın etik dışı yayınlardan uzak tutulması için, toplumun geleceği, manevi mirasın yozlaşmadan devamı, ahlaklı ve toplumsal değerlere saygılı bir nesil için bu tür yayınların durdurulması amacıyla yasal ve kurumsal önlemlerin alınması gerekmektedir. Her ne kadar yasal alanda yapılan ya da yapılması istenen düzenlemeler basın özgürlüğü adına sansür gibi gözükse de her özgürlüğün bir sınırı olduğu unutulmadan toplum yapısı ve toplumsal değerler göz ardı edilmemelidir.

Çocuk Gelişimi Öğrencilerinin Ahlaki Olgunluk Düzeyleri İle Bilişsel Duygu Düzenleme Becerileri Arasındaki İlişkinin İncelenmesi

Ali ÖZCAN
Pamukkale Üniversitesi
aliozcan@pau.edu.tr

Özet

Bu araştırma çocuk gelişimi önlisans öğrencilerinin ahlaki olgunluk düzeyleri ile bilişsel duygu düzenleme becerileri arasındaki ilişkinin incelenmesi amacıyla gerçekleştirilmiştir. Pamukkale Üniversitesi Kale Meslek Yüksekokulu, Çocuk Bakım ve Gençlik Hizmetleri Bölümü Çocuk Gelişimi programında 2016-2017 eğitim-öğretim yılında öğrenim gören toplam 203 öğrenci araştırmanın örneklemi oluşturmuştur. Araştırmada veri toplamak amacıyla Kişisel Bilgi Formu, Ahlaki Olgunluk Ölçeği ve Bilişsel Duygu Düzenleme Ölçeği kullanılmıştır. Öğrencilerin ahlaki olgunluk düzeyleri ve bilişsel duygu düzenleme becerileri arasındaki ilişkiyi belirlemek için Pearson Momentler Çarpım Korelasyon Katsayısı analizi yapılmıştır. Öğrencilerin ahlaki olgunluk düzeyleri ve bilişsel duygu düzenleme becerilerinin çeşitli değişkenlere göre farklılığı incelenirken, tek yönlü varyans analizi (One Way ANOVA) kullanılmıştır. Analizler SPSS 16.0 paket programı yardımıyla test edilmiştir. Araştırmadan elde edilen bulgular ışığında; çocuk gelişimi öğrencilerinin ahlaki olgunluk ölçeğinden elde ettikleri puan ortalamaları ile bilişsel duygu düzenleme ölçeğinin, "düşünceye odaklanma", "plana tekrar odaklanma", "pozitif yeniden gözden geçirme" ve "bakış açısına yerleştirme" alt boyutlarından elde ettikleri puan ortalamaları arasında pozitif yönde anlamlı bir ilişki olduğu sonucuna ulaşılmıştır. Ayrıca öğrencilerin anne öğrenim durumuna göre ahlaki olgunluk düzeylerinde anlamlı bir farklılığa rastlanmazken, bilişsel duygu düzenleme ölçeğinin "bakış açısına yerleştirme" alt boyutundan elde ettikleri puan ortalamaları arasında anlamlı bir farklılığa rastlanmış, diğer alt boyutlarda ise anlamlı bir farklılık gözlenmemiştir. Öğrencilerin baba öğrenim durumuna ve ailelerinin aylık ortalama gelir durumuna göre ahlaki olgunluk ölçeğinden ve bilişsel duygu düzenleme ölçeğinin tüm alt boyutlarından elde ettikleri puan ortalamaları arasında anlamlı bir farklılık gözlenmemiştir.

Anahtar Kelimeler: *Ahlaki olgunluk, bilişsel duygu düzenleme, çocuk gelişimi öğrencileri*

Dalit Identity Constructed By Print Media Frames Of Dalit As Passive Victims

Ali Saha

Abstract:

Historically discrimination towards the Dalits were the core behind the formation of Dalit identity in a casteist Indian society. Assuming media as the mirror of the society, the present study analyses the newspaper reports which discussed Dalit discrimination and accordingly derive how the Dalit identity is being framed in the 2nd decade of the 21st century. I employed content analysis over approximately 3000 newspaper reports in the leading Indian English newspaper- Times of India across 2011 and 2012. With the use of framing, based on the responses of Dalits to their discriminatory practices and atrocities I derived passive victim frame and discuss how the media framed the passive victimization of Dalits. Then I employ social dominance theory on the cases covered under PV frame and derive the Dalit identity that these media reports construct. The results revealed an influence of politics on the framing of reports Dalit discrimination. Overall the results reveal a changing media approach towards the cases of Dalit discrimination from the 20th and early 21st century. However the media still seems to show an inclination towards the dominant groups such as legal and political institutions along with the upper castes thus supporting a subordinate identity for the Dalits.

Keywords: Dalits, Media, Identity, Framing, Social Dominance

1.Introduction

The caste of birth forbidden.

The chosen struggle forbidden.

It may have been yesterday. Maybe today.

Maybe anytime.

Sridhar (2011, pg.311)

The complex identity that characterizes the life of Dalits as ‘untouchables’ comes to the fore through these lines of Kalyana Rao’s succinct ‘preface to’ her novel *Antarani Vasantam* (Untouchable Spring). It is the aspect of ‘forbiddance’ that brings together the ones who have since centuries faced prejudice and discrimination for being located at the lowest level of the hierarchy leading to the social construction of their identity as ‘Dalits’ (Samuelsen, 2013; Zabaliute, 2010).

The identity of Dalits, like other identities, is dynamic (Govinda, 2008; Samuelsen, 2011; Zabaliute, 2010). Dalit identity changed with the changing socio-political and cultural conditions of the society. Scholars such as Kothari (20), Shah (2006), Beteille (1996), Kumar (2000) and many others have located this changing identity through a comparison of Dalit experiences and responses in a pre-independence traditional and rigid casteist society and post-independent constitutionally casteless democratic society. Clarke (2002) adds that on one hand there are ongoing attempts by *caste communities* (Touchables) to re-imagine and reinscribe the conventional patterns of caste based intercourse. Whereas, on the other, the out caste communities (Dalits) are uniting in order to break, in a decisive manner, the structures of such a hierarchical and oppressive institution. This attempt by the Dalits have fostered a more rigorous and rapid transformation of their identity unlike the other caste communities.

One of the major factors which influence this construction of Dalit identity, among both Dalits and Touchables, is the media (Shah, 2006). In this global media scape where media acts as a major source of information and public opinion for every sphere of life (social, political, cultural and economic), the changing identities cannot be looked in isolation from media. Media through its frames of representations influence how the different individuals perceive the Dalits, i.e. they construct their version of Dalit identity, which further shapes how they respond to them (Pant, 2001; Slater, 2007, Tajfel and Turner, 1979). This response from the outgroup members along with Dalit’s own experiences of the social world of which media is a part, contributes to the formation of their identity. It follows that media plays an inevitable role in shaping Dalit identity. One influential way in which the media shapes identities is by framing events and public issues in particular ways. According to Entman (1993), “to frame is to select some aspects of a perceived reality and make them more salient in a communicating context so as to promote a particular problem definition, causal interpretation, moral evaluation, and/or treatment

recommendation” (p. 52). Such identity constructions through media framing is crucial, especially in the context of prevailing social stratification such as caste.

1.1 Indian media and Identity

With 232 million Indians relying on print media for everyday information, the identity of 201.4 million Dalits and the perception created by Indian society towards them lies in the hand of Indian press media (Kohli-Khandekar, 2008; Census of India, 2011). That is not to say that media simply tells us ‘what to think’ (Philo, 2008; Philo, Miller and Happer, 2007). Indeed media tells us ‘what to think about’, through the choice of which topics to cover and what to emphasize (Cohen, 1963; Lippmann, 1922). This aspect of ‘what to think about’ is important specifically in context to the social issues— such as minority discrimination, poverty and sexual harassment, because media can help foster a positive change in the society by influencing the society members to act empathetically and the government officials and NGO’s to draft policies that can target the core reason behind the persistence of the social issues.

Literature since early 1900 which discussed Dalit and Dalit identity representations in Indian media have claimed this media to be *Brahmanic* or *Castiest* and hence ignorant towards Dalit issues (Gupta, 2006; Jeffrey, 2000, Ratnamala, 2012). However recent studies published towards the end of 20th and early 21st century depict a changing media scene in a society which reflects the influence of the evolving Dalit identity (Ratnamala 2012, Ratnamala and Govindaraju, 2012; Jeffrey, 2000). In spite of this importance of media in construction of Dalit identity, this area remains barely studied in the 21st century with a complete absence of literature on media-Dalit relation in the 2nd decade of 21st century. This study aims to contribute to those ongoing debates by analysing media representations of Dalits in this present decade.

To achieve this goal, I conduct an in-depth content analysis (qualitative and quantitative) of the leading Indian English newspapers- Times of India along with the application of Entman and Iyengar’s framing theory and Sidanius and Pratto’s Social dominance theory. Drawing on the various newspaper pieces (reports, articles, opinion pieces), as my primary sources along with the theoretical and secondary sources, this paper focuses on the media frames of Dalit discrimination in the print media in 2011-2012, examines what identity of the Dalits does it create through those frames and determine the reasons behind such style of framing. The main objective of this study is to understand- (i) The framing of Dalit discrimination in TOI (ii) Changes in Dalit media frames between 2011 and 2012 (iii) Examine this change, its relation to Dalit identity and (iv) The factors influencing the construction of media frames.

Assuming media to be the ‘mirror of society’ this thesis studies how the press media frames the caste discriminatory practices against Dalits and situate them as a part of the constitutionally casteless society. This will not only help identify the Dalit identity in the media frames, but will also contribute to understanding as to how the media consumers (audiences, readers) will perceive the Dalits. Moreover this will help trace if media is contributing to uplifting their identity or to derogating them. Along with discerning the reason behind such representations, the results derived will help rule out media drawbacks if any and accordingly may open up ways to overcome them. Whereas, any positive outcome can be utilised further so as to reap better results for the society and specifically the outcasts.

2.Method

Content analysis was found to be the best suitable method because it is an effective way to review a text and systematically analyse frames included in a representative sample of articles. The most circulated English daily- *Times of India* (TOI) has been chosen for this study. TOI has a circulation of more than 2 million each day. TOI is also the largest selling English-language daily in India and the world (Audit Bureau of Circulations, India, 2016). The Factiva database and Times of India, hereafter TOI, database were used to retrieve data. Newspaper reports from 1st January 2011 to 31st December 2012 were collected and analysed. The terms used in these databases to search for Dalit related news reports were “Dalit”, “Scheduled caste”, “Acchut”, “Shudra” and “Untouchable”. These keywords were chosen after extensive research of the literature on media representations of Dalits according to which these terms yielded the most relevant results. There are two types of content analysis - quantitative and qualitative. To give more nuance and context to the research, both qualitative, as well as quantitative content analysis of newspaper reports, have been conducted in order to gauge how they provide a platform to discuss Dalit discrimination.

3.Results

The Factiva and TOI database search yielded approximately 4134¹ reports on Dalits. By conducting content analysis upon 4134 news reports published in the year 2011 and 2012 in Times of India 600 news reports on Dalit discrimination and atrocities were extracted.² These 600 news reports included both thematic and episodic frames of Dalit discrimination. Approximately 524 reports of episodic frames were derived. Quite a few articles were identified as repeat coverage of an already reported case. Therefore rather than locating the number of reports with episodic frames, I derived episodic frames of cases. Moreover, some reports included more than one story. Under such conditions, each story was counted as a separate episodic case frame.

On the basis of Dalits' response to their caste-based hierarchy and hegemony in the present society, as a marker for their identity, I derived two frames from episodic frames of cases on Dalit Discrimination: *Dalits as Passive Victims* frame and *Dalits as Active Victims* frame³, hereafter abbreviated as PV and AV⁴. Identity loosely refers to subjective meanings and experience, to our ongoing efforts to address the twin questions, 'Who am I?' and—by implication—'how should I act?' (Cerulo, 1997). Henceforth, it was important to divide frames on the basis of Dalit response, as the varying responses under the two frames denote two different identities. Specifically, the *Passive Victim frame* defined 'passiveness' as an answer for 'how should I act'. In this paper I focus on explaining how yet in this world of active agency among the Dalits, the media constructs Dalits as passive victims and hence discuss only the PV frames.

The *Passive Victim* (PV) frame includes those episodic cases which frame Dalits as powerless and passive to the atrocities committed on them. Passive Victims or 'pure' passive victims (PV), portray Dalits as ones who accept their powerlessness in the society and perceive themselves as *Acchuts* or *untouchables* on the basis of that powerlessness, which is in turn grounded in their birth. In one of the reports, headlined *Dalit kids: 'Untouchables' and uneducated too* (25 April 2011, TOI), the Dalit student narrates that he is obliged to the caste practices and victimization because he is a Dalit and expresses it in the phrase - "*aam achute* (We are untouchables), If we even touch our teachers by mistake, they scold us for polluting them". Marxists argue that oppressed members of a social group often believe in legitimizing ideologies because of a "false consciousness" (Jost, 1995; Jost & Banaji, 1994; Jost, 1995). Such frames of Dalits as Passive victims support the view that Dalits deny to revolt because of this 'false consciousness' leading to legitimizing of caste ideologies. Hence these frames reproduce the Dalit identity of being 'oppressed'.

¹ This number of reports were obtained after excluding the duplicate reports. However, the search wasn't able to filter similar stories that appeared across states and hence was sorted manually while separating the reports on Dalit discrimination.

² Details will be later included in the methodology chapter. For now, its elaborated here because, in this chapter I show results of only the frames derived in 2011 and 2012.

³ This name 'Active victims' will be replaced by another more suitable name.

⁴ Although the episodic news frames revealed other frames such as legal frames or feminism frames, but for this study I specifically selected PV and AV frames. The reason being, these two frames were directly related to the aspect of Dalit identity based on how dalits responded to the caste-based hierarchy and hegemony in the present society.

Figure 3.1 Distribution of Dalit discrimination frames in 2011 and 2012

The graph above explains that the number of PV frames of Dalits in 2012 is slightly higher than in 2011. In 2011, 45 cases were framed as passive and powerless victims whereas this grew to 52 in 2012. Although the difference between the number of PV frames in 2011 and 2012 wasn't significant, the ratio of the total cases of PV to the total number of cases reported each year is worth noting. The search conducted, yielded 1118 reports in 2011 on Dalits and approximately 238 reports which discussed Dalit discrimination. Whereas, in 2012, out of 3016 articles 358 discussed Dalit issues. That is, the reports which discussed Dalit discrimination went down from 21.2 % to 11.8 %. It can be argued that the reason behind the changes in both number of reports on Dalit discrimination as well as cases/reported cases ratio, from 2011 to 2012 is connected to the changes in the political scenario. 2012 being the year of general as well as presidential elections in India the media overall reported more cases on political issues. In 2011, 800 news reports discussed politics, whereas this figure doubled in 2012, when approximately 1600 reports were about politics.

Scholars such as Iyengar (2004), Roberts and McCombs (1994), Bauman (2016), Cobb and Elder (1971), Coleman and Banning (2006) and many others have recognised that politics and media mutually influence i.e. they depend on each other, i.e. politicians for attracting voters and media for audience. This influence and dependency becomes noticeable specifically during the elections (Iyengar, 2014). The reason being, the salience of political candidates in media reports directly affects the perceived importance of these candidates among the public (McCombs, 2014; McCombs & Shaw, 1972). Also, "voters depend on media's presentation of parties and candidates to make informed, responsible choices at the ballot box" thus leading to the increased demand for news on politics (Bauman, 2016, pg.205). Hence, to meet the demands of readers, as well as gain more readers (media consumers), media incorporates more political news (Iyengar, 2004). Mazzoleni and Schulz (1999) state that with the increasing importance of mass media as a source of political information, with the decline of political press, the politicians have become more dependent on the mass media in general. This reliance of political bodies' on media for its advertising along with the aspect of wooing⁵ Dalits (the minorities) for votes- seems to be the reason behind (i) increased frequency of PV reports and cases on Dalit discrimination in general. And, (ii) those which show substantial involvement of political members in Dalit cases of 2012. This political involvement seems to have affected the number of follow up news in each year as well and has been elaborated in the next section. The results can also be supported from the values which reveal a rise in number of reports that discuss politics and Dalit in both TOI, i.e. it increased from 800 in 2011 to 1600 in 2012.

The present quantitative findings reveal that the dynamics of political situation plays an important role in shaping the episodic frames of the Dalit discrimination. Based on the fact that media frames largely influence the identity construction, it can be followed that the changing number of media frames of Dalit discrimination has a

⁵ Dalits have been considered as an important part of Indian political system since the involvement of Ambedkar, followed by reserved political positions for Dalits and allowance of equal right to vote. With this the characteristic of political parties of wooing Dalits for votes by showing increased concern for Dalits and Dalit issues/discrimination/atrocities and using them as vote banks have become common (Jefferlot, 2002). The content analysed in this study reveals that even though media has addressed this aspect of wooing Dalits for votes, it wasn't a part of media reports on Dalit discrimination and hence haven't been included as a part of this study.

repercussion on Dalit identity as well. This proves a direct relation between the political situation, media framing of Dalits and hence the Dalit identity. However in the absence of previous literature on media reporting of Dalits under certain political conditions, it's not possible to compare this data. Hence this study will form the base to forthcoming research and more work needs to be done on the same.

3.1 News follow-ups (Repeat coverage)

When a crime event receives coverage, the amount of coverage varies in respect to prominence. Prominence of coverage can be measured in several ways, including the number of articles a case receives, the word count or story length of the coverage, and its placement within the paper. The frequency with which a story is covered (over how many days) is often considered as an indicator of newsworthiness (Lundman, 2003). Such that, when a larger sample of crimes does not garner significant or even repeat coverage, it leaves news consumers with the impression that some are more important than others.

This study revealed that the number of cases with follow-ups (repeat coverage) was more in 2012 than in 2011. It is apparent from the fact that 218 reports of 2011 contained 149 cases whereas 306 reports of 2012 discussed 128 cases. The data also reveals that the number of PV cases with follow ups in 2012 escalated by approximately 3 times than 2011. The previous studies revealed that the prominence of news coverage or news follow ups, are influenced by a number of different factors, including perpetrator characteristics (e.g., Duwe, 2000, 2005; Lundman, 2003; Schildkraut et al., 2017; Weiss & Chermak, 1998), newsworthiness of the victims (e.g., Paulsen, 2003; Schildkraut & Donley, 2012; Sorenson, Manz, & Berk, 1998), and event-level characteristics (e.g., Duwe, 2000, 2005; Schildkraut and Donley, 2012; Schildkraut et al., 2017; Sorenson et al., 1998). However this analysis revealed that involvement of political party during any event increased the chances of reporting and follow-ups. It follows that the frequency of repeat coverage boosted with an increased debate among political parties regarding an issue or with the involvement of any political member in the incident. This aspect of political involvement was apparent in the Banda rape case and the Mirchpur violence, which were the most reported cases across 2011 and 2012. A total of 22 articles discussed the Mirchpur violence whereas approximately 18 articles discussed the Banda rape case. The Jat mob which killed the father and daughter in Mirchpur, included a member of political party whereas, in the Banda rape case, the prosecutor was a Bahujan Samaj Party, MLA. Other reports which were equally horrific and brutal like Dalits being burned (*Patiala Dalit boy shot dead*, 7th July 2012) or Dalit girl being raped (*Minor raped: Police blind as local bigwigs protect accused*, 1st June 2012, TOI; *Rape victim prevented from joining school by panchayat dikkat*, 1st September, 2012; TOI) with an absence of political intervention, got reported only for a day irrespective of whether the accused were convicted or not.

As discussed above, 2012 being the year of elections, it was marked by increased involvement of political participation in minority, specifically Dalit issues, with an intention to woo the citizens for votes (Jefferlot, 2002). Under the following conditions, first- media which acts as a crucial watchdog to democratic elections, safeguarding the transparency of the process, and second- in a country where media sector is intrinsically tied to the political trajectories, it's apparent that the framing of political issues and parties will increase during elections or months preceding the elections (Saunders, 2006; O'gara, 2009; Whitten-Woodring, 2009). And this increase influences and therefore gets reflected in the media frames of Dalits as well. Hence the increase in follow ups can also be attributed to the changing political condition in 2012. That is, the number of follow ups increased with the increase in number of Dalit issues which reveal political involvement. The huge decline in ration of media reports on Dalit discrimination, focus on the political involvement in Dalit issues, and an increased number of reports on politics demonstrates media's limited considerations about Dalit atrocities, while participating in the institutional processes of the dominants, i.e. the political parties and politicians.

3.2 Framing of Police and justice system underframes of Dalits as Passive victims

The practice of "untouchability," other caste-based discriminations, violence against Dalit men, women, and children, and other abuses are in violation of numerous domestic and international laws (Hanchinamani, 2001; Bob, 2011; Eisenman, 2003). The Constitution of India proclaims the decision of the Constituent Assembly (which framed the Constitution) to provide social, political, and economic justice for all. To this day, the Constitution has several provisions to protect Scheduled Castes and to improve their position (Galanter, 2015; Jain and Venkata Ratnam, 1994). However, the extent to which these laws are implemented often debated. Christodas Gandhi (1998), the then-Tamil Nadu implementation officer for the Atrocities Act commented that "It is a great irony that we try to implement the act through an agency that is perceived as an agency of oppression." Previous literature have often argued the negligence of police towards the Dalits. Various reports by NCDHR(2011) and CDR(2012) record that the police officials refuse to take reports of the Dalits, abuse, beat, torture and even gang rape them. Navsarjan (2013) notes that police officers, who were influenced by caste allegiance and bribery rarely arrested suspects who were accused of violence. Ghanshyam (2006) mentioned that Dalits were not allowed to enter police stations in 27.6 percent of the villages surveyed by him. However, this aspect hasn't been discussed in the previous literature on media and Dalits, except where Ratnamala (2012) discusses that media hardly mirrors how the Dalits are routinely abused at the hands of the police and higher-caste

groups that enjoy the state's protection. However her study doesn't seem to provide adequate reasons for this media negligence.

The framing of legal functioning in PV frames is important because it is strongly linked with media portrayal of Dalit identity. As already discussed, discrimination towards Dalits have shaped their identity in the society for centuries. Whereas, framing of policies to protect them from these discriminatory practices and their rights was an initiative, by the Indian government, to upgrade their status and hence their identity in the society (Eisenman, 2003). On the contrary, failure of the legal institutions to implement these laws and protect the Dalits can be perceived as supporting for caste-based group hierarchies. Therefore, this leads to validation of caste ideologies, contribution to caste norms, atrocities, and discrimination, ultimately reinforcing the Dalit identity as being "broken" "oppressed" and "untouchables". Moreover, media's biasness towards these legal institutions rather than questioning their inefficiency, further points towards media's support for powerful rather than upgrading the minorities.

Figure 3.2a Frames of Dalits as passive victims in 2011 elaborating involvement of legal bodies

Figure 3.2 c Frames of Dalits as passive victims in 2012 elaborating involvement of legal bodies

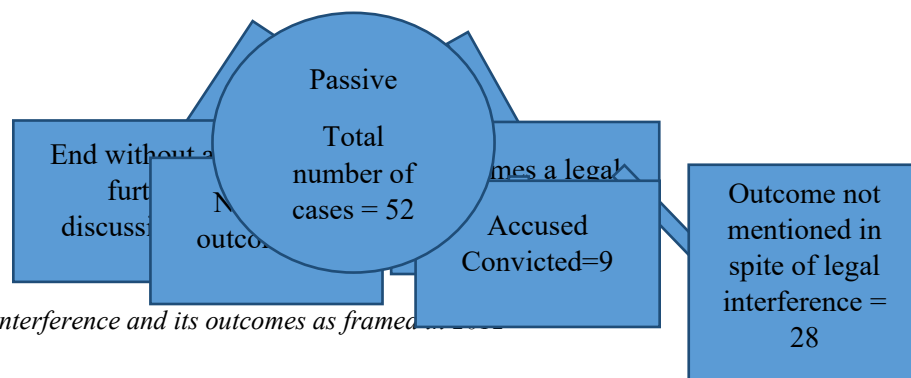

Figure 3.2 d: Legal interference and its outcomes as framed in 2012

The above data demonstrates very little but significant difference in the reporting of legal interferences in the cases of Dalit discrimination. In 2011, 74% of the cases were reported to have involved police or any government institution, where in 2012, this increased to 88%. Apparently the number of cases which did not denote the involvement of these institutions (government and legal) decreased by more than half i.e. 26% in 2011 to 12% in 2012. The interesting point here is, on one hand, the number of reports on legal actions increased from 2011 to 2012, on contrary reports on –

- ‘positive outcome’ decreased from 19% to 17%.
- ‘negative outcome’ increased from 9% to 17% and
- ‘no outcome’ increased from 46% to 54%.

As per the previous discussions, the media’s take on legal functioning increased in 2012. However, a detailed qualitative analysis of those reports reveal that - although the discussions on its inefficiencies increased (also indicative of the increase in number of cases with negative outcomes) the media’s stance on elucidating the casteist intentions of the legal bodies remain absent.

Among the 149 extracted reports in 2011 only 4 comment on police inefficiency, whereas in 2012, 9 out of 124 discussed this issue. One of them being *FIR lodged after 12 days of incident when an officer intervened* (11 April 2011, TOI), where the inefficiency can be ruled out from the headline. Another report published on 15 July 2011, in TOI, titled: *Complaints pour in against policemen* addresses the seriousness of the issue in the following lines, “Devadas Sherkhane, a complainant from Navalihal in Athani taluk, told the SP that Kagwad police did not take any action against the accused of an atrocity case even after one month of filing the case. He charged the Chikkodi DySP with colluding with the accused and making the case weak”.

The rest of the article which is 5 paragraph long, do not discuss this issue further. Nor did it address how such inefficiencies on the part of the police can be reduced to facilitate proper implementation of law and justice to the society members.

Another article published in 2012, which points towards the inefficiency of the police is:

The family members of the deceased youths are furious over no action taken against the police personnel despite two ministers promising registration of cases against them. “We were told that cases would be registered within two hours,” Natvar Parmar, uncle of deceased Prakash Parmar (26), said.

As mentioned earlier, approximately 70% of the cases discussed the involvement of the police in both 2011 and 2012, but hardly a few explain about the police inefficiencies. In 2011, where 4 news reports discussed police inefficiency, in 2012, 9 news articles discussed this issue. Although the difference in percentage is not a significant one, but it can be noticed that it’s increasing. Moreover keeping a note of this insignificant yet a growth might help in looking at other aspects of media frames of minorities and minority justice in longer run.

It can be assumed that media houses often seek this support police so as to gather more crime based stories as well as to move around freely in an area without any intervention from those officials (Chinbal, 1975). In a society, where the police has the power to control and direct/re-direct the actions of the people in the society, any action by an individual, nonetheless a journalist or media person, that’s against the police can lead to detrimental effect on the group or individual (Jauregui, 2013; Jeffrolet, 2002). The International Dalit Solidarity Network’s (IDSN-2013) report on police enquiry on Dalit issues in 2011 and 2012, state that convictions were awarded in 31.9% and 24% of total cases of crimes against SCs that were disposed by the court. However, the conviction rate based on total number of cases undergoing trial in those years, were a mere 3.6% and 6.2 % respectively (IDSN, 2013). This data depicts a very low percentage of conviction on crimes against Dalits. Yet this aspect of low conviction and negligence of the legal institutions to the Dalit issues were never discussed in the media. The media seems to

produce an illusionistic image of the incidents which can be misleading as it keeps the readers away from the real scenario. Indeed media reports characterize incompleteness and inconsistency. The results are consistent with Brown's (2016) study. Brown (2016) in his study on media reporting and police involvement during Florida shootings, explains existence of deep ties between the media and law enforcement. Further stressing that, the components of an institutionalized reporting system are deliberately biased and in favour of police departments. Here it can be developed that the PV frames, frame Dalit discrimination as isolated incidents of the sort the police and the courts are designed to handle rather than as cases with common elements illustrating a larger social problem that requires public action and attention. In context to identity, this deciphers that the identity of Dalits framed by Indian media are largely the constructions because of the dominant institutional bodies, here the police. Wilkinson (2006) highlights a close relation between the political parties and the police officials. Such that political leaders brazenly misuse police agencies to settle personal scores and intimidate their opponents (Verma, 2007). Hence it can be inferred that there is a direct relation between police, politics and media. Based on the fact that 2012 was a year of major political change, it can be inferred that these changes in the representations of the police actions in the media frames of Dalits is an outcome of the broader social conditions. This further deciphers that media's inclination towards the dominant groups and hence their representations are influenced by the political situation as well.

3.3 Under-representing Dalit voices

Chibnall in his study explored the nature of the police-media relationship in the context of the news-making process (1973). Focusing on crime reporters, he identified media's historical reliance on police sources for information and story framing. The analysis of the media content in this study reveals a similar result i.e. the coverage relied heavily, sometimes exclusively, on factual unattributed information and on information from official sources, such as police, court documents, and lawyers, i.e. on second hand narratives. As a result, it focussed on the role of caste based institutions (the law enforcement and the legal institutions) such as National commission of Scheduled castes (NCSC) and All India confederation of SC/ST Organisation, in caste based violence. This was reinforced by the legal oriented phrases in the labelling of caste discrimination. Although taking information from government officials and the legal institutions seems credible (Veltmeier, X; Coronel, X; Freed, Clark, Butchart, Singer, and Davis, 2011). But the absence of voices of the victims, reveal an absence of information regarding whether and how *Dalit* centric laws are implemented under the direct scrutiny of the higher level government officials. That is, the second hand narratives are often limiting and lack exposure to the victim's emotions and sufferings as a result of the evil practise. Chibnall(1975) in this context further argues that this reliance on second hand narratives could be highly problematic for reporters and that the promotion of police interests via the media, especially on the back of a good police-reporter relationship, could be favourable for the police .

The ratio of second hand narratives (interviews of the Police) to first person narratives (the interviews of the victims) is approximately 10:3 in both years, revealing that the media approach to collection of the news articles remains the same. This signifies the media biasness towards police and every other sector to which the police is affiliated. For example, the political parties and the government, rather than challenging the norms which forbid the Dalits to get equal opportunities. This repercussion of only having second hand narratives is visible in the reports of 2010 Mirchpur violence, where a father and his handicapped daughter were killed by 97 Jat mobs. The 22 media reports on Mirchpur violence, published across a period of 9 months (1st January 2011 to 30th September 2011), and mostly based on second hand narratives predominantly depict 'police activeness'. And the phrases "police said the accused are being searched for", "police have assured justice" and "police added that the search for the victims are on" were repeatedly used. These statements are contradictory to one of the victim's statement noted in the Supreme Court's report (2011) where "the witness has stated that the police did not record his statement". Moreover, IDS (2012) report also mentions "because the Khap panchayats supported Jats, the Dalits had to leave the villages". This aspect was also absent from the media reports, which focussed solely on the death of the duo. These examples clearly depict a significant difference in second hand narratives and first hand narratives. Henceforth a difference between media reports and actual events. Such mis-representations of incidences produced as a result of second hand narratives or under-representation of the victims, can also encourage false myths and also lead to delays in conviction (Strong, 2009; Mughal and Ahmad, 2011).

Here, the media can be seen as supporting the inefficiencies of the system rather than challenging the evil practices. It can also be derived that the presence of more second hand narratives than first hand narratives reveals that only the legal bodies, i.e. the constitutionally positioned dominant groups, were given an opportunity by media to justify themselves in a way that would preserve their 'status quo' whereas the Dalits were ignored. This aspect of one's personality to prefer the dominant groups and justify their acts has been discussed by Sidanius and Pratto, where they have termed this inclination or preference as social dominance orientation. This further points media inclination, if not biasness, towards the dominant- legal justice groups.

3.4 Framing of Dalits as passive victims of physical attack

Historically, the Dalits have always faced physical attacks in their day to day life. These attacks came in the form of lynching, murder, stripping naked, ostracism and sexual harassment. The physical attacks took place mostly when the upper caste or anyone who was placed above the Dalits in the social hierarchy, felt that the Dalits are breaching the rules and social norms (Bros and Couttenier, 2015; Chowdhry, 2009). Secondly, the Dalits being believed to be the most socially inferior caste by the ones above them, considered dominating the Dalits as their right. This dominance often came in the form of physical attacks, which wasn't conditional but was practised to impose their dominance and remind the Dalits of their social position (Chowdhry, 2009). The constitution doesn't permit atrocities based on caste and to prevent this, it had passed the Prevention of Atrocities Act in 1989 according to which anyone who practices caste shall be punished by the Indian legal system (Kapoor, 2007). In spite of this, the practices and beliefs still exist (Bayly, 1999; Gorringer and Rafanell, 2007).

Approximately 16 out of 24 cases in 2012 on physical attacks present the Dalits to be passive and powerless victims to the atrocities perpetrated by the other community. Whereas in 2012 out of 40 cases, 23 frame the Dalits as passive victims of physical attacks. These cases represented males as the major victims of these physical attacks which included lynching, beating and murder. The ratio of physical attacks on female to male was 3:16 and 4:23 in 2011 and 2012 respectively. This shows that the number of PV frames on female attacks to male attacks are consistent in the two years. This further reveals a continuing trend in media reporting on male to female ratio in one hand and gender to subject ratio on the other. The findings reveal that male to female ratio remains same and so does the reporting of males and females on physical attacks. This shows a patterned gender distribution of cases in media reporting of the PV frames.

The quantitative results depict that physical attacks were the most reported theme of Dalit atrocity in both 2011 and 2012. Considering the fact that physical attack took various forms- murder, lynching, police atrocities and custodial torture it is not difficult to explain why there were more number of cases and reports on physical attacks than any other type of Dalit atrocity both in 2011 and 2012.

Reports such as *Barber cuts dalit's nose in Mandya*, (11 October 2011, TOI), *Dalit beaten to death for peeping inside bathroom* (27 June 2011, TOI), *"Dalit's murder; Police clueless about the accused"* (17 April 2012, TOI), *Dalit principal attacked inside the chamber* (6 March 2012, TOI), *Dalit beaten for seeking RTI info* (14 August 2011, TOI), *Village ostracises Dalit for being a witness in murder case* (23 June 2012, TOI), are the headlines of the reports on physical attack on men. Whereas, reports which depicted the physical attacks on female were- *Four boys gang rape 8 year old in Punjab village* (26 September 2011, TOI), *Dalit girl gang raped* (13 April 2011, TOI), *Sambalpur cops unable to arrest rapist of Dalit girl* (23 January 2012, TOI), *Mentally challenged girl abducted raped* (18 April 2012, TOI), *15 year -old raped and burned in Puri district* (15 May 2012, TOI). It's apparent from the headlines of the reports that frames of physical attacks on Dalit men victims are very different from frames of female Dalit victims. Where the physical attacks on male included murder and slaughter, the females were framed mostly as victims of rape and sexual harassment which under certain circumstances were accompanied with murder. The frames of rape and sexual harassment of Dalit women have been elaborated in the next section.

Irrespective of whether the frames represent a particular gender or whole community as the victims, they share few common characteristics- that is (i) they blame the victims as a cause of the incident (victim blaming has been discussed in later part of the chapter) (ii) the reported incidents occurring in the rural areas. On an average approximately 69.3 % of the news reports, both in 2011 and 2012, were based on the incidences that occurred in the rural areas. Scholars such as Shah (2006) and Thorat (2002) in their study have observed that untouchability and atrocities on Dalits are more prevalent in rural than in Urban areas. The ratio of media frames of passive victimisation of Dalits in the rural and urban areas (69.3% and 30.7%) is consistent with the social findings.

The specific characteristic of media which can be recognised from all the above mentioned reports and also from most of PV frames are, rather than challenging the caste-based practices the media has focussed on the vulnerability of the Dalits. Media frames seems to institutionalize, legitimize and justify the reason behind the attacks on the Dalits. Here the media claimed the upper caste to be dominant in all the reports discussed and also justifies the act of the dominant group by blaming the Dalits. These frames of Dalits favour the social situation where the low-status groups are portrayed to have a negative social identities.

3.5 Dalits as passive victims of gender-based violence

Caste patriarchy is essentially anchored in the regulation of female sexuality and labour (Anandhi, 2013). Ambedkar (1979) in his essay 'Castes in India', elucidates that caste is a system of inherent graded inequalities and endogamy is fundamental to the sustenance of caste system. He further comes to the conclusion that women are the gateways of caste system as the burden of endogamy was linked to the bodies of women (Rege, 2013). Chakravarty (2009) stated that the concept of 'graded-patriarchies' were embedded in the larger system of caste and the norms. The norms and structures of the caste-patriarchies were different among upper caste women and Dalit women. He further adds that on one hand where the sexuality of upper caste women were tightly on the lines of purity and pollution to maintain endogamy, on the other, lower caste women, the Dalit women, were

shaped to be sexually available to upper caste men through the material structure of domination. The sexual availability of the Dalit women was religiously sanctioned through the custom of *Devdasi* (servant of God)⁶. This is summed up in the Marathi phrase, “devadasi devachi, bayko sarya gavachi” which means, devdasi is the servant of God, wife of entire village. In fact, the structures of caste and patriarchy institutionalised the bodies of Dalit women for the entertainment and sexual pleasure of men who are placed higher than them in the caste hierarchy (Rowena, 2012). The plight of Scheduled Caste women seems much more alarming when one looks at the data pertaining to serious crimes such as sexual harassment and rape.

Sex crimes such as rapes, honor killing, and sexual assault are common themes of discussion in the newspapers under study. Previous studies stated that Dalit girls/women suffer from double stigma and hence face more oppression i.e., being a Dalit and a Dalit woman (Bhave, 1988; Kannabiran, 2001; Mangubhai and Lee, 2012; Ciotti, 2017).

A number of books and studies have examined the elusive theme of what events and stories make it into the news. Crime news, compared to news of other nonviolent events, is vastly overrepresented by newspapers (King, 2009). The frequency of reporting such crimes are considered more new worthy when the victims are from a minority group (Mcbride, X; Mahtani, 2000). Patil (2016) in her study of rapes in the Indian press explains that, majority of the cases that was reported between 1992 and 2016 occurred to Dalit women. However, she doesn't explain the reason behind this kind of reporting. But this can be supported by Turkewitz's (2010) argument that rapes and rape reporting were associated with newsworthiness. Dalit women being the minorities, it can be inferred that the crimes against Dalit women, specifically rapes, were often reported because they were of more news worthiness.

The content analysis of the news reports across the two years revealed that in 2011, out of 42 PV frames, 9 cases framed the Dalit women as passive victims of sexual assault, specifically rapes and attempt to rapes. Whereas in 2012, with an increase in number of PV frames to 52, such frames of Dalit women also increased to 16.

However, the pattern of reporting across the two years remained same. *Youth arrested for raping a Dalit girl* published on 5th March 2011(ToI) narrates “Kishori (14) was alone at home when a youth of the village entered the house, choked the mouth of the girl and raped her”. And *Minor Dalit girl gang-raped, murdered in Alwar* (22 July 2011, ToI) which states “A 17-year-old Dalit girl was gang raped and brutally murdered in Safdar police station area of Alwar district on Wednesday night. ...the accused had dumped her body on the railway tracks”, are few examples of such reports of 2011.

The question that arises here is out of 1557 and 1572 reported cases of Dalit rapes in 2011 and 2012 (as per NCRB 2012), which ones made it to the news? What was the criteria behind selecting these 24(2011) and 27(2012) cases? Although it not possible to completely comment on this issue without seeking suggestions from the journalists and the media houses. But it can be inferred from the news reports that the incidences which constituted elements of brutality, sensation, women vulnerability, helplessness or victimization due to resilience (i.e Dalit women being victimized for challenging the patriarchal norms and traditions), made it to the news. For example, a news report of a rape incident states “The dalit family of the girl is very poor”. Here the element of poverty has been used to show vulnerability and helplessness of the raped Dalit girl. Similarly, other reports seem to have deliberately used the phrases “widow of a dalit man”(*Husband's friend killed him: Widow*, 22 July 2011, ToI); “minor dalit girl”(*Minor Dalit girl gang-raped, murdered in Alwar*; 23 July 2011 ; *Two held for raping Minor*, 28 June 2011, ToI), “differently abled girl”(*Mirchpur arson: Seven dispose before commission*, 25 January 2011, ToI), to limelight the passivity of the Dalit women and identify them as helpless and powerless.

On analysing qualitatively, it could also be established that not all cases were receiving the same amount of attention as others i.e. certain reports of cases were long and had multiple follow up news. The question that arises here is- why were some cases longer (300 words) and reported extensively over a long period of time whereas others were shorter, sometimes limited to 150 words? The reasons of the difference were (i) brutality and sensationalism (ii) political interference.

Whether be it the over-reported Pipli rape case (2012), Banda Rape case (2011) or the Mirchpur murder case (2010), all three made it to the news and were there for a longer period not only because the victim was a Dalit and raped and murdered brutally, like every other rape in the country. Instead they made it to the news also because of political involvement- i.e. either a member of a political party was involved in the event or because this event

⁶ Where lower-caste, specifically Dalit women were married to the God and initiated into ritual prostitution (Vijayashree, 2004). The practice of devadasi, in context to Dalit girl refers to forced prostitution. Literally meaning “female servant of god,” devadasis usually belong to the Dalit community. In this practise, a Dalit girl, usually before reaching the age of puberty, is ceremoniously married to a deity or to a temple. Once dedicated or married, the girl is unable to marry and is forced to become a prostitute for upper-caste community members. Eventually she is auctioned into an urban brothel. This age-old practice continues to legitimize the sexual violence and discrimination specifically in southern states including Andhra Pradesh and Karnataka.

attracted political attention as a result of other set of events that followed the rape. As explained earlier, the Mirchpur murder case involved a member of a political party, who was among the 97 other mobs. Whereas the Pipli rape case, attracted the attention of political parties, after the State Human right commission intervened leading to a major controversy, in which a Cabinet Minister lost his job, an IPS officer was shunted and a police inspector dismissed from service (IDSN, 2013).

Three characteristics were common in the PV frames of rape cases across 2011 and 2012:

- (i) Minor Dalits were shown as the major victims. Approximately in 76% (32 out of 42 cases, i.e. 16 out of 22 in 2011 and 15 out of 20 in 2012) of the cases reported, the victim was a minor (belonged to the age-group of 8 to 18).
- (ii) Sensationalism was extremely common in the cases that received a great deal of coverage. They included sensational details like, chilling picture of police brutality and the subsequent cover-up. Here, sensationalism, as Robbins (2008) states, seems to have been used as a tool to keep up the audience's interest in the case that had already received a great deal of coverage.
- (iii) Victim blaming was common throughout the news reports in both the years where the Dalit girl/woman was blamed for the incident. This aspect of victim-blaming has been explained in later part of the chapter.

From the qualitative analysis of the news reports it can be derived that media uses indirect language to support Dalit rape misconceptions and myths⁷ such as rape occurred when the “victim was alone” or “wasn't accompanied with a male”, “because the victim belonged to socially marginal or minority groups”, “victims as promiscuous women who invited the rape” and “that younger, “sexually loose” women are more likely to be sexually assaulted”⁸. Franiuk, et.al (2008) and O'Hara (2012) in their studies of British and American news media's reporting, stress on the fact that rape myths are widely prevalent in press reports. The following study shows also shows that media frames of rapes, are one of the most inaccurately, but well documented themes in these news reports.

3.6 Victim Blaming

‘Victim blaming’ is one of the commonly discussed aspect of media representations, specifically in context to minorities and females. Savani, Stephen and Markers (2011) in this context add that it's the disadvantaged individual who face victim-blaming in their day to day life. Victim blaming was common throughout the news frames of 2011 and 2012. In these reports, press framed the issues in a way that projected the victims to be the reason behind the discriminatory act (i.e they were blamed), whereas the perpetrators are absolved. It is apparent from the headline of the articles *Dalit attacked for drinking from upper caste's pot* (18 Feb 2012, TOI) and *Dalit boy thrashed for entering Tamil Nadu temple* (29th May 2011, TOI). Not only headlines, but even the contents were framed in a similar manner. The article *UP youth kills Dalit for having same name* (3 December 2011, TOI) narrates an incident where a 14 year Dalit was killed for merely having a similar surname as that of the upper castes. The news report explains it as:

In a state ruled by a Dalit chief minister, a 14-year-old Dalit boy was allegedly murdered merely because he shared his name with an upper caste neighbour in Basti on Thursday.

Here the media, by using “state ruled by a Dalit chief minister” in the article, seems ridicule that even though it's a Dalit who is ruling the state i.e. dominating in politics and political matters, but socially, any attempt by Dalits to dominate or claim equality to the upper castes can be met with severe outcomes. This elucidates social dominance of the upper caste. This report exemplifies the strength of upper caste and this is further supported by the absence of- context and articulation of the perpetrator's motive.

The media biaseness towards the upper caste is also evident from “upper caste women told him that they would not allow any untouchable to fetch water” in *TN dalit boy thrashed for fetching water from the public tap* (TOI, 14 June 2011). Where, instead of questioning the caste-based atrocity, the media framed it as – the Dalit was beaten for going against the upper caste women's orders. This indicates that media reports' deny focuses on the perpetrator's act, alleges the act of the victim, the Dalit, as anti-caste ideology and devalues the traumatic experience of the victim.

⁷ “Rape myths are attitudes and generally false beliefs about rape that are widely and persistently held, and that serve to deny and justify male sexual aggression against women” (Lonsway and Fitzgerald, 1994, p.133)

⁸ Such rape myths have been prevalent in the society since long and has been discussed across various literatures. Some of the works that has been used for this study to locate the rape myths are by Brownmiller, (1975), Warshaw (1988), Lonsway & Fitzgerald (1994) and Benedict (1992).

This characteristic of victim blaming is consistent in the news reports of both the years under study (2011 and 2012). Quantitatively, the victim is blamed in 72% and 69% of cases in 2011 and 2012 respectively.

There is a considerable amount of literature on media's characteristic of victim blaming, but it's specifically in context to women, women minorities and rapes i.e. its gender specific. Few scholars such as Romer, Jamieson and De Coteau (1998) and Bryant-Davis and Ocampo (2005) discuss victim blaming in context to ethnic minorities. Unfortunately, these discussions are absent from the previous studies on Dalit representation in Indian media (both print and electronic).

While discussing Dalit misrepresentation in Indian print, Gupta (2016) and König (2015) state that media tends to represent the negative stereotypes where a "standard" Dalit is expected to be; ill-fed, dry skinned, sunken-eyed, half bent with a broom in hand or with some agricultural equipment. Jost and Banaji, 1994; Jost, Banaji & Nosek, (2004) define victim blaming as a way of presenting, activating and justifying the negative stereotypes. These justifications for 'Dalits as the cause of the atrocity' i.e. 'Dalit victim blaming', were present in media frames since long but weren't elaborated under the blanket term of victim blaming. George and Martinez, (2002) in their study of media and victim blaming of black women argue that it's often the stereotypes of race and gender which foster the possibility of victim blaming in the media. Whereas, Napier (2016) argues that many political elites, journalists, and ordinary citizens spontaneously developed victim-blaming attributions that deflected blame away from the system.

Similarly, in context to the Indian society, where the Dalits are associated with a number of caste-based stereotypes, it can be proclaimed that media reporting and victim blaming of Dalits are an outcome of those existing stereotypes and are used to deflect blame away from the system which fails to eliminate caste-based practices.

Here, it can be added here that such kind of reporting, rather than creating empathy and concern for the Dalits, stresses on the notion that Dalits are inferior and any attempt to challenge the ideologies can lead to brutal results. Savani, Stephens and Markus (2011) state that victim blaming, is a result of the unanticipated Interpersonal and societal consequences of choice. Hence it can be stated that victim blaming has direct links to individual human desire for hierarchical stratification and institutional discrimination which are expressions for decreasing support for public policy and intergroup equality.

3.7 Sensationalistic coverage of violence

Distorted journalistic reports can generate both false hopes and unwarranted fears (Shuchman & Wilkes, 1997; Mann, 1995). For instance, when a finding is reported in a sensational way, the results may create a national media feeding frenzy. It is known that "the word 'sensationalism' was invented in the nineteenth century as a pejorative term, to denounce works of literature or journalism that aimed to arouse strong emotional reactions in public" (Wiltburg, 2004). Sensationalism was a way for those in the journalism industry to poke holes in other stories and shed light on small instances. This was used to bring out fear within people and led to constant questioning of who can be trusted and who can't (Gui, 2017). In fact sensationalism can be conceived as a tool with which the media sensationalizes actions and instances originally of small proportion and scares relevance, which are instead inflated and presented as something far more complex and severe.

Most of the research reviewed for this study showed that sensationalistic coverage of violence against minorities and women minorities' occupy a commonplace in print media (Kothari, 2008; Sothill & Walby, 1991; Sunindyo, 2004; Wykes, 2001). Often sensationalism incorporates elements of humour, frivolity or ridiculousness which comes in the form of puns, rhymes, the inclusion of odd details, quotes, or 'humorous' nicknames for perpetrators and victims (Turkewitz, 2010). The inclusion of humorous or ridiculous elements in reporting of violence and crime is troubling, as it only works against the idea that violence against minorities is a serious social issue.

This study revealed that sensationalism was incorporated in 52 per cent of the news frames, across both the years (2011-2012)⁹. This sensationalistic elements appeared most likely in the story than the headline of the story. This substantiates previous findings in the Dalit-media literature which states "the abnormal and sensational is something that newspapers like to report about" as these are the kind of news that attracts the audience (Wählstedt, 2012; p.13; Bogart, 2017). Similar concerns on media sensationalism has been also discussed by Barclay and Liu (2003), Mahatani (2002) and Smith (1984) in relation to the minority reporting in media in New Zealand, Canada and Britain respectively.

3.8 Missing context and mis-representing the context

Oxford dictionary defines context as "the circumstances that form the setting for an event, statement, or idea, and in terms of which it can be fully understood". However, by 'context' I mean the circumstances under which the Dalit faced such atrocities. Within the passive victim frame, irrespective of the theme under which it was discussed, coverage either did not explore the reason behind the committed atrocity or dealt with it in terms of the upper caste's immediate motive.

⁹ I took an overall average because the gap was not significant

The context was absent from approximately 72% of the cases in 2011 and 61% of the cases in 2012. For example, a 5 paragraph article published in TOI states an incident, where a group of seven were found guilty of driving Dalit girls to suicide. The article mentions “the girls committed suicide by setting them on fire” as a result of the “regular harassment by the locals¹⁰”. While framing the death in terms of immediate events and motive, the story ignored social dominance roots of caste, women and Dalit women discrimination. The major concern here is not just the media ignorance towards the cause of Dalit women grievances. Indeed, it is also the lack of reporting of how in spite of the on-going minority protection acts to prevent such atrocities, the policies failed to ensure protection to the Dalits. Siddanius and Prato(1999) discuss that, the aspect of individual’s or group’s negligence towards the social policies is directly related to their generalized orientation towards and desire for unequal and dominant/subordinate relations among salient social groups. On the same line, media’s ignorance towards inclusion of the depiction of the social policies aimed at preventing discrimination seems to contribute to the production and maintenance of group-based dominance.

An article headlined *Dalit postman seeks transfer after ‘hate mails’, probe ordered* published on 17th November 2011 (TOI), frames the discrimination faced by the Dalit postman in the following way:

In an interview with the journalist, Parmar (the postman) stated “these mails were threatening me not to enter the village and deliver posts as I belong to the scheduled Caste and the village was that of bapus (Kshatriyas). They would say that I have spoilt the village by entering and delivering mails there.”

The words ‘spoil the village’ by ‘delivering mail’ indicate the notion of pollution and purity among the higher caste. This notion is integrally linked with the institution of untouchability¹¹. The news report depicted this issue of segregation and distancing a Dalit from the upper caste as a social norm, being followed by a high caste community in a part of India. This further lacked articulation of the practise as a false belief rooted in irresponsible upper caste choices inclined to endorse power and dominance on the lower caste rather than in some social concern on preserving the ritualistic purity from the polluted. Through emphasizing the statement “spoil the village.....by entering and delivering mails there”. Media depicted it as one of the several restrictions that Dalits face in their day to day life, and are entitled to face for carrying the Dalit identity.

Iyengar’s (1999) study also points towards this absence and suggests that it is the norms and standards within news organizations and news production houses that reinforce episodic framing. This practice ‘simplifies complex issues to the level of anecdotal evidence’ (Iyengar, 1991, pp. 136–137) and induces a topical, disorganized, and isolated, rather than general and contextual, understanding of public affairs and social issues. Hence in context to the Indian society, where caste plays a role at every stage of an Indian’s social and economic life, it can be inferred that an absence of isolated representations of events in media keeps it open to caste-biased interpretations. Thus ignoring the Dalit issue as a major problem and contributing to the caste-based social group arrangements.

¹⁰ Locals here refer to the upper caste members.

¹¹ Purity is associated with ritual cleanliness--daily bathing in flowing water, dressing in properly laundered clothes of approved materials, eating only the foods appropriate for one's caste, refraining from physical contact with people of lower rank, and avoiding involvement with ritually impure substances. The latter include body wastes and excretions, most especially those of another adult person. As contact with the products of death or violence are typically polluting and threatening to ritual purity hence the notion of separating people based on purity and pollution was created. The notion is highly complex and vary among different castes. But broadly speaking, high status (held by the high caste) is associated with purity and low caste (held by the low caste) with pollution. Overtime this notion freed itself from its specific task of separating untouchables from others and began to operate at different planes of the caste system, where pollution was associated with anyone being born in the low caste families, irrespective of the type of occupation they performed. And purity with upper castes, irrespective of whether or not they perform polluting jobs.

3.9 Inclusion of caste/community of the prosecutor and the victim

Figure 3.9 a: *Acknowledging caste/community in the PV frames of 2011*

Figure 3.9b: *Acknowledging caste/community in the PV frames of 2012*

The pie-charts above illustrate the proportion of cases under PV frames which acknowledge the caste/community of attacker or perpetrator as published in 2011 and 2012. Here it can be seen that irrespective of the number of cases reported in these two years, the percentage of articles which mention caste/ community remains nearly same. Phrases such as “family of upper caste women”, “upper caste youths”, “Brahmin priest” and “caste Hindus” were commonly used in (18% and 19% in 2011 and 2012 respectively) the cases which mentioned the caste/community of the attacker. Whereas terms such as “police”, “member of political party” or words/phrases such as “non-Dalit resident”, “local residents” and “member from another community” replaced the caste/community of the attacker in the rest 82 % (2011) and 81% (2012) of the cases.

Previous media literature have discussed that media images of a community or a group becomes central to how the social individuals interpret that particular group and its members (Happer, 2013; Kulaszewicz, 2015). This data implies that one of the intentions of media behind concealing the identity of the attacker can be to avoid negative views about the attacker’s community thus avoiding any future friction between Dalits and the attacker’s communities. However, by abstaining from revealing the attacker’s caste, the media seems to avoid unfolding the complex issue of caste ideologies and caste-based norms as the reason behind these brutal attacks. Instead they embody Dalits as casual victims of everyday violence.

Subodh Ghildiyal, a journalist in TOI, who states that “when it comes to crimes that have a casteist motive you have to mention caste: – You have to make a distinction between a woman being killed as a ‘normal’ crime and a Dalit woman being killed or raped because she is a Dalit. Was she killed because of her caste? Because of prejudice? Because of casteist motivations?” (Cited by Wählstedt, 2012). However the news reports reveal a complete different picture to what the journalist claims ‘should be’. As can be noticed above, approximately 81.5% of the reports don’t mention the casteist intentions behind the Dalit atrocity. Here, it seems as if by using the terms “local

residents” and “member from another community”, media refrains from mentioning the cultural backdrop within which individuals interact and such discriminatory practices occur. Such incomplete descriptions of the attacks on passive victims tends to strategically emphasize them on being subordinate and hence powerless.

4. Discussion And Conclusion

The caste system originated as a traditional Hindu culture which led to the static socio-cultural life. As a result people were culturally habituated to see things in terms of traditional forms and relied on the maintenance of equal status to the individuals belonging to the same caste. This contributed to the strong hold of caste system in the country. The findings show that PV frames predominantly supported- the caste system, the social dominance of the upper caste, subordination of the lower caste and reproduced this as a major component of culture. The media's characteristic of victim blaming, i.e. Dalits as the reason behind the attack or sensationalizing of the events by using ‘untouchability’ and ‘untouchables’ to support them rather than challenging the practices, exemplified media's acceptance of ideologies that legitimize inequality and behaviours that produce inequality.

These frames reflected a complete media denial to reject the legitimacy of the caste based social systems. Nevertheless it failed to highlight the objective structural conditions of societies and other psychological motivations that can lead people to reject the legitimacy of their social systems. The societal components that related those atrocities to the specific historical and cultural aspects were emphasized. Whereas media ignored the present political and economic context that entails equality to Dalits and rejects the social system. Thus reinforcing the ‘status hierarchy’ of dominant and subordinate which was rooted in the caste system. The media only in few places, specifically where it mentioned Untouchables and Untouchability, justified the issue as caste-based. Otherwise the media framed the Dalits as people who violate role-expectations or stereotypes about their groups and hence are met with disapproval further highlighting how expectations, norms, stereotypes, and roles tend to mutually perpetuate each other. Moreover the media frames, through its elaboration of atrocities tended to justify the acts of victimizing Dalits as an outcome of one's dominant social role allocated by birth.

A systems contribution to the social dominance structure of the society is measured by its *social dominance orientation* (SDO) or the extent to which one desires that one's in-group dominate and be superior to outgroups (Schmitt, Branscombe and Kappen, 2003). SDO is the parameter to measure one's general attitudinal orientation towards intergroup relations, reflecting whether one generally prefers such relations to be equal, versus hierarchical that is ordered along a superior-inferior dimension. PV frames of media, where media has been seen legitimizing myths, supporting upper caste ideologies, blaming the Dalits for their victimization and absence of discussion on social policies that would help in Dalit upliftment, display media, specifically press media, to be more social dominance oriented. That is, media has been seen to be positively related to SDO. This further means they have a tendency to positively contribute to the social (caste based) inequality.

In the present study, the PV frames reveal not only an orientation towards the upper caste ideologies but also towards other dominant bodies. The media's reliance on government and legal institutions (second-hand narratives) for information on Dalit atrocities, ignoring the Dalit victims and supporting the legal institutions rather can questioning them exemplifies media's inclination towards the functioning dominant bodies in the society. Overall, it can be noticed that the media tends to be biased towards and be influenced by whoever is in power, irrespective of the social norms and concerns.

Media changes with the changes in the power structure and dominance. Back in 1900's media followed the Brahmins as it was the Brahmins who held the power and were dominant, later media's focus changed as the power structure got divided among the touchable castes. However in both cases as it was the Touchables who ruled the society, media heavily based itself on caste ideologies and degraded the Dalits. But now when the power structure keeps shifting among the Touchables and the Dalits, socially, economically and politically, media's take is dynamic as well. Yet, the identity of Dalits that this study portray is that of subordinates of the society, whose representation still depends on the functioning of the dominant groups.

Determination Of Awareness Levels Of Physical Education And Sports Teacher Candidates About Negative Acts

Barbaros Serdar ERDOGAN

Physical Education and Sports Mehmet Akif Ersoy University Turkey

Abstract

The aim of this research is to reveal the awareness levels of Physical Education and Sport teacher candidates about negative acts. When we look at the average responses given to the negative acts scale, we can say that the teacher candidates who participated in the research did not encounter the situations stated in the negative act scale in general. While most of the physical education and sports teacher candidates included in the research were doing sports regularly, about 10% of them stated that they were not doing sports. Female teacher candidates read books more than male candidates. And yet, they also pointed out that, they sometimes encountered the following negative acts; "Someone withholds information that will affect your success", "You are asked to do works that are below your qualifications", "Gossip and rumor spread about you", "Your mistakes are repeatedly uttered", "Your work is always criticized", "Your ideas and opinions are not taken into consideration", "People make jokes you do not like"..

Keywords: *Physical Education and Sports, Teacher Candidates, Negative Acts (Mobbing)*

Introduction

When it comes to negative acts, we face concepts such as bullying, mobbing, emotional harassment, intimidation, conflict or violence (Aras, 2012). Bullying results in the emergence of tendency for brute force and aggressive acts as a behavior disorder after emotional harassment (Tinaz, 2008). Conflict is a social phenomenon that arises from differences in the interests of people or groups, resulting in negative acts such as unrest, trouble, stress, hostility and fighting that cause one party to win and the other to lose (Cornille et al., 1999). Violence is the use of physical force to hurt and abuse (Hayward et al., 2011). The French origin word 'violence' means; by applying pressure or force, doing people things they do not like, or forcing them to do things they do not like; or applying brute force, attacking, causing physical or emotional pain; in other words, that means torturing, injuring and causing physical pain (Unsal, 1996; Gozum and Karacor 2017). Sexual harassment means all verbal or written sexual assaults that cause discomfort. Proposals with sexual content, implications of sexual intercourse by writing a letter or oral proposals or movements in the body language are included in the concept of sexual violence (Sarmasik, 2009). Mobbing can be described as slow-progressing systematic, persistent and intentional psychological terrorizing and intimidation actions observed in organizations (Einarsen and Skogstand, 1996). Leymann (1990), who brought up the concept of mobbing, has not found a regular relationship between personality and exposure to mobbing. However, a number of studies conducted to reveal the personality profiles of mobbing targets have shown that employees exposed to mobbing have specific personality profiles that significantly differs from the normal population (Leymann, 1996a). The studies revealed that; individuals exposed to mobbing in organization psychological had a wide-range of physical, psychosomatic and psychological symptoms (Hansen et al., 2006; O'Brien, 1997; Zapf et al., 1996), their psychological well-being was disrupted (Neidl, 1996) and they had a persistent state of anxiety (Cassitto and Giordano, 2003). It was found that; people exposed to mobbing were those who had working principles and ethical values and who were more positive, beloved, honest, trustworthy, independent, creative and generally superior to the mobbing person or group (Girardi et al., 2007). The distinctive feature of mobbing is the need to focus on how long and how often it occurs rather than a specific act involving physical or psychological aggression, and how the act is conducted (Leymann, 1996b). When individuals are exposed to emotional violence, it will not be easy for them to get rid of the effects, and occasionally, permanent emotional disorders may also occur (Tinaz, 2008; Gozum, 2017). Kudielka and Kern (2004) are the first researchers to prove that there is a significant relationship between exposure to mobbing and the level of stress hormone cortisol. According to the statistics, at least one third of the people exposed to mobbing seek for therapeutic help.

The Study

Research design and analysis

The data obtained in the research were evaluated using the statistical methods included in the SPSS 14.0 package program. In the research findings and evaluation section, the frequency distributions related to the demographic characteristics of the research participants, the mean and standard deviation values of the questions related to negative act perceptions, and also the reliability analyses were taken into consideration in order to determine whether the data were appropriate for statistical analysis. Normality test was performed to determine whether the questionnaire data presented a normal distribution and as the data showed a normal distribution, parametric tests were applied to determine significant differences based on the independent variables. The Independent Samples

T test was performed to see whether there was a significant difference between the two groups in the independent variables of 'gender' and 'doing sports', and the One Way Anova test was performed to see whether there was a significant difference among more than two groups.

Sample and Sampling

The research is a diagnostic research carried out upon 225 Physical Education and Sport Teacher Candidates consisting of 85 females and 140 males studying in Burdur at Mehmet Akif Ersoy University School of Physical Education and Sports and Department of Physical Education and Sports Teaching in 2015-2016 Academic year, by applying questionnaires through the Random method.

Data Collection and Data Analysis

Negative Acts Questionnaire (NAQ) was developed by Einarsen (1996) to identify those who are exposed to mobbing. The original Norwegian version of the scale consists of 21 items. All items include behavioral terms and the concepts of intimidation or mobbing is stated nowhere in the scale. The internal consistency of the scale was measured as .87 to .93 Cronbach's Alpha. The job satisfaction correlation value of the scale, was found $r = -.44$ from $r = -.24$ (Einarsen and Skogstad, 1996; Einarsen and Raknes, 1997; Hoel, Cooper and Faragher, 2001; Mikkelsen and Einarsen, 2001, 2002a, 2002b). In order to measure the negative acts (mobbing), the research made use of Cemaloglu (2007)'s Negative act Scale (NAQ), which was translated into Turkish as a 21-question scale with the help of three linguists. The scale was obtained from the Berge Bullying Institutions in Norway by the researcher with the permission of Cemaloglu. As a result of factor analysis, Cemaloglu found that the total variance of the scale was 0.71, the Cronbach's alpha coefficient of the items was .94 and the factor loads were between 0.59 and 0.87 (Cemaloglu, 2007a: 80-81).

Reliability Analysis

Cronbach's Alpha value was found to be 0.91 as a result of the reliability analysis of the negative acts scale consisting of 21 questions. Since the lowest reliability value is deemed to be 0.70 in the researchers conducted in social sciences, it can be said that; 0.916 Cronbach's Alpha value is a good result for this research in terms of the internal consistency of the scale. *Reliability Statistics; Cronbach's Alpha 0.916, Cronbach's Alpha Based on Standardized Items 0.917, N of Items 21.*

Findings

Table 1: Findings regarding the demographic features of the Physical Education Teacher Candidates

Variable	Level	N	%
Age	18-19	84	37.3
	20-21	79	35.1
	22-23	41	18.2
	24-25	14	6.2
	26 and above	7	3.1
	Total	225	100,0
Gender	Female	85	37.8
	Male	140	62.2
	Total	225	100.0
Doing sports?	Yes	198	88.0
	No	27	12.0
	Total	225	100.0
Time spent for weekly sports activities	1-2 hours	48	21.3
	3-4 hours	65	28.9
	5-8 hours	55	24.4
	9 hours and more	57	25.3
	Total	225	100.0
The way of spending free time?	Read book	68	30.2
	Go to cinema	32	14.2
	Visit historical places	10	4.4
	Go to leisure venues	115	51.1
	Total	225	100.0
Frequency of reading books	Once a week	52	23.1
	Once every two weeks	28	12.4

Variable	Level	N	%
Self-description	Rarely	119	52.9
	Never	26	11.6
	Total	225	100.0
	Silent and calm	66	29.3
	Social and outgoing	75	33.3
	Hyperactive energetic	61	27.1
	Angry- Quick tempered	23	10.2
	Total	225	100.0

When we look at the general demographic characteristics of the participants, we see that 72.4% was under 21 years old. While 37.8% of the participants were female, 62.2% were male. While 88.0% of the teacher candidates were doing sports, 12.0% of them said that they were not doing sports. The distributions of the teacher candidates regarding the time they spared for their weekly sports activities were similar. Approximately half (51.1%) of the participant group preferred to go to leisure venues as a way to spend their free time whereas 30.2 % of them preferred to read books. 35.5% of the participants stated that they read a book a week or every two weeks. 52.9% rarely read books. 33,3% of the participants described themselves as being social outsiders, 29,3% as calm and silent and 27,1% as energetic. Cross-charts of the gender variables were made from demographics in the data analysis and the following findings were obtained:

- 84.7% of women do sports while 90.0% of the men do sports.
- 44.7% of women read books, 35.3% go to venues of leisure, 21.4% of men read books, 60.7% go to venues of leisure.
- 29.4% of women read a book a week, 19.3% of men read a book a week.

31.8% of women described themselves as being silent and calm, while 27.9% of men described themselves as being silent and calm. While 23.5% of women described themselves as being energetic, 29.3% of the men identified themselves as being energetic [Table 1].

Table 2: Mean values regarding the level of awareness of Physical Education and Sports Teacher Candidates about Negative Acts

	N	MEAN	SS
1. Someone withholds information that will affect your success	225	1.83	0.86
2. You are humiliated as you are asked to do works that are below your qualifications.	225	1.45	0.77
3. You are asked to do works that are below your skills/qualifications.	225	1.88	0.90
4. Your responsibilities in important areas are cancelled or replaced with less trivial or undesirable duties.	225	1.78	0.89
5. Gossip and rumor spread about you.	225	1.93	1.08
6. You are ignored, excluded, not taken into consideration.	225	1.61	0.92
7. You are humiliated or mocked about your personality (for ex; habits and customs), attitudes or your private life.	225	1.53	0.85
8. You are shouted at or you become a target of instant fury (or greed).	225	1.91	1.04
9. You are pointed at, your privacy is disrupted, you are pushed, waylaid and other threatening acts.	225	1.57	0.88
10. Indirect acts of people to have you leave job.	225	1.62	0.89
11. Your mistakes and errors are repeatedly uttered / reminded.	225	1.96	0.95
12. Your opinions are not taken into consideration/ ignored or are responded with hostility.	225	1.72	0.94
13. Your work is always criticized.	225	1.87	1.00
14. Your ideas and opinions are not taken into consideration.	225	1.81	0.96
15. People you don't like make jokes you do not like (pranks).	225	1.97	1.06
16. You are assigned unreasonable tasks or tasks that are impossible to complete within due time.	225	1.80	0.93
17. You are accused and blamed.	225	1.56	0.79
18. You are strictly supervised.	225	1.72	0.97
19. You are forced not to ask for certain things you have right in (for example; sick leave, vacation right, travel allowance).	225	1.48	0.83
20. You are excessively mocked and teased.	225	1.54	0.81

	N	MEAN	SS
21. You are assigned work load that is too much to deal with.	225	1.67	0.93
MEAN		1.72	0.92

The mean value of the answers to the 21 questions regarding the evaluation of the perceptions of the physical education and sports teacher candidates about the negative acts is in the range of "Never" of the scale of five Likert with $x = 1,72$. According to this, we can say in general that; the teacher candidates who participated in the research generally never encounter the situations stated in the negative acts scale. The acts which the participants encountered "sometimes" are "Someone withholds the information that will affect your success" with $x = 1.83$ mean value; "You are asked to do works that are below your qualifications", with $x=1.88$ mean value; "Gossip and rumor spread about you" with $x=1.93$ mean value; "Your mistakes are repeatedly uttered" with $x=1.96$ mean value; "Your work is always criticized" with $x=1.97$ mean value; "Your ideas and opinions are not taken into consideration" with $x=1.81$ mean value; "People you don't like make jokes you do not like (pranks)" with $x=1.97$ mean value [Table 2].

Table 3: Results of the one-way Anova test showing whether the awareness levels of Physical Education and Sports Teacher candidates about negative acts differed based on the age variable

Results of the one-way Anova test showing whether the awareness levels of groups differed based on the age variable				
	Squares Total	Squares Mean	F	P
19. You are forced not to ask for certain things you have right in (for example; sick leave, vacation right, travel allowance)	8.639	2.160	3.265	0.013

P<0.05 means a significant difference.

When we assessed the awareness levels of physical education and sports teacher candidates about negative acts based on the age group of the students, we observed a significant difference regarding item 19 "You are forced not to ask for certain things you have right in (for example; sick leave, vacation right, travel allowance)" [Table 3].

Table 4: Results of the Turkey test showing whether the awareness levels of Physical Education and Sports Teacher candidates about negative acts differed based on the age variable

Results of the Turkey Hsd test showing the difference between the groups based on the age variable				
Variables	Variables	Variables	Variables	Variables
	18-19	20-21	-0.109	0.913

		24-25	-0.429	0.786

P<0.05 means a significant difference

There was a significant difference between 18-19 age group and 22-23 age group teacher candidates regarding the item "You are forced not to ask for certain things you have right in (for example; sick leave, vacation right, travel allowance)". According to this, we can say that; 22-23 age group teacher candidates encounter the negative act stated in this item more than the 18-19 age group. ($p<0,05$) [Table 4].

Table 5: Results of the T test showing whether the awareness levels of Physical Education and Sports Teacher candidates about negative acts differed based on the gender variable

	Gender	N	Mean	SS	P
1. Someone withholds information that will affect your success	Women	85	1.765	0.947	0.402
	Men	140	1.864	0.807	
2. You are humiliated as you are asked to do works that are below your qualifications.	Women	85	1.259	0.601	0.004
	Men	140	1.564	0.841	
3. You are asked to do works that are below your skills/qualifications.	Women	85	1.788	0.888	0.259
	Men	140	1.929	0.911	
4. Your responsibilities in important areas are cancelled or replaced with less trivial or undesirable duties.	Women	85	1.647	0.827	0.075
	Men	140	1.864	0.915	
5. Gossip and rumor spread about you.	Women	85	1.788	1.013	0.117
	Men	140	2.021	1.115	
6. You are ignored, excluded, not taken into consideration.	Women	85	1.506	0.854	0.175
	Men	140	1.679	0.962	
7. You are humiliated or mocked about your personality (for ex; habits and customs), attitudes or your private life.	Women	85	1.424	0.777	0.129
	Men	140	1.600	0.880	
8. You are shouted at or you become a target of instant fury (or greed).	Women	85	1.682	0.876	0.010
	Men	140	2.050	1.108	
9. You are pointed at, your privacy is disrupted, you are pushed, waylaid and other threatening acts.	Women	85	1.435	0.823	0.076
	Men	140	1.650	0.905	
10. Indirect acts of people to have you leave job.	Women	85	1.518	0.825	0.191
	Men	140	1.679	0.931	
11. Your mistakes and errors are repeatedly uttered / reminded.	Women	85	1.741	0.875	0.008
	Men	140	2.086	0.978	
12. Your opinions are not taken into consideration/ ignored or are responded with hostility.	Women	85	1.553	0.866	0.038
	Men	140	1.821	0.976	
13. Your work is always criticized.	Women	85	1.718	0.971	0.082
	Men	140	1.957	1.010	
14. Your ideas and opinions are not taken into consideration.	Women	85	1.706	0.870	0.209
	Men	140	1.871	1.002	
15. People you don't like make jokes you do not like (pranks).	Women	85	1.812	0.994	0.075
	Men	140	2.071	1.090	
16. You are assigned unreasonable tasks or tasks that are impossible to complete within due time.	Women	85	1.565	0.808	0.004
	Men	140	1.936	0.976	
17. You are accused and blamed.	Women	85	1.424	0.730	0.044
	Men	140	1.643	0.823	
18. You are strictly supervised.	Women	85	1.471	0.796	0.003
	Men	140	1.871	1.038	
19. You are forced not to ask for certain things you have right in (for example; sick leave, vacation right, travel allowance).	Women	85	1.376	0.740	0.129
	Men	140	1.550	0.876	
20. You are excessively mocked and teased.	Women	85	1.306	0.557	0.001
	Men	140	1.686	0.906	
21. You are assigned work load that is too much to deal with.	Women	85	1.471	0.781	0.011
	Gender	140	1.793	0.985	

P<0.05 means a significant difference.

A significant difference was observed between groups according to the results of the T test analysis where we compared the gender-based awareness level of physical education and sports teacher candidates with the 9 items included in the scale. In the item "You are humiliated as you are asked to do works that are below your qualifications", the level of men ($x=1.564$) is significantly higher than women ($x=1.259$). As for the item "You are shouted at and you become a target of instant fury (or greed)", the level of men is "Sometimes" with a mean

value of $x=2.050$ whereas the level of women is "Never" with a mean value of $x=1.682$. As for the item "You are repeatedly uttered your errors and mistakes" the level of men is "Sometimes" with a mean value of $x=2.086$ whereas the level of women is "Never" with a mean value of $x=1.741$. As for the item "Your opinions are ignored/not taken into consideration or you face hostile reactions" the level of men is "Sometimes" with a mean value of $x=1.821$ whereas the level of women is "Never" with a mean value of $x=1.553$. As for the item "You are assigned unreasonable tasks or tasks that are impossible to complete within due time" the level of men is "Sometimes" with a mean value of $x=1.936$ whereas the level of women is "Never" with a mean value of $x=1.565$. As for the item "You are accused and blamed" the mean value for men is $x=1.643$ whereas the mean value for women is $x=1.424$. As for the item "You are strictly supervised" the level of men is "Sometimes" with a mean value of $x=1.871$ whereas the level of women is "Never" with a mean value of $x=1.471$. As for the item "You are excessively mocked and teased" the mean value for men is $x=1.686$ whereas the mean value for women is $x=1.306$. As for the item "You are assigned work load that is too much to deal with" the mean value for men is $x=1.793$ whereas the mean value for women is $x=1.471$ [Table 5].

Discussion

When we assessed the awareness levels of physical education and sports teacher candidates about negative acts based on the age group of the students, we observed a significant difference regarding item 19 "You are forced not to ask for certain things you have right in (for example; sick leave, vacation right, travel allowance)". Cam (2013) carried out a research to determine whether the teacher candidates presented a significant difference based on their age and he found at the end of the one-way analysis of variance (ANOVA) that; the age of the teachers and administrators presented a significant difference in their perception of the values of the question "Mobbing / violence acts according to you".

Aktop (2006) concluded in his research that; "It was found that; academicians younger than 25 had higher mean values for mobbing at work place but this difference was not statistically significant". In of the researches conducted on workers in different fields, it was found that the 21 to 41-year-old people were more exposed to mobbing at workplace, but this difference was not statistically significant (Leymann, 1996). In a research where mobbing in two public hospitals was studied, it was found that, workers aged 18-30 years were significantly more exposed to mobbing compared to workers aged 31-45 and above 46 (Yilmaz et al., 2008). According to the results of the T test and one-way Anova test carried out to evaluate the awareness of physical education and sports teacher candidates about negative acts in demographic terms; no significant difference was found between the groups depending on the variables "doing sports, the time spent for doing sports, way of spending free time, the frequency of reading book and self-description". The differences obtained depending on the age and gender of the participants, are given below.

Conclusion

Most of the physical education and sports teacher candidates participating in the research stated that they did sports regularly whereas about 10% of them stated not doing sports. Women teacher candidates were more likely to read books than men. Men were more likely to go to leisure venues in their free time than women. When we look at the mean values of the responses given to the negative acts scale, we can say that; the teacher candidates who participated in the research did not encounter the situations stated in the negative acts scale in general. However, they stated that they sometimes encountered the following situations; "Someone withholds information that will affect your success", "You are asked to do works that are below your qualifications", "Gossip and rumor spread about you", "Your mistakes are repeatedly uttered", "Your work is always criticized", "Your ideas and opinions are not taken into consideration", "People make jokes you do not like". When we evaluate their awareness about negative acts according to gender, we can say that male participants encountered the situations stated in the 9 items on the scale more than women. When the differences between the groups regarding the age variable were examined, there was difference only in one item and no significant difference was found in the other items. There were no differences between the groups regarding other independent variables included in the questionnaire.

Abstract

The use of traditional and complementary medical practices is becoming increasingly widespread throughout the world. The attitude of physicians towards these methods has become a matter of debate. In our study, we aim to determine the level of knowledge and attitudes of medical students about Traditional and Complementary Medicine (TCM)

The number of the participants was 125 male and 115 female (age: $19,68 \pm 1,61$) in the first 3 classes of Kocaeli University Faculty of Medicine. We conducted a questionnaire that consist questions about demographics and socioeconomic characteristics of participants, levels of knowledge about TCM practices, how they learned about this information, attitudes towards TCM practices and participants also was asked to answer an integrative medical attitude questionnaire (IMAQ).

The IMAQ score was found as $120,18 \pm 12,91$. There was no statistically significant difference between IMAQ score and gender, family economic status, educational status of mother and father, longest living place, health status of the person ($p > 0,05$). When "Do you have knowledge about TCM." is asked; 28 people (11,7%) answered yes, 165 people (68,8%) slightly, 47 people (19,6%) answered no. The most information is obtained from social media with 27.9%. The most common method is hajamat / cupping followed by acupuncture, leech and hypnosis applications respectively. Among participants ,the usage rate of TCM applications was determined as 17.4% for females and 8.8% for males. 149 participants (62.1%) stated that the disease could be healed with TCM applications and 145 participants (60.4%) wanted to apply TCM methods to their patients as well as modern medicine and 182 participants (75.8%) wanted to train about TCM applications.

Medical Students are not well informed about TCM applications. In addition, they have a positive attitude and want to train about TCM. Demographic and socioeconomic characteristics do not affect the attitudes of medical students towards TCM applications.

Keywords: *Traditional and Complementary Medicine , Medical Education , Questionnaire*

Introduction

Despite the developments in the modern medicine, traditional and complementary medicine is emerging as an economically growing and popular health system throughout the world (Frenkel et al., 2008). There are many definitions of traditional medicine, complementary medicine, alternative medicine, and they are often used interchangeably. However, the use of the term alternative medicine is not considered appropriate because its not actually an alternative to the medicine (Mollahaliloglu et al., 2015).

According to the World Health Organization (WHO), "traditional medicine" is the whole of the knowledge, skills and practices that can or can not be explained based on theories, beliefs and experiences specific to different cultures, which are used to maintain, diagnose, cure or treat physical and mental illnesses as well as to maintain health . The application of traditional medicine outside its own cultural environment is defined as complementary medicine (Tanriverdi et al., 2013).

TCM methods are used widely in Turkey as it is also used all over the world. TCM practice rates of 40% in the US, 70% in Europe, 78% in South Korea, and 90% in developing countries are found in some studies (Oral et al., 2016). This rate is found between the range of 25,2% - 86,3 % in the studies that has been done in Turkey (Dogan et al., 2012).

According to the regulation issued by the Ministry of Health in 2014, Acupuncture, Apitherapy, Phytotherapy, Hypnosis, Leech therapy, Homeopathy, Chiropractic, Cupping therapy, Larval therapy, Mesotherapy, Prolotherapy, Osteopathy, Ozone therapy, Reflexology and Music therapy has been accepted as TCM practices. The authority to apply these methods has only been given to medical doctor ,dentists and pharmacists with the condition of being in their field of work (Regulation on Traditional and Complementary Medical Practicesi, 2014).

The widespread use of TCM methods brings some problems. with it. Patients can use these methods unconsciously and can receive this service on conditions that are not suitable for health and from non professionals. This would cause damage instead of improving health. Use of TCM is more frequent in life-threatening diseases such as cancer and HIV and also TCM use is more frequent in children than adults (Barnes et al., 2002; Kim et al., 2011; Ceyhan & Yigit, 2016). For this reason, in many countries, TCM methods have been integrated with modern medical methods, and these treatments have been tried to reach patients in a controlled manner by physicians.

Many countries have started to integrate TCM with modern medicine and medical education. In Germany, in 2003 TCM methods were included in modern medical education ((Dogan et al., 2012). In a survey study involving 125 medical faculties in the United States, 64% of schools reportedly had courses on TCM or related subjects. In Japan, elective or mandatory TCM classes taught in 18 modern medical schools. In China, 95% of hospitals serve modern medicine and TCM together (Karahancı et al., 2015). There are 12906 TCM clinics in Korea as of 2012 (Son, 2015, p. 84).

In recent years, positive developments in GTT have been experienced in our country. In 2014, the Ministry of Health published the regulation of the use of TCM, the Traditional and Complementary Medicine Dept. was established within the Health Sciences University and the International Congress of Traditional and Complementary Medicine was held in Istanbul within the presidency in 2018. As of 2017 there are TCM units in 40 hospitals within the provision Ministry of Health (GETAT, 2018). There is no TCM in the modern medical education curriculum.

The use of traditional and complementary medical practices is becoming increasingly widespread throughout the world. The attitude of physicians towards these methods has become a matter of debate. The attitudes of doctors and medical students who will become doctors of the future will play an important role for integration of TCM and modern medicine. In our study, we aim to determine the level of knowledge and attitudes of medical students about Traditional and Complementary Medicine (TCM)

Matherial-Method

The number of the participants was 125 male and 115 female (age: $19,68 \pm 1,61$) in the first 3 classes of Kocaeli University Faculty of Medicine. We conducted a questionnaire that consist questions about demographics and socioeconomic characteristics of participants, levels of knowledge about TCM practices, how they learned about this information, attitudes towards TCM practices and participants also was asked to answer an integrative medical attitude questionnaire (IMAQ).

The IMAQ (Integrative Medicine Attitude Questionnaire) was created in 2003 by Schneider et al. It consists of 29 questions. The questions were evaluated with likert type scale expressions scored 1-7. Questions 1, 2, 4, 6, 7, 8, 10, 11, 13, 17, 18, 25, 27 were reverse encoded. The higher the score, the higher the traditional and complementary attitude of the physician (9).

SPSS v20 package program was used for statistical analysis. (SPSS for Windows v. 20.0, SPSS, Chicago, IL, USA). Descriptive statistics are presented with mean, standard deviation for continuous data, and presented with numbers and percentages for categorical data. Normal distribution of continuous data was evaluated by Kolmogorov-Smirnov and Shapiro-Wilk tests. Mann-Whitney U test was used for comparison between two groups in the case of normal distribution non-compliance. $p < 0.05$ was considered statistically significant.

Results

115 female (47.9%), 125 male (52.1) total of 240 students from first 3 years of faculty of medicine (age: $19,68 \pm 1,61$) participated in the study. When education status of students' families is taken in to consideration 27.1% of mothers were highschool graduates and 45.4% of fathers were university graduates. 87.5% of the participants did not have any chronic diseases. Economic status of 65.8% of the families was found middle level. The most common place to live is found as city with 82.1% (Table 1).

When question "Do you have any knowledge about TCM methods" asked, 28 (11.7%) answered 'Yes' 47 (19.6%) answered 'No' 165 (68.8%) answered 'Some' (Table 2). The most common response to the question about where did you achieve the knowledge was social media with 67 people (27.9%). This is followed by internet (% 16.3), university (%11.3), friends and relatives respectively (%7.5) (Table 3). The most known method in our study was hajamat/cupping with 43 (30.4%). This was followed by acupuncture with 36 (25.4%), leech therapy with 31 (21.9%), hypnosis with 17 (12.0%) and herbal treatment with 6 (4.2%) (Table 4). The rate of use of TCM methods in our study was 17.4% in females, 8.8% in males, and 12.9% in total. 62.1% of the participants stated that the diseases could be treated with TCM methods, 54.2% would suggest TCM for their patients, 60.4% could want to apply TCM to their patients, and 75.8% want to study TCM (Table 5).

The IMAQ score was found as 120.18 ± 12.91 (Table 6). There was no statistically significant difference between IMAQ score and gender, family economic status, educational status of parents, the longest living place, health status of the person. (all $p > 0,05$) (Table 7).

Table 1: Demographic and socioeconomic characteristics.

Variable	n	%
Sex		
Female	115	47.9

Longest living place	p:0.889
Health status of person	p:0.364

Discussion

In a study conducted by Abbott et al, medical students' knowledge of GTT was found to be low in the USA. According to a research conducted by DeSylvia et al, medical faculty students have a lower knowledge level than other health disciplines in Canada. In our study, similarly, medical school students' knowledge level about GTT seems to be low.

Families, friends and relatives is the most common way to achieve knowledge about TCM on the previous studies conducted in Turkey (Oral et al., 2016). Social media was found as the most common way in our study, reason might be wide use of social media in recent years.

The most commonly known method in the general population is the use of herbal medicines in studies in both our country and different countries (Oral et al., 2016; Dogan et al., 2012; Kav et al., 2008; Elolimy & Albedah, 2012). The most known method in our study was hajamat/cupping and this was followed by acupuncture. The reason of the hajamat/cupping practice being the most known method in our study may be its increasing popularity in recent years and the debate by many medical doctors.

The rate of TCM use in the general population varies between 25.2-86.3% in our country (Dogan et al., 2012). In our study, the use of TCM was found to be lower than the general population. The reason why rate is low in our study is that the average age is young and the participants of our study have easy access to modern medicine. The use of TCM in women is found higher in our study parallel with in similar studies (Bulbul et al., 2009; Ceylan et al., 2002; Gozum et al., 2003).

In a study conducted by Abbott et al, it is stated that medical students in USA want to be educated about TCM methods as well as modern medical education. In our study, most of the medical faculty students stated that they wanted to study GTT. Students have also stated that GTT can be used in diseases, they might advise their patients to use TCM and they want to apply TCM to their own patients.

In a study conducted by Ergin et al in 2011 on 5 and 6 year medical students, mean for attitude score of the GTT method was found to be 118.3 ± 14.5 . There was no significant difference between the attitude scores, according to sex, age, education and working status of the parents, family type, number of siblings and socioeconomic status (all $p > 0.05$). The only mean, that is found significantly different statistically, is the longest living place ($p < 0.05$) (12). In our study, the IMAQ score was found as 120.18 ± 12.91 . There was no statistically significant difference between IMAQ score and gender, family economic status, educational status of parents, the longest living place, health status of the person (all $p > 0.05$).

Conclusion

TCM is widely used and its popularity is increasing. Although there are not enough studies about physicians' attitudes towards TCM in our country, many physicians might have negative attitudes about this issue. This can cause patients to take unhealthy treatment on unprofessional conditions. In our study, the preclinical students in the first 3 classes of medical faculty show a positive attitude towards the TCM methods and the majority of the students want to receive training on this subject. The most known TCM method by medical students is hajamat/cupping. The most of this knowledge is learnt from social media. The use of TCM in medical students is lower than that of the normal population, while it is higher in women than in men. Gender, health status of the person, economic status of the family, educational status of the parents and the longest living place do not affect the attitude towards TCM methods.

Abstract

Nowadays a lot of organization try to gain more maturity for their development in process. A large percentage of these organizations tend to the expansion model. People resource capability model is one of these models which concentrate on expanding organization human skills. People capability maturity model is a process-driven framework which carries out people resources step by step in an organization .The motive of this model is to guide the organizations in improving their people resources .This model contains five maturity levels and twenty two process area. Each of these maturity levels has different qualities from one another. In fact, each of these levels a unique way in changing the organizations culture by equipping it with more effective actions for attracting expansion organizing, provocation and keep in its human resources. The present research has been performed with propose of studding process areas connected to each of maturity levels in human resources maturity model that determines the maturity in Islamic Azad University of Bushehr. Methodology research design is a non-experimental and from description-collection, that researcher with the Cochran community statistical formula to determine the statistical sample size 410 people that the result was 199, and researcher distributed Carnegie Mellon questionnaire about 210 pcs between Islamic Azad University of blusher's staffs, and identified the first and second levels of maturity requirements on base of PCMM model in 2016. The objectives of the research with using SPSS software were analyzed and with use descriptive statistics according to the research questions. Results from this study showed that Processes of: The recruiter, Communication and Coordination, Workplace, Training and Development, Compensation system, Analysis of competency, Workforce Planning System, Rising of competency system was more attention from the society of the Islamic Azad University of Bushehr, however, this organization not completely covered the level 2 of mature PCMM model.

1. Introduction

In the 1980s the use of performance measurement systems primarily focused on economy and efficiency because cost saving and operational control purposes was unable to support organizational objectives (Pollitt, 1986; Ghobadian and Ashworth, 1994; Guthrie and English, 1997) and this infirmity was the main reason of BSC appearance. The BSC was developed by Robert Kaplan and David Norton after an extensive research project in 1990 and their first refereed paper published in 1992 (Kaplan and Norton, 1992). Kaplan and Norton's (1992) Balanced Scorecard (BSC) has become a widely used framework for performance measurement, although the authors originally intended the framework to be used as a tool for communicating strategy (Meyer, 2005). In general, at least three different explanations of the stages of the evolution of BSC exist in the literature (Morisawa, 2002; Miyake, 2002; Lawrie and **Cobbold**, 2004; Speckbacher et al., 2003) which are called as generations of BSC. All authors agree that the first generation of BSC combines financial and non- financial Indicators with the four perspectives (financial, customer, internal business process and learning and growth). At this stage, measurement systems without cause-and-effect logic may also qualify as Balanced Scorecards (Malmi, 2001, p.216). In fact, this generation of BSC was a set of indicators arranged by perspectives derived from mission and vision of organization. Speckbacher et al. (2003)

and Lawrie and Cobbold (2004) argue that the second generation BSC emphasized the cause-and-effect relationships between measures and strategic objectives. It became a strategic management tool, usually utilizing a strategy map to illustrate the linkage between measures and strategies. In contrast there is a view in the literature (Morisawa, 2002; Miyake, 2002) that the key contribution of second generation BSC was the formal linkage of strategic management with performance management.

Concept of the strategy-focused organization (Kaplan and Norton, 2001) reflected the third-generation application of the BSC.

Two basic concepts in all generations of BSC are perspectives and indicators. Kaplan and Norton (2001) have argued that organizations should develop the best set of perspectives that reflect their strategy. The earliest BSC papers (Kaplan and Norton, 1992) advocated the use of the four perspectives – financial, customer, internal business process and learning and growth. Although only four perspectives defined in original BSC, but Kaplan and Norton (1996) describes where it's required, organization can add other perspectives to own scorecard.

Another basic concept of BSC is indicator (or measure). One goal of balanced scorecard is to identify a core set of indicators that can be used to summarize an organization's performance (Chan and Ho, 2000) and also to provide a clear set of metrics to evaluate the organization's strategy (Kaplan and Norton, 2001). Therefore, the aim of a well-structured BSC is to establish a balanced set of indicators, which consist of both financial and non-financial measures that control all activities and operations of organization.

2. Literary

Meenchavan (2009) has done a research entitled "BSC, new challenge" the researcher has concluded that this model, as a culture change and development to accept new suggestions and members, is a suitable model.

Deem (2009) also has done a research entitled "studying the relationship of organizational culture and BSC effectiveness". The results of this research have shown that each of the four organizational features, partnership, solidarity, adaptability and mission have significant and positive- relationship with BSC effectiveness.

Another research has been done by Soleimani (2011) and entitled "studying the relationship of organizational culture and BSC effectiveness". By analyzing the questionnaire with Pierson correlation method and regression analysis, a direct relationship between organizational culture and each of its components, partnership, sohdrarity, adaptability, assignment and BSC effectiveness, was concluded.

In addition, Asaadi has done a research entitled "performance appraisal of Yazd province public hospital using a combination of BSC, data envelope analysis. The researcher concluded that mean relative efficiency of the hospital was 0.945, 9 out of 13 were on the efficiency frontier and the efficiency of 4 hospitals was less than one.

3. Research Hypothesis

The following research Hypothesis is established based on the above literature review. The research hypotheses are:

1. Using the Balance Scorecard, improve the performance of managers in keeping financial indicators of organization.
2. Using the Balance Scorecard, improve the performance of managers in customer retention.
3. Using the Balance Scorecard, improve the performance of managers in processes within the organization.
4. Using the Balance Scorecard, improve the performance of managers in growth of the organization learning process.

3.1. Participants and procedure

The population of this study consists university presidents and heads of departments in three higher education institutes in Bushehr. Since the population was small (136 people), sampling is not done and all members are chosen as samples.

This research is descriptive – survey and library resource and internet are used for the research literature.

3.1.1. Measure

The questionnaire data collection tools are researcher-made which the reliability of it is confirmed by the supervisor professor.

To calculate the validity of questionnaire, Cronbach's Alfa is used. (Alfa=0.88). Questionnaire consists of 20 questions: 4 questions for the financial indicators variable, 3 questions for the customer retention variable, 7 questions for the processes within the organization variable and 5 questions for the growth process and organization learning variable.

Likret 5 point scale is used in this questionnaire and to analyze the research hypothesis, the average test is used.

Table 1: The result of comparison between hypotheses mean

Dependent Variable	Statistic Value t	Significant Level (sig)	Degree of freedom (df)	Confidence Interval		Result
				High limit	Low limit	
The performance of managers in keeping financial indicators	6.227	0.000	114	0.3926	0.2031	Accept
performance of managers in customer retention	5.481	0.000	114	0.4972	0.2332	Accept
The performance of managers in processes within the organization	3.204	0.002	114	0.2171	0.0512	Accept
The performance of managers in growth of the organization learning process	0.764	0.429	114	0.1543	-0.0661	Failed

Figures:

Shape 1:
scorecard's perspective

4. Conclusion

The purpose of

studying the role of BSC in appraisal of higher education institutes performance.

According to the results of test and test results interpretation table, using BSC, in population's opinion, leads up to development of managers' performance in keeping financial indicators of organization, customer retention and within the organization processes, which were similar to Chen (2008), Umashankar & Dutta (2007), and Gullen (2003), researches. However it doesn't lead up learning process growth in organization, which differs from result of Amaratunga & Baldary (2000) and Einstein (2006) researches.

Determination Of Writing Components In Writing Courses Held With Hearing Impairments¹

Guzin KARASU

School for the Handicapped Anadolu University Turkey
guzinkarasu@anadolu.edu.tr

Abstract

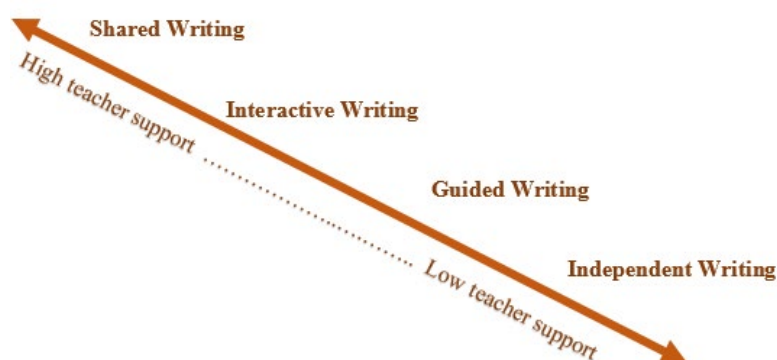

Various approaches are used to improve the writing skills of students with hearing impairments who has difficulties during the writing process. One of these approaches is Balanced Literacy Instruction Approach (BLIA) and it is determined that students benefit from the courses which are organized according to BLIA's principles and components. In this study, the courses were carried out with BLIA's components examined according to the determination of the writing components and pattern. The research, which is conducted by using Action Research method, was carried out with hearing impaired students who were studying in School for the Handicapped (SfH) of Anadolu University during 2015-2016 fall semester. As a result of this study, it is determined that the language levels of the students affected their component of writing and ongoing evaluations played an important role in the emergence of writing pattern.

Key Words: *Balanced Literacy Instruction Approach (BLIA), college students with hearing impairments, identification of the writing components, action research, teacher research.*

Introduction

Various approaches are used during the development of writing skills of hearing and hearing-impaired students. Today, many teachers and researchers agree that a single approach cannot be enough to fulfill the needs of all students in the class (Tompkins, 2007). Balanced Literacy Instruction Approach (BLIA), which is based on the combination of the Skilled Based Approach and the Whole Language Approach is widely used in literacy teaching (Fountas and Pinel, 1996; Pressley, Roehrig and Bogner, 2002; Schirmer, 2000; Tompkins, 2007). The BLIA advocates equal and sufficient time for language skills consisting of reading, writing, speaking and listening, and that students need to be supported as much as needed according to their needs (Asselin, 1999; Fountas and Pinel, 1996; Pearson, Raphael, Vicki and Madda, 2007; Pressley et al 2002). BLIA advocates various principles and has various reading/writing components. The principles of BLIA are: the reading / writing topics being appropriate to the interests and needs of the students; allowing students to make decisions on specific topics and choosing texts to read or write; giving importance to the process as well as the end product; being a model for new learners or inadequate readers; organizing educational environments which provides metacognitive awareness; interdisciplinary study; and defends the principles of teaching directly or indirectly the strategies and skills according to the language levels of students (Fountas and Pinnell, 1996; Schirmer, 2000; Tompkins, 2007).

BLIA's writing components are shared writing, interactive writing, guided writing and independent writing. As seen on Figure 1 the responsibility goes from "shared writing" to "independent writing" and gradually passes from teacher to the student. After the written evaluations are made, the component that matches the level of the skills of the students will be selected as the starting component. As the student progresses the process continues with the next writing component. Even if the next steps are taken during the acquisition of skills according to the ongoing evaluations repetitions of previous writing components can be made if needed (Richards and Reynandya, 2008; Wolbers, 2008; Karasu and Uzuner, 2018).

¹ This study was supported by Scientific Studies Research Projects, Anadolu University (Proje number: 1505E440).

Figure 1: According to BLIA, the responsibilities are gradually passed from teacher to student
(Adapted from Tompkins, 2000)

The teacher and the students decide together the sentence to be written in the shared and interactive writing. One common text is written. In interactive writing, the student is more independent and from time to time he/she occasionally contributes to the writing. Interactive writing is a transition phase to guided writing. The level of development of the students' writing skills is continuously assessed by the teacher. Thus, the teacher determines the amount of support to give to the student (Tompkins, 2000). If the students are ready, the process continues with the next writing component.

In guided writing, the students themselves write the texts, the teacher checks the texts while writing and provides the necessary support. And teaches the strategy, skill, concept and way which is followed during writing. As the students become more independent and as the development progresses in guided writing, the transition to the next phase can be made. Which is independent writing. At this phase, students often write their texts independently about the topic of their choice. Research shows that students with hearing impairment benefit from lessons with the principles and components of BLIA (Karasu et al, 2012; Pressley et al, 2002; Kaya, 2012; Schirmer, 2000; Uzuner, 2007; Uzuner et al, 2011).

When examining the research on writing skills of hearing impaired students, some researches about the linguistic information, the syntax and the limitations of writing (Albertini and Schely, 2003; Krestchmer and Kretschmer, 1978), student teacher interactions during writing (Graves, 1983; Truax, 1985) story structure and the effectiveness of the writing approaches (Campra, 1994; Mayer, 2010; Yoshinaga-Itano and Downey, 1996; Yuknis, 2014) are drawing attention. In our country there are researches about the focus of the students on the strengths and weaknesses of their writing, the comparison of written expression skills of hearing and hearing impaired students, the types and effectiveness of activities that can be carried out before writing (Erdiken, 1989, Erdiken, 1996; Girgin and Karasu; , 2014, Karasu and Girgin, 2007; Tuncay, 1980). There are two studies on the development of writing skills for hearing-impaired students about how the stages of the writing process are carried out and, on the activities and strategies applied. (Karasu and Uzuner, 2018; Karasu, Uzuner and Beral 2018) However, qualitative research on the writing process is needed (Karasu, 2014; Yuknis, 2014).

The purpose of this study was to determine the writing components and examine the writing patterns in the writing lessons conducted with BLIA with hearing-impaired university students. The research questions were as follows:

- a) What were the writing components that were used?
- b) How were the writing components determined?

Methods

The research method is an action research. Action researches are conducted to define what are the problems that occur during the application process in schools, institutions, etc., or to understand and solve a problem and to collect and analyze the data in a systematic way (Gay and Airasian, 2003; Johnson, 2002). The collection of the research data, the analysis, the decisions taken by the trustworthiness committee and the implementation of the action plans are carried out cyclically as shown in Figure 2.

Figure 2. Action Research Dialectic Cycle

This research is a 'teacher research'. In this type of research, the action research is conducted by teachers and increases students' learning, while also contributing to the teacher's professional development (Creswell, 2005).

Setting

The research was carried out in School for the Handicapped which is the only institution that provides university education to hearing-impaired college students in Turkey. The researches data was collected in the colleges class 214 which is the language classroom. The physical properties of the class has the necessary equipment for the education of hearing impaired students (Girgin, 2003)

Students. Research data collected out of seven students who were second grade in the "Computer Operator" program during the fall semester of the 2015-2016 academic year. Before the research, students were informed about the purpose and process of the research. Written permissions has been obtained. 'Whole Communication' was used to contact with the students. All students have a sense-nervous hearing impairment and students have hearing loss in both ears. Other features that determine the language levels of the students are given below. (Table 1)

Table 1: Student features

Students	Age / Gender	Degree of hearing loss (better hearing ear)	Age of onset of hearing impairment	Age of diagnosis	Age of onset of hearing aid	Secondary education environment
1	23/M	113 dB HL	Congenital	1	2	Vocational High School
2	22/F	101 dB HL	0.10	0.10	2	
3	25/F	96 dB HL	Congenital	1	14	
4	19/F	110 dB HL	Congenital	2	19	Vocational High School for Hearing Impairments
5	22/M	118 dB HL	Congenital	6	-	
6	25/M	83 dB HL	Congenital	5	12	
7	23/M	70 dB HL	Congenital	11	16	

When the texts written by the students participating in the pretest were examined, it was seen that the information about the text structure of the five students was very limited, and they did not include parts of the title and the text. When the contents of student writings are examined; it was determined that the contents of the three of the students did not conform to the directive, that a student needed limited support, and that the contents of the texts written by the three students were appropriate. It has been determined that all of the students have limitations on vocabulary, syntax and marking punctuation and that they needed intensive support.

Researchers. The research team consists of two researchers and a consultant. The research data were collected by the author of the article. The research team has over 21 years of experience in the education of hearing impaired students. They have graduate and doctoral grades in their fields. The research team participated in conferences related to qualitative researches and worked as a consultant, executive and researcher in the projects and their researches were published in national and international refereed journals.

Data Collection Techniques and Analysis

Qualitative and quantitative data collection methods and techniques were utilized in the research process. Data collection and analysis were performed simultaneously. The research data includes: video recording of the actual classroom interactions (33 hours and 4 minutes), writing lesson plans and reflections, reflective journal entries, students' artifacts, archival data (audiograms, the official records of the students) and criterion referenced tests' results. The collected data were reported by correlating the results obtained with each other and the field text. The quality of the research process, data and implementation was checked by the trustworthiness committee and studies for validity were carried out (Creswell, 2005). Ten meetings were held between 18.09.2015/09.02.2016.

In the study, pretest and posttest data were collected from the students on 05.10.2015 and 12.01.2016 with criterion referenced test. In different contents, five written expression data were taken, three of which were newspaper news and two of which were expository texts. A validation study was conducted to determine the appropriateness of the prepared questions to the age, level and interests of the students. In determining the types of texts, the vocational training and needs of the students were determined.

Written texts were evaluated by 'Evaluation Tool of Writing Skills' developed by Erdiken (1998). Texts were scored according to; structure (from 0 to 30 points), content (from 0 to 20 points), vocabulary (from 0 to 20 points),

grammar (from 0 to 25 points) and marking rules / punctuation (from 0 to 5 points). About the evaluations carried out, the interrater reliability was calculated by the formula of 'Agreement / Agreement + Disagreement x 100'. A consensus was provided by 84.8% in the pre-test and 71.9% in the final test. The application reliability coefficient of the courses performed according to the principles and components of the "BLIA" approach is calculated by the formula "Observed Teacher Behavior / Planned Teacher Behavior x 100". As a result of the application reliability studies, a consensus of 94.5% was provided.

Results And Discussion

In this section, research questions will be answered after the research process is explained.

The Research Process

This study has been carried out in two phases, pilot study and implementation process. In this article, the analysis of data collected during the implementation process is given. The data was collected during the implementation process in Speaking Skills for Computer Operate Training III (WSSCOT III) and Individual Computer Operator Language Support Courses III (ICOLSC III) lectures between October 2015/January 2016. All studies to improve students' writing skills have been carried out in the course "WSSCOT III". In the "ICOLSC III" course, other vocational courses of the vocational school program were supported, pre-test and post-test data of the research were collected, and individual writing correction studies were included.

Writing Components

Totally nine texts were written in three different types in lessons that were held with "BLIA" principles and components: Writing a Facebook message, newspaper news and expository text. Four of the texts are interactive, three are guided, and two are written in independent writing. In Table 2, the writing components, the topics and the dates of the written texts are transmitted.

Table 2: Writing components of text, topics and dates

BLIA Writing Component	Subject and Date of the Text
Interactive Writing	Writing a Facebook message (6 October 2015)
Interactive Writing	Content analysis of the school newspaper (27 October 2015)
Guided Writing	Y. Buyukersen Wax Museum Trip (6 October 17-18 November 2015)
Independent Writing	Writing a text with the topic of choice (3-10 November 2015)
Interactive Writing	Yılmaz Buyukersen's life (24 November 2015)
Guided Writing	Technology news (1-22 December 2015)
Interactive Writing	Comparing the features of websites (15 December 2015)
Independent Writing	Writing news with the topic of choice (1 December 2015-5 January 2016)
Guided Writing	Thoughts and feelings about Facebook (5 January 2016)

Determining the Writing Components

In the study, language levels of students were determining while assigning the writing component of texts written by university students with hearing impairments (Creswell, 2005; Schirmer, 2000; Tompkins, 2007). A variety of data were gathered in order to determine the language levels of the students and before and during the research. The diversity of the collected data helped to plan the lessons according to the level and needs of the students and supported the development of the students (Antia, Reed and Kreimeyer, 2005; Creswell, 2005; Schirmer, 2000). In addition, the evaluations made in the process overlap with the principle that giving importance to the process as well as the product, which is one of the principles of BLIA (Asselin, 1999; Fountas and Pinel, 1996; Pressley et al, 2002).

As a result of the evaluations, it was decided to start with Interactive Writing in the first writing lesson, where the students needed more support, where the teacher was more modeling and was able to give instant feedback. (II. Trustworthiness Committee Report- September 30, 2015) After the first two texts were written with Interactive Writing, the writing of the third text was done by Guided Writing, where the text was written individually by the student. (IV. Trustworthiness Committee - November 15, 2015) In this first text, which is performed with Guided Writing, there was a detailed preparation process before the writing, including screening of sources, examination of written and visual sources in class, and trips. Each student then wrote his or her own text individually with support from the researcher.

It has been decided to make an Independent Writing training with the students because all of the students included sections of the article and provided limited but appropriate content in all of their writings. (Writing Lesson Plan and Reflections and VII. Trustworthiness Committee Report- November 18, 2015) Independent Writing practice was given as homework. Students were required to write on a topic they wish to write, and in the text they write the direction of the students to pay attention to the sections and features of the text was given in writing.

In order to reinforce the observed development in the students, the writing of the fifth text was also carried out by Interactive Writing. (VII. Trustworthiness Committee Report – November 18, 2015) The following texts were written according to the decisions taken at the 12th and 16th of Decembers VII. and IX. trustworthiness committee meetings. With these decisions texts were written in turn: Guided Writing, Interactive Writing, Independent Writing and Guided Writing.

In the research process, a 'writing component pattern' emerged in Figure 3, consisting of Interactive Writing, Guided Writing, and Independent Writing, considering students' development. When language skills of hearing impaired students are examined, there are differences in language levels of students of similar age group (Paul, 1998; Schirmer, 2000). It is almost impossible to create a group of hearing-impaired students with a uniform level of language skills. For this reason, different writing component patterns should be expected in writing studies with different student groups.

Figure 3: Writing components pattern

When the pattern is examined, it seems that the teacher and the student have begun with interactive writing where they write a common text, which requires more support for the student in the writing instruction (Dostal and Gabriel, 2015). Later, it appears that the student is given more responsibility by the less supported, more independent, guided writing and independent writing (Asselin, 1999; Pressley et al, 2005; Tompkins, 2007). In subsequent written expressions, it was determined that there was a return to text writing with components to make more reinforcement and repetition (Richards and Reynandya, 2008). This finding of the research coincides with the other researches in the literature that the hearing-impaired students need intensive repetition and support due

to the limitation of language skills (Luckner and Cooke, 2010; Paul, 1998; Rupley, Blair and Nichols, 2009; Schirmer, 2000).

When the level of writing skills of students in pre-test and post-test was examined, it was determined that the writing skills of all students except for one student were improved limitedly. (Figure 4) It is thought that the first student's development is due to the personal characteristics of this student. This student was disciplined, willing to learn and self-repeating. It is believed that the reason for limited development in other students is that they need longer time to develop their writing skills and that the limitations of the language of hearing impaired students require longer periods of intensive repetition in lessons than their normally hearing peers (Dostal and Wolbars, 2014; Paul, 1998; Rupley, Blair and Nichols, 2009; Schirmer, 2000).

Figure 4: Students' written expression pretest and posttest results

This study, in which written expressions of hearing-impaired university students were examined in terms of determining the writing components to be used, was carried out through an action research because it aims to answer the question 'How?' (Johnson, 2002). Moreover, in the field of special education, there are problems in the analysis of the data with the reasons of the problems such as the number of subjects in experimental researches. This is another reason for organizing the study as an action research.

In this study, the trustworthiness committee reports, which are required by the action investigation, have a separate significance. In this research that aims to improve the writing skills, the researcher has made decisions and made action plans by interviewing field experts to solve the problems experienced during the applications. Decisions taken by the trustworthiness committee have contributed to the enhancement of the quality of implementation and have increased its validity (Baumfield, Hall and Wall, 2008, Creswell, 2005, Henning, Stone and Kelly, 2009). It is thought that this study, which is a teacher research, can be an example of different researches for the development of different skills by field teachers and researchers.

Results

In the study conducted with the hearing-impaired university students, the evaluation of the writing components of the texts and the preparation of the lesson plans, the pre- and in-process evaluations played an important role. The researcher repeatedly included the use of writing components during writing lessons. The reason for this is the need for intensive repetition in the education and training of hearing-impaired individuals. The repetitions achieved and the lessons that are tailored to the needs and levels of the students are positively affecting the development of writing.

Lessons were carried out according to the principles of "BLIA" in the research process. For this purpose; to ensure that the writing is appropriate to the interests and needs of the students; students were authorized to make decisions on specific topics and choose texts to read or write. By giving importance to how the working process is carried out as much as the resulting product, the lessons are designed with the evaluations made.

In order to ensure that the strategies and skills to be taught are appropriate to the level of the students, opinions were obtained from the instructors and experienced practitioners who are experts in their fields. This is also the case for action research. The implementation of the decisions taken by the trustworthiness committee increased the validity of the data. This is a sign of the importance of collaboration among field specialists in the field of general and special education.

The data of this research is limited by seven students who is studying in School for the Handicapped which is the only institution that provides university education to hearing-impaired college students in Turkey. The writing pattern that emerged in the research reflects the characteristics and needs of the students participating in this research. The same research as the purpose of generalizing the findings obtained from this research can be repeated in different educational environments, spreading by different participants and researchers for a longer period of time. In addition, in the development of writing skills, semi-experimental, experimental, and single-subject investigations can be conducted to determine the cause-effect relationships between variables. It is thought that this study, which is a teacher research, can be an example of different researches for the development of different skills by field teachers and researchers.

Abstract

The objectives of this research were: to development and test the congruence of entrepreneurial leadership indicators for private educational administrators, the multi-stage random sampling was applied for 940 administrators. Collected data were analyzed by programs computer.

The research findings were: 1) the entrepreneurial leadership indicators for private educational administrators consists of 5 main components, 18 subcomponents and 77 indicators. Confirmatory factor analysis of Model for measuring the entrepreneurial leadership indicators for private educational administrators, the Model was congruent with empirical data, the Chi-square(χ^2) = 105, and Degree of Freedom(df) = 98, P-value = 0.27, GFI = 0.99, AGFT = 0.99, and RMSEA = 0.014, and the major factor had factor loading was higher than 0.70 in every factor. The minor factor and indicators had factor loading in higher than the criterion level as 0.30 in every factor and indicator.

Keywords: *Entrepreneurial leadership, indicators, private administrators*

Background and significance of the problem

The development of the country contributes the prosperity in the future. It must focus on strengthening existing capital of the country and enough power to impel "Human development". To be prepared with the 21st Century Education Development Plan the Ministry of Education Development Plan No. 12 (BE 2560 - 2564) has set strategic goals and targets that can meet the major development needs of the country. (Ministry of Education, 2560)

The Education Management in Thailand, Schultz (1982) The private sector has played an important role in providing education services to alleviate the burden of the state. Economists have said that encouraging the private sector participate in education will increase the efficiency of government education as it is competitive. According to the intent of the National Education Act, 1999 to provide people with the opportunity to receive quality education and participation in private education. It is an important strategy to drive educational reform to achieve government policy. The quality and standards of education are monitored by the quality and standards of education similar to Section 5, Part 3, Section 43 (Office of the Secretary of the Education Council, 2009). Consequently, private schools need to develop quality education according to educational standards.

The school administrator is a person who will be responsible for school personnel within the school. (James & Connolly, 2000), an important person to point out the success and failure of the organization in education reform and Key to Open a New Dimension of Educational Reform. Act as supervisor supervising school administration. Be able to convince the co-workers to work together. Leadership is a leader. (Ministry of Education, 2009). That said, school administrators are key personnel of the school and be a professional leader, have knowledge, innovate learning and expand the learning potential of the members. Including professional ethics (Teeran Charoen, 2557) Leadership for school administrators is important and highly motivated because Change of the humanities, quality inspection, teacher development and governance in the organization. Schumpeter (1965 Cited in McNeill, 2012) Describe the concept of entrepreneurial leadership, Entrepreneurship as a form of management and transforming the management style into an organization is an innovative enterprise. Focus on learning and developing organizations together. The success of the organization will be sustainable that need a quality person same as Palmer (1971), Miller & Droge (1986), Robinson (1991), Koh (1996), Hatem (1997), Coglisier (2004), Chen (2007), Surie & Ashley (2007), Strubler (2010), Leonard (2013), Goossen & Stevens (2013) that give the concept of entrepreneurial leadership. To show how to be a business startup, operation plan and business all aspects by themselves by accepting the potential risks. To look to the profit from the performance of the business. Make sure that the person will be lead the establishment is enthusiasm, integrated with management principles in organization management by finding fault then make improvements. Be the person who sees the business opportunity, can find a channel to build their own business, and ready to take risks.

If the model developed by the researcher is consistent with the empirical data. The model structural relationships entrepreneurial leadership for private educational administrators can be use in guidelines for planning or establishing criteria for evaluating school administrators in basic education commission. To develop of basic school administrators in accordance with the theory and research. This will enhance the performance of private school administrators. Effect to the management of education and development of quality education. In addition, the model structural relationships entrepreneurial leadership for private educational administrators to make the decision and evaluate the performance. Nonglak Wiratchai (2002) Tested models have the ability to data reduction.

It is easy to use, reduce the duplication of data, and manage data concisely. It can be used effectively in the operation of the organization.

Research objectives

1. Development of entrepreneurial leadership indicators for private. educational administrators
2. Test the model congruence of entrepreneurial leadership indicators for private educational administrators.

Research Definition

1. Entrepreneurial leadership are behavioral expression of private school administrators show visionary, risky, innovativeness, creative thinking, and proactive approach. Measure from 5 factors 1) Visionary 2) Risk Taker 3) Innovativeness 4) Creativity Thinking and 5) Proactive
2. Creating and Developing indicators are the process to obtain information indicate to entrepreneurial leadership of private school administrators by combining factors 1) Visionary 2) Risk Taker 3) Innovativeness 4) Creativity Thinking 5) Proactive

Method of the research

This research method has 3 stages

1. Study and analyze for define the indicators entrepreneurial leadership of private school administrators. Researcher Researchers study and analyze documents from theories, documents, academic texts, journals, academic articles and related research for create a semi-structured interview. Bring to the 5 experts for examine the quality of the interviews in terms of content validity. Coverage of questions with objectives and the clarity of the language for In-depth interviewing with 9 experts by semi-structured interviews. It consists of professors from various universities, management in the Office of Private Education Commission, school administrators from both public and private. Use purposive Sampling methods.

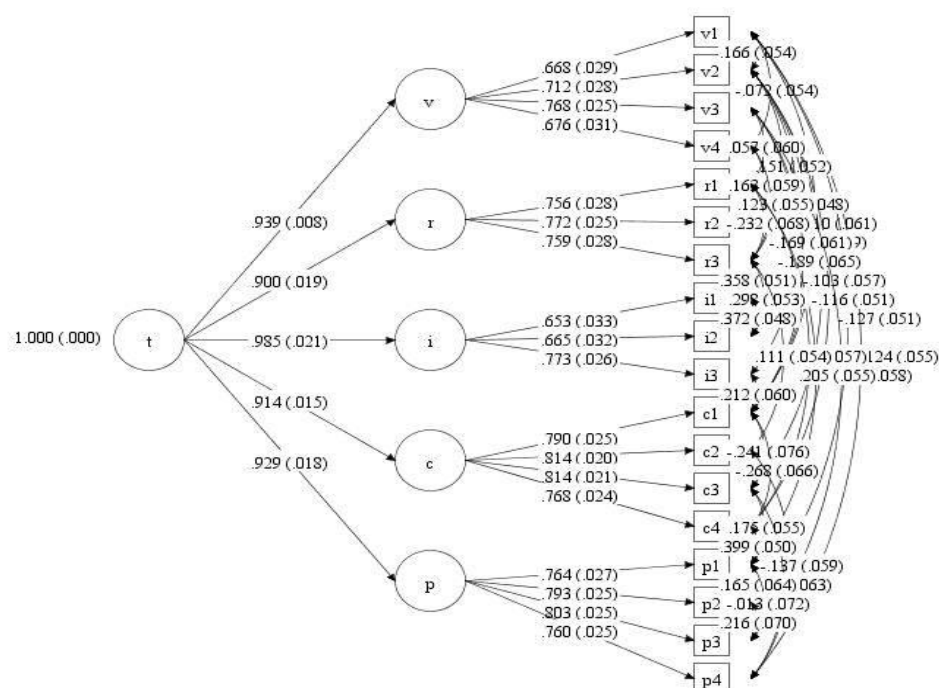

2. Development of entrepreneurial leadership indicators for private. educational administrators. Reacher found that, the entrepreneurial leadership indicators for private. educational administrators by focus group discussion. Target group was 9 experts by Using purposive Sampling. Consist of academic executive education, university lecturers' directors of area office, and administrators by analyzing the content of the focus group discussion.

3. Test the congruence of Model for measuring entrepreneurial leadership indicators for private. educational administrators. People were private school administrators under the office of the secondary education office in office of the basic education commission in year 2560, 3901 people. Size of the sample was analyzed by model; advanced statistics require a large sample size. (Lindeman, Merenda & Gold, 1980, cited in Nonglak Wiratchai, 1999). The maximum ligature parameter estimation was used. (Maximum Likelihood) Sampling Group of informants consisted of 278 people. The multi-stage random sampling was use. The research instrument was a 5-rating scale (Rating Scale). Target group was 7 experts and analyze Content Validity. Concerning the consistency of the questions with the definition of action and the clarity of the language. Index of item objective congruence (IOC) was between 0.80-1.00. Reliability and Cronbach's alpha coefficient was 0.98. The Confirmatory Factor Analysis: CFA by consider from Chi-Square, degree of freedom (df), Goodness-of-fit-index (GFI), Adjusted Goodness-of-fit-index (AGFI), Root mean square error of approximation (RMSEA) and P-Value by using computer programs.

Summarize and discussion

Research Result

1. Entrepreneurial leadership indicators for private. educational administrators have 5 main-factors, 18 sub-factors and 77 indicators include 1) Innovativeness include 3 sub-factors, 10 indicators. 2) Visionary include 4 sub-factors, 21 indicators. 3) Proactive include 4 sub-factors, 15 indicators. 4) Creativity Thinking include 4 sub-factors, 20 indicators. 5) Risk Taker include 3 sub-factors, 11 indicators.
2. Confirmatory factor analysis of Model for measuring the entrepreneurial leadership indicators for private educational administrators found that, the Model was congruent with empirical data, the Chi-square ($\chi^2 = 105$), degree of freedom (df=98), Goodness-of-fit-index (GFI = 0.99), Adjusted Goodness-of-fit-index (AGFI=0.99), Root mean square error of approximation (RMSEA=0.014), and (P-Value = 0.27). Accept the hypothesis that the Model was congruent with empirical data.

Harmony index of measurement model entrepreneurial leadership indicators for private educational administrators

Index of harmony	measurement	Analytical results	result
χ^2 - Test	Insignificant P> 0.05	$\chi^2 = 105$ Df= 98 P-Value = 0.27	pass
χ^2 / Df	< 2.00	1.1	pass
RMSEA	≤ 0.05	0.014	pass
SRMR	≤ 0.08	0.026	pass
CFI	≥ 0.95	0.99	pass
TLI	≥ 0.95	0.99	pass

Research Discussion

1. The study and analysis determine entrepreneurial leadership indicators for private educational administrators have 5 factors in private educational administrators. There are very important for private educational administrators and all leadership educators must have leadership in this manner, consistent with Robert & Jeffrey (2000) said that entrepreneurial leadership is to increased efficiency in management by recognizing change, opportunities and limitations are created. Successful entrepreneurs are often remembered for their environment. He will look for obstacles, disturbances, or innovations that can create opportunities. School administrators need to pay attention to the surrounding environment, control creative potential and in every change, we get new ideas. Administrators must learn outcomes and solutions using various strategies. Administrators with entrepreneurial leadership will find advantages and opportunities for change. Applying the skills with strategic concept, has developed the results of the practice. Entrepreneurs must be aware of the good organizational structure of the organization. This will lead to further development.
2. Development of entrepreneurial leadership indicators for private educational administrators have 5 main-factors, 18 sub-factors and 77 indicators. Factors and indicators suitable for private schools. Because the context of private education institutions is both similar and different from the state educational institutions. In particular, the difference in management that can be carried out with the approval and needs of stakeholders is very high and management flexibility. The individual development in the

development can be leap forward. It can make benefit and maximize efficiency. This is consistent with Schumpeter's (1965 Cited in McNeill, 2012) said that entrepreneurial leadership and society of entrepreneurs are entrepreneurship as a form of management. Transforming the management style into an organization is an innovative enterprise focus on learning and developing organizations together. The success of organizations that are sustainable can depend on the motivational group of successful entrepreneurs.

3. Consistency results found that model entrepreneurial leadership indicators for private educational administrators that was develop consistent with empirical data and statistical significance was statistically significant. Confirmation factor analysis of entrepreneurial leadership indicators for private educational administrators have 5 factors. It is an important factor of the entrepreneurial leadership indicator for private school administrators because It is a factor of structural integrity. Innovativeness has maximum weight value, the school administrators must have the skills in explore and collect information, create ideas and bring ideas to practice according to Surie & Ashley (2007). Conclusion of the innovativeness from reviewing relevant documents and research. Innovativeness is exploration, creation, reflection & implementation and evaluation & act.

Suggestion

The results of this study suggest that the following research results and suggestions for further research will be used.

- 1) Suggestions for the use of research results.
 - 1.1 Educational, people involved and all private education institutions can bring the results of research as a guideline to evaluate for the development of school administration under the jurisdiction by leading indicators needed some indicators used to determine the rate in the early stages and development in the next phase.
 - 1.2 The studying factors of entrepreneurial leadership indicators for private educational administrators have 5 factors, consistent with empirical data and statistical significance was statistically significant. Confirmation factor analysis of entrepreneurial leadership indicators for private educational administrators. Therefor, School will lead to the application in the institution can be selected to remove some factors, some indicators or all for use by based on the context of each school.

Suggestions for further research

1. There should research the structural equation modeling of entrepreneurial leadership for private educational administrators in other rating.
2. There should do the workshop for administrator development affecting School Performance in 5 ways consist of 1) Visionary 2) Visionary 3) Innovativeness 4) Creativity Thinking 5) Proactive, to create a variety of knowledge. Research and development may be undertaken and participatory action research.
3. There should be a study of factors that affect to the entrepreneurial leadership of future school administrators and in different contexts.
4. It should be studied and developed a guideline or method for the implementation of entrepreneurial leadership for school administrators to be used effectively.

Abstract

Digital competence is a key skill that every person must develop in the current times. This article presents a research work that aims to analyze the potential of the Project based learning (PBL) methodology for the development of digital competence. It is carried out through a quantitative study by applying a Likert Scale questionnaire to a group of future primary school teachers. The main results show the effectiveness of this methodology for the development of the five areas of digital competence: information and information literacy, communication and collaboration, creation of digital content, security and problem solving. In addition, the use of this methodology in the classroom has encouraged the development of skills such as: analysis and synthesis, problem solving, organization and planning, teamwork, ability to learn, adapt to new situations, among others. In conclusion, students claim to have improved their digital skills thanks to the methodology used, as well as other skills necessary for lifelong learning.

Introduction

Project Based Learning (PBL) is a teaching-learning methodology that can be adapted to multiple subjects and educational ages (Trujillo, 2015). Abducted by a society that demands ever more competent citizens in multiple fields, this methodology becomes an effective teaching-learning strategy for the development of competences in students (REFERENCE). The democracy of access to knowledge, being possible thanks to the advances of the technology Nothing Something Fairly Much ical revolution, facilitates the introduction of new methodologies that bet on an active learning of the students, in which this is the main protagonist of their knowledge. This methodology offers a framework for transforming current educational practices, since it is part of connecting with our students' own interests.

According to Vergara Ramírez (2016) the students who follows a PBL methodology say that "they learn because they want". For this, it is important that the teacher establish a connection with their students, asking their interests, concerns, among others. In addition, a feeling of commitment must be generated between the teacher and the students, having, in turn, to motivate them, guide them, etc. The PBL aims to empower the protagonism and implication of students in their teaching-learning process (Castillo-Sagasta, 2017, Fernandez-Samaca, Scarpetta, Rodriguez, & Mejia, 2017, Terrón-López et al., 2017). The students mark their learning pace and progress towards the acquisition of new knowledge and skills (Rodríguez-García, Hinojo-Lucena & Ágreda-Montoro, 2017). Moreover, this methodology promotes a style of learning by discovery (Trujillo, 2015). For that reason, the student must develop research skills, organization, planning, writing and restructuring to progress in their own learning. Also, they should develop interpersonal skills, teamwork, critical and self-critical ability, ability to learn to learn, ability to adapt to new situations, information management skills from various sources, communication and written in one's own language, etc.

In this context, digital competence has been defined in the EC Recommendation on Key Competences (European Commission, 2006) as a key competence for employment, learning, self-development and full participation in society. Being digital competent is necessary nowadays for working, living and learning in the knowledge society (Ala-Mutka, Punie & Redecker, 2008). It involves five work areas: information literacy, communication and

collaboration, creation of digital content, security and problem solving (INTEF, 2017).

In this paper we present a work carried out through a research-action with a sample of future teachers who are studying at the University of Granada (Spain). With this sample we work digital competence as the central axis of the problem to be solved through PBL methodology.

The Study

We present a research financed with public funds of the Ministry of Education, Culture and Sports of the Government of Spain (Reference: FPU14 / 04626). The objective of this research is to analyze the perception of future teachers of Primary Education about the effectiveness of the ABP methodology for the development of instrumental (analysis and synthesis competence; problem solving; organization and planning; information management; learning about the field of knowledge or specific topic; oral and written communication) and digital competences for their personal and professional future. For that, we carry out a investigation-action, applying a quantitative, descriptive and cross-sectional methodology for the study (Hernández Sampieri, Fernández Collado, & Baptista Lucio, 2016).

The experience was carried out during the course of the subject Teaching and Technological Resources applied to Primary Education in the 2017-2018 academic year with a group composed of 41 students from the second year of the Master's Degree in Primary Education. We conducted a convenience sampling because it is an experience carried out with our students. In the following tables (1 and 2) we obtain more information about the participating sample.

Table 1: Sex of the sample

Sex	Frequency	%
Men	13	31,7%
Women	28	68,3%

Table 2: Age of the sample

Age	Frequency	%
18-21	35	85,4 %
22-25	3	7,3 %
26-30	1	2,4 %
>30	2	4,9 %

To collect the information, a questionnaire constructed ad hoc was elaborated in order to know the usefulness of the ABP methodology for the development of instrumental, personal and systemic generic competences and also the digital competence. For the purpose of this investigation, we will focus on the items related to the analysis of instrumental competences. The questionnaire was structured in two parts: the first asked about the sex and age of the student and the second questioned the effectiveness of the ABP methodology for the development of instrumental competences, such as: analysis and synthesis capacity, resolution of problems, capacity of organization and planning, abilities of management of the information coming from diverse sources, basic knowledge on the area of study and oral and written communication in the own language. To know this, four response possibilities were offered: Nothing (1), Something (2), Fairly (3) and Much (4), for which a Likert Scale was followed. Throwing more data on the instrument, not published until now, once all the relevant processes for its validation have been carried out, its reliability index was calculated through the Cronbach's Alpha obtaining as result $\alpha = 0,966$.

Findings

The Table 3 presents the descriptive analysis performed on each of the items according to their minimum, maximum, average and standard deviation values and gives us a general view about the usefulness of the ABP effectiveness for the development of instrumental general skills.

Table 3: Instrumental skills developed by the students

	Minimum	Maximum	X	Standard desviation
Analysis and synthesis competence	2	4	3,29	,642
Problem solving	2	4	2,98	,651
Organization and planning	2	4	3,41	,741
Information management	2	4	3,22	,690
Learning about the topic	2	4	3,39	,628
Oral and written communication	2	4	3,29	,642

As we can see, the students have indicated that this methodology has benefited them to improve their competence in organization and planning above all others. In second place are the competences related to analysis and synthesis, basic general knowledge about the area of study and improvement of oral and written communication in the language itself. As a lesser developed competence you would find the improvement of your ability to solve problems.

The results show that 56.1% of the students affirm that the development of the work through the PBL methodology has meant a very considerable improvement with respect to their capacity to organize and planning. The 46.4% of the students think that the development of this experience has benefited their general knowledge about the area. In addition, 39% of the students think that this methodology has favored them totally to improve their ability to analyze and synthesize and to communicate orally and written in Spanish. The 36.4% of students say that this methodology has greatly benefited them to improve their ability to manage information from various sources. Finally, 19.5% of the students have effectively developed their ability to solve problems. All of this we can see below (Figure 1):

Figure 1. Key competences development

The second part of the research refers to the improvement of digital competence as the key competence to be developed through the PBL methodology. Regarding to the improvement of the first area of digital competence (information literacy), 59.72% of the students consider that this methodology has helped them to improve their competence in this dimension. On the other hand, 27.78% said it was helpful, and finally, 12.5% said that this methodology has helped them to develop such skills (Figure 2).

Figure 2. Utility of the PBL methodology to improve information and information literacy skills

Going into the second dimension, 47,22% of the students says that this methodology has contributed to a better

development of communication and collaboration skills. 36,11% of the sample think that this methodology has been helpful to improve their competence in this area. Finally, 16,67% says that this methodology has been useful for the training in this area (Figure 3).

Figure 3. Utility of the PBL methodology to improve communication and collaboration skills

The third dimension refers to creation of digital content. Most students think that this methodology has been very useful for the effective development of these skills (47,22%). Moreover, we highlight a 44,25% and 8,33% of the students who support the potential of this methodology as we can see in the following figure.

Figure 4. Utility of the PBL methodology to improve creating digital content skills.

Regarding to the security dimension of the digital competence, on the one hand, most of students (43.06%) indicate that this methodology has been very helpful in improving their security skills, followed by 33.33% of students who say that it has been very useful and 22, 22% that has been something useful (Figure 5). On the other hand, we only found 1.39% of the subjects who affirm that this methodology has not helped them to improve their digital security skills.

Figure 5. Utility of the PBL methodology to improve security skills in interaction with digital media.

Finally, concerning the last dimension of digital competence: problem solving, we come back to find a majority of students who think that this methodology has been quite helpful with 45.83%, followed by those students who say that it has been quite useful with 31.94%. We found, at the same time, 19.44% of the students who affirm that this methodology has been useful for them and 2.78% who say that that PBL methodology has not helped them to improve their skills in the problem solving area (Figure 6).

Figure 6. Utility of the PBL methodology to improve problem solving skills.

Conclusions

Project-based learning (PBL) is a teaching methodology that can be applied in any field of knowledge. In this way, we find application studies in the field of engineering (Terrón-López et al., 2017), physics, computer science (Benjumeda & Romero, 2017), education (Lee, Kim, & Byun, 2017), the company (Ye, Van, Chapman, & Jacobson, 2017), among many others.

As a result of the results found, we can define the PBL as an effective methodology for the development of instrumental competences in our university students, as reflected in various investigations (Arbelaitz, Martín, & Muguerza, 2015; Arroyo-García, 2017; Castillo-Sagasta, 2017; Grande Martín, 2015; Lee et al., 2017). This methodology helps to create and develop habits of reflection, criticism, analysis, synthesis or evaluation of contents in the different stages of the process. In turn, learning with and from others provides diverse opportunities to exchange learning experiences with others. In spite of being experiences in which, according to the students (Trujillo, 2015) they have more work compared to traditional methodologies, they end up preferring this type of strategies in contrast to those that are limited to following a textbook and reproducing the information learned without questioning and reflection.

With regard to the planning of teaching through an ABP methodology involves a deliberate and reliable preparation of a series of actions and guidelines related to the project to be developed so that it responds to the consideration of learning with a learning perspective in which the competences of the person are put into practice (Trujillo, 2015; Vergara Ramírez, 2016).

In this sense, if one of the purposes of university education is to provide highly competent citizens to successfully develop in the Information and Knowledge Society, it is our obligation to carry out innovative learning experiences to promote an optimal development of the same. To do this, students must be aware and participate in the whole process and in the steps they have to take throughout the course of their learning, developing values, strategies, skills, etc.

As a summary of the work presented, we can affirm that the methodology based on project-based learning contributes effectively to the competence development of university students and, more specifically, to the future teacher of higher education, as has been demonstrated in this investigation. Despite being a research-action experience carried out in a particular subject, various investigations have revealed the potential of this methodology for the comprehensive development of students and the necessary competencies according to current society to function effectively in the same.

Finally, Ala-Mutka, Punnie & Redecker (2008) says that:

“Lifelong learning strategies need to answer to the growing need for advanced digital competence for all jobs and for all learners. Learning digital skills not only needs to be addressed as a separate subject but also embedded within teaching in all subjects. Building digital competence by embedding and learning ICT should start as early as possible, i.e. in primary education, by learning to use digital tools critically, confidently and creatively, with attention paid to security, safety, and privacy. Teachers need to be equipped with the digital competence themselves, in order to support this process” (p.5).

"Developing Media Theory" As A Mixed Communication Theory: A Russian Media Case

Dr. Gönül Cengiz

Assistant Professor of Kahramanmaraş Sutcu İmam University, Department of Cinema and Television,
Kahramanmaraş, Turkey,
gonulcengiz88@gmail.com

Abstract

"Developing Media Theory" is considered as a mixed media theory. Because the theory includes the efforts of the developing countries to adapt some of the principles and norms of the four previously published media theories to their own media systems.

According to the developing media theory, which is a kind of authoritative media theory, governments in developing countries have played an important role, function and responsibility in the political and economic development of the media. In this context the most important manifestation of Russia's media system is that state control has a limited pluralism. At the same time Russia, the fact that the media is strongly under state control opens the way for the government to continue to provide a strong state control after the market liberalization. In the framework of the Development Theory that emerged within the basic fabric of developing countries, the important role of the media around the concept of "westernization" in Russia, it cannot be said that the Russian media is shaped in line with national goals and serves these purposes.

In this paper, the media in Russia was assessed in terms of a holistic view by using qualitative research method. The research problem was Developing Media Theory and it was studied with an interpretive approach from the Perspective of Russia.

As a result of paper the media in Russia cannot fully fulfill its functions although it is on its way to becoming one of the ideological apparatus of the state.

Keywords: Developing Media Theory, Mixed Communication Theory, Russian Media, State Intervention

Introduction

"Developing Media Theory" was developed due to the application difficulty of four basic media theories, developed by Siebert et al. under certain conditions and failing to satisfy in solving communication problems of third world countries in particular.

The starting point of the Developing Media Theory set out by Denis McQuail is that the media should support and encourage national development in the direction of specific economic and political development goals in a developing country. In the scope of Developing Media Theory, journalists are considered as intermediaries and representatives of national development or modernization.

According to this theory, as the state may control and direct the media in order to reach development goals, it can be limited by using different forms of direct and indirect control (Chebi, 1999: 52). One of the main reasons for developing this new theory of the media is the support role required for the development process as well as all the traditional functions of the mass media in developing countries. As Altschull stated, the mass media need to fulfill their functions as "tools to help development of the countries" within the scope of theory (Altschull, 1984: 284).

The roles that mass media have to assume in developing countries are also present in the national development and communication policies that have taken place in the 1950s and 1960s and that are in line with various economic, social and political changes. Especially the dominant view in these years is "they will need the help of information in the difficult and slow journeys of socio-economic prosperity and development process of Third World Countries" (Stevenson, Cole, 1984: 9).

McQuail points out that there are many sources that set the stage for the development of the theory, but the MacBride Commission Report, prepared primarily by the UNESCO international organization, is important (1987: 120). Some comments and suggestions in the content of the Commission Report are in line with some of the basic principles that the Instrument for Development Theory suggests in the interaction of communication, economic development and national structuring. The Commission emphasizes the inevitability of the integration of communication and development for developing countries:

"Development strategies should include communication politics as an indivisible part in the definition of requirements, in the planning and implementation of selected priorities. Communication in this context should be considered as a major development resource, a tool to provide genuine political participation in decision-making, a central information-based approach to defining policy options, and a means of recognizing national priorities" (Many Voices in a Single World: Communication and Society, Today and Tomorrow, (Mac Bride Commission Report, 1993: 288).

The main features of the theory can be summarized by McQuail as follows:

- The media should accept and fulfill the positive developmental responsibilities in line with national policy.

- Freedom of the media should be subjected to restrictions according to economic priorities and community development needs.
- In media contents, it should be prioritized news and information flow of other countries similar or close to the conditions of the country in terms of national culture and policy.
- Journalists and other media employees should know that they also have responsibilities as much as freedom of information collection and dissemination.
- In accordance with development tools, the state has the right to intervene or direct control, censorship or subsidy right" (McQuail, 1987:121).

In some respects, "Development Tool Theory" is also regarded as a mixed press theorem (Budak, 1997). As Vural (1994: 30) pointed out, the Development Tool Theory ultimately has a mass media structure that is "not as liberal as the countries where the theory of social responsibility works, as democracy has played on the basis of the libertarian ideology, and not as a jurist as the countries to which the authoritarian theory applies". The determinants of the basic characteristics are the social-economic conditions and political systems of the countries in question. With regard to the development and development of the country, the state may, if necessary, censor mass media, intervene in publications, or have a say in the operation of the vehicle. This situation manifests itself differently in Russia. Although there is no direct intervention in Russia, the government intervenes indirectly in the media and implements censorship. Russia sells high volumes of publishing licenses to publications it dislikes.

The Theory of Developing Media in Russia includes traces of both authoritarian theory and the Soviet Communist Theory, but aims at describing the relationship between the political system and the mass communication system. For this reason, this theory is accepted as a mixed communication theory.

Research Objectives and Findings

Development Tool Theory keeps in step with the freedom of thought and expression. Thus, it has a non-authoritarian mass media order as much as the non-liberal states where authoritarian theory is dominant such as the countries where the Social Responsibility Theory is applied but the democracy exists. The basic characteristics are determined by social-economic conditions and political systems of the countries conforming to this theory.

The state may censor to mass media, intervene in publications or have the right to comment on the operation of the tool as regards the development of the country, if necessary. This situation differs greatly in the Russian Federation.

The state indirectly intervenes in the media and implements censorship although there is no direct intervention. In Russia, the sovereignty of power directly affects the media of the country. The power itself is in tendency to determine almost the majority of the media agenda.

On the other hand, state interventions are also generally differed related to the commercial dimensions of publications. For example, Russian state sells publishing licenses to media organs in high prices, which the government does not like. The opposition media, which do not have the power to get that license at high prices, asks for help from the state again and they have to maintain the broadcasting policy according to the state's wishes. Mass media are regarded as dependent or guided by these directions; freedom of thought and expression are put on the back burner in order to protect national interests and it may be the case that the tool operates entirely in relation to the central authority. The aspects of the theory evoking authoritarian norms are especially remarkable at these points. The Russian government has not only a major influence on the printed media, also on audio-visual mass media. Establishment and operation of radio-television broadcast systems, establishment and implementation of telecommunication policies, and all necessary infrastructures for these systems require great funding. Due to inadequacy and lacking of private sector facilities, it is inevitable that the mass media is in cooperation with the state in order to improve economic and social conditions (Ansah, 1991:216). Thus, it facilitates the state control in this field. The Russian government makes private mass media dependent on itself with these ways applied for the private media.

At the same time, the developing Russian government puts many mass media under protection by expropriating and ensures that journalist or publishers become public officials working towards the goals of the government. In addition, one-party regime, which is very common in the Russian Federation and low or inadequate opposing voices, make newspapers, radios and televisions.

Methodology

In this study, the media in Russia used a qualitative research method to evaluate a holistic viewpoint, and the research problem, the Developing Media Theory, was examined through an interpreting approach from the perspective of Russia.

Research Outcomes

As a result, ruling elites in Russia has begun to shape maximum independent national media policies free from foreign influences (especially from the West), support and represent a national socio-cultural consensus to preserve their continuing sovereignties. Thus, many features of the Developing Media Theory we called it as mixed media

theory manifest itself in Russian media order. But let's consider the fact that it is difficult to provide common ground in the implementation process of Development Tool Theory, a theory that can be applied in developing countries with different political, economic and social systems. Therefore, it is hard to say that it is completely suitable for developing theory although the media in Russia has many features of this theory. It is possible to characterize the media systems applied in Russia in the 1990s as a derivative of the authoritarian, liberal and social responsibility theories or a mixture of these.

In Russia, its legal and administrative body is more legalized by parties and often has the tradition of avoiding law. While the important role of the media in the Westernization concept in Russia is taken up, it cannot be said that the Russian media has been formed in the direction of national targets and served for these purposes.

Abstract

This project demonstrates how the principles of Joint Practice Development (JPD) (Fielding et al, 2005) have been applied when attempting to solve the issue of staff engagement with CPD. The culmination of this project was the Teachers Takeaway (www.teacherstakeaway.co.uk) which is an online platform showcasing instances of outstanding teaching, learning and assessment where staff from 3 local colleges; Havant and South Downs, Eastleigh and Fareham College have recorded 3-5 minute videos on various topics including management of learning, use of technology and embedding English and Maths. The collaborative nature of JPD (and also the outcome of the project) sought to break the “silo mentality” or as Schulman (1993) calls it “pedagogic solitude” via inclusive and effective relationships being built and this website is an example of how that can be achieved.

Development Of An Instructional Supervision Model To Enhance Learning Management Competencies In Primary School

Abstract

This research was designed to develop an instructional supervision for enhancing learning management competencies in primary schools. Researchers utilized qualitative method including in-depth interview, documentary analysis, and observation approaches to collect data. Researchers began their research by reviewing the related past research literatures as a method of documentary data collection. Findings from the first phase indicated that there are four components of instructional supervision model to enhance learning management competencies namely interactions, organizational climate, action, and assessment for development. The second phase of this research was conducting focus group interviews to seven experts to verify the suitability of the four components and also the related indicators. Findings of the second phase revealed for remaining the four components but adding 24 behavioral indicators while the third phase of finding adding to 33 indicators. Researchers then developed a tentative instructional supervision model to enhance learning management competencies based on the findings from second and third phases. In the final phase, researchers would like to obtain the feedback on the effectiveness of the developed instructional supervision model by conducting classroom observation and in-depth interviews to nine school administrators and teachers who have used the developed instructional supervision. Findings from the final phase were used to refine and modify thus propose the instructional supervision model to enhance learning management competencies in primary schools of Thailand.

Keywords: *Instructional supervision model; learning management competencies, primary schools.*

Introduction

Learning management in this research is defined as the capacity to design pedagogic strategies that achieve learning outcomes for learners. Smith and Lynch (2010) highlighted that learning management is an emphasis on the design and implementation of pedagogical strategies that achieve learning outcomes. Underpinning the learning management premise is a new set of knowledge and skills, collectively referred to as a futures orientation and which attempt to prepare the mindsets and skills sets of teachers for conditions of social change that pervade local and global societies in 20th century (Lynch, 2012).

Supervision provides an opportunity to promote teacher efficiency, abstract thought, and a reflection on teacher's own instructional methods. If the school administrator lacks adequate knowledge of supervision and does not know how to meet the needs of the teacher, then an unproductive working relationship may be established. So teacher could spend time being upset with the school administrator and might not devote sufficient effort toward teaching learners. More importantly, learners' desire, ability, and levels of learning may be affected. When the school administrator cannot meet the teacher's needs, the entire teaching experience may not be as effective as it could have been (Fritz & Miller, 2003)

In recent years, instructional supervisions have been the subject of much criticism. Tubsuli, Julsuwan, and Tesaputa (2017) clarified several supervision preparation and operational problems such as lacking of supervision plan, lacking of holistic and systematic learning management plan, lacking of supervision cooperation, supervisors are lacking of knowledge and skills in Thailand. In response to this inefficiency, Ministry of Education, Thailand has to make an effort to reform their supervisory process is not simply a procedure but be innovative and make their impact significantly on quality of schools.

Chansirisira (2008) emphasized that teachers' competencies and performance are important factors to affect the achievement of work goal. Therefore, those who hold the positions must have the knowledge, attitudes, skills, experiences, abilities, and competencies to accomplish the tasks at the minimal acceptance standards. Consequently, supervision can be considered as unique competencies and skills that allow the supervisor helps the

supervisee. In other words, supervision model exists can provide a framework for the process. In addition, supervisors incorporate various modes and interventions to facilitate supervisee development (Chansirisira, 2008). On the other hand, awareness of these supervision models, modes, and interventions will help the supervisee to understand the underlying supervision processes and therefore, be a more active participant in the supervision process. The interactions and relationships between supervisor and supervisee are vital because a dialogue can develop a means of sharing personal styles and preferences between supervisor and supervisee for supervision model to be used in supervision (Chansirisira, 2017).

Research Objectives

This research was designed to propose an instructional supervision model to enhance learning management competencies in primary schools of Thailand. To achieve this main aim the following specific aims were formulated to guide the research:

- i. To identify the components and indicators of instructional supervision model to enhance learning management competencies in primary schools.
- ii. To propose the instructional supervision model to enhance learning management competencies in primary schools.

Method

Researchers employed qualitative design as it is a systematic subjective approach to gain insight, explore the depth, richness, and complexity inherent in the phenomenon. Researchers began the research using document analysis to investigate the components and their indicators by analyzing the related documents both printed and electronic materials. This document analysis requires that data be examined and interpreted in order to elicit meaning, gain understanding, and develop empirical knowledge (Bowen, 2009). This is followed by focus group interviews to a group of seven experts to validate the identified components and indicators from the first phase. The seven experts were required to give suggestions for improvements. The focus group and in-depth interviews were found appropriate in this case because the seven experts were needed to have an open discussion and the nine practitioners have to discuss deeply on the identified components and indicators. Researchers acted as a moderator to aid the discussion by using probes to collect desirable data to develop the instructional supervision model. This process is recorded and transcripts were used to interpret and analyze given information using thematic analysis.

The final phase of this research was directed to refine and modify the developed instructional supervision model from nine practitioners who are school administrators and experienced Thai language teachers from three best practice schools, three participants from each respective school. Classroom observation followed by in-depth interviews were carried out to capture rich, descriptive data about the suitability of identified components and indicators as methods to measure the effectiveness of develop the instructional supervision model for refinement and modification.

Purposeful sampling technique was employed to select the seven experts and nine school administrators and teachers in this research. This sampling technique is useful in this situation because researchers need to reach a targeted sample quickly, and where sampling for proportionality is not the main concern. This involves identifying and selecting individuals that are especially knowledgeable or experienced with this phenomenon of interest (Cresswell & Plano Clark, 2011).

Findings

The initial findings were derived from the checklist of documentary analysis on literatures and related documents to identify the components and their indicators of the instructional supervision model to enhance learning management competencies. This is followed by qualitative results from focus group interviews about the verification of components and indicators. Finally, the modified instructional supervision model tried out by nine practitioners including school administrators and experienced Thai language teachers. Adjustments were made based on respondents' feedback before the proposed instructional supervision model.

Qualitative findings from documentary analysis

Initial findings derived from document analysis checklists concluded that there are four components as follow:

- Interactions (Relationship)
- Organizational climate
- Action, and
- Assessment for Development

These four components could be formed an acronym as ROAD.

Qualitative results from focus group interviews of seven experts

The second phase findings indicated that all the seven experts accepted the four identified components of the first phase. However, majority of them suggested that the identified components should include behavioural indicators. As a result, findings from the second phase revealed that there are four components and 24 indicators.

Qualitative results from classroom observation and in-depth interviews of nine practitioners

Non-participation observation to the three selected best practice schools showed that school administrators and teachers are working together to achieve the desired supervision goals. They are committed to develop their schools and encourage the community's participation in school operations. The impact of utilizing this instructional supervision to enhance learning management model (ROAD) indicated that quality level was at good level.

Findings from classroom observation showed that teachers are able to achieve their learning outcomes effectively in Thai language. In addition, they also had planning before teaching and created media of teaching and learning continuously. Findings also showed that instructions in the classroom are using learner centred approach. Learning activities are interesting and can attract learners' attentions.

Findings from the in-depth interviews with the nine practitioners found that interactions are able to create trust and cooperation in order to develop learners' quality. Guidance and mentoring helps to support, promote, and develop learning management with a pleasant organizational atmosphere. At this phase, there were some changes have to made on the number of indicators, that is from 24 indicators from the second phase to 33 indicators. The detail findings were shown in Table 1 below. Those added indicators are highlighted with bold.

Table 1: Components and indicators of the instructional supervision model

Component	Indicators
Interaction (R)	1.1 Trust
	1.2 Help
	1.3 Support and promotion
	1.4 Encouraging
	1.5 Solving problems together
	1.6 Open effective communication
	1.7 Understanding individual difference
	1.8 Accept other people's opinions
	1.9 Focus on participation.
	1.10 Have good relationship with others.
Organizational climate (O)	2.1 The demand of the personnel in the organization
	2.2 Action planning
	2.3 Learning together
	2.4 Promoting & supporting
	2.5 Encourage expressions of opinion.
	2.6 Provide an environment conducive to operations.
	2.7 Support the media, innovation and technology.
	2.8 Allocate resources
	2.9 Positive organizational climate on work motivation.
Action (A)	3.1 Teamwork
	3.2 Study the sequence data prior to operation
	3.3 Work motivation
	3.4 Following standard procedure
	3.5 Have discipline in work
	3.6 Believe in the ability of others.
Assessment for development (D)	4.1 Clarify purpose of measurement and evaluation.
	4.2 Measurement and evaluation covering behaviours, abilities and feature.
	4.3 Continuous measurement and evaluation in real situation.
	4.4 Various tools
	4.5 Quality assurance tools
	4.6 All parties are involved in evaluation

	4.7 Analyse data correctly
	4.8 Presenting the results of data analysis with real data.
	4.9 Collecting information to improve and develop.

Development of ROAD supervision model

The end product of this research was the development of ROAD supervision model to learning management competencies in primary schools of Thailand. The main principle of ROAD is to create trust and collaboration in the quality of learner development through interactions. The main objective of the ROAD supervision model is to strengthen teachers' competencies in teaching. The components and indicators that included in the ROAD model are four components and 33 indicators.

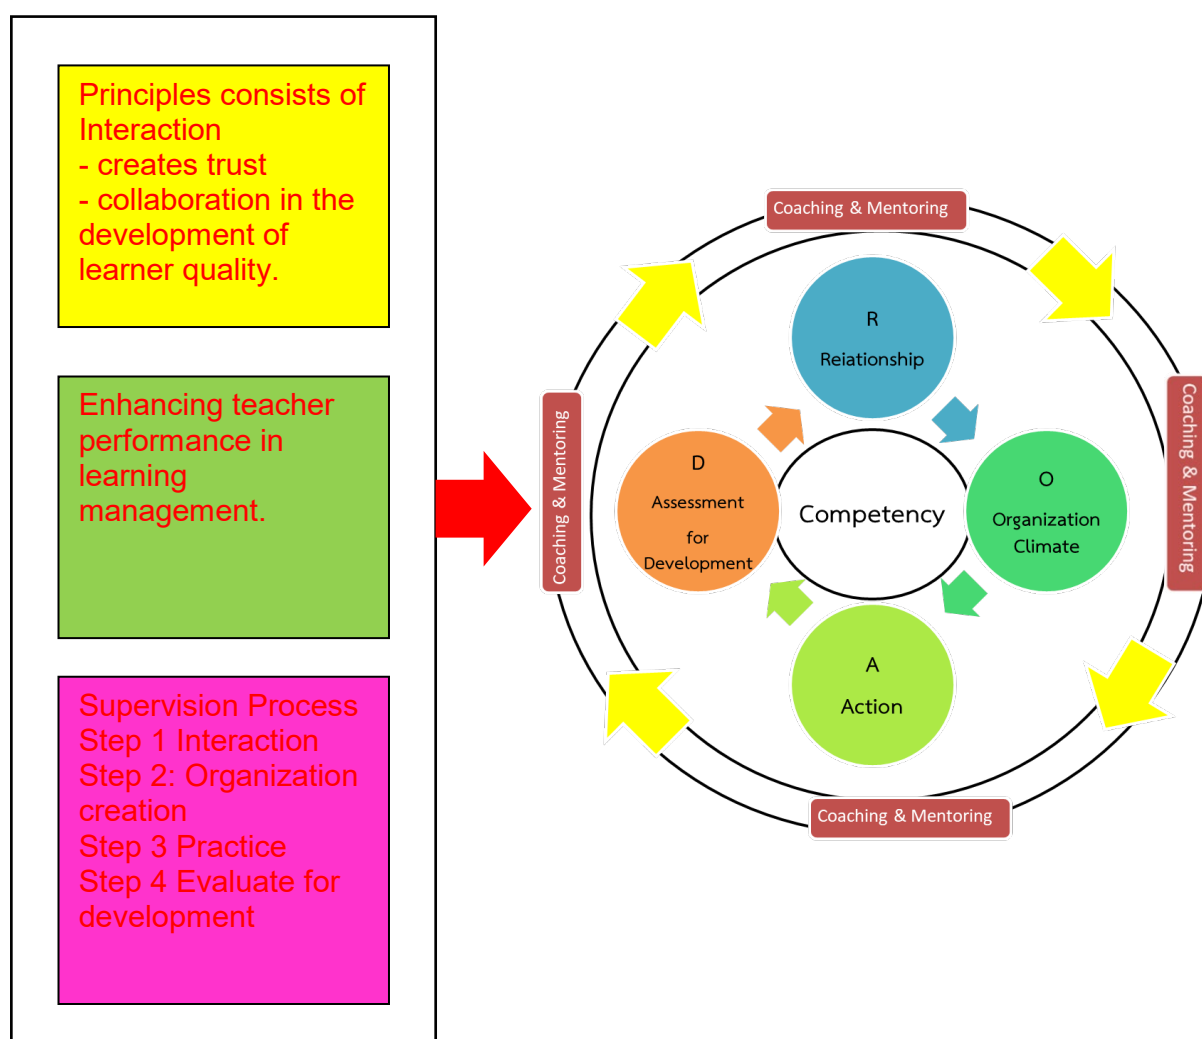

Figure 1: ROAD Instructional Supervision Model

Discussion And Conclusion

The developed instructional supervision model to enhance learning management competencies in primary schools consisted of four components. The first component was interaction (relationship) means interaction between school administrators, supervisors, and teachers in the instructional supervising process which aimed to solve instructional problems and developing a systematic teaching and learning technique. This finding is corresponding to Pakphoom's (2013) study. Pakphoom found that knowledge and understanding of human relationships are the key factors to promote cooperation, teachers' willingness to participate in school operation, and teachers' successful work performance.

The second component of ROAD model was organizational climate. Organizational climate refers to the physical environment within the organization, social behavior of school personnel, communication and cooperation would lead to achieve school goals. As Laoreandee (2013) stated that organizational change is an attempt to improve

systematically within organizations, which may allow the organization to respond to changes from internal and external environments. The third component is action which means the effective operations would help the personnel such as school administrators and teachers work happily, have the courage and power to work. This finding is in line with Joyce, Weil and Calhoun's (2013) study. Joyce et al. emphasized that the principle of quality work is to set clear goals and action oriented model.

The final component of ROAD model was assessment for development that is a process producing information for learning by assessing learner and learning. Information from the learning assessment reflects learners' learning performance and instructions. It leads to the adaption of teaching and learning change so that learner can learn to the full potential. This is in parallel with Somprach's (2016) statement. Somprach mentioned that assessment of learning process must include learning outcomes, learning management plan, and learning assessments.

One of the essential roles of the school administrators is to coach the teachers to do their best. With this developed ROAD supervision model, school administrator, supervisor or senior teachers can help them to make better decisions, solve their instructional problems that are holding them back, provide opportunities for them to learn new skills, and otherwise their teaching career is expected to progress. Some teachers are fortunate enough to get formal training in coaching and supervising. However, many teachers have to develop the learning management competencies by themselves. Therefore, this ROAD supervision model may help school administrators. Supervisors, and teachers with the proven techniques, practice so that teachers are able to enhance their competencies in learning management. Although the ROAD model looks like a simple supervision model yet it is a powerful framework for structuring your supervision.

The ROAD model has been verified by the seven experts and nine practitioners about the suitability of the components and turned up to be most appropriate components to be included. The result was in accordance with the study by Kanjanawasee (2002) who described the four standards for evaluation namely utilization, possibility, appropriateness, and accuracy. Since the nine practitioners also satisfied with the practicality of the ROAD supervision model, researchers would like to suggest to Educational Service Area Offices and all primary schools in Thailand to implement a systematic development for teachers by utilizing this supervision model. Finally, implication of this research is encouraging the policy level agencies to focus on supervision through managing a motivation system for supervisors, school administrators, and senior primary school teachers who can conduct effective supervision.

Abstract

Visualization is known as one of the keys to understanding chemistry concepts, while Augmented Reality (AR) technology is gaining popularity as one of technology-enhanced interactive learning tools. The main propose of this study was to develop an interactive particulate-level visualization in the topic of collision theory and chemical reaction rate, also known as chemical kinetics, by using AR technology for smart devices with android system. This multi-marker AR visualization was developed by using Unity 3D 5.6.0, Autodesk Maya 2017, Vuforia 6.5 and Photoshop CC 2017 software. It was validated by four experts, two chemistry experts and two computer science experts. The average scores from the experts for the content quality, design and presentation, usability, and total scores were 4.70, 4.55, 4.60 and 4.62 out of 5.00, respectively (all were in the 'very satisfied' level). The visualization tool then was implemented in a chemistry classroom of 29 Grade-11 students (semester 2/2017) from a large-size high school in Ubon Ratchathani Province of Thailand. The data collecting tools included the achievement test on chemical reaction rate (pre- and post-test, 15 items) and the survey of students' satisfaction towards the visualization tool. It was found that students' average score for the pre-test was 5.72 (S.D. 1.49, 38.16%). After spending four hours for studying this topic by using the pre-installed AR application on their android smart devices together with corresponding printed markers, their average score for the post-test was 10.93 (S.D. 1.41, 72.87%), which was increased by 34.67%. The paired-samples t-test analysis indicated that the post-test score was statistically higher than the pre-test score at the significant level of 0.05. In addition, they were very satisfied (4.53 out of 5.00) with the visualization tool. Therefore, the developed AR visualization was effective to enhance students' achievement of reaction rate and to make learning chemistry visualizable and enjoyable.

Introduction

The term 'reaction rate' is not a property of the chemical species themselves but rather can only be defined as a property of the extent of a reaction (Schmitz, 2005). In this study, the author considered 'collision theory' as one of the sub-topics in the 'reaction rate'. It is also called chemical kinetics which has been reported as one of the most difficult chemistry topics for high school students in many countries around the world such as Thailand (Chairam, Somsook and Coll, 2009; Supasorn and Promarak, 2015), Turkey (Çalik and Kolomuc, 2012; Çalik, Kolomuc and Karagolge, 2010; Kolomuc and Tekin, 2011), and the Netherlands (Van Driel, 2002). This learning difficulty has been arisen because there are many factors influencing the reaction rate (Justi, 2003) and some of them involve particulate or sub-microscopic explanation. Many visualization tools such as simulations (University of Colorado Boulder, 2018), animations (Supasorn and Amatongchai, 2016), and Augmented Reality or AR applications (Ditcharoen et al., 2014), have been developed to introduce students to the sub-microscopic world and to diminish the above learning limitation. One of the most popular simulations is called PhET Interactive Simulation developed by University of Colorado Boulder (2018).

Chemical Reaction Rate:

Several Research studies reported that many students exhibit difficulty in learning this topic. For example, Supasorn and Promarak (2015) attempted to develop Thai high school students' concepts of chemical reaction rate by using inquiry-based experiment together with corresponding analogies. They concluded that inquiry activities may be effective means to enhance and retain students' conceptual understanding, but may not be very effective for helping them recognize their alternative- or mis-conceptions. They suggested that chemistry instructors should implement inquiry activities in conjunction with the corresponding analogies since it is one of the effective way to support students in changing from the less correct conceptions to the more correct conceptions. More examples from Turkey, Çalik, Kolomuc and Karagolge (2010) attempted to identify some limitations encountered in learning the concept of chemical reaction rate of Turkish high school students. They found some of these limitations including (1) incapacity to define the rate of reaction, (2) mis-conceptions of the relationship between the rate of reaction and its influencing factors, and (3) absent of understanding of how activation energy and enthalpy relate the rate of reaction. They also studied effects of conceptual change pedagogy on grade 11 students' conceptions and found that the conceptual change pedagogy intervention helped the students to realized and improve their mis-conceptions. They suggested that the integrated use of various conceptual change techniques is more effective to

diminish student mis-conceptions. In addition, Cakmakci (2010) tried to identify alternative conceptions of chemical kinetics among secondary school and undergraduate students in Turkey. Some similar alternative conceptions among them included (1) defining reaction rate as reaction time, (2) difficulties explaining how reaction rate changes as the reaction progresses, (3) exothermic reactions occur faster than endothermic reactions, (4) activation energy is the (total) amount of energy released in a reaction, (5) a catalyst does not affect or does not change the mechanisms of a reaction, and (6) an increase in the initial concentration of reactants would increase/decrease the rate of a zero-order reaction. There are more research studies involving student conceptions of chemical reaction rate, however, they are not reviewed in this article.

Augmented Reality (AR) in Chemistry:

Augmented Reality (AR) Technology has been gaining popularity in learning science courses including chemistry. It allows students to visualize what they cannot observe with their direct perception, such as phenomena at the sub-microscopic or particulate level. In other word, AR technology not only makes it possible to change some abstract or intangible chemistry concepts to be more concrete, but also stimulates students in learning chemistry even in the difficult topics or concepts (Cai, Wang and Chiang, 2014). AR is often used in two main situations: (1) when the phenomenon cannot be simulated in reality such as all sub-microscopic world, and (2) when real experiments have conspicuous shortcomings, such as some experiments involving very toxic, rare or expensive chemicals or equipment (Cai, Wang and Chiang, 2014). Some examples of AR technology in chemistry courses are reviewed in this article. For example, Cai, Wang and Chiang (2014) developed the set of AR Tools containing four specific substance composition applications including water molecules (oxygen and hydrogen atoms, see Figure 1a), diamond crystals (carbon atoms), graphite crystals (carbon atoms), and NaCl (sodium and chloride ion). They implemented the AR tool for Grade 8 students in China and reported that the AR tool is beneficial in improving middle school students' cognitive test performance on corresponding concept, and it has larger influence on low- than on high-achieving students. Additionally, students generally hold a positive attitude toward the AR tool since they enjoyed the exploration experience. Next example is from Thailand studied by Ditcharoen et al. (2014). They developed a learning media in topics of atomic structure and chemical bond with AR technology (Figure 1b). The learning media contains 34 models of chemical structures simulated in form of 3D animations which were able to run on both personal computers and android tablets. This AR learning media was developed by using Autodesk Maya, Photoshop, and Unity 3D. For the quality evaluation of the AR learning media, the item-objective congruence (IOC) from five experts in chemistry field were 0.81, while the satisfaction towards the AR media from 60 undergraduate students from Faculty of Science at Ubon Ratchathani University was 4.36 out of 5.00 (satisfied level). They concluded that this learning media could help students gain a better understanding of chemistry comparing with the traditional method. The last example is from Turkey studied by Taçgin, Uluçay and Özüağ (2016). They developed student-centered AR environment to teach periodic table, atomic structure, molecular structure, and VSEPR Model (Figure 1c). The environment was designed to provide students an active role by using fingers and hands to interact with virtual objects instead of AR markers. In addition, instructional design methods and principles were considered in designing process to get reach of more effective and productive learning material. This AR application will be applied and evaluated experimentally in order to determine effectiveness of this learning method in their further study. From these examples of AR applications, it can be said that AR technology is not only one of the effective means in developing students' learning capability, but also is enjoyable and interesting approach in chemistry learning around the world (Taçgin, Uluçay and Özüağ, 2016).

Figure 1: Screen-captured of some AR applications in chemistry learning

Based on the literature review above, the implementation of AR visualization is expected to be enjoyable and effective to enhance conceptual understanding of the corresponding concepts, especially concepts involving sub-microscopic level or intangible phenomenon, for secondary school students in Thailand who shared the same problems about alternative conceptions and difficulty in understanding 'chemical reaction rate' as students in other countries. As a result, the authors attempted to develop AR visualization tool or application with particulate level features in the topic of collision theory and chemical reaction rate to diminish some learning limitations and to enhance students' understanding at all levels of representations including the sub-microscopic level. This AR

application is called AR interactive Particulate-level Visualization or *ARiPV* of chemical reaction rate.

Research Questions

This research question was posed when the prototype of *ARiPV* was developed: (1) What are the experts' satisfaction when validated the *ARiPV* in terms of content quality, design and presentation, and usability?, and the other two questions were posed when it was implemented for grade-11 students: 2) How do students' scores on the achievement test of chemical reaction rate change before and after performed the corresponding interactive particulate-level visualization?, and 3) What are students' satisfaction towards the *ARiPV*?

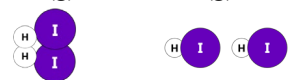

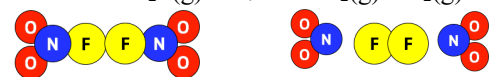

Methodology

There were two phases of methodology in this study including (1) development and expert validation and (2) intervention of the *ARiPV* of chemical reaction rate.

Phase 1 Development and Expert Validation of the *ARiPV*:

The *ARiPV* was developed by using Augmented Reality (AR) Technology for smart devices with android system. This project was developed by our senior undergraduate student majoring in information technology under the authors' supervision. For the collision models, both successful and unsuccessful collisions, for four reactions were firstly designed by an expert in chemistry field (see also Table 1). There were two successful and two unsuccessful collision models for the first three reactions, while there were one successful and two unsuccessful collision models for the last reaction (totally 15 models).

Table 1: Examples of successful and unsuccessful collision models in designing the *ARiPV*

No.	Successful collision	Unsuccessful collision
1	$\text{H}_2(\text{g}) + \text{I}_2(\text{g}) \rightarrow 2\text{HI}(\text{g})$ 	$\text{H}_2(\text{g}) + \text{I}_2(\text{g}) \rightarrow \text{H}_2(\text{g}) + \text{I}_2(\text{g})$ 
2	$\text{H}_2(\text{g}) + \text{Br}_2(\text{g}) \rightarrow 2\text{HBr}(\text{g})$ 	$\text{H}_2(\text{g}) + \text{Br}_2(\text{g}) \rightarrow \text{H}_2(\text{g}) + \text{Br}_2(\text{g})$ 
3	$\text{CO}(\text{g}) + \text{NO}_2(\text{g}) \rightarrow \text{CO}_2(\text{g}) + \text{NO}(\text{g})$ 	$\text{CO}(\text{g}) + \text{NO}_2(\text{g}) \rightarrow \text{CO}(\text{g}) + \text{NO}_2(\text{g})$ 
4	$2\text{NO}_2\text{F}(\text{g}) \rightarrow 2\text{NO}_2(\text{g}) + \text{F}_2(\text{g})$ 	$2\text{NO}_2\text{F}(\text{g}) \rightarrow 2\text{NO}_2\text{F}(\text{g})$ 

For the factors influencing reaction rate, the first reaction ($\text{H}_2 + \text{I}_2$) was chosen to represent the effects of the following factors: normal condition, concentration ($+\text{I}_2/+\text{H}_2$), temperature ($+/-$), and catalyst (+) or retarder (-) effects (totally 7 models, see Table 2).

Table 2: Examples of models for illustrating factors influencing chemical reaction rate of $\text{H}_2(\text{g}) + \text{I}_2(\text{g})$

No.	Factors/Condition	Animation models
1	Normal	
2	+ Temperature	
3	- Temperature	
4	+ Catalyst	
5	+ Retarder	
6	+ I ₂ conc.	
7	+ H ₂ conc.	

Then, these collision models were transformed to be the multi-marker AR visualization involving some computer programs. The markers used for manipulating the models were QR code images generated from the free QR code generator website and then modified by using Photoshop. Each of all collision models was built in form of 3D animation models using Autodesk Maya. Then the AR-based mobile application for these animations was developed by using Unity 3D and Vuforia. It consisted of narrative sounds and buttons for increasing or decreasing temperature and concentration, and to choose catalyst and retarder. To perform the visualization, the AR application must be installed into an Android smart device. Once the application is enable, move the smartphone camera over any developed marker, the 3D molecular model will appear. To enable two molecular models, two markers must be placed under the camera. Once the two markers are moved close to each other the collision animation will appear in which the two molecular models will move closely and collide each other, and then producing successful or unsuccessful results of collision according to the direction of collision shown in Table 1 (see Figure 2). The direction of collision can be changed by moving one marker to each of the four sides of the other marker. Finally, this *ARiPV* was validated and evaluated by four experts, two chemistry and two computer science professors. Some revisions were made based on expert suggestions.

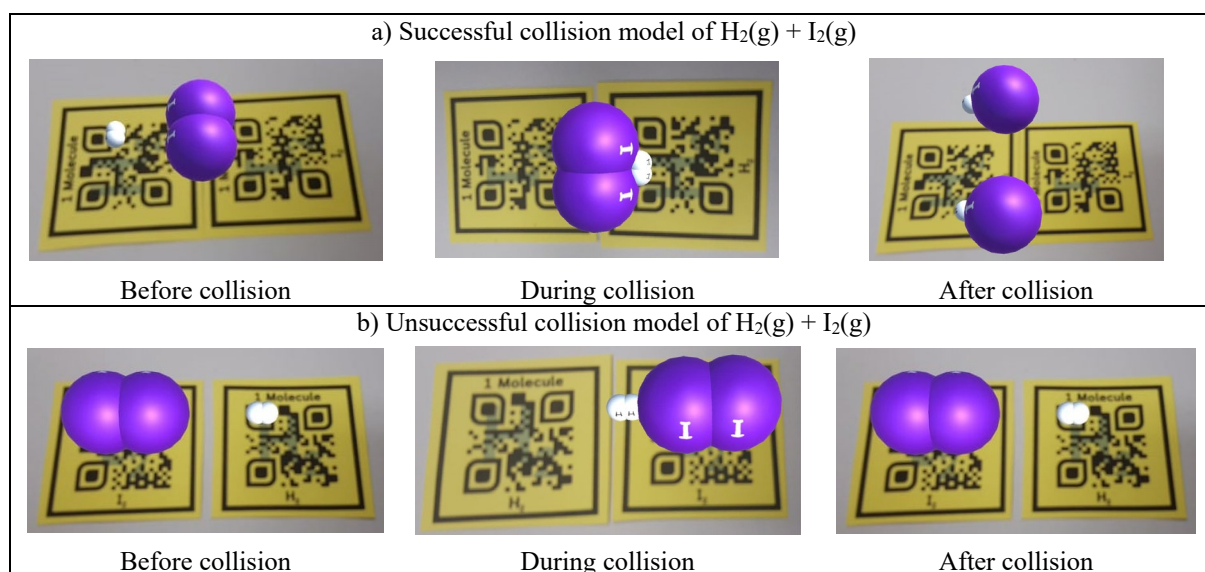

Figure 2: Example of collision models of $\text{H}_2(\text{g}) + \text{I}_2(\text{g})$

Phase 2 Intervention of the *ARiPV* for High School Students:

The implementation phase followed the one group pre-test/post-test study and used a quantitative method in its research paradigm. The details were shown below.

Participants: With prior permission from the school principal and the instructor of the science course during the second semester of academic year 2017, 29 grade-11 students (one classroom) at Det Udom School in Ubon Ratchathani of Thailand who attended all activities in this study were purposively selected as the participants of this study. They were about to start learning the topic ‘chemical reaction rate’ in the chemistry course. Please notice that all research tools (lesson plans and activities, particulate animations, and achievement test) were in Thai in which all examples in this article involved translation into English.

Treatment Tool: The learning activities based-on the *ARiPV* of chemical reaction rate was the only treatment tool in this phase. The prototype of *ARiPV* consisted of AR application or software, markers, and activity form. There were four one-hour visualization learning activities including (1) collision theory (Figure 2-3), (2) chemical reaction rate, (3) effects of concentration and temperature on chemical reaction rate (Figure 4c-d), and (4) effect of catalyst and retarder (Figure 4e-f) on chemical reaction rate. Each of these activities were based on 5E inquiry learning cycle (Bybee et al., 2006; Chau, Samsudin and Yahaya, 2018) in which the students were asked to participate in the following process: (1) Engagement, they were engaged with a scientific question regarding chemical reaction rate of each activity, (2) Exploration, they next explored evidence (or data) to answer the engaged question by interacting with the AR interactive particulate-level visualization focusing on the corresponding feature, (3) Explanation, they formulated explanation from collected evidence (or data) to answer the question, (4) Elaboration, they then elaborated their understanding through group and class discussion concerning their explanation and further concepts as well as applications in their daily life contexts, and (5) Evaluation, they were finally evaluated their understanding by means of class and group discussions together with corresponding assignment or task.

Figure 3: Examples of successful collision models for the rest reactions

Figure 4: Examples of some factors influencing chemical reaction rate of $\text{H}_2(\text{g}) + \text{I}_2(\text{g})$

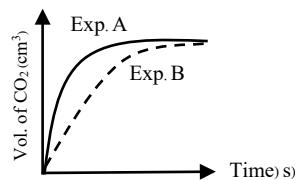

Data Collecting Tool: There were two types of data collection tools in this study. The first tool was the achievement test of chemical reaction containing 15 items, in which each item was credited 1 point. The test consisted of three sub-topics including collision theory (3 items), chemical reaction rate (3 items), and factors influencing chemical reaction rate (9 items). The test was content-validated by two senior chemistry lecturers and one chemistry education professor. The second tool was the survey of students' satisfaction toward the *ARiPV* in which some items were selected and adapted from the survey by Cai, Wang and Chiang (2014).

Q1: Consider the reaction of Mg and HCl shown below.

$$\text{Mg}(\text{s}) + 2\text{HCl}(\text{aq}) \rightarrow \text{MgCl}_2(\text{aq}) + \text{H}_2(\text{g})$$

Which change will give a result as Exp.B?

A. Increase the volume of HCl(aq) with the same concentration.
 B. Increase the amount of Mg with the same size.
C. Use larger-size of Mg with the same amount.

Q2: Consider the following reaction: $\text{M}(\text{s}) + 2\text{HA}(\text{aq}) \rightarrow \text{MA}(\text{aq}) + \text{H}_2(\text{g}) + \text{Heat}$

Which experiment will generate $\text{H}_2(\text{g})$ fastest?

A. Zn reacts with 1.0 M HCl B. Mg reacts with 1.0 M HCl C. Mg reacts with 1.0 M CH_3COOH

Figure 5: Example of a test item in the achievement test of chemical reaction rate

Implementation: The four visualization activities were implemented as one of the chemistry course learning activity. All participants participated in the following process. They began the process by completing the pre-achievement test of chemical reaction rate. They then spent 4 hours for learning four activities and interacting with the *ARiPV* of chemical reaction rate through 5E inquiry learning cycle (Figure 6). The AR application was pre-installed on their android smart devices together with corresponding printed markers, two android smart devices and one set of printed markers for each group (4-6 students per group). Finally, they completed the post-achievement test as well as the survey of students' satisfaction towards the *ARiPV*.

Figure 6: Students interacting with the *ARiPV* of chemical reaction rate

Data Analysis: The data collected in this phase were pre- and post-achievement test scores and student' satisfaction towards the visualization. The paired samples T-test analysis was applied to identify the differences between the means of pre- and post-achievement test scores at the 95% confidence level. Class normalized learning gain or $\langle g \rangle$ was applied to identify the level of learning gain (Hake, 1998; Pentecost and Barbera, 2013). The topics with $\langle g \rangle \leq 0.30$, $0.30 < \langle g \rangle < 0.70$, and $\langle g \rangle \geq 0.70$ were classified into low-, medium-, and high gain categories, respectively.

Research Findings

The results of this study were divided into two phases: (1) expert validation and evaluation of the AR interactive visualization of chemical reaction rate, and (2) students' achievement test score and satisfaction towards the visualization.

Expert Validation and Evaluation of the *ARiPV*:

In the process of the validation and evaluation of the prototype of *ARiPV*, the average satisfaction from all four experts was 4.63 out of 5.00, which was in the 'very satisfied' level. The satisfaction was divided into three aspects including content quality, design and presentation, and usability. The average satisfaction for each aspect was 4.70, 4.55 and 4.60, respectively (all were 'very satisfied' level). Some modifications were made upon expert comments and suggestions. Some of the modifications were to improve the narration sound quality, the presentation form of the markers, and color of the 3D model.

Table 3: Expert validation and evaluation of the *ARiPV* of chemical reaction rate

Item	Mean	S.D.	Satisfaction level
A. Content quality	4.70	0.47	Very satisfied
B. Design and Presentation	4.55	0.60	Very satisfied
C. Usability	4.60	0.49	Very satisfied
Total	4.63	0.52	Very satisfied

Students' Achievement Test Score and Satisfaction towards the *ARiPV* of Chemical Reaction Rate:

The results of this phase were divided into two sub-topics as follow.

Students' Achievement Test Score of Chemical Reaction Rate: Prior to learning the topic of chemical reaction rate, the students' pre-achievement test score was 5.72 (S.D. 1.49, 38.16%), see Table 4. After they spent four hours interacting with the *ARiPV* learning activities, their post-achievement test score was 10.93 (S.D. 1.41, 72.87%). The paired-samples T-test analysis of students' achievement test scores indicated that they obtained post-test score higher than pre-test core at the 95% significant level of confidence, in which the actual gain was 34.71% and the normalized gain was 0.56 (medium gain). the lowest score of the pre-test was in the topic of collision theory. This was arisen because they were unaware of direction and energy of collision. For the post-test scores, they obtained over 70% in all topics and the normalized learning gains or $\langle g \rangle$ were in the medium level in all topics. This occurs due to the fact that the *ARiPV* contains both the macroscopic and the sub-microscopic features

that allow the students to observe what happens at the particulate level and to observe how the rate change when each factor is added. This can effectively support the students to notice and correct their prior mis-conceptions to be the more correct concept of all sub-concepts. However, the chemical reaction rate was the topic with slightly higher gain, while the factors influencing rate was the topic with slightly lower gain than the other topic. This can be explained that there were just 3 test items in the ‘chemical reaction rate’ with only a few sub-concepts, which is about definition of reaction rate and the rate decreases over time. On the other hand, there were 9 test items in the ‘factors influencing rate’ and more factors involving in this topic so the students may get confused about how each factor influences the reaction rate.

Table 4: Students’ pre- and post-achievement test scores of chemical reaction rate

Topic (total score)	Pre-test			Post-test			Learning gain		T (T-test)
	mean	SD	%	mean	SD	%	%	<g>	
1. Collision theory (3)	1.10	0.31	36.78	2.14	0.83	71.26	34.48	0.55	6.438*
2. Chemical reaction rate (3)	1.17	0.47	39.08	2.28	0.65	75.86	36.78	0.60	7.273*
3. Factors influencing rate (9)	3.62	0.94	40.23	6.52	1.12	72.41	32.18	0.54	9.681*
Total (15)	5.72	1.49	38.16	10.93	1.41	72.87	34.71	0.56	15.084*

* Statistically significantly different at the 95% confidence level ($p < 0.05$)

This finding indicated that the intervention was effective to enhance students’ achievement understanding of chemical reaction rate. This finding is aligned with the previous studies that AR technology is one of the effective means in developing students’ learning capability (Taçgin, Uluçay and Özüağ, 2016), supporting them to improve cognitive test performance on corresponding concept (Cai, Wang and Chiang, 2014), and helping them gain a better understanding of chemistry (Ditcharoen et al., 2014). However, some of them tended to hold some previous reported mis-conceptions, such as definition of reaction rate, relationship among factors and their influences on reaction rate (Cakmakci, 2010; Çalik, Kolomuc and Karagolge, 2010), defining reaction rate as reaction time, the rate of a reaction increases with time, and exothermic reactions occur faster than endothermic reactions (Cakmakci, 2010).

Students’ Satisfaction towards the Prototype of *ARiPV*:

From the survey of students’ satisfaction towards the *ARiPV*, the students rated their overall satisfaction at the ‘very satisfied’ level (mean 4.59, S.D. 0.54), see Table 5.

Table 5: Survey of students’ satisfaction toward the prototype of *ARiPV* of chemical reaction rate

Item	Mean	S.D.
1. AR-based learning software is more interesting than previously used learning methods	4.69	0.54
2. Using AR-based software enables me to view chemistry concepts such as the particulate world, atoms, and molecules in a different way	4.59	0.63
3. I like learning chemistry using AR	4.52	0.69
4. I hope that other disciplines such as physics and biology will apply AR tools to learning as well	4.55	0.51
5. I hope to use similar AR tools to learn chemistry in the future if possible	4.62	0.68
6. I will recommend the AR learning tool to other classmates	4.59	0.50
7. I’m interested in using AR-based learning tools	4.52	0.51
8. The content of this software is closely related to the ‘rate of chemical reaction’, which is a very interesting topic to me	4.55	0.51
9. The AR-based learning tool enables me to learn not only on own but also with my friends and classmates	4.55	0.51
10. The design of this software is pleasing and genuine	4.83	0.38
11. The colour of this software is appropriate, as it is attractive and does not distract me	4.52	0.51
12. The narration sound of this software is appropriate, as it is attractive and does not distract me	4.66	0.55
13. I think that learning about the rate of chemical reaction and particulate world using an AR-based learning tool is necessary	4.55	0.51
Total	4.59	0.54

Note: The survey was adapted from Cai, Wang and Chiang (2014)

When consider each survey item, the mean score for each of 13 items was also rated at the ‘very satisfied’ level with mean value greater than 4.50. They rated top three highest satisfactions in terms of ‘pleasant and genuineness of the software’, ‘more interesting than previously used learning methods’ and ‘narration quality’. This implied that when the students were interacting and learning by using the AR visualization application of chemical reaction

rate, they highly agreed that the application can enable them to view chemistry at the particulate world and to learn not only on their own but also with classmates. They also highly agreed that AR based-learning application should be applied to future topics in chemistry and other disciplines. They were interested in using AR based learning tools and would recommend the AR learning tool to other classmates. Finally, they highly satisfied that this application is closely related to the 'rate of chemical reaction' and that learning about the rate of chemical reaction and particulate world using an AR-based learning tool is necessary. This finding is aligned with the previous studies that students generally hold a positive attitude toward the AR tool since they enjoyed the exploration experience (Cai, Wang and Chiang, 2014) and that AR technology is enjoyable and interesting approach in chemistry learning around the world (Taçgin, Uluçay and Özüağ, 2016).

Conclusion

This study showed that the prototype of AR technology can be successfully used in developing a particulate-level visualization since it enables the visualization to be interactive, interesting, accessible, portable, and enjoyable. From the expert validation of this application, it showed that the experts totally agreed that this AR-based visualization is appropriate to be one of the main resources in learning chemical reaction rate which is one of the difficult and intangible concepts in chemistry. From the intervention of this visualization for grade-11 students in a regular school in Thailand, it verified that the intervention of the AR-based interactive particulate-level visualization application or *ARiPV* application through 5E inquiry learning cycle was effective to develop students' leaning achievement of chemical reaction rate as their post- achievement test score was statistically higher than the pre- achievement test score. Their mean of the post-test score was greater than 70% in all topic in which the actual and normalized learning gains were 34.71% and 0.56, respectively. Their satisfaction towards the *ARiPV* was at the 'very satisfied' level (mean 4.59). This indicated that the use of AR-based interactive particulate-level visualization through 5E inquiry learning cycle was effective not only to promote students' conceptual changes from the less to the more correct understanding both at macroscopic and symbolic levels, as well as particulate level, but also to bring students to learn chemistry with more enjoyment, excitement, interest, and attention than traditional learning approach (Cai, Wang and Chiang, 2014; Taçgin, Uluçay and Özüağ, 2016).

This study may have implications for chemistry instructors in that sub-microscopic- or particulate-level visualization tools (such as AR applications, simulations, and animations) play important role in learning chemistry especially for the intangible concepts at the sub-microscopic world. Simply lecturing or implementing chemistry experiment can be effective to enhance students' understanding at the macroscopic and symbolic levels, but not the sub-microscopic level. Corresponding visualization tools at the particulate level should be considered to be in conjunction used with the lecture topic or implemented experiment.

In our future study, this prototype of the *ARiPV* application will be further modified to reach better quality and then published on Google Play. The final version of *ARiPV* application in conjunction with the corresponding small-scale chemistry experiment of chemical reaction rate will be intervened for the new group of students and findings will be reported in our further study.

Acknowledgements

This study was part of the project code RSA5980021 project entitled " Development of low-cost small scale chemistry experimental kits in conjunction with inquiry-based learning activities to promote high school students' achievement understanding and changes at molecular level", co-funded by Thailand Research Fund (TRF) and Ubon Ratchathani University (UBU). The authors would like to thank Dr.Suparb Tamuang, our colleague, for her help with English proof.

Abstract

This paper was aimed to evaluate the benefits of meditation in regard to emotional intelligence thus develop a meditation program to enhance emotional intelligence for elderly people. Researchers utilized quantitative survey design using questionnaire as an instrument to collect data. After reviewing the related literatures and interviewing seven meditation experts, researchers identified four main factors and 15 secondary factors. The four main factors were concentration, mindfulness, critical thinking, and positive thinking. Concentration factor consisted of attention, focus, and no distraction. Mindfulness factor was comprised of conscious, recall, and control. Critical thinking factor included identify, analysis, synthesis, and problem-solving. Positive thinking covered openness, optimistic, non-judgments, confidence, and courage. A total of 330 samples were selected from a population of 1,635 who are the elderly people who studied and practiced mediation using multi-stage random sampling technique. The location of the study is Khon Kaen province. The quantitative findings showed that mindfulness factor (PNI = 0.61) is the most desirable needed factor. This is followed by critical thinking factor (PNI = 0.59). Finally, positive thinking and concentration factors are found to be the least desirable needed factors which have the same value of PNI that is 0.58.

Keywords: *Concentration; critical thinking; elderly people; emotional intelligence; meditation program; mindfulness; positive thinking*

Introduction

Many previous studies have linked people's negative mental and emotional states to adverse health outcomes (Chu, 2010). Chu studied 351 full-time working adults with different experience in meditation found that those participants with greater meditation experience exhibited higher emotional intelligence. Meditation would seem to be one of the effective coping strategies for enhancing emotional intelligence and promoting mental health simultaneously (Carmody & Baer, 2008). Carmody and Baer found that meditation is not only beneficial to mental health but also the regulation of cognitive and emotional functioning. Other studies have found that practicing meditation can enhance emotional intelligence, sociability, empathy, positive states of mind, positive values, happiness and joy, and positive thinking (Block-Lerner, Adair, Plumb, Rhatigan, & Orsillo, 2007). This is further supported by Lutz, Slagter, Dunne and Davidson (2008). Lutz et al. found that meditation practices potential regulatory functions on attention and emotional processes can cultivate such ends as well-being and emotional balance.

Emotional intelligence is defined as the ability to identify and manage individual own emotions as well as those of other people. It incorporates emotional awareness, emotional application, and emotional management (Ositive Psychology Program, 2016). Chu (2010) revealed that there are three ways meditation can increase individual's emotional intelligence as follow: (i) meditation helps individual to become aware of and detach from negative thoughts; (ii) meditation helps individual to read the emotions of other people, and (iii) meditation melts away layered of anxiety, depression, dysfunctional thought patterns, and years of piled up emotional baggage.

Conceptual Framework

At the preliminary stage, researchers reviewed the related literatures and interviewed seven meditation experts to identify the four main factors, 15 secondary factors and 34 indicators. The four main factors are concentration, mindfulness, critical thinking, and positive thinking.

Concentration factor is defined as focusing on meditation such as maintaining our mind consciously without any

distraction. The concentration factor consists of three secondary factors namely attention, focus, and no distraction. The second factor is mindfulness. Mindfulness factor means looking at the surroundings consciously as they are neutral but naturally they are changeable. Mindfulness factor encompasses three secondary factors that are conscious, recall, and control. The third factor is critical thinking. The critical thinking factor means pondering deliberately and reasonably by wisdom. Each situation is evaluated and concluded based on individual's knowledge, thinking, and experiences by proving evidences. The critical thinking factor is comprised of four secondary factors such as identify, analysis, synthesis, and problem-solving. The final factor of meditation is positive thinking. The positive thinking refers to have positive viewpoints, courage in overcoming any problems and obstacles. The positive thinking factor consists of five secondary factors namely openness, optimistic, non-judgment, confidence, and courage. The proposed conceptual framework is shown in Figure 1 below:

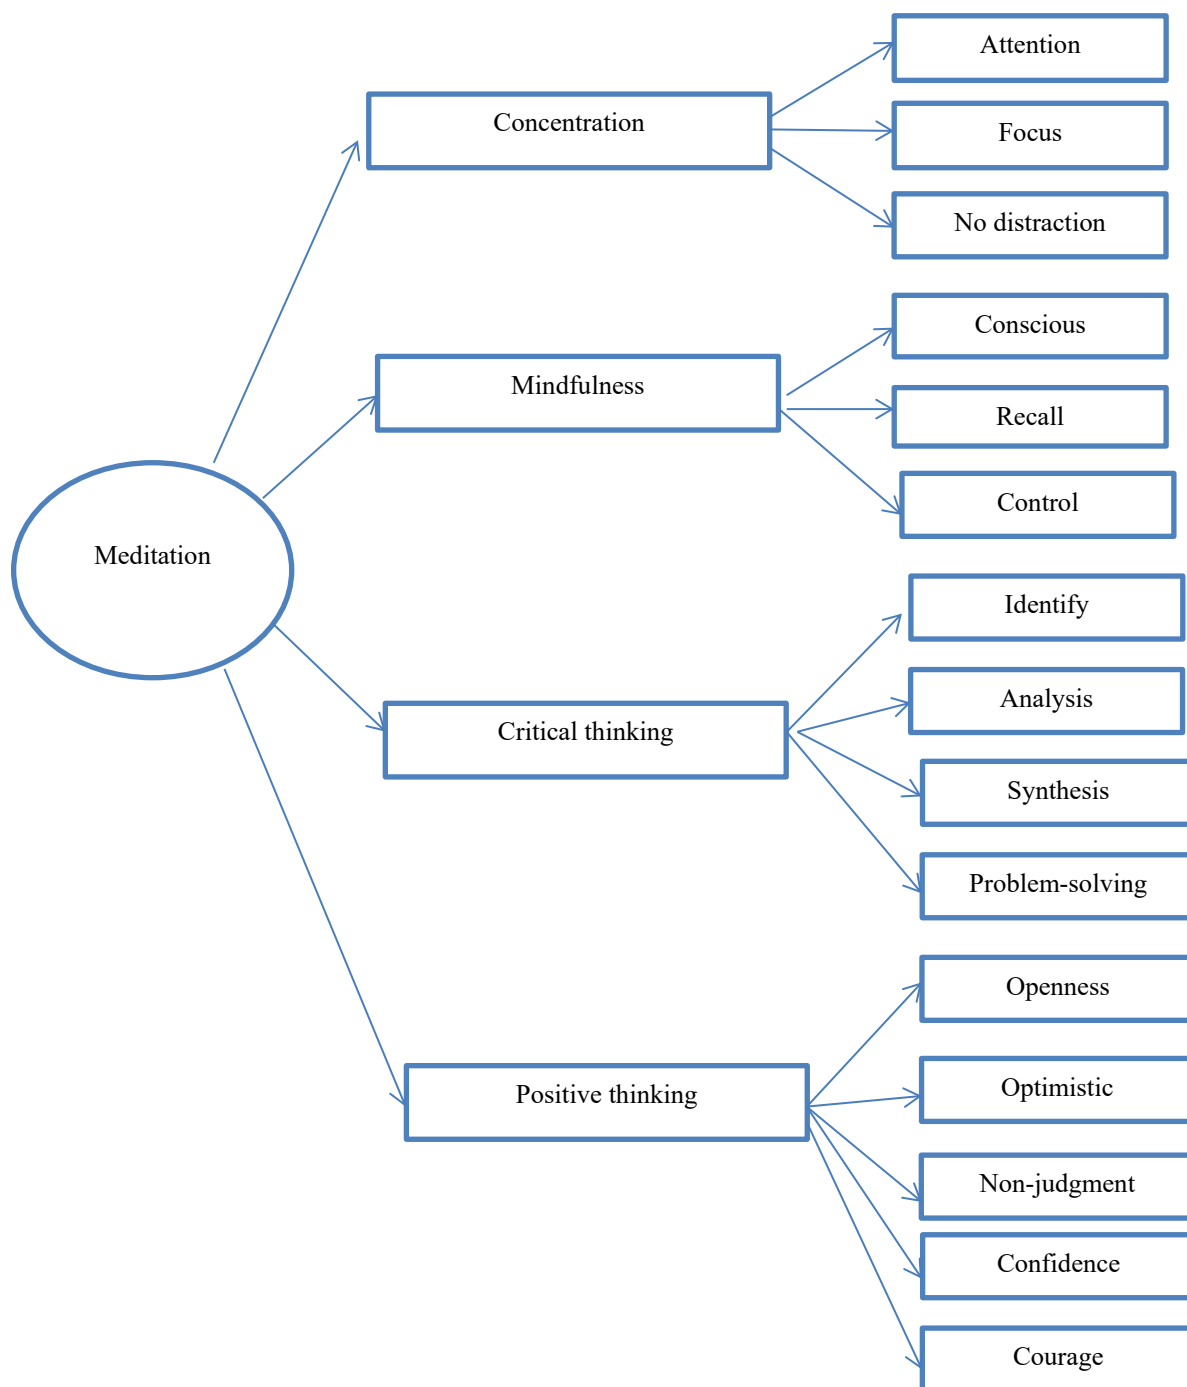

Figure 1: Conceptual Framework

Attention means concentraing mind firmly with continous patience. Focus means setting target of mind by focusing

on emotions. No distraction means thinking only determined topic without any distraction and being able to retrieve thinking to determine one. Conscious means to be aware of own current emotions, thinking, and self-reminding. Recall means to be able to remember and not forget the present data. Control means to be able to control of emotions and understand the essence of emotional control.

Identify means defining problems and setting criteria in specifying features of problems. Analysis means improving data deliberately and reasonably. Synthesis means data processing and data storage. Problem solving means making decision based on values of each feature with reasons, causes, and relationships for actual practice and application. Openness is defined as capability of understanding the process of both self-thinking and self-emotion. Optimistic defines thinking in positive about viewpoints of world and living styles. Non-judgment defines as excluding our thinking into making decision. Confidence is defined as confidence in thinking and do not fear of making mistake, and courage means courage to tell what we are thinking.

Method

A survey design was employed by researchers using questionnaire as a method of quantitative data collection. A total of 1,635 population of this study who are elderly people and they are staying in Khon Kaen province, Thailand. The population was distributed into three groups namely those elderly people aged between 60 to 64 years old, 65 to 69 years old, and more than 69 years old respectively. All the three groups were with a combination of male and female before they were selected. The criteria of selecting samples were the samples who are consciously not to mess up the fuzzy information and willing to participate in the study. Researchers utilized multistage random sampling to determined 330 samples out of the 1,635 population.

Survey questions in the form of questionnaire were distributed to 330 samples for collecting information on their perceptions about meditation practice and their current condition and desirable needs. This methods benefits this study in terms of obtaining data more efficiently as time, energy and costs could be minimized (Sekaran 2006), provides an excellent means of measuring attitudes and orientations in a large population which can, therefore, be generalized to a larger population (Babbie 2002).

The survey questionnaire instrument was administered in Thai language to ensure that the respondents were clear about the statements. The questionnaire was comprised of two sections. Section A was including demographic items which were intended to gather information regarding demographic factors of the respondents. Information pertaining to their personal background such as gender, age, educational level, marital status, annual income, occupation, health problem, mental problem, used to practice meditation, and frequency of meditation practice. Section B was specifically designed by researchers to gauge the perceptions of the elderly respondents about the current condition and desirable needs regarding the main and secondary factors. To measure the respondents' responses towards meditation practice, a five-point Likert scale was used.

The questionnaire was then sent to advisor for comments and feedback. This is followed by sending the questionnaire to seven experts for checking precision linear content (Index of item objective Congruence, IOC). These seven experts were selected based on the criteria as they are meditation experts who have knowledge and skills of meditation. From the feedbacks returned by the seven experts, some modifications were made to the original instrument and the IOC value was higher than 0.80. Reliability testing was carried out to 30 elderly people who have the similar background but they were not the samples of the actual study. It could be concluded that the instrument was reliable and good to use because the Cronbach alpha value is 0.75.

According to Chueachot, Srisa-ard and Srihamongkol's (2013) interpretation of comment, researchers determined its level as shown in Table 1. Data was analyzed using descriptive statistics include percentage, mean score, and standard deviation. This is followed by the analysis and priorities the needs required by the formula of Modified Priority Needs Index (PNI_{Modified})

Table 1: Interpretation of mean range

Mean range	Interpretation
1.00 – 1.50	The least level of comments
1.51 – 2.50	The less level of comments
2.51 – 3.50	The moderate level of comments
3.51 – 4.50	The much level of comments
4.51 – 5.00	The most level of comments

Results

The initial result is the descriptive results related to the backgrounds of the respondents that derived from the Section A of the questionnaire. This is followed by results about the current and the needs required conditions as well as the PNI reading on meditation factors.

Descriptive results

The backgrounds of the respondents showed that majority of them are females, aged between 60 to 64 years old, higher education graduates, and have already retired. The overall samples were quite equally distributed in term of their marital status and health problem. Table 2 shows the backgrounds of the respondents.

Table 2: Backgrounds of the respondents

Demographic factor	Categories	Total number	Percentage
Gender	Male	96	29.10
	Female	234	70.90
Age	60-64	187	56.70
	65-69	117	35.50
	More than 69	26	7.90
Education	Primary	33	10.00
	Secondary	62	18.80
	Higher	235	71.20
Marital status	Single/Divorced/Widowed	138	41.80
	Married	192	58.20
Annual income	10,000 - 29,999 baht	78	23.60
	30,000 - 49,999 baht	54	16.40
	50,000 - 99,999 baht	50	15.20
	More than 100,000 baht	148	44.80
Occupation	Retired/No job	232	70.30
	Part time	58	17.60
	Full time	40	12.10
Health problem	Healthy	181	54.80
	With health problem	149	45.20
Mental health	Used to consult psychologist	1	0.30
	No problem	329	99.70
Used to practice meditation	Ever	330	100
	Never	0	0
Frequency of meditation practice	1-2 times/month	84	25.50
	3 - 4 times/month	38	11.50
	Over 5 times/month	208	63.00

Results about current and the needs required conditions

Results of the study revealed that the overall needs of meditation program was necessary to fix as PNI = 59. Although the current conditions were found to be at moderate level (mean score = 2.90, $SD = 0.29$), but it also needs required condition to increase (mean score = 4.61, $SD = 0.62$). When researchers separated each main main factors and secondary factors, results showed that there is a necessary requirement in descending as follows. Table 3 below shows the mean score and standard deviation of the current and the needs required conditions as well as the priorities need index for each meditation factor.

Table 3: Current and the needs required conditions

Meditation factors	The current conditions			Needs required conditions			Priorities needs index
	Mean	SD	Level	Mean	SD	Level	
Concentration	2.91	0.25	Moderate	4.59	0.63	High	0.58
Attention	2.96	0.14	Moderate	4.66	0.59	High	0.57
Focus	2.94	0.23	Moderate	4.53	0.59	High	0.54
No distraction	2.83	0.39	Moderate	4.58	0.67	High	0.62
Mindfulness	2.85	0.37	Moderate	4.60	0.63	High	0.61
Conscious	2.91	0.31	Moderate	4.65	0.58	High	0.60
Recall	2.76	0.49	Moderate	4.52	0.69	High	0.64
Control	2.90	0.31	Moderate	4.62	0.62	High	0.60
Critical thinking	2.86	0.38	Moderate	4.54	0.63	High	0.59

Identify	2.86	0.36	Moderate	4.56	0.65	High	0.59
Analysis	2.81	0.46	Moderate	4.54	0.60	High	0.62
Synthesis	2.86	0.37	Moderate	4.52	0.64	High	0.58

Discussion And Conclusion

This study has examined the meditation factors to determine whether it helps to improve emotional intelligence. As expected, meditation experience was positively associated with emotional intelligence, which is in parallel with past studies' results that practicing meditation can enhance emotional intelligence (Chu, 2010). Results of this study reflecting the importance of meditation process to be more emphasized in terms of providing knowledge and skills of meditation factors. The meditation learners need to take into consideration on mindfulness factor. This is because the mind condition has to be aware to recall and control one's mind as a priority factor with good understanding before doing meditation and be able to evaluate after meditation.

Secondly, it is also important to be able to apply the critical thinking which consists of identify, analysis, synthesis and problem solving during meditation to understand and improve the state of mind and turn situation and problem to be learner's experiences and skills. This is followed by the positive thinking factor which also play important roles in enhance the ability and skills in mediation. The last important factors to improve and develop the confidence and belief in good benefits of meditation is positive thinking factor which most of the respondents have already had this attribute in Thai culture. Hence, the development model of meditation program must consist of these four factors prioritized as shown in the result of above need assessment. The most desirable result of meditation is happiness found in good understand of one's mind in being concentrated in mindfulness while applying one's critical thinking factors and encourage positive thinking into benefits of oneself and others in society.

Acknowledgements

The researchers would like to thank Faculty of Education, Khon Kaen University for providing the financial supports to conduct this research. Special thanks to Khon Kaen University for its technical and research support to make the research a success. Researchers would like to take this opportunity to thank all the contributors who had involved and helped until completion of this research operation.

Development Of Studio Model For Enhancing Ict-Use In Education For The 21st Century

Nutteerat PHEERAPHAN

Educational Technology Department, Faculty of Education
Srinakharinwirot University, Thailand
nutteerat@g.swu.ac.th

Abstract

The purpose of this study was to develop the studio model for enhancing use of ICT in education for the 21st century. This study was carried out by synthesizing research papers and analyzing focus group data from 10 experts. The result showed that the model has designed to be a place where students are encouraged to use it for (i) a laboratory room for the use and development of ICT in education, (ii) a place for training and exchange of knowledge about using ICT in education, (iii) an innovative and educational technology service, and (iv) a place for sharing knowledge and working with others. It has 2 main components: service and stakeholder. The service components consist of (i) technology & infrastructure, (ii) pedagogical & technical support, and (iii) variety training & activities. The stakeholder components include (i) institutes and partnerships, (ii) undergraduate student and pre-service teacher, and (iii) instructor. There have been many suggestions for the implementation of this model on the management policy, and the establishment of partnerships with external organizations.

Keywords: *ICT in Education, the 21st century, Studio model*

Introduction

The Information and Communication Technology (ICT) has been used as a powerful tool in teaching and learning to help develop 21st century learners who have profound knowledge and efficient skills such as the ability to communicate, brainstorm, solve problems and collaborate (Sitzmann, Bell, Kraiger, and Kanar, 2009; Punya, Chris, and Danah, 2013). Such change has been one of the major causes of Thailand's educational reforms for more than a decade. Thailand's educational reform focuses on the development of the ability to use technology for education and provide sufficient knowledge and skills to use technology to pursue self-knowledge throughout life (Ministry of Education, 2011). Like the National Economic and Social Development Plan, they have planned to a continuous development of people and society to learn throughout life and keep pace with an opportunity of change to access resources and create economic opportunities with knowledge based on Technology and Innovation (Office of the National Economics and Social Development Board, 2010). The "Thailand 4.0" policy of the present day also focuses on innovation in driving the country by ICT. ICT has become an important tool in both manufacturing and working sectors. For this reason, the development of new-age learners must focus on developing the students' ability to use ICT as a tool for planning, designing, managing, solving problems, creating communication and working to develop innovation with others for the changing needs of the country and society (Sinlarat, 2016).

Higher education aims to prepare students for a career in the future. It is important to focus on and set goals for the development of the learners' skills in the use of ICT as a tool to promote their learning and also disseminating knowledge to others. Although today's tertiary learners are familiar with the use of ICT, such as smartphones, in their daily lives, the study of Lei (2009) and Goktas et al. (2009) has found that students in higher education only have the basic skills despite the modern materials provided in class. They lack experience but be skilled in high-level ICT. This may be because they have not yet seen instructors use ICT in teaching since there is a limit use. This resulted in students, especially teachers, not gaining experience to use ICT in their learning and it may affect their teaching career in the future (Pheeraphan, 2016; Lim and Khine, 2006).

Institutions in higher education should focus more on providing a learning environment that encourages learners to have the ability to use innovation and communication technology, and to communicate accurately, to benefit their learning and work with others with ethics. This development cannot be achieved by studying only one course, but it is a continuous learning throughout the study period. It should be learned by the students, who can practice and learn by themselves, from learning resources or organized knowledge. It will meet the needs, attention, readiness and time of each one truly. For this reason, it is recognized that the importance and necessity to find out the role of cooperation of stakeholder for the ability to enhance the use of innovation and ICT effectively in the University is not emphasized only for their sake of learning, or working and learning with others, but also for the sake of their future careers.

The Purpose Of This Study

The purpose of this study was to develop the enhanced use of ICT in the educational studio model (Studio TEACH) for 21st century undergraduate students.

Literature Review

1. Principles of Learning in the 21st century

Principles of the 21st century learning, which is a learner-centered learning, relies on constructivism theory. Learning is a process that occurs within the learner. The learner is the creator of knowledge from the relationship between what is perceived and existing knowledge. This concept of learning is focused on creating new knowledge through the thinking process, social process and group process. Students are encouraged to participate in the class. The instructor is the facilitator to provide learning experience to the learner, which is consistent with the interests, ability and aptitude by integration of teaching methods and variety of learning resources (Techakup and Yindeesuk, 2013). According to Panich (2012), the design of learning is appropriate to the learner-centered learning which the learner is involved in the creation of knowledge and teamwork with others. Moreover Laohajaratsang (2007) said the future learning model is collaborative learning. The learning process is based on interactions between learners and learners, learners and instructors and/or community learning. There are various learning environments such as learning resources, digital and non-digital media sources, including appropriate learning activities. In this learning process, teachers need to have ICT skills to be able to create and utilize resources and digital resources. In addition, they have to use ICT as a tool to organize learning environment for students.

2. ICT is an important skill for all students in the 21st century.

The concept of the 21st century basic skills must be developed. One very important skill is ICT skills. Learning in higher education will encourage students to use ICT as a tool to access, manage, evaluate, create and communicate to work with others efficiently and appropriately in accordance with the moral and relevant laws (Panich, 2012; Dede, 2010; Kim, Jung, & Lee, 2011; Partnership for 21st Century Skills, 2009; California Emerging Technology Fund, 2011).

3. Thai Teacher's Competency

The Teachers' Council of Thailand has set a standard for professional teachers. All teachers must have the standards of knowledge, innovation and information technology education. Teachers need to a) be able to choose, design, build, and innovate so that learners can learn, b) develop technology ad information for learners to learn better, and c) find a variety of learning resources to promote the learning of students. It is compatible with many foreign scholars and organizations such as UNESCO (2007, 2011), Australian Institute for Teaching and Learning Leadership (2011), and International Society for Technology in Education (2005). Identifying ICT is one of the key competencies that teachers in the 21st century need so that teachers will be able to apply ICT as an important tool in learning management that promotes learners' learning.

In this research, the phrase "the use of innovation and information technology in education" means the ability to use ICTs as tools to access, combine, evaluate, create and communicate information to learn, work, and promote the learning of others.

4. Technological Pedagogical Content Knowledge (TPACK Model)

Mishra and Koehler (2008) mentioned the knowledge that teachers must have in teaching with technology are knowledge of the content, knowledge in how to teach, and knowledge in how to choose and use technology. The TPACK Model is very much in line with the 21st century learning, since the role of technology is increasingly becoming important and changing. Teachers in this age must have proper knowledge in all three aspects for effective teaching and learning.

5. Learning Environment

Learner-centered learning is an opportunity for learners to engage in a variety of learning activities. In particular, the concept of environmentally-friendly learning is based on constructivism (Chaicharoen, 2014). It is the environment or the place where the learner is the creator of knowledge. There are areas where students take action, work together and support each other by using tools or learning resources to achieve the goal or mission set. The classroom and the atmosphere in the classroom affects the perception and learning of the learner. Johnson (2014) offered four classroom features that are favorable to student learning: functional, comfortable, welcoming and inspiring.

The seating arrangement should take into account of the four basic elements: sensory details, seating arrangement, supplies and storage, and student information.

a) Sensory details: The sensory perception of the learner, including the eyes, ears, nose and touch are all important; leading to colors, sounds, odors, temperature and lighting in the classroom.

b) Seating arrangement: The classroom should have the flexibility of chair arrangement. This principle is important, too, because it facilitates the learning and interaction of the students. The arrangement of tables in the classroom influences the atmosphere in the classroom, such as classroom arrangement which makes the atmosphere more formal, regulatory focus. Organizing classes using round tables are more independent and the studio layout shows that the classroom is a collaborative room.

c) Supplies and storages: The room should have materials and equipment so that students can access, use and store their own stuff

d) Student information: In the classroom, there should be space for posting to the students. It will be stimulated into an atmosphere of awareness or inspiration to learn.

6. Researcher synthesizes papers on problems, obstacles and factors that promote the development of information technology and communication skills.

20 papers on problems and obstacles as well as the ways and factors that promote the development of ICT skills have been researched and synthesized (Office of the Education Council. Ministry of Education, 2013; Chitrotchanarak, 2013; Suwanrassamee, 2009; Pornsima, 2014; Wongpinpech, Panusjutaboon, Chansakul, and Wannapiroon, 2016; Jongsatiyou and Siridhrungsri, 2014; Pheeraphan, 2016; Singh and Chan, 2014; Lim and Khine, 2006; Drent and Meelissen, 2008; Goktas, Yildirm, and Yildirm, 2009; Brun and Hinostroza, 2014; Tezci, 2011; Lei, 2009; Bingimlas, 2009; Gokts, Gedik, and Baydas, 2013; McGhee and Kozma, 2015; Pelgrum, 2001; Tondeur and et al. 2012; Pheeraphan, 2013).

The problems and obstacles faced by students' lack of knowledge and skills in using innovation and information technology in education are as follows.

- a) There are no number of courses with sufficient ICT and communication integration.
- b) There is a lack of laboratories for innovation and information technology education for students to use in the practice outside of class time.
- c) There are so many students that it is not possible for the instructor to organize activities that allow all students to use ICT in their learning activities.
- d) Teachers lack motivation to use innovation and information technology in education in teaching and learning.
- e) Pre-service teachers lack motivation and lack awareness of using innovative and informative information technology for their future teaching.
- f) Pre-service teachers lack a good example of innovation and information technology education.

The problems and obstacles that make the teachers in higher education institutions unable to integrate innovation and information technology in education teaching and learning in the course of responsibility are as follows.

- a) There is lack of knowledge in the application of innovation and information technology in education in learning management.
- b) There is too much teaching load and there is a lack of time to train and develop themselves in the use of innovation and information technology education.
- c) Higher education institutions do not provide the necessary materials, equipment, programs and infrastructure to support the classroom. Teachers cannot use the media and learning resources to manage their teaching and learning therefore they are still using the traditional method and media.

The problem-solving approaches that researchers synthesized for the literature and research are as follows.

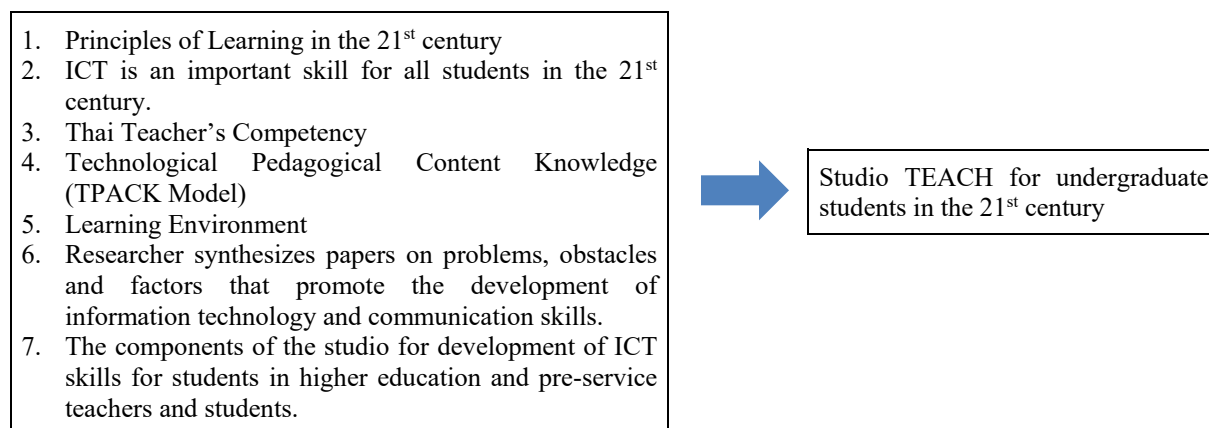

- a) The institution should have a concrete ICT plan.
- b) There should be periodic training sessions for instructors in educational institutes.
- c) The institution should have basic infrastructure equipment and adequate supplies.
- d) There is technical support.
- e) There are models of innovative users and information technology education in teaching and learning.

7. The components of the studio for development of ICT skills for students in higher education and pre-service teachers and students.

The study on the development of ICT skills for pre-service teacher showed that the component of "Studio TECH in TEACH" has four components: 1) Technology & Infrastructure, 2) Various Training Activities, 3) Pedagogical & Technical Support, and 4) Role Model (Pheeraphan, 2016, 2017). The performance of the components was found to the pre-service teachers to be quite satisfied with the four components at a high level. They agreed that access to and services within "Studio TECH in TEACH" promotes their innovation and information technology education.

Moreover, the study on the development of the “TEACH for TECH” model to promote ICT skills of the 21st century students (Pradubwate, 2017) found 3 components to develop students in higher education: 1) Technology and Infrastructure Services, 2) Providing support in the use of appropriate technology, and 3) Multidisciplinary Training. The performance of the three components illustrated that the students in various fields that have access to services and activities within “Studio TECH in TEACH” agrees with the three components at the highest level.

Research Framework

Pic1: Research Framework

Research Method

The development of studio TEACH for undergraduate students in the 21st century has determined documented goals, contributors, variables, research tools, research process, data collection, and analysis in the following orders.

The 10 respondents were selected by experts in areas of curriculum and instruction, Educational Technology, educational administration, supervising education, and teachers in educational institutions at basic education level.

The tools used to collect data are the studio TEACH model for enhancing the use of ICT in education for undergraduate students in the 21st century and recording and discussion topics. Analyzed data by content analysis.

The research process is as follows:

1. Analyzing and synthesizing documents and research related to the principles of learning process and principles of student's growth more importantly. The concept of basic skills that learners of the 21st century comes in many concepts. The concept of the performance of Thai teachers in the 21st century, the concept of learning content for science and technology (Technological Pedagogical Content Knowledge Model: TPACK Model), the concept of environmental learning which may include documents and research related to the problems and obstacles. The guidelines and factors that promote the development of ICT skills, and the results of the study of “Studio TECH in TEACH” to promote the innovation and educational information technology for pre-service teachers, and the research on the development of the “Studio TEACH for TECH” model to promote ICT skills for the 21st century students.

2. Developing a studio TEACH model.

3. Focusing on the topic of the focus group to study the opinions of 10 experts on the areas of the studio TEACH by making a discussion plan which is made up of conversation issues, patterns and processes. The person responsible for the conversation, recording, and collect data and tools such as voice recorders and notes for example, by setting the scope of the group conversation.

- a) The purpose of the studio TEACH.

- b) The elements of the studio TEACH.

- c) The application of the studio TEACH.

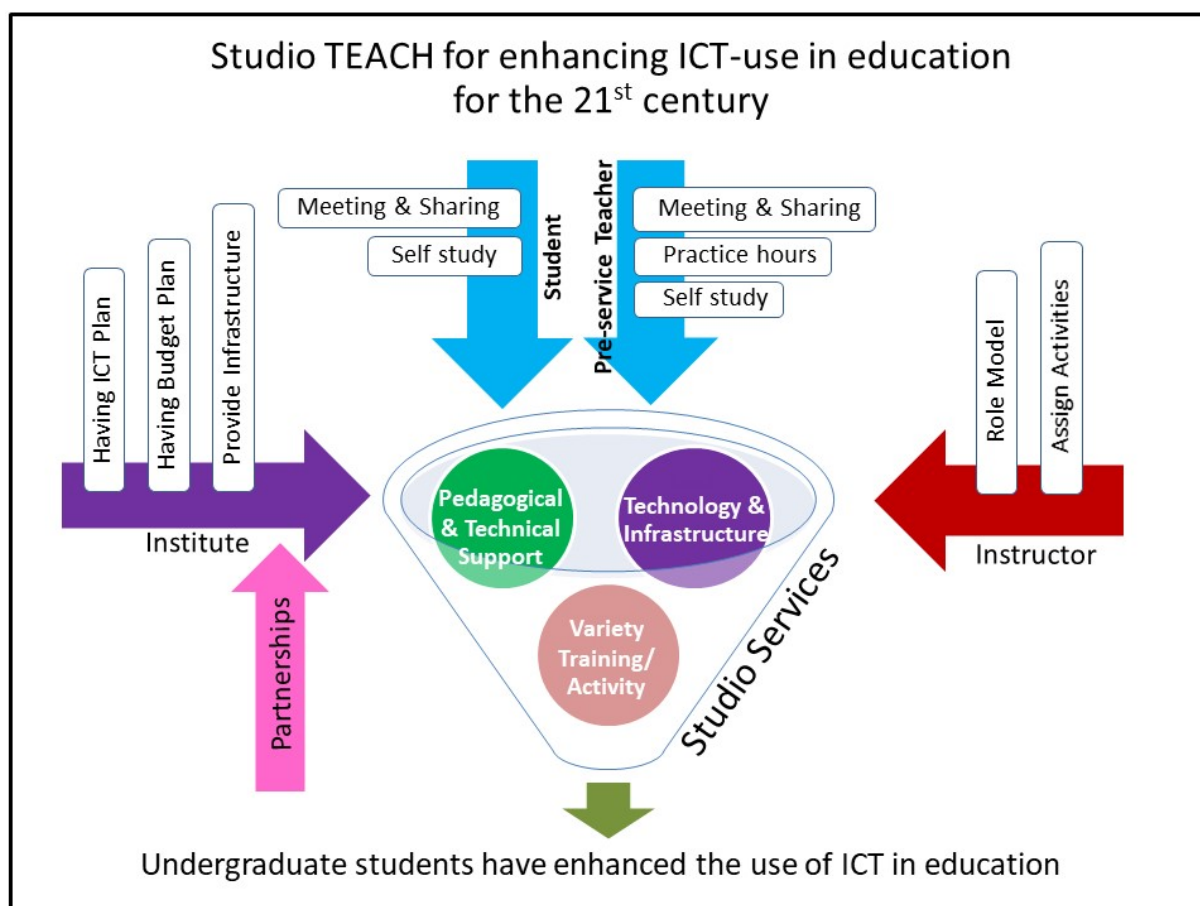

- d) Other suggestions

4. Proceed with group discussion, recording, and collecting data from group conversations.

5. Content analysis, summary, and presentation of the research results.

Research Results

The development of a studio TEACH model by analyzing and synthesizing documents and researches with the comments of the experts in the group discussion showed that the studio model for the enhancing ICT-use in the 21st century has designed to be a place where students are encouraged to use it for a) a laboratory room for the use and development of innovative media and information technology in education, b) a place for training and exchange of knowledge about using innovation and information technology in education, c) an innovative and educational technology service, and d) a place for seeking knowledge and working with others. The studio TEACH aims to provide two target groups: 1) students in the professional field and 2) students in other fields.

Pic2: Studio TEACH Model for enhanced the use of ICT in education for undergraduate students in the 21st century

The studio TEACH consists of two main components:

1. **Service component:** Providing technology and infrastructure such as places, tables, chairs, computers, tablets, and smart boards. The atmosphere is favorable for students to use the service individually and in groups.
